FOREST AND STREAM

Terms, Five Dollars a Year. Ten Cents a Copy.

NEW YORK, THURSDAY, FEBRUARY 10, 1876.

Volume 6, Number 1. 17 Chatham St. (City Hall Sqr.)

Summer Shooting on the Minnesota Prairies.

ON a lovely day in mid-August, of the past Summer, I was seated in a Pullman Palace car, with a copy of the last FOREST AND STREAM in my hand, at the depot of the Chicago, Milwaukee and St Paul Railway. Turning to the Advertising Department of the paper, I read as follows: "The Chicago, Milwaukee and St. Paul Railway traverses a finer country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other Northwestern line. Its forests, prairies, lakes, and streams, abounding with game, presents unequalled attractions to the votaries of Nimrod and Walton." Well, there was I, on Thursday, August 12th, 1875, one of the votaries aforesaid, about to leave on the 1:25 P. M. train from Milwaukee, bound for St. Paul, in compliance with arrangements previously made for a week's shooting on the prairies of Minnesota. "All aboard!" We are soon crossing the Menomonee Marsh, and on the bluffs beyond this sea of "living green," the "Fair White City," can be seen in all its loviness. Its graceful spires pointing peacefully to the blue sky above, while the huge grain elevators looming up, flanked by forests of masts and spars, form a picture, at once suggestive of the beauty and prosperity of the Cream City of the Lakes.

What a delightful day, and how lovely the country appears! How rich and dark is the foliage of the trees, and how [illegible] emerald tints of the grass, [illegible] on the [illegible] bushes of buckwheat, [illegible] Like the [illegible] and [illegible] and [illegible] that is [illegible]. The whistle sounds down brakes, "Pewaukee!" roars the brakeman, while several of our fellow travelers get out here, with fishing rods, etc. This means business for the bass, for Pewaukee Lake is famous for this sport. "All Aboard!" Here we go, through Hartland, Lakeside, and Nashotah, past Pine Lake on the right, Nagowicka Lake on the left, then Grass Lake, Okauchee Lake, and Oconomowoc Lake in succession, their placid bosoms glancing and gleaming in the bright sunlight, like burnished silver. Rushing through gentle slopes, and over quiet streams we arrive at Oconomowoc, nestling around lakes LaBelle and Fowler, and called "Cooney" for short. What a commotion! Amid the greetings and leave-takings can be heard such exclamations as, "How's fishing?" "Are the bass biting!" "Bully!" is the answer. "Caught thirty yesterday!" "Average three pounds!" "Good enough!" chimes in the chorus. I was joined here by my friend J. C. H., and his pointer Don. "All aboard!" shouts the conductor. "Now we're off!" says H. "Good bye dear old Cooney!" Softly sighs the golden-haired beauty in front of us, "With a smile on her lips, and a tear in her eye," as we are whirled suddenly through a wood and lose sight of the lovely village. Dashing along through fields tented with shocks of yellow grain, we are reminded that "the harvest truly is plenteous." Across Rock River, and yet again, and here we are at Watertown, forty-five miles from Milwaukee. A few miles farther and we are crossing Lowell Creek Marsh, which extends North and South as far as the eye can reach, and a mile or two in width, a vast waving ocean of wild rice, with the creek meandering through and debouching into sloughs. Here in the Fall will be myriads of wild ducks and brant, and the music of the shot gun will roll and reverberate across the marshy wastes. As we look we see a flock of young geese lazily winging their flight up the stream.

"Columbus," a very pretty town it is, too, on Crow-fish River. Soon after leaving it, H., excitedly cries, "There goes a covey of chickens!" Sure enough, there they go, Whir! Twelve or fifteen, nearly full-grown. We mark them down near the edge of a small patch of willows across the meadow, and a score of heads are drawn in again at the windows, smilingly. "A fellow-feeling makes one wonderous kind."

At Portage City we cross the canal connecting Wisconsin and Fox rivers, and destined to connect the waters of Lake Michigan with the Mississippi River. After a "smiling" welcome from mine host Fox, and a most enjoyable supper, H. and myself lighted our cigars, and stretched our legs for a few minutes stroll on the platform. As the train moved off we repaired to the baggage car to look after the dogs, and likewise to obtain a good view of the Wisconsin River, which we are now rapidly approaching. "Kilbourn City!" Here we are. A number of tourists leave us here for a ramble amidst the famous "dells." While crossing the bridge, we get a fine view of the [illegible] and the dam, and the boom below.

Friday, August 13th.—We were suddenly awakened this morning, by hearing a sonorous voice [illegible] measured tones:

> "Sleep undisturbed, within this peaceful shy
> Till angels wake thee with a voice like mine."

Get up boys and look at the ducks! We [illegible] and perceive our "mutual friend," J. C. H., [illegible] curtains, look out, and discover thousands of [illegible] disporting in the rays of the rising sun, on the [illegible] tom. We find upon investigation that we [illegible] the thriving little city of Hastings, Minn., [illegible] recrossed the Mississippi River, having encamped during the night at Winona. J. C. H., who [illegible] of our shooting party, came down the night before St. Paul to meet us, and he reported everything in readiness. We arrive at St. Paul in time for a [illegible]

THE POINTER RANGER (Winner of First Prize for Rangers, at Chicago), THE PROPERTY OF S. B. DILLEY, ESQ., OF LAKE CITY, MICHIGAN.—See Page 4.

fast at the Park Place Hotel, where we were warmly welcomed by the genial host, Mr. O. McFarland, and his amiable wife. We found the hotel crowded with summer guests, and the "Bonifface" was correspondingly happy. As we had time to spare, H. and myself decided to devote it to sightseeing. We accordingly engaged a carriage and a pair of spirited ponies, driven by a black-mizzled "cullud pusson," and proceeded up the left or east bank of the Mississippi. We visited in succession, Bridal Veil Falls, Dawn's Leap, Silver Cascade, Sulphur Spring and St. Anthony; thence over to Nicollet Island, and accross to Minneapolis, the "beehive" of the Northwest. St. Anthony's Falls, here furnishes the most available water-power in the world, and among the numerous flouring and lumbering mills, and factories of all kinds, may be seen the largest flouring mills in America. Leaving this busy scene, we returned down the west bank of the river to the famous falls of Minnehaha, where after doing the falls and the glen, we do justice to an excellent dinner. After mingling the smoke of our post-prandial cigars with the mists and spray of the falls, we next visit Fort Snelling, situated on a high bluff of St. Peter's Sandstone, near the confluence of the Mississippi and Minnesota rivers. The view from the old fort is magnificent. The bluffs of White Sandstone, crowned by the dark green of oak leaves and scarlet berries of the sumach, with the river below reflecting the dazzling beams of the declining sun, afford a most picturesque and charming scene. Descending the bluff, and crossing the river in a ferry boat, which is propelled by the current, by means of a wire rope stretched across, and pulleys, we ascend the opposite bluff, and return to St. Paul, visiting by the way Fountain Cave and a brewery, the delicious golden beverage being highly enjoyed after our somewhat dusty ride. We arrived at the hotel in time for supper, and after stabling the dogs for the night, and getting our traps together for an early start in the morning, we retired, well satisfied, and much enlightened by our day's experience.

Saturday, August 14th.—We arose this morning much refreshed, as the slanting rays of the rising sun came steaming in through the open windows. We met at breakfast, J. C. H. and our host, O. McF., who reported that all the arrangements were completed, and everything O. K. We accordingly proceeded to the depot of the St. Paul and Sioux City Railroad, where we found a special car in waiting for us, provided for our party through the courtesy of the gentlemanly and popular Superintendent, Jno. F. Lincoln, Esq., who is ever alive to the interests and comforts of true sportsmen. We left at 7:30 A. M., and on soon passing through the historical town of Mendota, with Fort Snelling frowning down upon us from the heights above. As we are whizzing along the Minnesota River bottoms we have time to take an inventory and ascertain the *personnel* of our party. First, there is J. C. H., whom we will hereafter call "Crip," the Major Domo of the Chicago, Milwaukee and St. Paul Railway, in Minnesota and Iowa. Next we have O. McF., familiarly known as "Mac." Then there is C. H. L. L., a prominent dealer in cereals, and popularly known as "Charley," and C. S. U. County Treasurer, whom we will dub "Cal," all of St. Paul. J. W. C., of Oconomowoc, Wis., whom, for want of a better name we will designate as "Jim," and your subscriber, your humble servant, of Milwaukee, whom the rest of the party call "Doc." But we must not forget the dogs. There is "Grouse," a large, noble, black and white setter, a son of J. H. Whitman's Grouse. Grouse is unfortunately on three legs, he having had one of his forejeet severely bitten in a "scrimmage." Then there is "Flora" and "Shot," a pair of lamusome black and tan Gordon setters. Flora is perfect, except that she has a "bobtail," it having been curtailed by reason of a crook in it, and her owner not being partial to the "Black Crook." Next we have "Sport," a lemon and white setter, and "Major," a red and white Irish setter, and "Don," a pure liver pointer, an old veteran in the field and nearly bald.

We arrived at Shakopee at 9:55 A. M., an important shipping point on the Minnesota River, at the crossing of the Hastings and Dacotah division of the Chicago, Milwaukee and St. Paul Railroad. We here unloaded our dogs and traps and put them into a car provided for us by the latter road, for we are bound for Glencoe, the terminus of this road, about thirty-five miles westward. We pass through the thriving towns of Chaska, Carver, and Young America, and arrive at Glencoe at 12:35 P. M. in time for dinner. After dinner we organized for the campaign as follows:—"Crip" commander-in-chief; "Jim," aid-de-camp; "Charley," master of transportation; "Cal," quarter master general; "Mac," chief of subsistence and commissary general; and myself as surgeon general. The rank and file consisted of a Yankee and a burley Swede for drivers, and "Dave," a genuine darkey from the Gunpowder River, Maryland, as cook. Our means of transportation consisted of two open spring wagons, with two seats each, with plenty of room between for the dogs; and the commissary wagon, which was what is known in western parlance as a "prairie schooner." The latter was then carefully loaded with the usual list of provisions and groceries for such expeditions, not forgetting a supply of "bread" in a demijohn. One of the greatest luxuries in this connection was a box of lemons. A lemon carried in the pocket in the field is very refreshing, and will quench thirst almost as well as water. We then put in a light table with folding legs, and two boards for benches, these took up no room, and helped to form higher sides for the wagon. One of the most useful and indispensable articles, was a camp stove furnished by "Jim." This was packed in a box, which it fitted to a nicety, and cooking utensils were packed in an oven, stove pipe, and cooking utensils set out for a party of twelve. It proved to be a capital baker, boiler and broiler. "Dave" said he was "stonished at his persistance." An open fire would have been out of the question on the prairies, with no timber in sight, but as it was, a few fence rails, cut up and carried in the wagon furnished all the wood required for the trip. At the rear end of the "schooner," was put in the ice-box, a large dry-goods box as would fit in; this was filled with ice packed in sawdust. On the top of all were laid two small tents with poles and flies. The schooner was now started off under the charge of Dave, with the Swede for "bull."

In half an hour our party got into the spring wagons, with guns, rubber coats, and dogs, and obeyed the injunctions of the lamented Horace, by going West—the admiring gaze of all the idlers in Glencoe following us out on the road. Our objective point was the Yellow Medicine, and Lac-Qui Parle country, on the border of Dakota.

On the road, hurrah! We are driving gaily over a rich, rolling prairie, well settled, with grain fields in every direction, grain in stack, grain in shock, and some not cut. The crops are the best ever raised in this State, both in quantity and quality. As the close season did not expire until the next day, we did not unpack our guns, but contented ourselves with smoking, talking and taking in the beauties of the day and the surroundings. Our route lay along the proposed extension of the Hastings and Dakota Railway, from Glencoe to Yellow Medicine. Toward sunset, the sky became overcast, and we arrived at Lake Marion, fifteen miles from Glencoe, in the midst of a brisk thunder storm, which, however, was of short duration, and the sun went down in a blaze of glory, foretelling fine weather for the morrow. We took possession of a small school-house near the lake during the rain, and when the schooner arrived, proceeded to establish our first camp, which we christened "Camp Crippen." The tents were pitched, the stove set up, and a dining-room made under a fly. While Dave was getting supper, we took a stroll down to the lake, which we found to be a beautiful sheet of water; the brilliant tints of the sunset clouds being reflected upon its tranquil bosom, and the fringe of trees on its shores looming up against the sky, formed a picture of quiet beauty that would have delighted the soul of an artist. After supper, pipes and tobacco were in requisition, and as a singular coincidence, each and every member of the party produced a supply of "Vanity Fair" smoking tobacco. Sitting in the moonlight discussing our future plans, it was agreed, that although the close season expired with the night, no shooting would be done on the next day, Sunday, except just what was necessary to supply our larder. With these good intentions, and in this satisfactory state of mind we retired for the night.

Sunday, August 15th.—All hands rose early on this bright and lovely morning. After a refreshing wash in the clear and cool water from the lake, we were summoned to breakfast by Dave. The *déjeuner* consisted of boiled and scrambled eggs, broiled bacon, hot graham biscuits, fried and baked potatoes, fricasseed dried beef, and coffee. After breakfast the horses were hitched up to the spring wagons, and Crip, Cal, Charley, and Mac, left camp for the purpose of "replenishing the larder." Jim not feeling very well this morning, and we both having conscientious scruples against violating the fourth commandment—Jim said it was the seventh—stayed in camp. During the morning, however, we found it necessary to vary our bill of fare by knocking down a few mallards and yellow-shanks, which happened too near our camp for their own safety.

While idling about, our attention was attracted, and our curiousity excited by the singular appearance of a small tree near the lake; its leaves were apparently of a bright red color, like maple leaves in October. Upon nearing the tree, we discovered that its fiery appearance was due to an immense number of large red butter-flies, which completely covered the leaves of the tree. We returned to camp, and for want of something better to do, we went to sleep. We were soon after roused from a glorious nap by the arrival of the foraging party, who quietly deposited the result of the raid in the ice-box. An hour later, the rat-a-plan of Dave called us to dinner, when we enjoyed the following choice bill of fare: Baked pork and beans, broiled prairie chicken, roast ducks, broiled plover, boiled potatoes, corn bread, apple sauce, pickles, etc., followed by rice pudding and coffee. After dinner, while smoking, it was agreed, that as we should in another day be too far from the railroad to ship any game to our friends, that no more should be shot than could be used by ourselves, or the farmers over whose grounds we hunted. That we would confine our shooting to three hours in the morning and three hours in the afternoon; devoting about five hours during the middle of the day to rest ourselves and dogs. The remainder of the afternoon was devoted to lounging, smoking, napping, and "telling stories." The dogs were duly attended to, their feet being bathed in salt water, as their first run on the stubble had made them somewhat sore. Grouse's lame foot was sewed up in a shot bag, and kept saturated with tinc arnica, so that he would be enabled to commence business in the morning. We retired early to-night as the first day's experience in camp life is generally the most fatiguing. With the bright moon shining down peacefully upon our quiet camp, we were soon dreaming of "loved one's at home."

Monday, August 16th.—This morning one of the wagons was sent in to Glencoe for a half bushel of onions and a keg of "lager." Upon investigation, it was discovered that the commissary department had furnished one hundred more "chickens" for yesterday's—Sunday—dinner, than could be used, which were tied up in bunches, ticketed, and sent in to be forwarded to friends in St. Paul—"sich is life," and the uncertainty of man. After the wagon departed our entire force took the field. The day was glorious, not too warm, with an invigorating breeze. The dogs were soon eagerly at work. Now "Grouse" winds the birds near the edge of a wheat stubble, and proceeds cautiously on three legs, his fourth being, as already stated, bandaged with a shot bag. Flora, with more confidence, pushes along boldly by his side, suddenly both come to a point—Grouse crouching close to the ground, perfectly rigid, and hardly breathing. Flora, standing erect, with right foot raised—a perfect picture. "Steady, boy!" "Ho Girl!" Whir! There goes one, fully grown; Crip cuts him down with his right barrel. Up goes another, he is immediately stopped by Mac. There go two more! Bang, bang! One dead, the other gets away minus a few feathers. Advancing slowly—the dogs still pointing—up go two more, both of which are nearly cut down. Then two more go off quartering in opposite directions. "By George, missed em both!" On a gentle rise, at the border of another stubble field are Cal and Charley with "Sport" and "Major," while Jim and myself try the swale with "Don" and "Shot," And so it goes for two hours. Whir! Bang! Bang! Whir!, "Steady, Don!" Bang! "Come here, Flora!" "Fetch, Sport!" "Here, Grouse, seek dead!" "Ho boy!" "Steady!" Bang! "Come here, you rascal!" Then a sound of a thrashing, given and taken. "Mack 'em down!" "See them go!" Bang! Bang! "Charge Major!"

We returned to camp about noon, where we found an excellent dinner prepared for us by Dave, and as our tramp had sharpened our appetites, we fell to with a will. About two o'clock the wagon returned from Glencoe, when we struck camp, packed up, filled the water kegs, and started for Preston Lakes, some fifteen miles further west. As we were driving merrily along, our friend Jim was observed to be "on a dead point;" following the direction of his gaze, we saw a buxom prairie lassie riding sideways upon a grey horse, without a saddle, with a sun-burnt leg of extraordinary development dangling below her short skirt. He was immediately brought to a "charge" by Charlie, when he commenced to quote Gray's Elegy. Two of the dogs were now allowed to range, and we were soon popping away at the grouse. After making quite a bag the schooner came lumbering along, and we proceeded on our journey. We arrived at Preston Lakes just about sundown, and discerned among the rushes at the edge of the lake near the road, a flock of mallards quietly feeding. We drove leisurely along until within thirty yards, when we opened a brisk fire, and bagged the entire flock of ten, save one, which though wounded, unfortunately got away. We selected a beautiful spot near the lake, sheltered by the timber, where we located "Camp Cline." After supper we smoked and talked for two hours, and then turned in, a gentle breeze singing through the leaves of the oaks, with the moonlight quivering and dancing to the music.

Tuesday, August 17th.—Another lovely morning; the air crisp and cool, the sky clear and bright, and the lake crimson with the blush of dawn. As we turn out we observe Dave preparing breakfast, and having performed our toilet—which consisted of a brisk washing of hands and face, and a simple combing of the hair—we started on a brief tour of observation. We found Preston lakes to be two in number, the largest about three miles long, the other about two thirds as large. They are separated by a narrow isthmus, along which runs a road. The banks are beautifully shaded by groves of fine timber; there is no inlet or outlet, and the shores are gracefully sloping with gravelly beaches, and no marshes. We observed some mallards and teal flying across the upper end of the lake, and a solitary bittern standing near the edge of the water. While passing over a slight knoll, our senses were regaled with the savory incense from David's altar, and we immediately altered our course and made for camp, just in time for breakfast. After breakfast we took the spring wagons, with three dogs, and started on our morning hunt, leaving Dave in charge of the camp. The wagons proceeded in opposite directions, with strict injunctions to return by noon. Mac, Jim, and myself took the route toward Buffalo Creek. We are now well out on the prairies, and the wheat fields are few and far between. We observed a very inviting array of stubble fields a mile or two away, but upon nearing them they were found to be out stubble. "No use, boys, we'll find no chickens here." We then went further, tried wheat stubble, and then the grass, but chickens were rather scarce this morning; mostly old birds, and very few coveys. We then struck out for the creek, which we found nearly dry, with the exception of occasional holes of water, in all of which we found a few ducks. We also saw several small flocks of geese and cranes flying, but could not get a shot at them. We returned to camp with twenty-five grouse, thirteen ducks, and a few yellow shanks. The other party had not been much more successful. They had a few more grouse, but no ducks. After dinner we wrote letters, as the weekly mail passed this point the next day for Glencoe. This pleasant task accomplished, we broke camp, packed up, filled everything that would hold water, from the well at the "post-office," for after leaving this point good water is rather scarce until the Minnesota River is reached. We then started for Beaver Falls, on said river, taking a southwesterly course. The sloughs were mostly dry, and we could drive, so to speak, anywhere, for all fences were left behind now. We are soon passing Buffalo Lake, a small sheet of water skirted with timber, and which is the last timber we will see until we arrive at the river. Soon after leaving the lake we came to a house, around which was the remains of a stockade and earthwork, erected at the time of the Sioux massacre at New Ulm, a few miles south, in 1862. A few miles further on and there is not a house to be seen in any direction—nothing but a vast expanse of prairie. We seem to be traveling continually in the bottom of a saucer, always going up towards the rim, where the sky and prairie meet but never getting there. Numbers of a beautiful species of swallow, with purple, green, and violet reflections, accompany us, feeding on the flies and insects stirred up by the horses. "Great Cæsar!" suddenly ejaculated Crip, "look at the cranes!" We looked in the direction indicated, on our "port bow," and beheld twelve or fifteen sand hill cranes drawn up in a row like a line of soldiers. As we drew nearer to them they began to execute the well-known "crane dance," the most ludicrous and amusing spectacle that it has ever been my good fortune to witness. Two of them stepped to the front, saluted, danced up and back, put their bills together and elevated them in the air, then *dos-a-dos* with wings flapping. Two more then took part in the exercises." Forward and back, right and left through, bills up, *dos a-dos* with wing accompaniment. This set would then take their places in the rank, and a new set would go through with the same evolutions. Their antics were comical and grotesque in the extreme, and afforded us a most amusing entertainment. "The Kiradly's are nowhere!" shouted Charley. "Better than the Can-can!" affirmed Cal They continued dancing—if their extraordinary contortions and gyrations could be called dancing—until we drove within two hundred yards, when they took wing hurriedly, croaking their displeasure at the interruption of their sport. The clouds now began to thicken, the breeze to freshen, and ominous mutterings of thunder were heard in the southwest. We got out our rubber coats, but none too soon, for a brisk shower was soon upon us, which, however, was of short continuance. The clouds soon passed over, and the setting sun shone out in all his effulgence, reflecting his bright tints in the waters of a large slough a mile ahead of us, which proved to be Nine Mile Slough. We resolved to camp here for the night, as there was no water nearer than Birch Cooley, some fifteen miles further on. We fortunately had wood and water enough for culinary purposes in the schooner, which could just be discerned against the horizon, and it was quite dark when it arrived. The full harvest moon, however, soon appeared above the prairie like a huge red disk, and we made our camp by moonlight, which we named "Camp Lange." While smoking after supper, every one seemed to be occupied with his own thoughts, and, impressed by a feeling of utter loneliness, scarcely a word was exchanged. Nothing could be seen but the slough and the boundless prairie, bathed in moonlight. At intervals could be heard from the slough the hoarse quack of the wild goose, the house croak of the crane, the wild cry of the loon. Soon Dave was heard singing, to the accompaniment of his dishes:—

"Oh! it is my night, de moon shines bright,
De stars are out on de sight;
De whippoorwill sings, in accordless day do dance
De bull frog [illegible] chances."

But his song was a feeble effort; his heart was not in it, for he felt as lonely as the rest of us. We saw that it was a failure, but said nothing. The mosquitoes, however, soon made it lively for us. They came in swarms, but we put on our head nets of gauze and defied them. During the night they caused some of the horses to break loose, but the dogs, ever watchful, alarmed the drivers, who secured them. The pointer Dou, who was nearly bald, had his head so bitten that it resembled an inflamed nutmeg grater the next morning. The drivers also suffered severely. This was the only night that we experienced any inconvenience from this cause, however, and this was owing to our close proximity to the slough.

Wednesday, August 18th.—All hands were up by daylight. Breakfast was dispatched, camp broke, and we were packed up and on the road by seven o'clock A. M. Major and Shot were nauging, and about half a mile beyond the slough struck a scent, and were soon trailing the birds. This we thought a little strange, as we had not seen a grain field since the previous morning. The dogs, however, were soon on a point. We got out of the wagons, and had very fine sport for an hour, finding three large coveys. We again clambered in, and proceeded onward. Soon we perceived grain fields in the distance, ahead of us, but, what seemed strange, we could see no houses. As we drew nearer we observed near each stubble field what seemed to be a green mound. On the top of some of them we saw children intently gazing upon us as we approached. These mounds we found to be sod houses. We were now in what is known as the "Sod Settlement," the settlers being Swedes. The houses are constructed by digging a few feet into the ground, putting in a rude frame of posts and rafters, roughly boarding it, and, on the outside of all, putting a layer or wall of sod three feet thick. This makes a warm house, and affords a good protection against the fierce blasts of the Winter. There is a well-worn path running from the door up to the top or ridge of the house. This path is made by the occupants, who, upon the approach of anything strange across the prairie, run up like so many gophers to their post of observation. We now began to see the effects of the grasshoppers, in burned grain fields and impoverished crops. Still, the present wheat crop is very fair. For two years past the crops have been utterly destroyed in this section by the ravages of the "hopper." We hunted faithfully through this settlement, but did not bag a single chicken. What coveys we saw were not half grown, being second broods, so that we did not waste a single cartridge. The few old birds we likewise mercifully spared. We ascertained that many of the nests were destroyed in the Spring by burning over the prairies to destroy the grasshoppers, and that most of the broods which hatched were destroyed by a terrible hail storm soon after. We were informed by an intelligent young Swede that the farther we went the fewer grouse we would find; that we were five miles from Birch Cooley, and nine miles from Beaver Falls. We also ascertained the unpleasant fact that one of the horses had quite a sore breast, and one in the other team was rapidly becoming demoralized. We held a council, and decided to take a cold lunch, feed and water the horses, rest an hour—it being now ten A. M.—then take the back track. Accordingly, at eleven A. M. we lit our pipes, turned our faces eastward, and started on the return trip, regretting that we could not visit Yellowstone this season. When we arrived within a mile of Nine Mile Slough we let out half of the dogs and were soon among the grouse. By the time the schooner came along we had bagged about fifty. Dave was instructed to follow on and make Preston lakes that night if it took till midnight. We again started, passed the slough without a regret, and reached Buffalo Lake about sunset, where we had a clatter at the ducks, securing seven. After watering the horses we continued our journey, and finally reached Preston Lakes at eight P. M. We made arrangements to stop for the night with Mr. Allison Houck, the postmaster, who lives near the lake, and who will accommodate sportsmen with good quarters and royal fare. We found here a party of three sportsmen, among whom was Dr. L. After supper we all adjourned to the verandah, where, under the glorious harvest moon, we "filled the night with music," Mr. Houck's two daughters joining in the chorus. We had duets, quartettes, and chornses. The songs we sung have been rendered more harmoniously, and by far better voices, but certainly not with more zest and unction, or to a more appreciative audience than on this occasion. What a contrast to the night before at Nine Mile Slough! About eleven o'clock the white sail of the schooner was observed "in the offing," slowly toiling along. Good night was said, and we all turned in happy and joyous.

Thursday, August 19th.—After a most refreshing night's sleep, and a good breakfast prepared by our good-natured hostess and her daughters, we bade them adieu and left at seven A. M. Passing between the lakes, we took the road northeast toward the village of Hutchinson, on the Hassau River, and founded by old Asa Hutchinson, of the once famous "Hutchinson Family" of vocalists. We are now traversing a splendid chicken country—a fine rolling prairie, with grain fields on the higher ground, and sloughs lying between. After a morning of right royal sport, we camped at noon at the forks of a road, one leading to Hutchinson, the other to Glencoe, *via* Lake Marion. We designate this as "Camp Broadaxe." At three o'clock we leave Dave in charge of the camp, and again go for the grouse. The two wagons started off in contrary directions. Our load consisted of Jim, Mac, and myself, with the Yankee driver, the other of Crip, Cal, and Charley, with the Swede. Our squad had fine success, and arrived at camp at dusk, singing merrily. We were loudly welcomed by the others, who had already returned, and who seemed to be unusually anxious to know what we had bagged, looking very mysteriously the while. We counted out thirty-eight chickens and a few ducks. We outnumbered them on grouse, but they solemnly conducted us to the back of the tents and said "Behold!" There lay side by side, stretched out to their utmost extent, three immense Canada geese, the largest weighing fourteen pounds after being drawn. "We are all right on the goose!" chuckled Cal. "How is this for high?" asks Crip. "Everything is lovely and the goose honks high!" rejoined Charley. "Well, boys," said Mac, "it appears that you were on a wild goose chase, while we attended to legitimate business." They said nothing more, but Charley began whistling the "Old Grey Goose." We were now, fortunately, summoned to supper; and what a supper! David had outdone himself, and put Delmonico to the blush, in the estimation of our appetites. After supper two men appeared and invited us over to a neighboring house to participate in a prayer meeting, but we respectfully declined, and soon after were peacefully snoring.

Friday, August 20th.—Breakfast over, we divided into two parties as before, and hunted for two hours with the most gratifying results. As we were returning to camp, Flora and Don were ranging along the edge of a snbble, the day being now very hot and dry, when a covey got up under Flora's nose and sailed away across a slough. As Flora stood watching them, looking very sheepishly, with her bob-tail standing out straight, Jim shouted—"A bob-tail flush, by Judas!" Flora and Don came sneaking under the wagon, when we took them in and started on. The dogs were beginning to show the effects of hard work, though they had been worked alternately, and been well cared for. Returning to camp, we are soon joined by the other party, who had also made a good bag. Together, we counted out sixty-five grouse, with a slight sprinkling of ducks. After dinner we broke camp and started for Glencoe, *via* Lake Marion. Our route lay through a most beautiful farming country, and the pinnated grouse were more plentiful than we had yet found them, but we were obliged to push on in order to reach Glencoe that night. We passed Otter Lake, of a cruciform shape, with a long, heavily-wooded island in the centre. Two of the dogs are ranging, and we get a number of shots from the wagon while driving along the road. We are soon in sight of Lake Emma, and a few miles further on we came to Lake Marion, our first camping ground. We gaze upon its pure waters with feelings of pleasure, and leave the site of our camp with regret, like parting with an old friend. But we have no time to tarry. We must catch the morning train, or lie over until Monday. Toward sunset we try the stubbles with good success, and reach Glencoe at nine P. M. The other wagon soon came in, the schooner arrived some two hours later, and our week's spell is ended. We have been extremely fortunate, having had magnificent weather, no accidents, no sickness, and no unpleasantness of any kind. We are indebted to our friends for the most delightful week we ever spent in the field. The country lying between Glencoe, Lake Marion, and Hutchinson furnishes the best pinnated grouse shooting I have ever seen. This section, together with portions of Southern Minnesota, in the vicinity of Austin, Albert Lea, and Blue Earth City, was by far the best shooting grounds in the Northwest last Summer. We arrived at St. Paul on Saturday night, and on Sunday we bade adieu to our friends and started for home, completely rejuvenated, and feeling that we had obtained a new lease of life.

We are under obligations to S. S. Merrill, Esq., J. C. Gault, Esq., and A. V. H. Carpenter, Esq., of the C. M. and St. P. Railway, and to John F. Lincoln, Esq., of the S. C. and St. P. R. R., for favors conferred, and also to the conductors and baggagemen of the above roads for their kindness, and consideration of the comfort of ourselves and dogs.

OCONOMOWOC.

Natural History.

[This Department is now under the charge of a competent Naturalist, indorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.]

WINTER HABITS OF BUZZARD HAWKS.

DURING the last two Winters I have had a fine opportunity for studying the habits of three of the larger species of our buzzard hawks—the Red-tail (*Buteo borealis*), the Red-shouldered (*Buteo lineatus*) and the Rough-legged (*Archibutus lagopus*). The two former are usually described together by authors as identical in habits, cry, etc., but I have found them to differ essentially. The red-tailed hawk is a bird of the open districts. All day long it sits erect upon some detached elm in the meadows, or occasionally on the edge of a little oak grove, over a spring run on the sheltered side of a hill, evidently watching the ground beneath. If it perceives a mouse or other small quadruped, its glides swiftly downwards with half-closed wings; then, with extended wings and raised claws, seizes its prey. Frequently, as it spies its would-be victim making off, it runs clumsily with flapping wings in pursuit, and eagerly strikes again, but in this second attempt I have rarely seen it succeed. Sometimes you see one sitting for a long time motionless and erect in the tall grass, watching like a cat, or perhaps walking slowly with a sidelong motion. At this season it feeds exclusively on mice and rats; in early Spring on toads, frogs, snakes, and the like. I doubt if it ever attacks birds, for in about a dozen specimens examined at different seasons I have never been able to detect any of their remains; nor have I ever seen it pursue one. Occasionally a wounded quail or snipe may fall a prey, but such cases must be rare. A mouse, when seized, is divided into two, a rat into three or four parts, and bolted—skin, bones, and all. By noon both crop and stomach are full, and the bird removes to some high perch where it may remain undisturbed, or betakes itself to sailing in most graceful circles high up in the sky.

Its flight is slow and rather heavy, but its aerial revolutions extremely majestic and beautiful. Moving from one place to another, it proceeds in a straight course with three or four deliberate flaps of the wings, followed by an interval of sailing. When about to alight, it shoots upward in a cycloid curve, drops its feet to a branch, and closes its wings, frequently without a single flap. Thus I have seen it swoop down from an immense height, and then, almost grazing the ground, sweep upward and alight without a perceptible effort. It never hunts its ground on wing, or drops upon its prey directly from the air. It frequents two or three favorite perches in the same field day after day; and ordinarily you may easily approach it in a wagon, provided you do not do so directly, but draw near in a circle. You must, however, be ready to shoot the instant your horse stops, for that instant the bird will certainly take wing. Should you miss, or even slightly wound it, it may move only a few hundred yards, and you can frequently drive up again within range; for it seems to apprehend no danger unless you are on foot, when few birds are more systematically shy.

The only cry which I can with certainty refer to this species is a large scream like the syllables *cree-e-e, cree-e-ep!* repeated five or six times, and very different from the shrill *whe-e-e-o!* of the red-shouldered hawk so often mimicked by the jays. It is my impression that this species is of much rarer occurrence in the neighborhood of Cambridge, Mass., in the breeding season, than is usually supposed.

Often confounded with the above is the red-shouldered hawk. This species haunts in the autumn the edges of swampy woods adjoining meadow land, or sits for hours at a time upon some lofty oak or hickory that towers above the surrounding forest. During the Spring, Summer, and early Fall it keeps within the woods, rarely coming out of their shadow, except to make some distant journey, or soar aloft in those vast aerial circles characteristic of the family. I have never been fortunate enough to see it strike its prey; but I judge that its motions are more rapid and dashing than those of *B. borealis*, and I also suspect that it preys more on larger animals and birds, although it is nearly as sluggish as its congener. The red-shouldered may at all times be distinguished from the red-tailed hawk. Its small size is very apparent, while on the perch its red breast, and whitish bars on its tail, while in the air, are very conspicuous. When startled from its perch it flies for a few hundred yards with quick, powerful, continued flapping of the wings, like the domestic pigeon; it then proceeds more leisurely. Its loud whistling *whe-e-o! whe-e-o!* is the only note I have ever heard, and is not to be confounded with the cry of any other New England hawk. It is much less common in the vicinity of Cambridge than the former, affecting more densely wooded sections. It is also more shy, rarely allowing your horse and wagon to come within gunshot.

The rough legged hawk (*Archibuteo lagopus*, Gray) is in habits almost totally unlike either of the preceding. It seems to haunt exclusively the open meadows, and, contrary to the usually accepted idea, is more active than either of its fellows, resembling in a general way the marsh hawk (*Circus hudsonius*). Leaving its perch it flies a few hundred yards; then poising above the meadows at a height of perhaps fifty feet, maintains its position for a moment with continued flappings, until, getting fairly balanced, it floats for many minutes at a time on outspread, entirely motionless wings, its body being nearly horizontal, with the head lowered, and eyes eagerly scanning the ground. On several occasions I have seen it breast in this manner a moderately strong wind for some time without a single apparent motion or any perceptible drift; and when thus poised it strongly reminds one of a stuffed bird suspended by a wire. This feat I have never seen performed by any other bird, though I find it attributed to *Buteo montanus* by a writer in *Nature*, whose explanation, however, would utterly fail in the present instance, as all the conditions necessary to the support of his theory have been, in my observation, entirely reversed.

Should the rough-leg fail in its search, it proceeds to another part of the meadow, and there repeats the performance, and if, after trying several places, it is still unsuccessful, it almost invariably returns to the first point and begins again. When at length it does discover a small quadruped, it seems to descend upon it through a succession of curves; but I do not feel quite sure how invariable this mode of sweeping is with it, for I remember seeing one sail down from a tree on a nearly even inclined plane. Should it miss its aim, it rises, and poising, awaits the reappearance of its prey, which, when finally secured, is devoured on the spot. Its ordinary flight, though straightforward and slow, is rather light and easy, with nearly constant flapping, and at such times it resembles a gull more than a hawk; but in its high sailing is hardly to be distinguished from the red-tail, except perhaps by its greater size.

When about to alight it chooses some large detached tree, and rising to the topmost twig, settles easily and lightly, keeping its wings spread an instant to maintain its balance. In this, I think almost universal habit of choosing the topmost twig for its perch, it differs from all the other large New England hawks; and its appearance as it sits with its body nearly horizontal, swaying up and down with the wind on some slender spray, is, to say the least, unique. Perhaps the small size of the feet may show a special adaptation for this habit. I have heard no cry or note of any kind.—WILLIAM BREWSTER.

Cambridge, Mass.

NOTES FROM OUR CORRESPONDENTS.—John Burroughs (Esopus-on-Hudson) says: I have seen an extraordinary number of eagles on the Hudson this Winter. Yesterday from the car window I saw eight in the vicinity of West Point—four bald eagles, at least, and three black or golden eagles, and one I could not determine. The black eagles were sitting on the floating cakes of ice, or hovering over them. The bald eagles were high in air, sailing round and round. Passing down the Hudson the last of December I saw three black eagles on the ice. About the first of December I saw several golden eagles in the fields near Kingston, and one day soon after a bald eagle flew along by my house. Why this great flight of eagles? Have others observed and noted this? Have you noticed how easy the pine grosbeak is tamed? I saw a lady in the Jersey City depot the other day, with one in a cage, that had only been caught a few weeks, and it would hop down into her hand and feed. It was very fond of apple seeds. She said it sang finely. I have seldom seen a bird that looked so clean and healthy in captivity. ...George A. Boardman

writes from Jacksonville, Fla., that the rough-billed or white pelican, usually considered an almost exclusively Pacific Coast bird, is numerous in many parts of Florida, especially at the mouth of the St. John's River, and on the outer bars along the coast. He has never known one taken at Jacksonville. Mr. Ridgway informs him that the roughness of the bill is only a Summer or breeding ornament....“L. E. L.” tells us that in San Diego, Cal., gulls are protected and act as street scavengers, as do the buzzards in Charleston, S. C., and are far more picturesque and interesting. They sit on the ridges of the buildings in long rows, descending in flocks to dispose of any refuse cast out, and sometimes fight and scream over the bits like *gamins* over cigar stumps. Some among them are exceedingly handsome birds, pure white and dove color, and in their perfect confidence they are very amusing, as well as useful members of the Board of Public Works....A lady in Clifton, Staten Island, has succeeded in capturing a veritable singing mouse, which had for some time made itself heard.

—The Annual Report of the Museum of Comparative Zoology at Cambridge, Mass., shows that the gentlemen there are busy in working up and making available to students the vast collections, and that the care of no part of them is being neglected. No person going to Boston or Cambridge should fail to visit this splendid museum, which is the fittest monument that could ever be erected to its immortal founder, Professor Louis Agassiz.

—There is a very large cat in a store in Boston whose coat is exactly tawny in hue. Yellow cats and reddish cats are not uncommon, but a perfect lion color is almost never seen, and suggests our Tabby's relationship. There used to be in Salem, Mass., an enormous cat which was regularly striped, had a short, thick head, and was in all respects a miniature tiger.

—The gale last week came near blowing over the eagle's cage at Central Park and letting the noble birds free. The other out-door houses of the menagerie were badly shaken.

A SEAL IN THE DELAWARE.—A seal was captured in the Delaware River at Trenton, N. J., a few days ago. It is a very unusual occurrence, and Dr. Charles C. Abbott, of that city, has written to the Trenton *Gazette* some notes concerning it. He says this seal is of the common species of the Atlantic coast, that have been simply driven away from these waters by civilization. When the Swedes settled in South Jersey and on the Pennsylvania shore they had quite a large seal fishery. Dr. Abbott has found in that vicinity, among what are called “kitchen refuse heaps,” consisting of stone implements and pottery, large quantities of the bones of the seal, showing that they were in common use.

A LUCKY PARTRIDGE.—The following entertaining little story of a grouse was included in a letter from “Gypsey,” whose pungent pen has heretofore contributed to these columns. Our readers will notice the similarity of behavior between the partridge before the mirror, and the kinglets described by “Mrs. E. I.,” in FOREST AND STREAM for January 6th. The story reads thus:—

“A few evenings ago, just as an artist friend of ours stepped out of his studio, a partridge started from the door stone and flying against a lattice-work screen was captured all alive and fluttering. She was quite unhurt, a fine well-grown bird, and is now domesticated in a suitable cage, glass in front, and with a looking glass at the back, and it is interesting to watch the absurd antics she indulges in to attract the attention of the other bird, (in the mirror), such as only a partridge or a turkey cock could venture upon. She has become very tame under the constant interviews she is subject to, and picks up her rations of corn, buckwheat, bittersweet berries, frost grapes, and chopped cabbage in a decidedly ration-al manner; and would, perhaps, take a critical peck at sundry pictures in oil and water color that have already been done of her, could she have the free run of the studio. But how she came to drop herself beside that door on that particular evening is the puzzle. It is true that E. S. P. had snapped a couple of caps at a partridge not far from the spot on the afternoon previous, and perhaps dame Partlett reasoned, like Capt. Scot's 'coon, that it was best to save her pretty plumage and come down at discretion. For the present she is well housed and cared for, and a useful 'sitter,' and when the breeding season comes will be turned out to do her *eggs*-act duty among her *brooders* and *sitters*.

—A great flight of little auks (*Mergulus alle*) over Great Britain has been chronicled by numerous notes in the English papers. The country people there call them “rotchies.” Here they usually go by the name of “sea-doves,” or “dovkies.” It is rare to find more than a few in this southern latitude even in winter, and still more rare to find them inland; but in November, 1871, two individuals were captured after a cold northeast storm at Middletown, Conn., thirty miles from the coast. The same storm drove a lot of the little auks to Middletown, Mass., and for a few days they were taken by collectors in large numbers along the coast of Massachusetts, particularly at Cambridge and Ipswich.

JACKSONVILLE, Fla., January 31st, 1876.

Gentlemen:—Your letter of the 20th inst., together with the box of trolling baits, was received yesterday. Believing that your articles are superior to all others in the market, I will assist to introduce them to those who fish in Southern waters. Will give your new baits a fair trial in a day or two. Enclosed herewith you have a bank draft on New York for $10.04, the amount of your bill. Very respectfully yours,

F. E. SPINNER.

MESSRS. W. D. CHAPMAN & SON, Theresa, N. Y.

THOMPSON & SON, 338 Broadway, use no sugar of lead in waterproofing their suits. Sugar of lead will not stand washing, and amongst old sportsmen is considered detrimental to health, making them liable to rheumatic attacks. Thompson's suits are guaranteed to be thoroughly waterproof, even after being washed, and are as good and cheaper than any other suits in the market.—*Advertisement*.

The Kennel.

A KENNEL REGISTER.

WE have opened at this office a Kennel Stud Book, or Register, for the pupose of registering the pedigrees of dogs of every description, native as well as foreign. With the increased care and attention that is now given to breeding (sporting dogs in particular), a Register of this kind has become an absolute necessity. Its advantages, both to the breeder and purebaser, are too apparent to require comment. The book is to be a public one, open to inspection at any time, and a copy of any pedigree contained therein can be obtained on the payment of a small fee to cover the expense of copying. No pedigree will be received for registration unless properly authenticated, and we shall make it our duty, so far as lies in our power, to see that they are correctly given. If coming from a stranger, the attestation of some person known to us will be required. Upon registering a pedigree, the owner of the dog will receive a certificate signed by us, giving the number and folio upon which it is to be found. We shall publish each week a list of the dogs registered and owners' names. At the end of each month a copy of the index of the book will be printed, and at the end of the year, or at such time as may be deemed advisable, the pedigrees will be printed in the shape of a handsome book, illustrated with engravings of the dogs whose portraits have appeared in our paper.

The question of pedigrees is one which has so recently acquired importance that there are many fine dogs, both native and imported, in this country, whose owners have given the matter but little attention. And yet many of the dogs have attained a wide-spread reputation. We might instance, as cases in point, Mr. Jarvis' Dick, and the fine old pointer, Phil, imported by Col. Sam Colt, of Hartford; and yet we should desire to see these dogs and their progeny registered as a startiug point for future reference. So that at this early stage it is difficult to determine what shall, in this country, constitute a pedigree. A few years hence we might fix the limit at a certain number of generations; now, it will not do to draw the line too close, and lovers of an ancient lineage can, if they choose, base their estimates of value upon the length of the pedigree.

The charge for registering a pedigree will be one dollar; but for every dog registered the owner will be entitled to a copy of the Kennel Stud Book at half the regular price. The Register and certificates are now ready, and we are prepared to receive either pedigrees or simply names for registration. This plan has received the unqualified approval of many gentlemen who may be classed as representative breeders and sportsmen, and we do not doubt that such a book, carefully and conscientiously kept, will be of immense value to the present as well as future generations of sportsmen.

RANGER.

THE subject of our illustration this week is the winner of the first premium for pointers at the Chicago Bench Show, just concluded. We regret to say that the picture does not do Ranger justice, not through any fault of artist or engraver, but from the fact that it was drawn from a picture which is faulty in outline, and no dog can be more perfect and curve in outline than he is. Ranger's pedigree may be summarized as follows:—

“The original pointer bitch Nell was owned by Douglass, and imported from Scotland about the year 1850. While on the way, the bitch Jennie was whelped. This Jennie was visited by the pointer dog Driver, also noted for his good qualities, and owned by E. D. Eldridge. Color, white and liver. Jennie whelped but one pup, Fannie, and she was visited by Dime; color, white and liver; owned by David Craft. Dime was sired by the imported English pointer dog Swat, owned by E. F. Saddler, Esq., of McGregors, Iowa. From Dime and Fannie was whelped the pointer bitch Kate, owned by Wm. B. Luiz, Esq., of Lake City. Kate was visited by Rake, an imported English pointer, owned by Col. N. E. Gesner, of Lake City, Minn. Rake was liver and white ticked, and from that issue Ranger was whelped” on the 27th of December, 1872, making him a little over three years old,

To give a tithe of Ranger's exploits in the field would occupy more space than we can spare. His owner, Mr. S. B. Dilly, of Lake City, Minn., has alone shot fully a thousand birds over him during the past three seasons. He writes us:—

“I hunted Ranger for the first time on pinnated grouse the 1st of August, 1873, and killed forty-four, and my friend Fairfield twenty-three over him the first day. He pointed the first scent he got fully twenty rods away, and very cautiously approached within about fifteen yards and it was almost impossible to get him further, and, as the day warmed up, he would work closer. It was tedious, for his scent and caution were wonderful. As the season wore along he did much better, and at the close of hunting, late in the season, he was perfection on late and wild birds in stubble and short cover. From the beginning he was a swift and exceedingly fine ranger, covering his ground perfectly, and obedient to the whistle, or command. He dropped to shot from the first as if he had been trained to it for years. I killed that year over him between three and four hundred birds. His second year in the field was wonderful, he pointed his birds at first scent, and would not stir until I came up, when he would walk up to his birds and point with a decision and fairness that was pleasing and beautiful. No matter whether on a brush-neck weed down wind, his nose was so fine that not a bird was flushed, and right here I will say that I have never known him to flush a bird, and I challenge any one to say that he ever has.”

In confirmation of this we have a letter from Mr. C. A. Zimmerman, the well-known sportsman, of St. Paul, to the same effect, describing Ranger as the best ranging dog it has ever been his privilege to meet or shoot over. Mr. Sloan M. Emery, of Lake City, also writes to the same effect, and says emphatically that, after having been under his observation and shooting over him for three years, “*I have never known him to flush a bird.*” His stock, of which there are two litters that were shot over last season, all partake of his peculiar qualities, and not a poor one has been turned out.

We selected Ranger as the representative pointer to be cast in a solid figure for the base of our Chicago Cup, the principal prize at that show; a portrait of Ranger also ornamented the salver which formed a portion of the service presented by us at the Memphis Bench Show and Field Trials, and as we have received inquiries from several gentlemen in that direction for information regarding Ranger, they now have the matter in detail.

BREEDING OF SETTERS AND POINTERS.

WITHIN the past five years quite an impetus has been given to the importation of setters, pointers, and other dogs for field purposes, by gentlemen, with the laudable object of producing, if possible, a better quality of such dogs than we already have in this country. This effort certainly is commendable, and every unprejudiced sportsman will be thankful to those gentlemen for their enterprising liberality. But as a very old and careful breeder of setters and pointers, let us suggest that there is great danger of running the thing into the ground, by breeding indiscriminately with dogs of unknown qualifications because they are imported from widely-advertised English kennels. When we first turned our attention to shooting, selecting, and breeding setters and pointers, full fifty years ago, such matters were considered by most of the community rather beneath the attention of a gentleman, and when almost any one was seen with a gun on his shoulder, he was pretty sure to be looked upon as an idle fellow who never would amount to much in the end. And this reminds us of an instance showing the fallacy of such views. Full thirty years ago, when we were residing at Trentou, N. J., there came to that city Mr. B., then a young gentleman who had just graduated at Princeton College, who had, like ourself, a perfect infatuation for dog and gun; but in consequence of close application to his studies and the want of proper exercise, his health became considerably impaired, and in order to regain that, and to indulge in his favorite sport before commencing the study of the law, he devoted much of his time with us in the field, and it soon become a common remark among his friends and others that Mr. B., although a very promising young man, never would amount to anything, as he was too fond of his dog and gun. But, although he shot much with us for full fifteen years, and is now certainly one of the most skillful and accomplished field sportsmen in America, he is the Chief Justice of the Supreme Court of the State of New Jersey, and among the foremost in the legal profession in this country.

But notwithstanding the absurd views so many persons had in those days about field sports and the breeding of dogs for that purpose, we continued to pursue it. And as every skillful sportsman knows that a good day's sport depends upon good, well-broken dogs, we have ever since that time devoted our best judgment in order to secure the best strain of dogs for the purpose; and then, too, we have availed ourselves of the judgment of such gentlemen as Mr. G. W. McKelvay, of Trenton, N. J.; Mr. R. A. Drake, of Hopewell, N. J.; Mr. Theo. Morford, of Newton, N. J., and many other practical, unprejudiced skillful field sportsman who, instead of making wonderful bags of game around the fire at home, and writing up their knowledge of field sports by reading books upon the subject, are just such men as know what a good desirable strain of dogs is when they come to shoot over them. And for many years those gentlemen and ourselves gave much attention to the different strains of dogs of the day, but found no better than the descendants of the old setter Gronse, something of the history of whom we gave in a late number of our paper. But when the latter strain of dogs began to wane, we secured Bruce, Don, and a bitch of the Gildersleeve strain; but with this strain we found no better dogs for service in the field, yet we found dogs possessing *more* desirable qualifications than any others we have tried. The Gildersleeves, when properly bred, are very easily broken, have good dog scent, naturally staunch on game, good tempered, easy of control, never gun shy, and with all are generally handsome, well-formed, orange and white dogs of great industry and endurance, and we have had no difficulty in raising the pups.

One of the most important matters to be observed in breeding is to breed from both dog and bitch which are good, steady, *well broken* dogs, and the more work they have had on game the better; and then, too, we have found that working the bitch moderately while she is with pup is advantageous. We do not presume to say that good dogs cannot be bred from a thoroughbred dog and bitch which had never been hunted, but we know that pups thus bred require far more skill and attention to make good dogs of them.

Mr. Theo. Morford, of Newton, N. J., has recently become the possessor of the famous red Irish setter Ranger, imported by Mr. Jenkins, of Baltimore, and being asked if he intended to cross him with his own stock, his answer was: “I certainly will not breed to him at all, unless he shall turn out to be a good, staunch, well-broken dog, with good nose and free from timidity.” If all breeders would pursue this course there would be far less complaint about timid, inferior dogs. The Laverack setter Pride of the Border, imported by C. H. Raymond, Esq., has proved to be a good, staunch, well-broken dog, with fine nose and great endurance. We therefore bred a few American-bred

bitches to him, and in the course of another season hope to be able to report favorably of his offspring.

We are waiting with considerable anxiety to see and know how the produce of the late importations of blue blood will turn out. If they are superior in any respect, or even equal to our favorite Gildersleeve strain of those bred from Mr. David Brooks' famous dog Bismarck; Mr. Forman Taylor's one eyed Sancho; or Mr. Theo. Morford's famous strain of orange and white setters, which has an infusion of the Gildersleeve, we will be among the first to proclaim it.

As this is a time when many bitches are coming in season let us suggest that the owners can save themselves much trouble and annoyance by placing them in an elevated place, such as the loft of a barn.

THE CHICAGO BENCH SHOW.—We have received from the National Poultry Association a printed slip containing the complete list of premiums. The corrections and additions to be made to the list published last week are as follows:—

IMPORTED BLACK AND TAN GORDON SETTERS OR THEIR PROGENY.

Dogs—1st, Dexter, Henry Pickett, 796 Michigan avenue, Chicago; 2d, ——, Thomas L. Jerome, Locust Valley, L. I.; 3d, Mike, Daciel T. Elston, North Branch, Chicago.

Bitches—1st, Nora, A. F. Copeland, Boston, Mass.; 2d, Nell, Michael Mahoney, No. 2, Henry street, Chicago; 3d, Belle, Dr. Jas. A. Coyne, 679 W. Indiana street, Chicago.

NATIVE ENGLISH SETTERS.

Dogs—1st, Sport, H. J. Edwards, 312 W. Lake street, Chicago; 2d, Don, Frank G. Sheldon, Hudson, Mich.; 3d, Spot, H. J. Edwards, 312 West Lake street, Chicago.

Bitches—1st, Flora, John Davidson, Monroe, Mich.; 2d, Belle, J. B. Welch, Hudson, Mich.; 3d, Gypsey, H. J. Edwards, 312 West Lake street, Chicago.

NATIVE BLACK AND TAN SETTERS.

Dogs—1st, Dash, John Davidson, Monroe, Mich.; 2d, Black, A. G. Mack, Chicago; 3d, Max, Geo. B. Dougan, Richmond, Ind.

NATIVE RED OR RED AND WHITE SETTERS, CALLED IRISH SETTERS.

Dogs—1st, Ponto, Richard Valentine, Janesville, Wis.; 2d, Patsey, Wm. P. Harrison, Geneva, Ill.; 3d, Lion, Wm. H. Way & F. C. Ward, Rochelle, Ill.

Bitches—1st, Gypsey, J. H. Whitman, 95 Lake street, Chicago; 2d, Fannie, Alexander White, 884 W. Madison street, Chicago; 3d, Trent, A. W. Miller, New Buffalo, Mich.

POINTERS OVER FIFTY POUNDS WEIGHT.

Dogs—1st, Ranger, Stephen B. Dilley, Lake City, Minn.; 2d, Dash, E. O. Greenwood, Cincinnati, Ohio; 3d, Duke, C. Jeff Clark, St. Louis, Mo.

Bitches—1st, Belle, E. M. Gillespie, Columbus, Ohio; 2d, Dandy, Robert Burt, Braidwood, Ill.; 3d, Queen, Stephen B. Dilley, Lake City, Minn.

POINTERS UNDER FIFTY POUNDS WEIGHT.

Dogs—1st, Cæsar, Richard B. Morgan, Richmond, Ind.; 2d, Frank, John Zimmer, Aurora, Ill.; 3d, Rock, Thomas Stagg, Chicago.

Bitches—1st, Fan, M. Gillespie, Columbus, O.; 2d, Juno, W. F. Milligan, Chicago; 3d, Lily, Wm. Arthur Wheatley, Memphis, Tenn.

FOX HOUNDS.—1st, Ben, Samuel H. Turrill, Chicago; 2d, Rover, Laurens H. Rascall, Grand Rapids, Mich.; 3d, Plato, Samuel H. Terrill, Chicago.

NATIVE ENGLISH SETTER PUPS.—1st, Dick, L. F. McLean, Beloit, Wis.; 2d, Joe, Frank G. Sheldon, Hudson, Mich.; 3d, Daisey, F. Donahue, La Salle, Ill.

ENGLISH SETTER PUPS FROM IMPORTED STOCK.—1st, Queen Bess, Arnold Burges, Mayesville, Ky.; 2d, Rose, Luther Adams, Boston, Mass.; 3d, Regent, Luther Adams, Boston, Mass.

IMPORTED ENGLISH SETTER DOG, FOR STOCK PURPOSES.—Premium to Rock, Luther Adams, Boston, Mass.

NATIVE ENGLISH SETTER DOG, FOR STOCK PURPOSES.—Premium to Grouse, J. H. Whitman, 95 Lake street, Chicago.

BRACE OF IMPORTED ENGLISH SETTERS, KNOWN AS "FIELD TRIAL BREED."—Premium to L. H. Smith, Strathroy, Ont.

THE SPRINGFIELD POULTRY SHOW.—When the Rod and Gun Club of Springfield, Mass., takes hold of any enterprise, whether in the shape of a bench show or poultry exhibition, it is pretty certain to succeed, as witness the magnificent bench show of last year, which was probably, up to that time, the finest ever held in this country, notwithstanding the inexperience of the members of the club in conducting such affairs. Their co-operation, therefore, with the Connecticut State Poultry Society and the New England Poultry Club, in the management of the consolidated exhibition of poultry, pigeons, and pet stock to be held at Springfield on the 15th inst., is a sufficient guarantee of success. A few weeks later the Rod and Gun Club hold a bench show, to which we desire to call the attention of sportsmen of all sections of the country. The premium lists are now in course of preparation, and will be noticed as soon as received.

MR. BURGES' BOOK.—The long-expected book on the Dog, by Mr. Arnold Burges, of Kentucky, is now almost ready for issue, and will probably be given to the public within a week or ten days, by Messrs. J. B. Ford & Co., the publishers. Not having seen the advance pages, we cannot as yet speak of the merits of the book; but from Mr. Burges' long experience as a breeder and facility as a writer, these cannot but be of a high order. The illustrations are engravings of celebrated dogs, the majority having appeared originally in these columns.

ARRIVAL OF KATHLEEN.—Mr. Wm. Jarvis, of Claremont, N. H., has at length received his fine and long-expected red Irish setter bitch Kathleen. She comes direct from the kennel of John M. Niall, Esq., Killaloe, Ireland, and will prove a fitting mate for handsome Dick. We have Kathleen's pedigree, and will publish it when we can give the necessary space.

—Mr. J. B. Alexander's (of Henderson, Ky.) fine Irish puppy, Kaiser, out of Kitty, by Plunket, is growing finely, and promises to make his mark at Memphis next Fall. He will also be shown at the meeting of the Kentucky State Association, to be held in May of this year.

CORRECTION.—In our description of Mr. Saltus' Dash and Bess last week, we should have said, in enumerating the progeny of Bess, now in the hands of several gentleman, that Mr. Jarvis, of New Hampshire, had them, instead of Mr. James, as printed.

Mr. C. H. Raymond donates a puppy by Pride of the Border, out of Dimity, as a special premium to the Springfield Bench Show next month.

—Geo. M. Whitman, of N. Uxbridge, Mass., claims the name of "Duke" for a pointer puppy, (white with black spots), sired by Old Phil out of Fanny, whelped October 29th, 1875, at the Kennel of A. C. Waddell, Newtown, New Jersey.

A LARGE LITTER.—According to the Wilmington *Morning Star*, a gentleman in that city owns a bitch that on Sunday evening last was safely delivered of nineteen pups.

IRISH SETTERS.

SAVANNAH, GA., January 24th, 1876.

EDITOR FOREST AND STREAM:—

In the *Rod and Gun* of the 15th inst., in answers to correspondents, I see the Field Editor of that paper in answer to questions to two parties relative to the color of the Irish setter, replies to one that the pure Irish setter is of two colors, red and white, and red, one strain equally as pure and good as the other, although the red is the favorite; to the other he gives a similar answer, but adds, "the person who thinks that Irish setters are pure of all colors is either a knave or a fool."

I would like to know if this authority on all dog matters, as one of the questioners above alluded to calls him, has ever been in Ireland, or visited any of the larger kennels there, or if he has ever seen any Irish setter save some of those which have of late years been imported into this country? Or what does he know about this particular breed of dogs that he makes such a statement as the last one quoted? Why does he not give some other and better authority than his own personal opinion—for such it must be—in this matter.

The *Rod and Gun* has always looked upon "Frank Forester" as an undisputed authority on the dog, and yet, according to the statement of its Field Editor, that genial and accomplished gentleman, and thorough sportsman must have been a knave or a fool. He, ("Frank Forester"), gives the color of the Irish setter as red, red and white, and yellow, and in an article from his pen entitled The Yorkshire Moors, in speaking of his father's kennel, he refers to a brace of pure Irish setters *orange and white* in color. "Old Calubar," that talented contributor to the London *Field*, and thorough sportsman, has repeatedly advertised in its columns pure Irish setters of a *chestnut* color for sale. Was he a knave or a fool? That Nestor of American sportsmen, your venerable Field Editor, whose great experience in breeding setters is only equalled by that of one living man, Mr. Laverack, says that pure Irish setters are no doubt of all colors. The man who would directly or indirectly apply such epithets to him would only be judging him by himself.

There are many other authorities I could quote to prove that the Irish setter is of more colors than red, and red and white, but I will not take up the space in your columns to do so, as that has already been done in the very able article on Color in Setters, by Capt. J. P. White, of this city, and which was published in your paper some time ago.

The Field Editor of the *Rod and Gun* in making the statement I have quoted has laid himself open to severe criticism from sportsmen, not only in this country, but in England and Ireland. While I will admit that the deep, rich red Irish setter is the handsomest dog a sportsman can have, I emphatically deny that he has to be either red, or red and white in color to be of pure blood. GEORGIA.

A HOSPITAL FOR DOGS.

ELIZABETH, N. J., February 1st, 1876.

EDITOR FOREST AND STREAM:—

As far as my observation goes, seven-tenths of the whole number of blooded dogs that have distemper yield up the ghost—which nine-tenths of the mongrels, cross-breeds, and curs recover from it. I have bred quite a number of good dogs, and have found them cursed with two enemies—worms and distemper. The first will crawl and sneak away from the dog upon being treated with injections of quassia tea, or internal doses of areca nut, but the latter goes hand in hand with death for the victim. Upon reckoning up, I find that I have lost nine valuable dogs between the ages of one and two and a half years, all of whom died from distemper. Some of them were treated with all remedies known generally, and with the best of care and attention; others were allowed to "gang their own gait;" the result was the same in either case.

Is the blood of the true blues too aristocratic, or are their constitutions too enfeebled to withstand the same punishment visited upon their race? Be that answered as it may, the majority of true lovers of the dog believe with me, that in this country at least, there is no known certain cure for distemper in dogs. We have M. D.'s for ourselves and M. D.'s for our horses and cattle—but for our most faithful friends, we have here and there a — *Quack*.

Why can't we have a hospital for sick and wounded dogs, where they may receive attendance from an educated physician and be properly treated? It certainly would not take long for a practical doctor to master the anatomy of the dog, and to discover the diseases most common to them together with the best mode of treatment. He could have medicines put up for shipment, by express, to any point desired, so that those, who by reason of distance could not send the dog, might be able to get advice and help by paying for it in advance. To the subscriber who pays a certain sum, say $5, he shall become a member of the Association having it in charge, and upon receiving his dog at the hospital, he shall pay but a nominal sum for board and attendance. The subscription to be yearly. Dogs treated for others than members, shall be charged for accordingly. There are, I believe many men who will pay handsomely for the support and maintainance of such an institution, and you, Mr. Editor, are best qualified to agitate the question. I know "Squire's" sympathies tend toward helping the poor brutes, and he perhaps knows more of and about them, than any man in the United States. E. S. WANMAKER.

Such an institution as that suggested by our correspondent would, in time, be practicable and beneficial. At the present time we believe the trouble could be better met by the establishment of suitable kennels by parties of five or six gentlemen, who could engage one able man to oversee it, particularly during the non shooting season. We believe the New York Kennel Club, who, by the way, we hear are to remove their headquarters to Jerome Park, have scarcely ever lost a dog from distemper.

KENNEL PRODUCE.—The fine Gildersleeve bitch Flora, obtained from the Kennel of Horace Smith, Esq., our Kennel Editor, has recently given birth to nine pups, six dogs and three gyps, by Mr. Forman Taylor's famous one-eyed Sancho.

THE ALASKA SEAL HERDS.—Assistant Treasury-Agent Falconer reported last fall that the number of rookeries at the seal islands has increased at least one-third over that of any year since 1870. The young seals, from one year old and up to four, have increased over one-half. He is of the opinion that, should this continue, 5,000 additional seals could be taken annually without detriment to the rookeries. As regards the old bulls, there seems to be a slight falling off, which can be accounted for in a measure owing to the yearly increase of female seals.

—Belle Angevine pears, from Antwerp, are selling in Covent Garden Market, London, for $150 per dozen. Some of these fine specimens weigh four and a half pounds each.

Fish Culture.

CONVENTION OF THE AMERICAN FISH CULTURISTS ASSOCIATION.

THE fifth annual convention of the Association was held on Tuesday, the 8th inst., at the office of Mr. Geo. Shepard Page, the Vice-President. The following gentlemen were present: Hon. R. B. Roosevelt, President, in the chair; Messrs. Thos. S. Shepard, N. Y.; Morgan, W. Ayres, of Brooklyn; B. B. Porter, Oakland, N. J.; John C. Roe, Paterson, N. J.; Jno. W. Green, N. Y.; Eugene G. Blackford, N. Y.; John J. Muir, Brooklyn; John J. Van Wyck, N. Y.; H. H. Hooper, Charleston, N. H.; J. P. Trimbell, N. Y.; Philip Neidlinger, N. Y.; Geo. E. Ward, N. Y.; Charles B. Evarts, Windsor, Vt.; N. W. Hunt, Brooklyn; S. H. Furman, N. Y.; Wm. M. Tileston, N. Y.; Fred Mather, Honeoye Falls, B. Phillips, Brooklyn; James Dederick, N. Y.; George S. Page, A. B. Malcomson, T. C. Banks and others.

Mr. Roosevelt, the President, opened the meeting with his usual able address, summarizing the operations of the various Fish Commissioners, and those of this State in particular during the past year. In previous years the New York Commissioners had not paid so much attention to the propagation of trout as they had to other fish; shad, for instance, but during the past season they had purchased from Mr. A. S. Collins his hatching establishment at Caledonia, which, from its proximity to the State hatching house, was admirably adapted to the purpose. This culture of trout, however, was not being conducted at public expense for the personal benefit of the Commissioners, but for the purpose of restocking public streams and waters under private control, and the Commissioners had advertised widely the fact that trout fry could be had free of cost on application to Mr. Seth Green, at Rochester. The supply of trout eggs procured this year, would reach to the extent of 20,000,000. Applications were being received in large numbers, and there was no reason why our trout streams, so largely depleted of late years, should not now be fully restocked. The absence of Mr. Seth Green was owing to the fact that his whole time was occupied with the preparations necessary to disposing of this immense quantity of eggs. The sturgeon is a fish which, of late years, has been much neglected, and very unjustly. In Europe, where they are not so abundant as with us, the sturgeon is regarded as the king of fish. Only a few years since they were so abundant on the Hudson as to sell for one cent per pound; now, if steps are not taken to protect or increase them by artificial propagation, they will soon be almost extinct. The sturgeon is emphatically a fish for the public, and his meat the most substantial of all fish. When they become scarce, people will look upon them as a delicacy. A few years ago the porgie was looked upon with scorn; now, that have become somewhat scarce, people have discovered that they are one of our best pan fish. And so with the herring; because they are plentiful and cheap, we ignore them, and yet we buy and cook fish every day that cannot compare with the herring for the table. Sturgeon will come to be as dear as trout, viz: $1 per pound, if we do not protect and increase them. The attempt to propagate them artificially was first made year before last, but for some reason, with but little success; last year the Commissioners were more successful. There are parties on the upper Hudson who make a business of taking the sturgeon for the sake of the roe, from which they make caviare. The roe is taken before it is perfectly ripe, and when in the condition at which it is most desirable for propagation. Taking advantage of this fact the Commissioners were enabled to impregnate several hundred thousand eggs, but not so many as they will hatch another year.

Mr. A. S. Collins, the regular Secretary of the Association being absent, it was moved and carried that Mr. M. C. Edmunds of Vermont be requested to act as Secretary *pro tem.* A letter was read from Mr. B. F. Bowles Treasurer of the Association, advising his departure for Europe and enclosing a check for the balance of the funds of the Association remaining in his hands. Also one from Mr. Sprout of Muncy, Lycoming Co., Penn., describing his operations in trout culture. He has now six ponds, well shaded and extending over half a mile in length, with a depth of water ranging from three inches to five feet. Also one from Prof. Baird, regretting his inability to be present, the severe labors in connection with his preparations for the Centennial rendering it impossible.

A voluminous communication was received from the veteran fish culturist Seth Green, detailing in his own quaint and inimitable style his operations during the past year. As we shall print this document in full at a later date, we shall pass it now, mentioning as probably the most important fact contained in it, that Mr. Green has succeeded in obtaining a hybrid or cross between the California Salmon and our brook trout, which he thinks may be very valuable for some waters; the eggs are now far advanced towards maturity. He cites the fact that the successful transportation of fish from one place to another has assumed the importance of a trade. A communication was received from Mr. E. T. Sterling, giving an account of the operations of the Fish Commissioners of Ohio during the past year. As we shall print an abstract of their report, we will only give here Mr. Sterling's summary, which is as follows:—"The result of our experience has taught us, 1st, that we cannot hatch frozen white fish eggs. 2d, that a fishes egg, like the human head, can be pounded out of shape, return to its natural form and contain its vitality. 3, that very muddy water does not at all interfere with the perfect development of the white-fish eggs, from the first stage of pregnancy to the birth of the young stranger, when he comes forth with sac well victualed, and finally, that we believe the eggs on the spawning beds of the lake will hatch out several weeks before the first of April this season in case the water continues as at present, viz: 38°, and that nature will have the natural food for the young fish ready."

Mr. Fred Mather was then called on to relate his experience in fish culture for the past year, which was as follows: "In May he was sent by Prof. Baird to the Pamunkey River, Virginia to hatch shad eggs, but with poor

success for the reasons stated in the letter from Mr. Green, viz: few spawners. He then tried his newly invented can for hatching fish eggs at sea, both at the Smithsonian, and upon the Delaware River with good success. After which he was sent with shad to Louisana for the tributaries of Lake Ponchartrain where he collected the fishes of that region for the Smithsonian. In October the Virginia Commissioners sent for him to superintend their hatching-houses at Blacksburg, and Lexington, where he hatched many California salmon for the James and its tributaries Coming north he found that upon recommendation of Prof. Baird, the Centennial Agriculture Bureau wished him to take charge of their aquariums and exhibition of live fish, which was accepted, and he now asked the assistance and co-operation of the fish culturists and commissioners in shape of specimens of live fish, crustacea, &c., or for specimens of fish food, either alive or in alcohol. That he will be in Philadelphia in March, and may issue a circular stating what will be required for the exhibition and how to send it; also promising that all donations shall receive due credit, not only upon the tanks, but also upon the catalogues and publisher reports.

It was moved that a committee be appointed to nominate officers for the ensuing year, and the President appointed Messrs. Porter, Evarts and Hudson, as such committee.

The question of the American Fish Culturists' Association being represented at the Centennial was discussed, and it was resolved that application be made for a room in the Government building, where discussions and conference could be held not only among our own fish culturists', but with those from abroad who would most probably visit us at that time. Messrs. Page, Malcomson and Muir were appointed a committee to carry this resolution into effect. Mr. Geo. E. Ward was appointed Treasurer *pro tem* and a recess was then taken.

After recess the committee upon nominations reported the following names as those selected for officers for 1876 7. President, Hon. R. B. Roosevelt; Vice President, Geo. Shepard Page; Treasurer, Eugene G. Blackford; Secretary, M. E. Edmunds; Executive Committee, H. G. Reider, Easton, Pa.; Fred Mather, Honeoye Falls, N. Y.; Alex. Kent, Baltimore, Md.; W. F. Whitcher, Ottawa, Ca.; Seth Green, Rochester, N. Y. Prof. James W. Milner being called upon, related his experiences during the past year, more particularly with regard to operations with shad. His attempts at getting spawn commenced in North Carolina, from whence he went to the Potomac. His movements in connection with the Fish Commissioners of Virginia and Maryland, have already been partially detailed in these columns in connection with our reports from those States. He described the immense seines used on the Potomac, some of them four-fifths of a mile in length, and hauled to the shore by means of a steam engine. Sometimes 1,800 shad were taken at a haul, and the net used only once on each tide. No less than 7,000,000 shad were placed in the Connecticut, above the Holyoke dam, the object being, if possible, to originate a breed of fish whose instincts would take them on their return from the sea above this obstruction to the spawning beds above. The eggs of the California salmon received this year, came through in capital order. Half a million or more were placed in the Kankakee, in Michigan. The eggs of the Atlantic salamon are just about ready for distribution. Prof. Milner also describes the work of the United States Fish Commission at Woods Hole, last summer, when much that was of great importance to the scientific world was accomplished. He also gave an account of what was being done in preparing for the fish display at the Centennial.

A resolution was offered fixing a price for trout eggs and fry, under the sanction of the association, which, however, was negotiated.

Mr. Blackford called the attention of the meeting to the necessity of procuring reliable statistics regarding the fish supply of the United States. He said:—

"It is impossible that we should see clearly what we are driving at unless we start with that which must be the foundation on which we must build. Suppose this was a live stock association, given to the raising of horses, or cows. The first thing we would do—being practical people—would be to get some positive data as to production. Once production noted, consumption is readily derived. It would be of great importance for the association to know how many trout were artificially produced and sold in the various markets of the country. Starting from this point, I should be even desirous of going further. If the Smithsonian Institution, so ably represented by Prof. Baird, is laboring to account for the increase or diminishing of certain classes of sea fish in various years, it can only arrive at a just conclusion by being fully informed as to the catch of fishes on our coast. The hearsay ought to be discarded, and nothing but the positive facts cared for. If France, and a portion of England, give yearly statistics as to the harvests of the sea, why should we not furnish the same thing to the American public? I should think that, as far as regards the trout culturist, the Fish Commissioners of the various States might, without very much trouble, furnish what might be a reliable account of the cultivated trout sold within their jurisdiction.

As to the sea fish, such an important subject, having to do with the food of the people, I do not see why facts in regard to them are not obtainable, though to secure them the means to be employed would be more difficult. Having these ideas in view, I shall propose the following preamble and resolution:

Whereas, The Fish Culturists' Association believe that data in regard to the catch of staple fish, such as are sold in the markets of the country, would be of great importance, allowing the positive determination of questions of vast commercial and scientific importance, be it

Resolved, That the Fish Culturists' Association request the Fish Commissioners to urge on the State Governments of which they are the representatives, the necessity of the State appointing certain officers, whose duty it shall be to collect such data, so that reliable information may be obtained in regard to the catch of staple fish in the various States.

Messrs. Mather, Milner and Phillips were appointed a committee to report upon the advisability of presenting the Society's diplomas or medals for inventions in fish culture, to report at the next meeting. It was also resolved that all fish culturists be requested to report at the next meeting on their various ways of propagating fish.

The next meeting of the Association will probably be held at Philadelphia during the Summer, but the regular meeting will be held on the second Wednesday in February, 1877.

IMPREGNATION OF FISH WITH GAS-TAR, ETC.

AQUADALE PONDS, WENONAH, N. J.

EDITOR FOREST AND STREAM:—

Noticing the item from one of your Philadelphia correspondents concerning the spoiling of fish in the Schuylkill by petroleum, gas-tar, etc., reminds me that last fall while moving black bass over the Camden and Amboy Railroad, a Philadelphia gentleman came into the car to look at the bass. In course of conversation he informed me that for years he had been in the habit of fishing up the Schuylkill, but the contamination of the water by petroleum and factory refuse was ruining the flavor of the fish. He expressed himself delighted at the action of the West Jersey Game Protective Society in stocking West Jersey waters with valuable game and food fish, which would ere long be not only abundant but healthy.

Noting also the item from your Terre Haute correspondent as to the finding of an undigested minnow in the stomach of a large black bass this winter, I will say that I have a spring reservoir, bricked sides and bottom, which I have during the late fall and up to January 1st kept a few three-pound black bass in order to study their habits. The day before I took them out I put in with them a pike or pickerel six or seven inches in length. When I took the bass out the next day the pike had disappeared. MILTON P. PEIRCE.

FISHWAYS.

The following correspondence has been sent to us for publication by Mr. Seth Green, with a view to answering at one and the same time numerous questions addressed him on the same subject:—

OHIO STATE ASSOCIATION FOR THE PROTECTION OF GAME AND FISH
CINCINNATI, January, 27th, 1876.

SETH GREEN, ESQ.:—

My Dear Sir—A bill is now pending in the Senate of Ohio to repeal the present law which compels millers to erect fishways over dams. It is expected that there will be a close vote on it. The object simply is, of course, to get out of paying for the chute.

In the discussion of it, the other day, it was said by some Senators that the fish chute had proved to be an utter failure—that your experience in the East had demonstrated that—and that fish would not ascend the chutes to spawn; in a word, that it was all useless. We are very anxious to have your views upon it, recognizing as we do, the great weight of your authority.

This bill will be pushed to a vote in a week or so, and, presuming on the interest you take in the subject, we would be obliged if you will inform us at an early day. THOS. A. LOGAN.

ROCHESTER, January 30th, 1876.

THOS. A. LOGAN, ESQ.:

My Dear Sir—Yours is received. I do not believe any man has any more right to put an obstruction in any public stream to stop the free passage of fish up and down than he has to put a fence across a public road and stop the free passage of people on the highway. As to fishways being a failure in this part of the country, I would say that there have been but very few built. There is one at Schenectady on a dam in the Mohawk River that is a perfect success. It is the Bowen patent. But suppose the few that have been built had proved to be failures, that is no reason why they could not be made a success. I say they can be made a success, and if I had not had any harder problems to solve since I commenced fish breeding than to get up a fishway that the fish would have an easy passage over, I would not have so many gray hairs on my head as I have to day. SETH GREEN.

VEGETABLE DIET FOR TROUT.

January, 1876.

EDITOR FOREST AND STREAM:—

I have been much interested in a little controversy which has lately appeared in your paper, and would like to add my ideas on the subject to the discussion, particularly as the one point on which I doubt the good results of entirely vegetable diet for trout has not yet been touched upon. Undoubtedly trout can be starved into taking only vegetable food, and may, apparently, thrive and grow fat on it, and be in good condition to send to market to become food in their time. But, does a diet which is entirely unnatural to them in their normal condition fit them to strong healthy offspring? Has any fish trader tried taking ova and rearing young trout from parent fish fed on only vegetable diet? I should be glad to have Mr. Hale try it thoroughly and let us know the results.

We have, at the Cold Spring Trout Ponds, in Charlestown, N. H., taken the ova, and from them reared the young fry from trout owned by a neighboring fish breeder which were fed almost entirely on curd, little or no meat being given them, and not more than a half or one-third of them were perfect fish, but were monstrosities of one kind or other; double heads and curved spines preponderating, while very many had "blue swelling." As the ponds and parent fish of our neighbor were in good condition in every way, I could not account for this tendency to deformity by any other cause than the want of proper animal food. Therefore, if trout feed on curd alone, which is animal diet, do not produce strong healthy progeny, how will it be with the offspring of those fed entirely on vegetable matter? And, also, being, as you say, cannibals, will they not much more readily devour each other than when having moderate rations of meat served them with other things? Does Mr. Hale know that, while his fish appear to be vegetarians, they are not when not observed, quietly devouring each other by way of desert to their vegetarian repast? Hoping to hear soon on this question, I remain, gentlemen, FRANCES W. WEBBER.

SALMON TROUT FRY GRATIS.

ROCHESTER, N. Y.

EDITOR FOREST AND STREAM:—

Our State Hatching House is boiling over with young salmon trout, and all parties wishing them to stock any public waters in New York State will send their orders as soon as possible. I will send them to any locality in New York State by the parties paying the traveling expenses of a messenger, and giving the name of the lake, and full directions where to come with the young fry, and who to call upon for settlement. The above is all there is to explain. Send your orders as soon as possible, and they will be filled beyond your expectations Address

SETH GREEN, Rochester, N. Y.

THE NEW BRUNSWICK FISHERIES.—The transportation of frozen fresh fish from Northern New Brunswick over the Inter-Colonial Railroad is assuming very large proportions. Last week 115,000 barrels were brought to St. John alone, chiefly for shipment to the United States markets.

—Canned fish generally is not a particularly wholesome food, and is frequently dangerous. It should never be eaten unless it has been heated to a boiling temperature shortly before, even though it is preferred cold subsequently; and it is particularly liable to spoil soon after opening, under the most favorable circumstances. Brands devoid of these necessary directions for safe use should be avoided, and persons who persist in putting such food upon the market without precautions, should be placed under legal restraint.—*Southern.*

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.* Gronper, *Epinephelus nigritus.*
Drum (two species.) Family *Sciæ*- Trout (black bass,) *Centropristis nidc. atrarius.*
Kingfish, *Menticirrus nebulosus.* Striped Bass or Rockfish, *Roccus lineatus.*
Sea Bass, *Scienops ocellatus.* Tailor-fish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.* Black bass, *Micropterus salmoides;* *M. nigricans.*
Snapper, *Lutjanus cæxus.*

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could in no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—Fish continues to be in abundant supply, as the open weather interferes but little with the operations of our local fishermen. Our quotations are: Bass, striped, 25 cents per pound; smelts, from Maine, 15 cents; blue fish, 15 cents; salmon, frozen, 50 cents; mackerel each, 20 cents; shad, from N. C., extras, $2 each; Savannah, do., 75 cents; white perch, 18 cents; Spanish mackerel, 50 cents; green turtle, 22 cents; terrapin per dozen, $12; frost fish, 8 cents; halibut, 16 cents, haddock, 8 cents; king fish, from Key West, 20 cents; codfish, 10 cents; black fish, 18 cents; herring, from Newfoundland, 8 cents; flounders, large, 15 cents; eels, 18 cents; lobsters, live, 10 cents; sheepshead, 30 cents; scollops per gallon, $1; soft clams, per 100, 30 cents to 60 cents; white fish, 18 cents; pickerel, 15 cents; sun fish, 12 cents; perch, yellow, 12 cents; salmon trout, 20 cents; ciscoes, 12 cents; hard crabs, per 100, $1; soft crabs, per dozen, 75 cents; pompano, $1 per pound.

SMELT FISHING.—Large numbers of smelts have been caught through the ice upon the tide ponds, at Danversport, Mass., the past week. Twenty-five to thirty dozen a day have been taken by some persons. They are taken with hand lines, and run exceedingly large; three were weighed and found to weigh just a pound. Smelt fishing from the wharves has been very poor for a number of seasons past. This is probably owing to the destruction of a large number of fish during the months of March and April, when passing up the stream to spawn. One evening last Spring, while passing a brook in this place, I saw fully thirty men and boys engaged in taking them with dip nets, which is contrary to the laws of the State. The town of Danvers has Fish Commissioners, but they seem to take no interest in stopping this wanton destruction. A. F. G.

HOW TO MAKE "NEEDLE POINT" HOOKS WITHOUT BEARDS.—Select your favorite bend. Ascertain that it is made of well-tempered wire. A hook can be tested by thrusting it into a piece of wood, and with a pair of pliers judge of its strength. Some will draw out straight; others will snap in a weak place, while a good hook, well tempered, will hold its own with a fair pull. Hold the hook firmly between the forefinger and thumb of the left hand; then with a small jeweller's file (the English make is best) sharpen the point. A few well-turned strokes from an expert, and you have a hook with a clean point, as sharp and as bright as a needle—a "needle point" without the annealing process. Now, if the beard is an objection, break it off with a pair of small pliers, and smooth away any rough point with the file. Who first introduced fish-hooks? Who gave them the beard, and why? I think it is a subject on which even Father Isaac is silent. Was there a beard on the hook that Pliny tells of that caught the fish where an ox chain was used for a casting line? Once on laying open the head of a trout for microscopical study, on looking at the teeth in the throat, I saw only vast rows of beards. There they were—teeth all bent backwards and at the same angle as the beard. What goes down the throat of a fish won't come up—no regurgitating symptoms there. The beard of the hook is the model nature gave for a firm hold on slimy, slippery things. A hook with a "needle point" is a good thing; but a hook with a "needle point" and beard a better thing. But if any one is anxious to make the experiment of fishing with a beardless hook, let them break the beard off some half-worn fly and try. When one sits in a boat armed with a short rod and short line, and snaps the fish in without the exhausting run for shelter, where the object is to fill the pond and not the basket, of course the beard is an objection; for all a poor trout can do with its lacerated jaws is to sulk in a corner until better, or else turn on its side and die.—SARAH J. MCBRIDE. *Mumford, Monroe Co., N. Y., Jan. 29th, 1876.*

SHAD IN THE DELAWARE.—On Monday week a shad weighing 4¾ pounds was taken in the Delaware off Bombay Hook, and was served up at dinner at the Reform Club, of Philadelphia, on the following evening. The Germantown *Telegraph* says:—

"During the past three months, owing to the mildness of the weather, occasional shad have been captured in the lower Delaware. In November last, a specimen weighing four and a half pounds was taken near Reedy Island. During every Winter, if the weather is moderate and clear for a week or longer in January or February, a few are netted near Bombay Hook. They undoubtedly remain during Winter in the deep water about that locality, and when the temperature rises they commence to ascend the river. Not many years ago, after a mild atmosphere of several weeks' duration, followed by severe freezing weather, a school of shad were discovered near this city, frozen up in a small field of ice, from which they were taken and sold at high prices, the fish apparently having been caught 'napping' by the frost only a day or two before."

CASTING THE FLY.—We quoted last week from one of Mr. Geo. Dawson's capital letters to the Albany *Evening Journal*, some of his remarks on fly casting. The subject is so ably handled, Mr. Dawson wielding his pen with the same grace and ease as he does his fly-rod, that we are tempted to continue his remarks:—

"No two anglers ever cast exactly alike. One gets out his eighty feet of line by a perfectly straight backward and forward movement of his rod. This is the most natural movement, the most simple, and, generally, the most effective. But in this movement, without a slight deviation from a straight line somewhere, there is always danger that your line or leader may, at some point in their journey, overlap. This danger is always imminent with a brisk breeze at your back. I do not, of course, invariably adhere to this movement—never when the necessities of the case require a side cast; but where no material divergence from a straight line is necessary, I find it the most effective. Others give the rod its backward movement over the left shoulder, and its forward movement over the right. This gives the line a graceful sweep which is not only artistic but avoids the danger of lapping, which is always possible with a perfectly straight cast. To make an equally long cast with this movement, however, requires greater skill than with the other; for, without the very nicest appreciation of time and distance, the curved sweep of the line will prevent it from acquiring the direct position indispensable to a perfect forward projection. But those who adopt this movement generally know what they are about. Indeed, the very best anglers of my acquaintance (notably Gen. Arthur) practice it altogether. Others invariably make the side or under cast, seldom lifting their rods above their shoulder. There are supposed advantages in such a movement, but I have never been able to discover them. One must have a large space of clear water on either side of him to escape such entanglements with brush or tree tops as no angler covets. Of course there are times when this movement is necessary to enable one to reach desirable objective points, but it is not a movement to "tie to." Others still have no fixed mode of casting. It is their boast that they are equally expert in all. As a rule, however, you will find that in angling as in every thing else, those who are "equally expert in all," rarely excel in any. In casting, attitude may not be every thing, but it is a great deal. And what a multitude of attitudes anglers assume? Some stand as erect as pillars, swaying neither to the right nor to the left, whatever reach of line they covet. Some sway to and fro, with every movement of their rod, like a tall pine in a tempest. Others throw themselves forward as if ambitious to follow their fly in person; while now and then one casts with an ease and grace of attitude and of movement which would excite the envy and admiration of an athlete or sculptor. As I write, the recollection of one such comes back to me very pleasantly. He was an Adonis in form and *physique*, and his casting was the perfect "poetry of motion." Although like many of his contemporaries, his frosted locks and furrowed cheeks give token of advancing years, he still finds pleasure in the attractive pastime of angling. You have but to say to him, as Peter said to his discouolate brethren, "I go a-fishing," to secure from him their response, "I go also." But however one casts, it is impossible always to distinguish between the strike of a trout and that of a salmon; and as both are often found in the same pool, the angler is frequently annoyed by a call from the one when he is only eager to pay his respects to the other. The most experienced are often deceived, and they sometimes only discover their mistake after many minutes of exciting play. A four or five pound trout (and trout of these weights are very common in these waters) can no more be hurried home than a twenty pound salmon. The rod will only bear a certain pressure, and for a little while, a five pound trout reaches this point as unmistakably as the larger fish."

FISHING IN NEW HAMPSHIRE.—The Dover *Press* says: "Fishing on the Squamscott river has not been very successful this winter, bass being pretty scarce, and but few having been caught as yet. There is one place, called the "Hop-pole," about a mile above South Market village, which is considered by all the old fishermen the best place to catch bass, when there are any, and of course there is a great deal of competition for it, but for over twenty-five years past Capt. John French, of this town, has been the successful competitor. This year some of the young men thought they would beat the Captain and strike the first place, but when they got there they found the Captain had been there before them. Capt. French, who is in his seventy-second year, enjoys his triumph over the boys very much, and tells them they will have to wait until the "old man" is gone, before they can get it. I think they will. Perhaps some of your readers may be in the dark about staking out places to fish. I will briefly enlighten them. As soon as the ice is formed, sticks or brush are stuck into the ice, and the one that does it holds the place as long as the ice lasts."

Speaking of New Hampshire fishermen, a correspondent writes from that State as follows:

"One of the gentlemen named in connection with the nomination for Governor by the Democratic party, the Hon. Warren F. Daniels, is an ardent fisherman, and visits the Albany trout stream every year. Capt. Daniel Marcy, who was nominated, is an old sailor. Col. John B. Clarke, of the Manchester *Mirror*, is devoted alike to "fir, fin, and feather," line, trap, and gun; but, if he likes one branch of sport more than other, it is cooning."

F. D. T.

MOVEMENTS OF THE FISHING FLEET.—There is more life visible along the wharves the past week, than for several weeks agone, as the Georges fleet are being got in readiness for their first trips of the season. Men are busily engaged in sending down top-masts, getting the ice houses built, and putting everything below and aloft on board their crafts in the staunchest and snuggest condition for their coming conflicts with old old Boreas and Neptune, on Georges' stormy banks. There is a sufficiency of frozen herring to bait the sixty sail of vessels which are all ready for sailing; but the failure of the herring fishery in Bouie Bay and Bay of Islands is greatly to be regretted, as it will be likely to cause a short stock.

There have been 18 arrivals of the fleet the past week, 14 from the Bank fisheries and 4 of the herring fleet. The receipts of fish in round numbers have been 346,000 pounds of codfish, and 132,000 pounds of halibut. Sales of the latter have been made at 7 3 1 2 cents. per pound.—*Cape Ann Advertiser, Feb. 4.*

Yachting and Boating.

BOSTON, February 3d, 1876.

EDITOR FOREST AND STREAM:—

Yachting is talked here with enthusiasm. Many new but small yachts are being built by the different boat builders; among them is a fine keel sloop by Pierce Bros., City Point, South Boston. She is built in a thorough manner, neat, and elegant; her length over all is 28 feet; beam, 10 feet 6 inches; draft, 3 feet 9 inches. If lines betoken speed, we shall rate her among the fastest. We wish her success as a model of architecture. Messrs. Lawley & Son, of same place, have just started a cat boat, 24 feet over all; 10 feet beam; 3 feet draft. Her lines are excellent. She is different from the general run of cat-rigged class, being very roomy in the cabin for so small a craft. Mr. D. J. Lawler has just modeled a very seaworthy sloop for a Mr. McManus, of East Boston. She is to be 28 feet over all; 11 feet beam; 5 feet 6 inches in draft. Her friends predict a brilliant record for her. Many yachtsmen are actively going to Philadelphia next summer to participate in the Centennial regattas. Perhaps the new ones will put in an appearance.

Mr. Wendall, of East Boston, is building a fine keel sloop 26 feet long over all; 9 feet beam; 3 feet 6 inches draft. Her owner intends crowding on canvass, and make her lines tell. She will have an iron keel of 500 or 600 pounds to offset the large spread of duck. The last two enter the East Boston Yacht Club, and are an honor to the fleet.

There are others of which we have no authenticated account. Hoping this will interest all lovers of the sport, we remain ON-LOOKER.

PHILADELPHIA, February 23, 1876.

EDITOR FOREST AND STREAM:—

Messrs. Enstis and Rees paid the Schuylkill Navy an unofficial visit recently, and were taken up the river on the steamer Rockland by Commodore Ferguson. They were much pleased with the course. In the evening, by invitation, they attended the meeting of the Centennial regatta, where an interchange of views were had in reference to the proposed International College regattas, both here and at Saratoga.

The Association of American Colleges has, as yet, no official information that their challenge to row in July will not be accepted, but for the reasons set forth in late numbers of *Bell's Life* and *Pall Mall Gazette*, it is more than probable that some modification of that challenge will have to be made to enable those rowing at Henley to come over.

The College Regatta Committee having received their authority and instructions from the Convention would not, in any event, have authority to change the time or place of their race, but they think that the feeling among college men is strong to have the race, and wish to be prepared to meet any contingency that may arise.

That Oxford, Cambridge, and Dublin will be represented at Philadelphia (although at this early date not certain) there is no doubt, and our American colleges will scarcely allow them to go back without an intercollegiate race. SCULLS.

A dispatch received subsequent to the date of our correspondent's letter—which, by-the-way, reached us just too late for our last edition—states that the Cambridge University Boat Club, after discussing the question, has decided to decline the challenge of the Rowing Association of American Colleges. Consideration of the invitation from Philadelphia to take part in the Centennial regatta was postponed until after the Oxford and Cambridge race, when an effort will be made to get six oarsmen to visit the United States—but on their own responsibility, and not as representatives of the university. From this it would seem probable that the prospects of an International race during the Summer were rather slim. However, the excitement attending the opening of the Exhibition will not be confined to this country, and in the desire to be present some of the college men will most likely make up a crew or two and come over with the double object of seeing the Exhibition and carrying home cups.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

H. A. F., Boston.—Can you give me the address of any dealer in, or collector of birds' eggs in California? Ans. Ferdinand Gruber, 636 California street, San Francisco, Cal.

G. M. F., Englewood, N. J.—The circumstance of the field mouse fleeing with her young hanging on to her teats is not so unique as you suppose, but is their usual and widely observed habit.

J. S., New York.—Can you tell me of any place in this city where I can obtain ferrets trained for rabbit hunting? Ans. Don't know of any in this city—address Chas. Van Vechten, Victor, N. Y

SNOW DRIFT, Virginia City, Nev.—I have an idea that Giant Powder should be a "cure" in the fish pond clearing business, provided enough is used, and used right. Has any one tried it? Ans. If the pond had natural banks it would do no harm. We do not know of any one having tried it.

A. T. H., Waterford, N. Y.—How did the American Rifle team load in their matches with the Irish at Creedmoor and Dollymount respectively, or did any of our team load at the muzzle? Ans. At the breech, with the exception of Major Fulton, who first placed the empty shell in the chamber of his rifle, and then loaded from the muzzle.

INQUIRER, Concord, N. H.—1. In what way can I remove the leading from my rifle without injuring it? 2. Is the Ditmar powder safe to use in a rifle or pistol? 3. What will be the probable cost of the new Ballard rifles? Ans. 1. With benzine. 2. Yes, when used according to directions. 3. Twenty-five to thirty dollars, according to length.

W. W., Chicago.—What is the price of English chilled shot in New York, and how much would be the cost to have it sent out here? Ans. The English chilled shot is sold in this city by Henry C. Squires, No. 1 Courtland street; retail price, 15 cents per pound, $3.35 per bag of 25 pounds. Ask at one of the freight lines at your city the cost of transportation.

A. J. W., New York.—I am at times called to a place where eels alone abound, and I have promised some friends of mine there to procure for them an eel-pot. Will you kindly inform me, through your columns, where such can be procured ready-made, or who could make one to order? Ans. L. Heyniger & Co., No. 18 Fulton street, will supply you with eel-pots.

T. E. M., Hamden.—Can you inform me what was the age of the setter Bismarck, and what dog he was bred from? Ans. Mr. David Brook's famous setter Bismarck was one of the best dogs for all game in this country, and was about six years old when he died. His pedigree you will find in a former number of our paper, or by addressing Mr. Brooks, Philadelphia.

J. W. C., Rochester.—Will you be kind enough to inform me if there is a setter dog known as Forman Taylor's Sancho. If so, what is his breed and color, and what are his merits? Ans. Mr. Forman Taylor, of Monmouth County N. J., is the owner of the famous one-eyed Sancho, a full sized, well-formed orange and white setter. A thoroughbred, and an extraordinary good one.

SPORTSMAN, Erie, Pa.—I see by your paper that you send powdered areca nut to your correspondents. I want some for a young setter I own, and will be glad to get some at your cash terms. Is it efficacious for same purpose on man as on beast? Ans. Have mailed you some powdered areca nut. It is the best known remedy for worms in dogs, but we do not know of its being used for humans.

H., Rochester, N. Y.—Kindly inform me where I can get good fly fishing during May and June in Pennsylvania—a place that will combine pleasant scenery, fish in abundance, and where there is such a thing as a few "big" ones to be taken occasionally? Ans. See answer to "G. H. M." in this issue. For May, make headquarters at Trout River, but large trout are "mighty uncertain" anywhere short of Rangeley.

P. G., Milburn, N. J.—I have an aquarium 12x18, 12 inches deep, how many gold-fish can I keep in it, and how often will it be necessary to change the water? Ans. From three to four small fish to a gallon of water is the usual rule. With the proper marine plants it is not necessary to change the water very often. You can keep more fish in the same quantity of cold water than in warm. Avoid all kinds of sea shells and corals.

G. H. M., Germantown, Philadelphia.—Please state in your next issue where you think would be a good place for a small party to camp for some weeks in the spring and summer, not more than 200 miles from Philadelphia, where there is good fishing, or hunting, or both? Ans. In Pike Co., Penn., in the Bushkill or Sawkill streams near Milford; or Lackawaxen, or on Trout river, in Lycoming Co., twenty-five miles above Williamsport. No shooting until after July 4th, when woodcock will be in season.

S. W. B., Connersville, Ind.—1. Please give me the name of some reliable firm who handle game (wild pigeons) on commission in your city, also one in Boston, Mass.? 2. Some time since I saw a recipe for rubber cement in your paper. "Dissolve pure rubber in benzine, etc." I tried it, but the rubber don't dissolve. What is the reason? Ans. 1. Smith & Lewis, No. 17 Fulton Market, this city; don't know any Boston dealers. 2. Perhaps the rubber was too strong, or the benzine not strong enough; will investigate.

J. H. B., Newburyport, Mass.—Can you inform me, through the columns of your paper, who "Harry Archer" was, who is spoken of so often in "Forester's" works. I imagine it means "Forester" himself. Am I right? Ans. "Harry Archer" in the Warwick Woodlands, was intended for Herbert himself, and although he assumed the *nom de plume* of "Frank Forester," (suggested to him by the late Dr. Porter, a brother of the late W. T. Porter, of the *Spirit of the Times*), it was merely as to authorship. Frank Forester in the above work was only an imaginary character. The "Commodore," also mentioned in this book, was intended for the late Mr. Anson Livingston.

R. R., JR., N. Y.—Some months ago, after reading an article in your paper about giving canaries red pepper, I applied to you to state to me how to give the pepper to the bird. I gave him the pepper as directed twice, and these two occasions were a week apart, and always in very small quantities. After the second dish of pepper he stopped singing and chirping altogether, and has not given any sign of song since. Now please tell me what to do. The bird is healthy and clean, but suppose he was too young for such strong food as red pepper? Ans. The red pepper was probably too strong for your bird—feed now on hard boiled egg, and time will probably bring him around again. In another such instance give rock candy, or a piece of sponge cake dipped in good sherry. This will be sufficiently heating.

BRANDON, Bald Mountain, N. Y.—1. Do the Orcott and Hobbs patents, which I see frequently mentioned in connection with breech-loading guns relate to shells or simply primers? Where can they be obtained? 2. Can the Flobert saloon cartridge, small size, (32-100), be used for target practice in a Smith & Wesson revolver, (No. 1). A dealer in your city tells me that they cannot, but says that they can be used in Colt's. As the calibre of each is identical I do not understand it? 3. Is there for sale a single breech-loading gun known as the Phœnix? Do you know where it is manufactured? I have heard it spoken of, but have seen no circulars. Ans. 1. Primers; can be had of any of the dealers advertising in our columns. 2. The imported can not; but the Flobert shell, manufactured by the Union Metallic Cartridge Co., can. 3 Yes; we have directed a circular to be sent to you.

C. F. B., Brandon.—1. I have a valuable hound pup about six months old who for the last two or three weeks has been constantly shaking her head. Three or four weeks ago there came out a spot on her head, just forward of her ear all covered with small sores; her head does not appear to be inflamed, but is very offensive; her eyes also ran. Please tell me what to do for her, and oblige. I think that she is troubled with worms too, and would like to have you tell where I could get some areca nut, and what is a dose? Ans. Your pup evidently has canker of the head. Wash his ears out thoroughly with Castile soap, and, after drying, inject a weak solution of sulphate of copper, three grains to the ounce of water twice a day for two or three days, always keeping the ears washed clean. Have mailed to you some areca nut with directions for use. Feed him sparingly, and give him very little meat for a while.

RANGER, Woonsocket.—A friend and myself want to rough it two or three months next summer. We want to know where most of the emigrant trains or parties start from. Do any go to California from Omaha? Which would you take a rifle or a shot gun? What would be the cost of a good saddle horse? Ans. The emigrant teams leave Omaha, and follow a course parallel with and a little south of the Union Pacific Railroad. We would suggest, however, as a pleasanter trip for you to go to Denver, Colorado, and there join one of the numerous mining trains leaving that point; they travel slower than the emigrant trains, and you would have more sport on the way. A mustang saddle horse can be bought at the Elephant Corrals in Denver for from $35 to $40 in the fall, and $50 in the spring. But a mule, costing $100 to $125, would be much better, and more easily sold. Take both rifle and shot gun, or if confined to one, the latter, which should be a breech loader.

S. A., New York.—1. I have a 12-gauge breech loader, and have used Hazard's, Dupont's, and Laflin & Rand's coarse powder, but frequently, after shooting a few shots, the barrels foul, and I am compelled to remove the dirt by a wire cleaner, as a brush is ineffective. Some days I shoot all day and the barrels will not foul. Does it depend on the atmosphere, and how can it be remedied? 2. What reputation has G. Muss, gunsmith, of London? 3. Can I get a good split bamboo fly rod for $20 or $25, with German silver ferrules? 4. Will you please let me know when you have a good second hand central fire breech-loader at your office for $75 or $100, as I have a friend who wishes to buy one at that price? Ans. 1. You can remove the leading of your gun by using benzine; the atmosphere undoubtedly causes the effect you in unison at times. A wire brush repeatedly used will wear the barrels. 2. We do not know the gunmaker you mention. 3. Yes. 4. You can see some guns at the price you mention by calling at this office.

AMATEUR, Pittsburgh.—1. I have a breech-loading shot gun, branded or marked "Field," for which I paid $75. I bought the gun because it is a good one, and have beaten several guns costing double, both at target and in the field. What I want to know is who Field is; if he is a maker of any reputation, and where the manufactory is. And if you don't think I am as well off as if I owned a Scott gun of the same weight and calibre, save the finish? 2. I am told, in fact, assured, from the very best authority, that vaccination will prevent my dog from taking distemper. Is there anything in it, think you; would he not be as likely to die from the vaccination as from the distemper. Be kind enough to give me your candid opinion? 3. Would I be likely to get a good stock of dogs from a white English setter bitch and blue Belton dog; or would you advise me to breed her without the cross? Ans. 1. Field is not a maker but a dealer in guns, and, no doubt, many good guns are sold by him—and if your gun is a good one and answers your purposes you should be satisfied. 2. Although we have been breeding setters and pointers full fifty years, we have never tried the effect of vaccination to prevent distemper; nor has any instance of its trial come under our observation. We hope some breed-r will try it and report the effects. 3. You would be as likely to get as good dogs bred from such a dog and bitch as if bred from full blue Beltons; yet we rather prefer breeding to dogs of same color when the sale is a particular [illegible]

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, PRESERVATION, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
123 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, FEBRUARY 10, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith: Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

VOLUME VI.

WITH this issue we commence a new volume, and our readers will find, accompanying, the Index of the volume just closed. We ask no better witness as to the range and result of our labors than this index. It covers a wider field than has ever before been traversed by any publication of a similar nature in this country, and we take this opportunity of thanking the many kind friends and contributors to whom we are largely indebted for this valuable collation of topics coming within the scope of our paper.

MR. BISHOP'S LAST VOYAGE.—We have received, just as we go to press, and too late for the present issue, a very interesting letter from Mr. N. H. Bishop, dated at Biloxi, on the Gulf of Mexico, which point he had reached after paddling 2,155 miles in a Barnegat duck-boat. Here he was taking his first rest since launching his little twelve-foot boat on the Ohio, on which stream he floated for fourteen days without seeing the sun, and during which time he cooked or ate warm food but three times. Now Mr. Bishop is thawing himself out in the warm air of the Gulf, preparatory to continuing his voyage toward Pensacola, Apalachicola, St. Marks, and Cedar Keys, at which point he will have completed the line of the great irregular circle made by his last year's trip in a paper canoe. We shall publish the log of his trip next week.

EUROPEAN COMPLIMENT TO THE HAYDEN SURVEY.—In the January number of the *Quarterly Journal of Science*, published in London and edited by Prof. William Cookes, F. R. S., the editor, after noticing the list of publications of the United States Geological Survey, under the direction of Prof. Hayden, testifies in a very flattering manner to the value of the work: "We feel it our duty to call attention to the truly magnificent character of the survey now being executed on behalf of the Government of the United States. Not merely the geology, but the mineralogy, botany, zoology, meteorology, ethology, and antiquities of the whole Union are being carefully explored. Will the day never come when a similar survey will be made of the still wider and more varied region included within the British Empire? It would be a glorious contribution to science, and a worthy bequest to posterity."

—It is reported that New York parties are trying to negotiate for the purchase of Robbin's Island, Peconic Bay, for the purpose of breeding hares thereon.

THE HEALTH LIFT.

EVERYBODY who has attended athletic performances must have been very frequently struck with the great disparity between the development of the muscles of the arms and shoulders and those of the legs of the performers. Even those gladiators who have so recently been exhibiting their prowess in the so-called Greco-Roman wrestling lacked that perfect development or expansion of the lower muscles which was necessary to perfect their physical excellence. The free use of dumb-bells is probably accountable for this difference, and if half that is claimed for it is true, the Health Lift is the medium through which this disparity could be equalized. For general training purposes it appears to be admirably suited, the exercise being cumulative and at all times adapted to the strength of the person using it. For oarsmen it must be well suited, particularly since sliding seats have come into vogue, and more of the work is done with the legs than in former days. In the commencement of training, if what is claimed for it is true, it would be of particular benefit, as acting upon the weaker parts and developing them into harmony with the whole system, and then carrying the patient on to the point at which he aims. With only ten minutes' exercise each day it is astonishing what progress is made. The average man will, on his first effort, lift about three hundred pounds; in three months, with only ten minutes' practice per day, he will lift double that weight. Whether it will cure all the diseases to which flesh is heir, is problematical; that its frequent use will prevent dyspepsia and those diseases arising from sedentary habits, we have no doubt. It is an admirable aid to circulation, as every one who has used it will admit, and we quite agree with Dr. Ware, of Boston, that the introduction of the Health Lift into banks and insurance offices, where large numbers of young men are employed, would have the effect of restoring many physical organizations now going to decay, and lessening the number of our hollow-chested, half-developed youths.

GAME PROTECTION.

GAME LAWS OF NEW YORK.—The following Committee on Game Laws was announced in the Assembly on the 3d inst.: Messrs Sherman of Oneida, Shannon of Cattaraugus, Webb of Dutchess, Bowen of Clinton, J. S. Brown of Cayuga, N. H. Green of Genesse, Tabor of Erie, Lyon of Kings, and Halliday of Tompkins. It is fortunate that Mr. Richard N. Sherman, the chairman of the committee, is not only a sportsman, but a man of wonderfully clear head and reliable judgment. The much needed amendments to our game laws will now undoubtedly be passed. We should like to suggest, however, that in place of the amendment as proposed in the law as published by us last week, that the Spring snipe shooting be left, and that Summer woodcock shooting be abolished.

BATAVIA, N. S., February 3d, 1876.

EDITOR FOREST AND STREAM:—

Shall the time soon come when there will be a law passed prohibiting the sale of brook trout in saloons and hotels? Only last week one hundred and eight brook trout were sent by express to Batavia from Avon Hotel to be sold in a meat market here. The person who sent them claimed there was one hundred pounds sent to him from Canada. Our District Attorney counted them here. Is he bound to prosecute?

SPORTSMAN.

Certainly it is his duty to do so on proper information being laid before him. Even if the trout did come from Canada, it makes no difference; the law on the subject is very explicit. It says: "No person shall kill, or expose for sale, or have in his or her possession after the same has been killed, any speckled trout, save only from the 15th day of March to the 15th day of September, under a penalty of twenty-five dollars for each fish." We shall be glad to hear that this flagrant case of violation of the law is properly punished.

NEWBURYPORT, February 4th, 1876.

EDITOR FOREST AND STREAM:—

As you said in your last paper, Massachusetts laws are strangely defective. For instance, Jack snipe are not protected at all. They are classed with birds of prey, and lawful game at all seasons. Woodcock are only protected until July 4th, consequently, these prime game birds are fast diminishing. A few years and "the places that know them will know them no more." Older sportsmen than myself can remember, and not so very long ago, either, when our covers swarmed with woodcock, and snipe were plentiful enough. Within a circle of twenty miles around our city woodcock covers could be found equaling, if not surpassing, the famous woodlands of "Forester's" days. Inside of a year I was over a piece of ground where, fifteen years ago, two of my acquaintances shot twenty-five woodcock in a single day. I tramped it thoroughly, and my bag was one solitary woodcock, and I saw no more. Why is this? The covers are just as good as of old. With poor "Forester" I agree, summer shooting is the cause. Ten years hence, woodcock, I take it, will be as scarce around here as quail now are, and goodness knows that they are scarce enough. The same rule applies to snipe. The sportsman's bag is small now who guns for snipe, but a few years later I think in will be far smaller if some different arrangement is not made. I am but a young man, but I will go in heart and hand, and pocketbook as deep as I can to remedy the evils. FRED. H. B.

The question of Summer woodcock shooting has been argued *pro* and *con* in our columns almost since the establishment of the paper. We are strongly in favor of its abolishment. Snipe have fared no better in this State than in Massachusetts; but a law is now before the Legislature for their protection, making the 1st of July the end of the close season. It might have been the 1st of September just as well, as the snipe do not return from their breeding places until the cold weather sets in. We cannot express ourselves regarding Spring snipe shooting, as being opposed to it as unqualifiedly as we are to Summer woodcock shooting. Woodcock breed on the spot, and in their pursuit during the Summer months there is frequently but little distinction made between them and quail or young ruffed grouse. Spring snipe are most useful aids in the breaking of young dogs; invaluable they would be if more plentiful, and they are so peculiar, as well as migratory in their habits, that there is little chance of their extermination. It is undoubtedly the case, however, that snipe are taking a more westerly course in making their flights, abounding in some of the Western States. This question is well worthy of a careful investigation.

Apropos of Summer shooting comes the following letter from a prominent sportsman:—

NEW YORK, February 4th, 1876.

EDITOR FOREST AND STREAM:—

Referring to the article in the last issue of your paper, entitled Amendments to Game Laws, I find no mention of any amendment to the act relating to woodcock shooting during the months of July and August. There seems to be no reason for the great diminution in the numbers of these birds except that they are killed during these months. If this is not the true reason, I should like to know why we have each year less of this sport. Is there any way by which we can at the same time protect these birds, and still have two or three months of good shooting each year? If this is not attended to, and an effort made for their protection, woodcock shooting will, like our quail shooting, be a thing of the past.

MARK.

—The Virginia Association for the Protection of Fish and Game have adopted a constitution and elected the following officers for the ensuing year: President, Alexander Moseley; Vice President, Dr. O. A. Crenshaw; Secretary and Treasurer, Peyton Johnston; Corresponding Secretary, John Græme; Committee, W. Russell Robinson, Judge W. I. Clopton, Shelton C. Davis, Justice Joseph J. White, Judge W. W. Crump, Warner Lewis, of Brunswick; R. B. Kennon, of Powhattan; R. T. W. Duke, of Albemarle; Marshall Parks, of Norfolk; and Dr. Isaac White, of Montgomery. At their meeting last week a bill for the protection of fish in the waters of the Commonwealth was read by sections, amended, and adopted; and the Executive Committee was requested to submit the bill, and another of a similar character for the protection of game, to the General Assembly at an early day.

THE BUFFALOES.—Congress has at last taken action with regard to preventing the utter extermination of our best and biggest game. We learn from Washington that a bill has been introduced in the House to prevent the useless slaughter of buffaloes within the Territories of the United States. It is made unlawful for any person, not an Indian, to kill, wound, or in any manner destroy any female buffalo of any age found at large within the Territories. It is also made unlawful for any person to kill or wound a greater number of male buffaloes than needed for food by the hunter, or than can be used, cured, or preserved for the food of others or for the market. One hundred dollars for each buffalo is the penalty prescribed. Of course, to a certain extent, the law would be a dead letter, but its usefulness could be largely assisted if the officers of the various frontier posts were charged with its enforcement. An individual who expected to make a fortune by turning informer would require to have his hair screwed on tightly.

—A petition is now before the Dominion Legislature praying that the close season for snipe be changed from the 1st of September to the 15th of August. A correspondent of the Montreal *Star* writes:—

"There are many sportsmen, if there is to be a change, who would wish the period for killing this old favorite to be the 20th of September. It is a well ascertained fact that in August the bird, though it does arrive here, is merely half-grown—so lean that, as an article of food, it is scarcely eatable. Though the snipe does not breed in Canada as abundantly as the woodcock, still its nest is found round Quebec in the Bijou Marsh and elsewhere. The young are found on the feeding grounds at the end of August. It is shot during September, October, some even in November, so that sportsmen have at least two months and a half to shoot. Unless a total extermination is sought for, this ought to be ample, without slaughtering the half-grown birds in August."

GLOUCESTER AT THE CENTENNIAL.—The fish and fishing interests of the United States promise to be well cared for next Summer at Philadelphia. In addition to the displays under the direction and management of the Smithsonian Institution and Mr. Blackford of Fulton Market, the people of Gloucester, the home of our sea fishing, are preparing an unique collection of models of fishing smacks. These will comprise, says the Cape Ann *Advertiser*, one pink stern model standing room boat, 12 tons, style of 1800; square stern do. 18 tons, 1820; pink stern with cuddy forward, 40 tons, 1830; square stern schs. 60 tons, 1840; same style and size, a little sharper, 1850; Georgesman, 100 tons, 1875; mackerel catcher, do.; seiner, do.; Banker, 150 tons, 1875; high quarter deck Banker, 75 tons, 1800; market boat, 80 tons, under full sail, style of 1875; models of vessels on blocks and railways, models of boats and dories. These models are to be placed in a tank for exhibition, with other appurtenances of the business.

The display of live fish will be under the direction and management of Mr. Fred Mather, the well-known pisciculturist, a sufficient guarantee that this department will be most thoroughly conducted.

REMOVAL.—Our excellent agricultural contemporary, the *Scientific Farmer*, formerly of Springfield and Amherst, has been removed to Boston. The change, which is the result of the growth of the paper, will be accompanied by greater facilities and abundant capital. The *Scientific Farmer* is largely instrumental in promoting progressive agriculture, and this enlargement of its sphere of usefulness will be hailed with pleasure by its many friends.

—The Harvard Freshmen have declined Yale's Freshmens' challenge for a six-oared race.

NOTES OF A SPORTSMAN ABROAD.

TO break the monotony of a long voyage I left the P. and O. steamer at Gibraltar. To this place, on the north coast of Africa, it is only a journey of a few hours. Quite unexpectedly, I find myself in the midst of considerable sport. The neighborhood affords excellent shooting, abounding in a great variety of game. It is the favorite shooting ground of the English officers stationed at Gibraltar, who come over here in parties and encamp for several days, enjoying most excellent shootiug. The game consists of wild boar, jackals, hares, geese, ducks, partridges, snipe, several varieties of plover, woodcock, and curlew. The migratory birds, in their flight northward, in seeking to cross from one continent to the other, with unerring sagacity choose the narrowest point of the Strait of Gibraltar. This is from Tarifa to Tangier, consequently those birds come in here in great numbers, like a flock of sheep through a gate, and then spread out over the plains of Morocco. Sometimes these birds are deterred from crossing by adverse winds, and at such times the wild fowl and snipe shooting about Tarifa is said to be something extraordinary. The best partridge shooting on this side is between this place and Tetuan, about a day's journey to the northward. Just now Prince Arthur, or, to give him his proper title, the Duke of Connaught, is here pig-sticking. This sport has become suddenly fashionable because the Prince of Wales had some of it in India. The English Minister at this place, Sir John Hay, is a great patron of sport, and the Prince is here as his guest. The party presented a novel and picturesque appearance as it returned to town. The hunters were mounted on the famous horses of Barbary—a dappled gray seems to be the favorite color of these horses—pack mules with tent equipage, camels laden with the slain boars, while a motley crew of Moors, Arabs, and negro servants straggling along on foot, shouting and flogging their beasts, altogether made up a motley shooting party that surpassed anything I ever saw. Twelve pigs in all were killed, nine the first day and three the second. The hunt was attended with no casualties, except to the horses, three of which were more or less injured by the assaults of the boars. The mode of hunting these boars with the spear is this: The hunters, well mounted on fleet Barbary horses, are armed with a long spear—a long bamboo staff with a sharp steel spear head—which they hold in the right hand at a point just where it will balance itself. They take their stations along the edge of coverts in which pigs are supposed to be. A great number of beaters with clubs, and guns loaded with blank cartridges, together with some hounds, beat the covert, shouting and discharging their guns. As soon as a pig breaks covert and takes to the open the hunters ride for him, and if they can overtake him, ride alongside and stick him—if neatly done under the fore shoulder. If the boar be a "tough customer," it requires two or three thrusts to bring him down, and generally after he has received one thrust of the spear he turns upon and charges his pursuers. This is the critical moment that calls for all the skill of the hunter. He must so guide his horse and manage his spear as to receive him on its point and impale him there, a squealing, wriggling, harmless boar. If he fails to do this, the chances are the brute will catch his horse with his savage tusks and mangle him fearfully. One boar—the largest and most ferocious that was killed in this hunt—was not brought to bay until he had received three spear thrusts, and had ripped one horse. The Prince gave him the *coup de grace*, and the captain of hussars, who had the second thrust at him, and whose horse he injured, carried away with him his broken spear as a trophy of the fight. Another, and perhaps the more common mode of hunting the wild boar here is to shoot him with ball or buckshot cartridge. During my stay a party has been out for this sport, led by the Sharif of Wazan. This man is a personage of great distinction here, being the Pope or Spiritual head of the empire, and in many respects superior to the sultan. He is about thirty years of age and as black as the ace of spades. His features are rather coarse, and yet do not decidedly bear the stamp of the negro blood he owns. One sees many Arabs with as dark a skin as his, but much more regular features. He claims to be a direct descendant of the great propbet Mohammed, and is regarded as a very saintly and sacred person. It is popularly believed that he has the power to perform miracles, to heal the sick, to regulate the weather, and, what is still more wonderful, to change wine into water! He is rather partial to Venoc Clicquot as a beverage; but as the drinking of wine is contrary to the law of the Koran, the faithful say it turns to water in his throat. According to more direct and reliable testimony, however, the wine retains some of its familiar exhilerating quality, even after it has undergone this extraordinary change in passing into his alimentary canal, and his successful predictions regarding the weather are attributed by the skeptical to the possession of an excellent barometer. Like our own great prophet and saint, this one is very much married. He has several wives in every large town in the empire, so that in the words of the nursery rhyme,

"With rings on his fingers, and bells on his toes,
There is sure to be music wherever he goes."

His favorite wife at present is an English lady, very young and pretty, to whom he was married by the Protestant form, the ceremony being performed at the English Embassy here. But I am digressing. This hospitable gentleman is very fond of sport, and has a large collection of modern guns, rifles, etc. On this expedition, to which I had the honor of an invitation, not much of sport was had. There were plenty of pigs, but they could not be induced to break covert. The covert was so thick that both the beaters and the hounds were afraid to enter it much, lest their legs would be chewed up in the operation. Only three pigs were killed. Wild pork, of which an ample supply cooked in various ways has been furnished at the table of the hotel, has a peculiar, and, for pork, an improved flavor. It is pork with a venison flavor to it. Of course it is not so fat as the flesh of the pampered pet of an Irish sty. The color of these pigs is a sort of rusty black, with long bristles along the ridge of the back, and when pursued, or in making a charge upon his enemy, it is said these bristles are raised up in a way that renders him a ferocious-looking beast.

The keeper of the best hotel in this town, Mr. Martin, is a great sportsman, and is the leader and organizer of nearly all the expeditions going out from this place. He keeps the best horses, the best dogs, and has all the outfit necessary for the pursuit of any kind of game. He, too, is a descendant from the Ham branch of our common postdeluvian stock, and if not as dark as the familiar ace, at least has a complexion that won't tan in a hot climate. Mr. Martin is a native of our South, or of the West Indies, and is really a very well-informed and accomplished man. He was formerly a steward or body servant to the Duke of Edinburgh, has travelled every-where, and has a very wide acquaintance. It is said of the greatest military general of modern times that he is silent in seven languages. Martin is talkative in almost as many. I went out partridge shooting with him one day, and he worked the "team" in three languages, speaking English, Spanish, and Arabic with apparent fluency. He has the easy, reposeful manners of an eastern potentate, is a thorough sportsman, a good shot, a most courageous and skillful pig-sticker, and sings a good song, and if I add that he is a genuine host, I am sure I need say no more to convince you that Martin is a rare man to find in this part of the world. He is so fond of sport that he selected this place for his abode on account of the abundance and variety of game it affords. He keeps a good stable and has in it the best Barbary blood. Prince Arthur rode his favorite bay Barb at the hunt, and was so much pleased with it that he purchased the animal at a high price. Mr. Martin has just shipped to our Central Park Zoological Garden some specimens of the four-horned rams of Barbary, other specimens of which I saw in his stable. They are handsome fellows, with, four large, curling horns, two bending forward and two backward.

There are indeed a great many of the smaller migratory game birds in this vicinity. On riding a short distance into the country large flocks of green-backed plover, golden plover and sickle-hill curlew rise from your path, and, wheeling around for a while, settle again. It is difficult to get within gunshot of any except the green-backed plover. There is little or no covert, except the low stunted palmettos bushes. In this the partridges hide, and in hunting them beaters are required to drive them out of it. On striking a clump of this palmetto sometimes four or five birds will jump out and fly in as many different directions. I have visited the fish market several times to see what it affords. A small mackerel and the red mullet, which the Moors call the "Sultan of fishes," is about all I see at this season. Mr. Martin tells me that the lobsters taken here are very fine, sometimes reaching thirteen and fourteen pounds in weight, and from the shell of one I saw I can easily believe it.

The American Consul at this place, Col. F. A. Matthews, a most hospitable and courteous gentleman, is the man who compelled the venerable and stiff-necked Bashaw to apologize for saying the foreign consuls were "like a parcel of monkeys," an account of which was given in one of our newspapers last Fall. Col. Matthews is very popular here, and got a great deal of credit for the energy and spirit he displayed on this occasion. He is a native of Tangier, but has served both in our army and navy and lived in California for some years. If he is content to stay here he ought to be allowed to as long as he wishes to. Col. Matthews has the finest collection of Moorish arms in Tangier.

Tangier, Morocco, December, 1875. DRUID.

HOTEL WANTED.—I must apologize for occupying space in your columns regarding hotels; but as Florida is becoming a winter resort for many of the readers of the FOREST AND STREAM, I feel that I am not taking an unwarranted liberty.

Cedar Keys is the southern terminus of the Fernandina and Cedar Keys Railroad. Steamers plying between New Orleans and Havana call weekly to land passengers and freights. The steamer Valley City for Lumpa, Manatee, Punta Rassa, and Key West; steamer Emily for Manatee and Tampa; and the steamer Bill Keyser for Crystal River, Old Tampa, Tampa, and Sarasota leave Cedar Keys weekly. These various lines of travel cause many persons to lay over at the Keys in Winter, as well as Summer. The three existing hotels are anything but what the importance of the place demands; and, in the language of the *State Journal*, a paper published at Cedar Keys, "Our accommodations in that line (hotel) are such that no one stops here longer than he is obliged to. Parties traveling through are often delayed on account of the boats, but never make this a resort." I have personally tested the three hotels in the place, and can only say that I wished myself anywhere else.

Transient travel would materially aid in supporting a good hotel, and from my knowledge of the place I feel assured that a large number of permanent boarders could be secured from among the residents of the town. During the Winter months many tourists and sportsmen would visit the place and remain for days, or weeks, if suitable hotel accommodations could be obtained.

A few days since I pointed out the importance of establishing a good hotel at the Keys to Mr. D. E. Maxwell, Superintendent of the Fernandina and Cedar Keys Railroad, and he assured me that the Railroad Company would aid and assist the undertaking in every possible way. First, by deeding to the person erecting a hotel two blocks of land in the town, one block on the mound, the highest point of land on the coast, and the other extending from opposite the first to the bay shore—in all five or six acres of land.

Independent of giving the land, the Railroad Company would agree to transport all building materials and furniture and fixtures free of charge over the line of road. The mound affords a fine view of the main land, islands, bay, and ocean, and the beach is an excellent one for bathing and keeping boats. Fishing is fair, and ducks and beach birds are plentiful during the Winter months. By taking the morning train the sportsman can reach a point in one hour where deer, turkeys, and quail are plentiful, enjoy at least six hours' sport and return before supper. The climate is excellent, and the health of the place unexceptionable, and we feel assured that if a hotel was erected at the Keys by one who knows how to run such an institution that it would prove remunerative and a safe investment.

Jacksonville, Fla., Jan. 24, 1875. AL FRESCO.

The Rifle.

THE INTERNATIONAL MATCH.

JUDGING from the dispatches which have been flying across the cables during the past week, the question of an International Rifle Match is in a charming state of muddle, with a very fair prospect of its either being "off" altogether, or else confined to a match between our own and a sectional team, instead of the gallant battle we have expected with Sir Henry Halford and the Imperial Team. In our editorial of last week, we predicted that trouble would arise from the notification received by telegraph that the Scottish National Rifle Association team would visit us next summer to participate in an International match, but scarcely imagined that our prediction would be so soon verified. Should the match with the British Team be "off," it will be owing entirely to the action of our own National Rifle Association in sending *three* challenges when but one was either requisite or expected. It would be supposed that the experience of our riflemen at Wimbledon last summer, would have taught us how this matter should be managed. An invitation was given to Sir Henry Halford at that time, and gallantly accepted, to visit us during the summer for the purpose of shooting a match for the championship of the world. In the formation of his team Sir Henry invited the crack shots of Ireland and Scotland to compete for places, and with the pick of Great Britain and Ireland the strongest kind of a team could have been gotten together. And yet there is no reason why teams of purely Irish or Scotch organization should not come as well as Canadian, French, Swiss or German teams, and shoot in as many matches as can be gotten up; but for *the* match, the match suggested at Wimbledon immediately after the Elcho Shield competition, and subsequently accepted by the British National Rifle Association, but one team should be eligible to shoot, and that the Imperial Team, to be selected by Sir Henry Halford, at the request of the Association just mentioned; and we consider that Sir Henry is quite justified in abandoning the matter. We have already won the odd trick from the Irishmen; it was always expected that Sir Henry's team would have a proportion of Scotchmen upon it, (and Irishmen also if they choose to compete for places,) and therefore the bringing of three teams to shoot against our one, seems supererogatory, as well as making the odds against us three to one. And no doubt Sir Henry looks at it in the same light. It is the American team he wants to beat or be beaten by, not the Irish or Scotch. At all events he has written the following letter to the Loudon agent of the Associated Press.

"I am in communication with the Scottish National Rifle Club, which has accepted the challenge from America to send a separate team, and with the Irish Rifle Association, who still have the matter under consideration. I am endeavoring to obtain their coöperation in sending a British team alone. The Council of the National Rifle Association is so unanimous in its feeling that only a British team should be entered that there is no necessity to call a meeting on the subject. If I fail in inducing Scotland and Ireland to join in the British team, I shall place my resignation as Captain in the hands of the National Rifle Association. I have every reason to believe that England will not be represented by any separate team."

If, therefore, the Scottish and Irish Rifle Associations persist in sending separate teams, the great point of interest in this years' International match will be lost, the prospect of a contest with a British team transferred to a very indefinite period, and the Centennial deprived (as far as riflemen are concerned) of one of its chief attractions. It is too soon, however, to croak; everything may be satisfactorily arranged, and we may yet welcome this gentleman to whom our own riflemen are indebted for so many courtesies at Wimbledon.

MASSACHUSETTS RIFLE ASSOCIATION.—A meeting held for practice by this association, met at Spy Pond on Saturday, January 29. The highest scores were as follows: Higgins, 46; Frost, 46; Osgood, 44, and Sawyer, 44. The highest possible score was 50.

NATIONAL RIFLE ASSOCIATION.—The Directors of this Association met on the 1st of February.

The report of the Treasurer showed a balance of $1,198 04. On behalf of the Range Committee, Col. Wingate submitted a report, favoring a change of targets from iron to canvas. It was proposed that the State be requested to pay a portion of the expense. The joint committee on the international match was increased to eighteen. The selection of the place for the international match was reserved for the Board of Directors to decide upon. Resolutions were adopted which provide that any club paying the sum of $25 shall be entitled to send ten of their number to Creedmoor, during the spring and fall meetings, who shall have during that time all the rights of annual members. In addition, the club will be presented with a bronze medal, which shall be competed for by the members of the club. The programme for the spring meeting was presented and adopted. There will be five matches, as follows: All comers, Directors, Military, Short Range, Mid Range, Leech Cup, and Patrick Henry Rifle Matches. Major Fulton presented his report upon the ground selected for a range near Philadelphia. He stated that it could in no way compare with Creedmoor. While there is no doubt that Creedmoor is far superior to any other range, we were in hopes that those having the international match in charge could find it to their advantage to have it take place at or near Philadelphia. The meeting adjourned after the President had appointed the following committees: Range Committee, Col. Wingate, Capt. Story, and E. H. Sanford; Finance Committee, Inspector General Woodward, Hon. D. W. Judd, and N. P. Stanton; Prize Committee, Col. Ward, Capt. W. C. Casey, and Major Gen. Kilburn Knox. Joint Committee on International Match, Gen. Woodward, Col. Wingate, Col. Gildersleeve, Gen. McMahon, and N. P. Stanton.

CONLIN'S GALLERY.—The eighth contest for the *Turf, Field and Farm* competition cups, was shot February 3. L. C. Bruce, score 43, won the first cup for the second time. H. D. Blydenburgh, score 35, the second cup for second time, and Wm. M. Tileston, score 34, the third cup. The next competition for the cups will take place Thursday, February 17, commencing at 4 P. M. The FOREST AND STREAM badges will be shot for Thursday, February 10, open to all comers.

CREEDMOOR, JR.—The fifth subscription match came off on Tuesday, Feb. 8th. The winning scores were F. Backofen, 44; R. Rathbone, 41; D. F. Davids, 39; R. H. Hand, 39; J. W. Todd, 37. The remaining two prizes of the U. M. C. Badge competition will be shot for on these conditions. Five competitions; ten shots each; entrance $1; open to all comers, except those who have made over 40 in the badge matches. The highest aggregate of the five competitions takes the first prize. The next highest the second prize. Another gold badge equal in value to the other, to be shot for, on the same terms, open to all. The scores may be shot off at any time before the 10th of March. All scores made will be published weekly.

HELLWIG'S GALLERY.—The tenth annual competition shooting in lying position, took place at Hellwig's new gallery, 271 and 273 Eighth avenue, Wednesday, February 3, 1876. The winners of prizes are as follows. Donald Cameron, first prize, 46; B. Ginger, second prize, 44; M. L. Riggs, third prize, 28. The next weekly competition will take place Wednesday, February 9, at 6 P. M.

GLEN DRAKE.—The members of the American Rifle Association assembled in force at Pelhamville, N. Y., on Saturday, February 4, 1876. Two matches were shot, one for the Association Cup, the other a Subscription Match. The ground was covered with snow, and the rays of the sun were reflected from it in a manner so as to render it extremely difficult for the marksman to see the bullseye upon the white hill 500 yards away. In the match for the Association Cup there were ten scoring shots, with an allowance of 5 points for military rifles of 50 calibre. The best scores were as follows: R. Rathbone, 45; D. F. Davids, 41, and H. Fisher, 40. The Subscription Match allowed only five scoring shots; the winning scores were: D. F. Davids, 24; R. Rathbone, 23, and Rathbone 23. Next Saturday the match for the Holden Rifle will take place. On the 22d of February there will be three matches, consisting of a Military, an All-comers, and a Subscription Match.

MOUSEMERE.—The seventh competition for the Harris trophy on Tuesday of last week, resulted in the following score: H. W. Blakemore, 75; Henry J. Quinn, 73; Douglas Smythe, 71; G. Livingston Morse, 68; Henry Maynard, 66. Mr. Blakemore has now won twice.

On Monday the return match between two teams of the Yonkers Rifle Association, commanded by Capt. Douglas Smyth and Major Fredine Shonnard, respectively was contested. Although the weather was fine, the wind in the earlier part of the match was variable and troublesome. The snow which covered the ground, by its refraction and glare, also interfered with the shooting. Following are the scores of the several members of each team:

SMYTH'S TEAM.	
J. L. Morse	169
H. L. Garrison	182
S. G. Peray	186
Total	915
SHONNARD'S TEAM.	
L. M. Ballard	181
C. Dusenbury, Jr.	183
A. H. Jocelyn	185
Total	953

Major Shonnard's team having won the first match on Jan. 10th, the third and decisive contest will be shot in March next.

CONNECTICUT.—The Norwich Rifle Club are making extensive arrangements for work and practice as soon as the season opens. Negotiations are in progress for a new range, at which there shall be accommodations for spectators, and early in the spring the members hope to occupy it with weekly meetings. The club have received an invitation from Col. Gildersleeve, of the National Rifle Association, to attend the proposed grand rifle tournament this year.

RHODE ISLAND AMATEUR RIFLE CLUB.—On Saturday, January 29, 1876, a match took place during a heavy rain for a handsome badge. Distance, 200 yards, off hand. The best scores were: Keyes, 43; Ralsbeth, 41; Thomas, 41; Howe, 38, and Perkins, 37.

SYRACUSE.—A rifle match comes off at the Yates Dragoons range, in Syracuse, on Thursday of this week, between Rochester and Syracuse shots. The teams will consist of six men each, firing fifteen rounds at 120 feet distance, position standing, rifles to be 32 calibre or less, Wingate's rules to govern. A report will be given in next week's issue.

NEW JERSEY SCHÜTZEN PARK.—A grand Centennial shooting match will be held at the above place on February 22. Prizes to the extent of $350 will be distributed, and the question of a team or teams to contend with the Western shooting societies at the Centennial match will be discussed.

MARYLAND RIFLE CLUB.—This club was organized on January 29, 1876, with one hundred members. Constitution and by-laws were adopted, and the following officers were elected: President, Gen. James R. R. Herbert; Vice-President, C. D. Fisher; Secretary, W. P. Herbert; Treasurer, A. V. Canfield, Jr. An Executive Committee consisting of D. H. Thomas, Capt. Zollinger, Capt. Post, A. F. Gibson, and W. C. Keener, was also elected. The following committee was also appointed to select a suitable range: Capt. Zollinger, C. D. Fisher, A. V. Canfield, Jr., C. P. Kahler, and D. H. Thomas. Another committee on Incorporation was appointed, composed of Messrs. Beall, Frick and Terrett, who were instructed to incorporate the organization under the name of the "Maryland Rifle Club." Major Fulton, of the American Rifle Team, was present, and joined the new club, together with one hundred others. The club is not, as many suppose, composed exclusively of members of the Fifth Regiment, but has many members from the State at large. The first annual meeting will take place in April next, when new officers will be elected.

CHICAGO.—Below are the scores made in the first competition for the Hamilton, Rowe & Co. Badges, at 200 yards off hand, which came off Saturday, 29th of January, at South Park Range. The individual making the highest score in the first ten shots, in take the badge. The individual making the highest score in the last five shots, to take a substantial purse. Col. Shafter won in each case. The weather was simply horrid, mercury from 10° to 15° above; wind blowing very hard and gusty. The scores made are excellent considering the day, which is as follows:

Name.	Score.	Total.
J. A Snaffer	4 4 4 4 4 4 4 4 5 4 5	53
H. G. Howe	4 3 3 4 4 3 3 4 4 5 4 5 3 3	55
O. C. Buckmaster	3 3 3 4 4 4 4 4 4 5 4 3	55
W. Burnham	4 4 4 3 5 4 4 3 3 4 2 3 4 4	55
J. L. Yale	5 3 3 4 4 3 4 5 4 4 2 4 2 5 3	55
J. Muir	4 5 2 3 3 5 4 3 2 3 3 4 3 3 5 4	49
S. W. Burnham	2 4 4 4 2 0 4 3 3 3 3 3 4 4 4	46

MILWAUKIE.—The weather being very fine on Monday last, January 31, a few of the members of our Rifle Club thought they would improve the opportunity, and have a shoot at their range at Wauwautosa. The sun shone bright, and the air was warm and pleasant; the wind moderate but not very steady. Five hundred yards was the distance. The following is the score:

Name and Arm.	Score.	Total.
Fielding—Sharps Rifle	5 5 5 5 5 5 4 5 5 5 5 5 4 5 5 5 5 5 5 5	98
Skelton—Remington	5 5 5 5 5 5 5 4 5 5 5 5 4 5 5 5 5 5 5 5	98
Turner—Remington	4 4 4 5 5 5 5 5 4 5 5 5 5 5 3 5 5 5 5 5	93
Bangs—Remington	4 5 5 5 5 4 5 4 4 5 4 5 5 5 5 5 3 5 5 5	93
Meanies—Remington	5 5 4 4 4 1 5 5 4 5 5 5 5 5 5 3 6 4 4 4 4	91

After the score of 20 shots was finished, Fielding and Bangs made three shots more each, scoring bullseyes on every shot, making a total of 113 out of 115 for Fielding, and 108 out of 115 for Bangs. WAD WAG.

THE RIFLE IN ROCHESTER.

ROCHESTER, N. Y., January 29th, 1876.

EDITOR FOREST AND STREAM:—

The recent revival of the interest in rifle shooting has spread to Rochester, and all lovers of this sport are aglow with the fever. Early last year the military, in connection with some civilians, organized the Rifle Association of the Seventh Division, which soon purchased extensive grounds and proceeded to fit them up for practice. A tract of fifty-five acres, lying about four miles north of the city on the river bank was chosen as presenting the greatest advantages. The grounds consist of a level plateau, twenty-five feet above the water level, bounded on the west by the Genesee River, and east by the skirts of a still higher plateau seventy five feet above the first. This bench takes such a direction that firing can be done simultaneously at the 600 and 1,000 yards targets (also at 500 and 900, 800, and 800, etc). The bank is of sand, and is quite steep enough to catch the balls with certainty. The firing is 2° or 3° to the south of east, and herein lies, perhaps the only undesirable feature of the whole range. The range has been in use up to the 600 yard point since September, and several matches have been shot. At the opening match, Dr. C. E. Rider took the first prize with 72 out of a possible 75. Mr. Schwartz, the second with a score of 12, and Mr. W. H. Heigher, with 11, all at 180 yards. On a subsequent match, Mr. Seth Green took a gold medal with a score of 32 out of a possible 25 at 200 yards.

In addition to the above the only matches open to all comers were for the Brinker Medals, one for the best score at 200 yards, any rifle, and one for the best score at 500 (with military rifles) or 600 (with any rifle), to be won three times before becoming property. Only one match has been shot at each distance. Dr. Rider won at both distances, at 200 with a score of 28, and at 600 with 31 out of a possible 35.

Since the Winter set in the Amateur Rifle Club, formed last Autumn, opened a gallery for the use of its members, and work has been brisk ever since. Ten prizes, from $20 gold, downwards, were offered for the ten best strings of ten shots each made during the month of December. An unlimited number of shots were allowed with the gallery rifles, (32-calibre Wesson) at 141 feet, off-hand, Creedmoor rules; second class targets reduced to one-tenth size, (bulls-eye 2 1-10 inches, etc). Forty-nines were abundant, and Mr. S. A. Servis and Dr. Rider tied for the first prize at 481 out of a possible 500. On shooting off, Mr. Servis won with 43 to Rider's 39.

A match is now in process of negotiation between teams of eight from the Rochester Club, and the Yates Dragoons Club, of Syracuse, and when it has been shot I shall try to find time to advise you of the result. LATROS.

—The Detroit *Free Press* lately made a statement placing the expected cut of the Saginaw and shore districts, or more properly the east side of the State, at 778,000,000 feet, but it now says that unless the present indications change mighty sudden, not one-half of that amount will reach the streams. Operations in the woods have been entirely suspended, and hundreds of men have been discharged. The cause of the trouble is lack of snow.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl.

GAME IN MARKET.—Game continues remarkably scarce and dear. At this time last year the prairie chickens were coming in by the car load, and the present condition of the supply indicates either a closer attention to the game laws in the Western States, or a greater scarcity of birds. We quote: Ruffed grouse, at $1.50 per pair; pinnated, do., $1.40 to $1.60; quails, $5 to $5.50 per dozen; canvas-back ducks, $3 to $3.50 per pair; red heads, $1 to $1.25; sprig-tails, black ducks and widgeon, 90 cents to $1; broad bills, 60 cents; teal, 75 cents to $1; brant, $1.50; geese, $1.25 to $1.50 each; rabbits, 50 to 65 cents per pair; hares, 40 to 50 cents per pair.

—We regret being obliged to allow letters from Mr. John Rigby, "Gloan," and others, on choke-bores, to remain over until next week.

NEW YORK—*Rochester, February 3d*, 1876.—Sport with the shot gun is almost limited to fox hunting. A grand hunt is being organized. Report says that there is an unusually wise old Reynard living a short distance from this city, and it is proposed to try the effect upon him of many dogs and men. I am inclined to think Mr. Fox will soon meet with a violent death. IATROS.

NEW JERSEY, *Atlantic City, January 27th*, 1876.—A few mornings since a party of our gunners had scarcely left the depot, when old Watch routed a fox, who took to the woods, and gave the hunters a merry chase for four hours, when he was killed. He weighed twelve pounds, the average weight of the gray fox being not more than nine. Our hunters do not go fox hunting on horseback, but take to the woods on foo., and when the dogs have found their fox, head them off at old roads and fields. REYNARD.

PENNSYLVANIA.—"Wish" Miller, of Uniontown, Fayette Co., Pa, has lately returned from a three weeks' hunt in Hoy's wilderness, on the north branch of the Potomac river, thirty seven miles from Oakland, Maryland. He made his headquarters in a shanty, with J. L. Browning and Samuel Hoover, who were herding hogs on the beech nuts, which are very plentiful there this Winter. The forest was literally alive with wild pigeons, feeding on the great abundance of mast. He killed only four deer, however. They were very scarce, being driven off by panthers and bears, which were numerous. He shot one of the largest bucks that has been brought to Uniontown for many years. Wish saw two panthers killed by Mr. Conway, and one by Mr. Kusmiller, and killed a catamount himself. One of the panthers measured nearly eight feet in length. In speaking of this magnificent hunting district, the *Standard* says: "You can travel through this wilderness for hundreds of miles without seeing an inhabitant. The hemlock, beech, sugar and wild cherry trees, from eighty to a hundred feet high, grow in abundance. The rays of the sun never penetrate through the matted branches of the tall trees. The country is level. It is just as nature made it, a wild, howling wilderness, the home of the bear, the panther and the wolf. Such a thing as a snake, or toad, was never known to be found in this place. Foxes and rabbits are plenty, and other small game in abundance."

Hamburg, February 1st, 1876.—Just as we predicted, partridges are again, we might almost truthfully assert, entirely exterminated in this section, as other game is also. It is a disgrace to the honor of our county (Berks) that no stricter and more vigilant laws were enforced, and we now see the results. In a county where the local journals speak boldly of "big catches" with a seine, nets, and other untawful means, it is evident that no attention is given to the doings of our "wise Legislature," and of course, so the laws are powerless in that direction. Our disciples of "Walton" are also minus any water here for displaying their powers in "enticing the finny tribe."

PEKO NIXON.

THE MEGANTIC AGAIN.

MONTREAL, January 29th, 1876.

EDITOR FOREST AND STREAM.—

In your paper of the 6th inst., I saw a communication signed "Pierpoint," and headed Guides' Wages in Megantic. In the first place, there is no occasion for parties to go to Scotstown when they can reach the foot of Lake Megantic via. Robinson, Gould, and Stornoway, and thence to Megantic Post Office, where there is a large settlement of Highland Scotch fishermen who are always willing to act as guides for reasonable wages; those we had last fall were paid at the rate of $16 or $20 per month. Each man supplying a large flat-bottomed boat to convey us and our traps up and down the lake. Megantic is supposed by most people to be nearly uninhabited, which is a great mistake; every acre of land is taken up from the foot of the lake nearly to the basin, and nearly all the lots have a clearing and a small house erected thereon, consequently there are are plenty of able-bodied men who are glad to earn reasonable wages by acting as guides to sportsmen. At the head of the lake there are but few settlers, and only the man McDonald and an Indian (the only one frequenting this place), who act as guides. McDonald is a regular impostor as regards exorbitant charges, and "Mr. Lo the poor Indian" is not to be trusted at all on account of his fearful love for fire-water. A person once on the lake can send for provisions, etc., by boat to the foot of the lake. A store, hotel, and Post Office is carried on here by a very obliging fellow, by name, John B. McDonald, who will arrange for guides, etc., on reasonable terms. Major McMinn, and Arthur Bruce, Esq., at the saule place (the latter a subscriber to your valuable paper, would I am sure do all in their power for any sportsman going their way. ESCULAPIUS DENTALIS.

CHILLED vs. TATHAM SHOT.

EDITOR FOREST AND STREAM:—

INDIANAPOLIS, January, 1876.

As there has been considerable discussion upon the merits of chilled shot, I will give you the results of a trial with it, and if you think it of sufficient merit you can publish them in the FOREST AND STREAM. The guns were two of Mr. W. W. Greener's No. 10, 33-inch barrels, and weighed 8¼ and 9 pounds. The shells used were Eley brown, loaded with 4½ drachms No. 2 Dupont sporting powder, with a pink edge fea

wad, and 1¼ oz. of No. 6 chilled shot with a common card wad over the shot. I had an equal number of shells loaded same as the above, except No. 7 Tatham shot was used instead of the chilled shot.*

*The Newcastle chilled shot, No. 6, have 270 pellets to the ounce, and Tatham, No. 7, 291.

The target was 30-inches in diameter, and the distance 40 yards. The sheet for the pattern was 30×40 inches, and the pads for the penetration were 18×24, heavy brown rag paper, placed against an inch board 36×50 inches.

In order to test the new guns *relatively* as well as *absolutely*, I invited several gentlemen, who in their own estimation, each had the best gun, to join in the trial. I will give the results in the order in which the guns were shot, giving the names of the manufacturer:—

NO. 1—GREENER—CHILLED SHOT.

Right barrel.	Fig. of merit.	Right barrel.	Fig. of merit.
Pattern.....106		Pattern.....191	
Penetration.....40	152	Penetration.....49	230
L. B.		L. B.	
Pattern.....162		Pattern.....189	
Penetration.....46	208	Penetration.....50	239

NO. 1—TATHAM SHOT.

R. B.		L. B.	
Pattern.....187		Pattern.....190	
Penetration.....41	338	Penetration.....44	234

The figure of merit was reached by adding to the number of pellets within the 30-inch circle the number of sheets penetrated by three pellets.

NO. 2—GREENER—CHILLED SHOT.

R. B.		R. B.	
Pattern.....152		Pattern.....229	
Penetration.....39	190	Penetration.....48	277
L. B.		L. B.	
Pattern.....169		Pattern.....192	
Penetration.....46	215	Penetration.....43	234

NO. 2—GREENER—TATHAM SHOT.

R. B.		R. B.	
Pattern.....192		Pattern.....215	
Penetration.....43	235	Penetration.....40	215
L. B.		L. B.	
Pattern.....187		Pattern.....222	
Penetration.....56	243	Penetration.....38	260

NO. 3—DOUGAL*—CHILLED SHOT.

R. B.		L. B.	
Pattern.....163		Pattern.....109	
Penetration.....39	202	Penetration.....41	150
		Pattern.....168	
		Penetration.....44	212

TATHAM SHOT.

R. B.		L. B.	
Pattern.....157		Pattern.....154	
Penetration.....40	197	Penetration.....38	192

*This was among the first guns that Mr. Dougal bored on his new plan.

NO. 4—DOUGAL*—CHILLED SHOT.

R. B.		L. B.	
Pattern.....184		Pattern.....191	
Penetration.....39	223	Penetration.....49	240

TATHAM SHOT.

R. B.		L. B.	
Pattern.....191		Pattern.....202	
Penetration.....36	227	Penetration.....60	252
L. B.		L. B.	
Pattern.....219		Pattern.....232	
Penetration.....50	269	Penetration.....38	270

*This gun is a new one and is bored on Mr. Dougal's modified plan.

The foregoing trials brought several new guns into the field on Jan. 8, and to secure uniformity of results, the shells were all loaded by, and the contest conducted directly under the supervision of S. Beck, Jr., Esq., the leading gunsmith of this city. The No. 10 shells were loaded with 4½ drachms No. 2 Dupont dicking powder and 1¼ oz. No. 7 Tatham shot. The No. 12 shells with 3¼ drachms Dupont and 1 oz. Tatham—distance and target same as on preceding days, except that in the former the 30-inch circle embracing the central group of shot, was described after the shot was made, and in the latter, the circle was made before the gun was fired, and the number of pellets only counted that struck within the circle.

NO. 1—SCOTT*.

Right barrel.	Fig. of merit.	Right barrel	Fig. of merit.
Pattern.....199		Pattern.....181	
Penetration.....52	251	Penetration.....42	223
L. B.		L. B.	
Pattern.....142		Pattern.....151	
Penetration.....46	188	Penetration.....48	199

*This gun was originally of the English pattern of boring, but was recently re-bored on the *modified choke plan* by S. Beck & Son's of this city.

NO. 4—DOUGBL—TATHAM SHOT*

Average pattern of 4 shots	211
Average pattern of 4 shots	43
Figure of merit	254

*It is but just to state that this gun was shot first in the morning of the 5th with soft shot, when the weather was calm, and during the forenoon a swift breeze sprang up, which affected the shooting of all the guns. This in common with the test as is indicated by the *chilled shot* which were made last.

COMMENTS.

From the foregoing tests it will be seen that the results reached with *chilled shot* do not correspond with those generally attributed to them as compared with *soft shot*. The facts are these: Every gun made better patterns with soft than with chilled shot; and in No. 1, 2, and 4, which are of approved modified choke-patterns, the results are remarkably uniform. The same is true of the figure of merit. In every case it was better with the soft than with the chilled shot. On the other hand, the penetration was better in every instance with the chilled shot.

It would be a matter of interest to known how Tatham shot compares in solidity with the soft shot used in the *Field* Gun Trial last Summer.

Buckshot were fired from the choke-bored guns with varied results. At 60 yards from four to ten balls could be put into a target 30×43 inches with a charge of 4½ drachms of powder and 12 shot; and at 100 yards from 3 to 6 would be lodged in the same sized target.

Quite a number of shots were fired, of cartridges cut between the two wads separating the powder and shot, so as to leave on one side just enough of the shell undivided to hold the ends together, and inserting them thus into the gun. The shells were loaded with the usual charge of No. 7 shot, at 40 yards; when fired the charge of shot was expelled from the gun with the forward end of the shell containining them, and in this manner would pierce the target consisting of two thicknesses of inch board, making a clean cut orifice the size of the shell. At 100 yards the shells usually bursted before reaching the target. This practice might be useful in cases of emergency when it was desirable to improvise killing charge out of small shot for large game. H. G. CASEY.

A DECEMBER HUNT IN THE SOUTH-WEST.

December, 1875.

EDITOR FOREST AND STREAM:—

We (two) left Philadelphia on the morning of 26th of November for a month's shooting in the Southwest. The "limited mail" by the Vandalia route makes St. Louis in thirty hours—an improvement over previous seasons and trains of six hours. We took three dogs (setters)—Dash, an old stager, and two pups that had not been shot over; Cora, a Gildersleeve bitch coming a year old, and Don, eight months old, son of David Brooks' Bismarck, recently smothered in an express car. Don is the image of old "Biz."

Our ground was the same as that shot over last Winter, viz.: Jasper County, Mo., the adjoining counties in Kansas, the Ind an Territory about Vinita, with the addition of some points in the Neosho Valley. Joplin was our headquarters in Missouri. It is the centre of the richest lead and zinc developments, and is a mining town of mushroom growth—four years, and 7,000 population. 8 000 tons of pig lead were shipped in 1874, and the estimate for 1875 is 12,000 tons, and this is the return from scarcely more than surface scratching. So the locality affords mineral as well as game attraction to those disposed for both. The Messrs. Davis—father and son—of Murphy & Davis, one of the leading mining firms, do a great deal of quail and grouse shooting, and do not consider a bag of seventy-five or a hundred quail an extra day's sport. Joplin is reached from St. Louis by the Atlantic and Pacific Railroad to Pierce City, and the Memphis and Carthage Railroad from there to Oronogo, from which there are eight miles to be traveled by stage. The Joplin Hotel, kept by Heathwood & McCoy, is among the few good ones west of St. Louis. Mr. Heathwood was our host last year, and then resided on his farm—the Spring River Stock Farm—nine miles from Joplin. It has 1,000 acres under fence and cultivation, and is probably the finest farm in Southwest Missouri. His stock of game chickens, some 500, is said to be, in point of thoroughbred qualities and purity, the best in the country. The Spring River skirts the farm, and its vicinity abounds with quail. It is also the boundary line of Kansas, where, on the Shawnee Prairie, the grouse are as abundant as in any part of the State. The M. C. & N. W. Railroad terminates at Brownsville within the State line, but there is no accommodation for sportsmen. Board can be had at Smithville, a village two miles this side.

We did not find quail so plenty in the valley this, as last year. The heavy floods that visited this section last August probably destroyed the birds in the low land. In the upland we found from three to six coveys in each favorable field. "Bis" Don had an invincible spirit, and at first thought it his mission to catch the birds, and made liberal efforts to run them down, but, as your Esquire Smith says, a two-foot rawhide is a prime instructor, and it was the rod presented by the Squire that educated him to hunt with his nose, instead of his legs and eyes. Cora was gentler, and did not require rod tuition. Three month's practice made dogs of them hard to beat. They did not lose a day's hunt, and were in better condition at the end than when they began, showing the traits of endurance for which their stock is remarkable. Not caring to take them to the buffalo and antelope country, we expressed them in a case from Chetopa, Kan., and they reached home in five days, in good condition, and had evidently been well cared for by the company.

After having ten days' satisfactory shooting about Joplin, we left for Vinita, Cherokee Nation, but did not tarry there, because our old hunting friends had left the locality. Charley Peach, a keen sportsman, had removed to Neosho, A. & P. Railroad, a good point for deer and turkeys, as well as grouse and quail, and Chief Rufus Rose being in Washington on Indian matters, so we traveled up the Neosho valley (Missouri, Kansas & Pacific Railroad) to Chetopa, the point where the Irish team pitched their tents last year. The contrast between this valley and the Indian Territory which is still not open to white settlement is very striking, one third of it, at least, being under fine cultivation. I am satisfied that this Neosho valley, from Chetopa to Parsons, and from Parsons to Emporia, and to Junction City on the two branches of the M. K. & T. Railroad, will offer all the sport that any one could desire in the way of quail and grouse, or wild fowl either, in the Neosho River, if they be cared for. On the same road, from thirty to one hundred miles south of Vinita, deer, turkeys, and grouse are so abundant that a hunting party is never disappointed in their quest. We found wing shooting so good within a range of fifteen miles of Chetopa, that we did not shift our quarters, though it is probably better about Oswego, Neosho Falls, or Burlington, simply because the ground is not so much shot over. Our companions were Bob Orm and A. A. Kase, who led the Irish team, and who know the country thoroughly, and are the best shots, day in and day out, that we ever hunted with. We bagged from one to four dozen grouse a day from 9 A. M. to 3 P. M., according as the day favored, with always good quail shooting before and after those hours. I prefer this December shooting to that of the three preceding months, though then much larger bags can be made. On account of the heavy crops of corn, chickens were never finer than they are this year, their average weight running from four to four and a half pounds the pair. The high prices West—$1 to $3 the dozen in St. Louis, and $5 to $6 in Chicago—stimulated their shooting by professional hunters. $4 was the cash price paid in Chetopa the dozen; but this was owing to rivalry of different houses, and was $1.75 above the ruling price at many other country towns. From 1,000 to 2,000 grouse per week were shipped from Chetopa, chiefly to Chicago.

Kellerman, who keeps the National Hotel, treated me very well. He understands the care of hunting parties, particularly the measure of lunch requisite. His charges to hunters, too, are reasonable—$2 a day if they stay four days, or $7 a week, if they stay longer. The prairie grass was never known to be more luxuriant than this year, and in the river bottoms it was so rank—five to ten feet growth—that it was useless to attempt to hunt in them. From Chetopa we went north to Emporia, where we took the Atchinson and Santa Fe Railroad west, to the buffalo and antelope country. On this road, west of Emporia, say for seventy-five miles, I should not hesitate in stopping off for quail or grouse. It is well settled up, and has all the marks of good ground. It was our purpose to stop at Fort Dodge for buffalo, but learning that they were ranging one hundred miles south of there, we went on to Fort Lyon, where moderate herds of them were grazing on Sand Creek, about forty miles south of the road. I shall not inflict details of a buffalo or antelope hunt upon you, as it is an old story in your columns. Barring the incidents of the hunt and the exhilerating life on the plains, the mere shooting of buffalo is coarse work and unexciting, and bears no comparison to wing shooting. Two years ago multitudes of buffalo were to be seen on the line of this road, but persecution has driven them a good three day's ride away, and the day is not remote when they will be virtually exterminated. But one buffalo has been seen from a train this season on either this or the Kansas Pacific Road. This straggler was posted near Kit Carson, on the latter road. The Baron Rothschild party stopped off at Fort Dodge for a buffalo hunt while we were at Lyon. I have not yet seen or heard the record of their expedition, but should judge they had a square taste of horseracking and plain life if they persevered in reaching the buffalo range. At Denver there were three parties of English noblemen after mountain game. They had extravagant outfits of equipments and guides, but their success did not equal their expectations. The Game Association of Denver, have introduced quail in their vicinity. The birds have thrived and increased, and in a couple of years it is expected they will afford first-rate shooting.

During our five week's hunt we had but one stormy day, and the temperature was uniformly pleasant, ranging from 40° to 60°. Next December we shall shoot for birds at different points in the Neosho Valley, and camp for deer and turkey at some point south of Vinita, not yet determined upon. The territory I have indicated will afford to those in quest of good ground, all the sport they desire. We did not strike any roads that had abolished dog tariffs, but we have no reason to complain of them, and are satisfied with the charges and the good care given the dogs by the baggage-masters. The Pa. Cen. R. R. charges $1 50 from Philadelphia to Pittsburgh, and each of the three roads between Pittsburgh and St. Louis charge $1 50, or a cost of $6 a dog to St. Louis. West of St. Louis our dogs cost us about half a cent a mile. As I say the baggage masters cared for the dogs as well as they could, gave them comfortable quarters as were at their command, supplied them with water, &c., and attended to their transfer in the night.

W. W. Judy, 221 North-Third street, St. Louis is personally informed of the best hunting points west of the Mississippi, and knows sportsmen in each locality, Col. Goss, Neosho Falls, Kansas, likewise. The Col. has a kennel of fine dogs, a handsome collection of Western birds and animals, and of course a first-class stock of breech-loaders and equipments. Mr. John L. Brown, of Sedalia, Mo., is also a keen sportsman, and has written a pamphlet giving much valuable hunting data of several localities. I am sure either of these gentlemen would give brother sports men in need of it as much information, and as cheerfully as they give it to us. Such a hunting trip is a wholesome relaxation, and will build flesh about one whose life or business is of a sedentary character at the rate of two pounds the week as it did with our little party of two. B.

NEW YORK YACHT CLUB.—The election of officers for this club was held on Thursday of last week. There were two tickets in the field, and under the new regulations abolishing proxies and allowing only yachts owners to vote, a close vote was the natural result. The candidates for Commodore were Mr. G. L. Kingsland, the 1875 Commodore, and Mr. Wm. T. Garner. The other officers were, with the exception of Secretary, and one or two places on the regatta committee, almost identical. After the election there was some excitement, when it was announced that Mr. Kingsland had received twenty-five votes to twenty-four for Mr. Garner, but the latters friends contended that only forty eight votes had been cast, and that it was a tie. Immediately after the vote had been declared, Mr. Lester Wallack, one of Mr. Garner's supporters, came in, and wanted to vote for him, but was not permitted to do so, on the ground that the vote was closed. Some excitement ensued, and Mr. Garner's friends claimed that a Garner ticket, which had been cast, with Garner's name torn off, as they claimed, accidentally, ought to have been allowed for him; Mr. Kingsland was, however, duly elected.

The other candidates elected were as follows: S. Nicholson Kane, Vice-Commodore, (regular;) Charles A. Minton, Secretary, (opposition;) Sheppard Homans, Treasurer; A. Cary Smith, Measurer; L. De Forest Woodruff, Fleet Surgeon; William Crebs, Henry Steers, and G. S. Winston, Regatta Committee; Fletcher Westray, N. D. White, George L. Jordan, C. Alfred Grymes, H. N. Alden, J. O. Proudfit, and D. T. Worden, House Committee; S. Nicholson Kane, A. S. Hatch, Philip Schuyler, and William H. Thomas, Committee on Admission.

After the election, the day of the June Regatta was fixed for the 8th of that month, and $2,500 was appropriated for prizes. The Treasurer's report showed that the receipts for 1875 had been $16,060 55, and the disbursements $16,244 13, and that the present indebtedness of the club amounts to $10,440.

—The students of Amherst College have decided not to send a crew to Saratoga the coming summer. The college cannot raise sufficient money to support both boating and base-ball, and has decided to give its entire support to base ball.

TENTH ANNUAL STATEMENT

OF THE

New Jersey Mutual Life Insurance Company,

Pope's Rifle Air Pistol

FOR TARGET PRACTICE.

JUST THE THING FOR SPORTSMEN AND military men. Shoots darts or slugs a distance of 50 feet. Perfectly accurate. By practicing with it one may become a dead shot. Each pistol is put up in a neat box, with 6 darts, 6 targets, 100 slugs, ramrod, claw, wrench, and skeleton gun stock. Price $5; nickel plated, $6. Sent by mail on receipt of price and 35 cents postage.

One of the many testimonials from the Commander-in-Chief of the U. S. Army:—

"It is surely ingenious in mechanism, quite accurate in aim, and useful in preparing one for the more serious handling of the ordinary rifle.

W. T. SHERMAN, General."

POPE MANUFACTURING CO.,

Wm. R. Schaefer,

Manufacturer only of first-class Breech-loading

Shot Guns,

And Dealer in

Guns of all Descriptions.

Guns bored to shoot close and hard, warranted, EVERY TIME. Gun stocks—bent, crooked, or straight—warranted to stay. Constantly on hand, a large invoice of English chilled shot, in 28-lb. bags. Repairing and engraving promptly attended to.

No. 61 Elm Street, Boston,

feb2 1y Corner of Dock Square.

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 30 cents. Highest award, Vienna, 1873. Send for circular. **WM S. KIMBALL & CO.,**

PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsmun. Have used your tobaccos for many years, and know them all to be first class.

For Sportsmen.

A trusty friend, in weariness or trouble: a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. G. Lamborton, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers. dec23 tf

Sharps New Long Range Rifle.

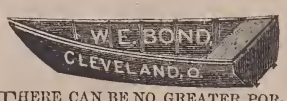
SCHOVERLING & DALY,
jan20 3m Nos. 84 and 86 CHAMBERS STREET, NEW YORK.

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fast like moveable anvil made of steel. The nickle cone also prevents misfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3½ inches.
Shells and Loaders, and description Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.



From Captain Bogardus, Champion Wing Shot of America.

MESSRS. GEORGE E. HART & CO.,
Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,
may13-1y A. H. BOGARDUS.

THE
PAPER STEM PIPE.
Just the Thing for Home and Camp Use.

Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,
The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,
For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER.
The best for rifles and for all ordinary purposes. Sizes F.F., FF.G., FFF.G., the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,
21 Park Row, N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by CAPT. A. H. BOGARDUS, the "Champion Wing Shot of the World."

DITTMAR POWDER

MANUFACTURING CO.

MY NEW IMPROVED POWDER can now be loaded from an ordinary powder flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR,
NEPONSET, MASS.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration*. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

CHAMPION GUNS OF ENGLAND
PAPE'S
Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12 Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape	Davidson
60 yards. Long Range, Sporting Bores.	
1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2½ oz. shot.

1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858 1859, 1866. Address

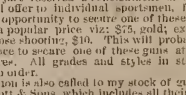
IMPORTERS AND MANUFACTURERS OF
Guns, Rifles, Pistols, Fishing Tackle

Remington Rifles and Shot Guns, Holabird Shooting Suits, Cartridge Vest, Belts and Pouches. Implements for both muzzle and breech loading guns.

Sportsmen's Goods and Ammunition of All Kinds.

We take muzzle loaders in exchange for breech loaders, and have always some fine second-hand guns on hand cheap.



Goods sent C. O. D. to all parts of the United States.

Ivory and Pearl Stocks put on Pistols. Repairing of all kinds artistically executed.

Cartridges for Breech Loading Shot Guns, ready loaded, put up in boxes of fifty, or loaded to order. aug5-6m

H. C. Squires, No. 1, Courtlandt st. New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER'S
Far-Killing Prize Guns.

Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.

W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.

I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price viz: $75, sold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.

Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.

Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.

Send 25 cents for large illustrated Catalogue of Guns, and including Game Laws for all the States, and summary of Great London Gun Trials. Ready March 1st. Jan15 1y

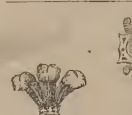
BREECH LOADING GUNS,
Made to Order
OR
FROM STOCK.

These Guns, celebrated for genuine high class workmanship and No. 1 SHOOTING POWERS, are built in six qualities (or brands.) They are now imported direct to our NEW YORK OFFICE, and sold by the Manufacturers to SPORTSMEN at the following prices.



Pioneer,	$65 Gold.
Tolley,	90 "
Standard,	115 "
National,	140 "
Challenge,	180 "
Paragon,	225 "

These SHOTS and others requiring Guns specially built, on our new system for DOUBLE-CLOSE SHOOTING, with increased PENETRATION, can have their wishes carried out WITH DESPATCH

Without Extra Cost.

Send for illustrated descriptive particulars and price sheets to our

BRANCH OFFICE, 29 Maiden Lane,
NEW YORK CITY.
MANUFACTORY, PIONEER WORKS,
1y1 Birmingham, England

J. D. DOUGALL'S
EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 188, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

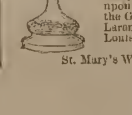
PRICE LISTS, &c., ON APPLICATION TO
24 SUFFOLK STREET, DUBLIN, or
72 ST. JAMES STREET, LONDON.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,



Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supersede all the complicated and unrefined styles now in use, as such powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
aug26-tf Established 1780.

W. W. GREENER'S
DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 86 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 90 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address

Camp Life in Florida.

By CHARLES HALLOCK,

AUTHOR OF THE FISHING TOURIST.

This is a most seasonable book for Sportsmen, Tourists, Invalids, and Settlers, and has been long needed by Winter Tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and data for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

348 pp., 12mo. Price, $1 50.

CONTENTS:

Introductory Chapter.
Buds-eye Glades at Florida.
Outfit for Sportsmen.
Hints for Southern Hunting.
Coastwise Routes of Travel.
Game Animals and Birds of Florida.
Game Fish of Florida
Three Months in Florida for One Hundred Dollars.
Supplementary Hints for Cheap Recreation.
Up the St. John River.
Indian River.
Florida the Promised Land.
Fort Capron.
Fishing at St. Augustine.
Black Bass Fishing on Spence Creek.
Hunting the Panther.

THE AMERICAN NEWS COMPANY, AGENTS.

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 22, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The fine fleet composed of the steamships JUNIATA and WYOMING. *The Wyoming does not carry passengers.* The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families *en route* for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamer leaves Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia

McBride Flies.

HAVING BEEN FOR THE PAST twelve years associated with my father, John McBride, in the manufacture of fishing tackle, I feel competent to continue the business and supply the custom with the same quality as heretofore. Parties supplied with casting lines and artificial flies for Pennsylvania trout streams, Adirondacks, the Maine Woods, Lake Superior, Thousand Islands, Canadian, and other waters. Anglers not acquainted with the nomenclature of these flies, by mentioning the locality where they intend fishing, will have the varieties best suited to those waters sent to them. Flies copied from any natural insect or pattern desired. SARA J. McBRIDE, (successor to John McBride) Mumford, Monroe county N. Y. Dec2-1y

BREECH LOADING GUNS
A SPECIALTY.

AGENTS:
for the following celebrated makers:
W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); J. P. CLABROUGH & BRO.; P. WEBLEY & SONS, and WESTLEY RICHARDS.

HOLABIRD'S Shooting SUITS,
DIXONS & HAWKSLEY'S SHOOTING TACKLE
STURTEVANT BRASS SHOT SHELLS;
BUSSEY'S PATENT GYRO PIGEON AND TRAP
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the *heads down* in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. In ordering send measurement around the chest.
PRICE $7.50.
AGENTS FOR THE
Union Metallic Cartridge Company's Ammunition,
WARRANTED THE BEST IN THE MARKET.
SEND FOR CIRCULAR.

THE FISH AND THE GOLD RING.

[An incident of the loss of the steamship Anglo Saxon off Cape Race, Newfoundland.]

A FISHER'S skiff rocked lazily
Off rough Newfoundland's coast;
O'er her the clouds drooped hazily
Like banners of a host.

The fisher kept his weary watch,
And plied his dripping lines,
And anxious eyed the scanty catch
His tiny bark confines.

The day was done—dull evening came—
For home the toiler left,
Where soon by his industrious dame
Each fish was deftly cleft.

When lo! from out the offal slid
A ring of finest gold;
Strange that such uncouth casket hid
An heirloom quaint and old!

Weird things transpire beneath the skies,
More weird within the deep:
Known only to those sapient eyes
That ward and vigil keep.

Of this occurrence naught but guess,
For none the secret knew,
Till on the pinions of the press
Across the wave it flew.

A stranger to Newfoundland hied;
When he the circlet saw,
"My long lost mother's ring," he cried,
And, wondering, stood in awe!

Oh, God! in sunshine and in storm
Thy guiding hand we trace;
Who gave this frail memorial from
You stormy steep Cape Race!

Full fifty pounds our fisher got;
God's ways are wonderous wise;
To Him a ne'er forget me-not—
A blessing in disguise!

Among the Sword Fish.

CLOSELY connected, and quite as valuable as the mackerel, in a financial and game point of view, is the sword fish, (*Xiphias gladius*), and it was our pleasure and good fortune this Summer to take a hand in this sport and see how it is done on our coast off the Vineyard. Before speaking of the mode of capture, or excitement of the sport, it would be well, perhaps, to take a look at some of the peculiarities of our game. As they are seen swimming along the surface they present an appearance not unlike the great white shark, and entirely unlike their fourth cousins, the timid mackerel. Graceful in form, like some natty marine privateer, they move along, "armed to the teeth" in stern reality, and evidently conscious of their great power. From the upper jaw shoots the sharp weapon from which they derive their name, and its power can only be appreciated when felt or seen.

In the Mediterranean Sea it grows to a length of six or eight feet, and is frequently found on our coast lengthened far beyond that. The scales are extremely minute, and from the back juts a huge dorsal fin that often causes it to be mistaken for itsrival, the shark. The tail is keeled, the lower jaw sharp, as if trying to keep pace with its neighbor, but had failed, and was determined to be savage even in its diminutiveness. The mouth is as toothless as one could wish, and the thought strikes you that the one great tooth or sword had drawn all the succulent or toothy matter from its jaws, and its power had been condensed in one great arm. The upper part of the body is a beautiful bluish-black, now striped or spotted with brown, or shaded with the same, and as it shoots along now bursting the watery doors, and rushing through the frightened air, the silvery stomach and dark back comes into bold contrast, and show it as a beautiful member of the finny race, as well as a savage enemy to all creation. On the southeastern part of Massachusetts, round the heel of old Cape Cod, seems to be a favorite hunting ground for them. Here they chase the timid mackerel and smaller fishes, devouring them without the first thought of the bond of relationship; and here it is that the fishermen "most do congregate." Lying all night in the jolly harbor of Wood's Hole we had ample time to prepare for the sport, and by three o'clock sharp our little sloop was swinging around and gathering herself together, headed for Gay's Head. The vessel was a common sloop of about sixty tons, and the only peculiarity being a stanchion rigged on the extreme end of the bowsprit, and a curved top to hold the "harpooner." At nine o'clock we were out of sight of the fair Vineyard. The wind settling, I was informed that I could go aft and use my weather eye, and the better I used it the more fish we would get, and after not a few attempts to climb a greasy pole of a mast, I found myself aloft, with a firm grasp on the throat of the gaff, my weather eye, contrary to orders, full of tar, and my port one on the *qui vive* for the game. We were just moving along, and I was taking in the horizon for miles around, when the man at the bow gave a sort of cross between a cluck and a groan, which I saw meant "port," and that something had been sighted. The old craft lazily fell away, and I then saw two dark forms, with their razor-like fins out of the water, slowly moving along ahead of us. The Cap winked at once to come down, and as I reached the deck the fun commenced. The man waited until we were almost upon them, and as one of them turned as if in idle curiosity to see what the great shadow meant, he hurled the spear, and the next moment the huge fish as if with a yell of rage, sprang from the water, and with a furious twist tried to shake out the iron. So great was the effort that it fell with a crash on its side, and for a moment was still—but it was only for a second. The line jumped into activity and rushed out so that you could not follow it, now swaying to and fro and making the water fly like rain. About fifty feet of line had gone out, and we all took hold to take our turn, and at last six of us managed to get a fair hold and attempted a trial of strength, and if six individuals were ever jerked around in a more vivacious manner they have my utmost sympathies. Now he would land us all together in a lump; then slacken up and take us unawares; throw us to the deck with a force that fully came up to my preconceived ideas of the "sport," and would undoubtedly have dragged us all over, if the rope had not been sure and fast. This sort of *fun* was kept up for about fifteen minutes, when he perceptibly weakened, and the long rushes to the right and left grew weaker and weaker, until we ventured to haul in, and as the Cap said he had pulled at everything from "old Jersey * * * to Gov. "plug," and this was the hardest one of all. But science will tell, and at last we had the brute alongside. The iron had entered near the tail, and run parallel with the body towards the head, and as we hauled him up, twisting and cutting with rage, one of the men, in a very artistic manner, cut him across the tail with a bar, and the day was ours. A rope was then rigged from the peak and fastened around the long sword, and we all gave a "long pull and a short one" and the monster rolled aboard the sloop Roaring Similet, and jerked a salute with his huge sword to Capt. Busby, sole owner thereof. We measured our game, and the line gave us nine feet six inches, and though I have frequently caught sharks that measured thirteen feet, I never saw any one to show near the strength of this peculiar creature. We cruised about all day in this vicinity, and succeeded in capturing three more, varying from six to nine feet; and as we turned for the Hole I felt that I had well earned my experience, but would still advise the uninitiated to try it. A six months' course at the gymnasium is taken in an hour, and Indian clubs are at a discount, while as for a Turkish bath you have a novel one, and it would surprise the first Turk at the manner in which you are enabled to dissolve and at the same time wound up and rubbed together—and all this for the small price of trying to haul in a sword fish.

In Messina and Reggio the fisheries are carried on in very much the same way, except that the boat is propelled by oars, and a large flambeaux is carried ahead to attract them. During the fishing the crew chant a slow dirge, that is supposed to charm his fishship and coax him to destruction, as did the mermaids to ourselves ages ago.

Many incidents have happened from this fish mistaking vessels for a foe, and when enraged they rush blindly ahead with a force that is truly wonderful. Ospium thus speaks of him: "He summons to his instant aid the oft-tried powers of his trusty blade, selects some boat, and runs his puissant sword full many an inch within the fatal board."

In 1868 the result of an attack like this formed a subject for the action of courts of law in England, as insurance was refused to a vessel injured by one of them. It seems that the Dreadnaught, a first-class merchant ship, left a foreign port in perfect repair, and on the afternoon of the third day a "monstrous creature" was seen sporting among the waves, and lines and hooks were thrown over by the captain to capture it. All efforts to this effect failed. The fish got away, and in the night time the vessel was reported as leaking dangerously. The captain was compelled to return to the harbor from which he had sailed, and the damage was attributed to a sword fish twelve feet long, which had assailed the ship below the water line, perforated her planks and timbers, and imperiled her safety on the ocean. Prof. Owen, the distinguished naturalist, was called upon at the trial to give evidence as to the probability of such an occurrence, and the force, if such was the case, and he related several cases illustrating the immense power of the fish, and as regards the striking force, stated that "it strikes with the accumulated force of fifteen double-handed hammers. Its velocity is equal to that of a swivel shot, and is as dangerous in its effects as a heavy artillery projectile." Capt. Wilson, of the ship Halifax, in referring to their strength, says: "I had abandoned all idea of taking the fish until by great good luck it made for the land, an I I made another attempt, and having about three hundred feet of rope in the boat we succeeded in making a running bowline knot around the sword of the fish, and this we fortunately made fast to the shore. When the fish found itself secured it plunged so violently that I could not prevail on any one to go near it. The appearance it presented was truly awful. I immediately went aboard a Lima packet and got the assistance of her crew to a man. By the time we returned the fish was less violent. We hauled upon the net again and made fast three hundred feet of rope, and although we mustered thirty men, we could not move the creature an inch. By this time we got about a hundred negroes from a plantation, and we hauled nearly the whole day before the fish became exhausted. On endeavoring to raise it it became most desperate, sweeping with its sword from side to side, so that we were compelled to get stronger ropes, fearing he might cut us in pieces. It was fortunate that it came on belly up, as one of its strokes would have cut the boat in halves. After securing it one of the men jumped upon its back, and at a great risk ent through its tail, and animation was completely suspended. It was then measured, and found to be twenty-one feet long and eight feet broad, and weighed nearly five tons." Quite large enough to sink one of our largest vessels. I saw a vessel some days ago that came into New Bedford in a leaking condition, and upon hauling her up a broken sword was found, and after unloading everything it was found to have penetrated the copper sheeting, and then through the hull and inner ceiling of yellow pine, and the extreme end was found hard and fast in the oak end of a spare nail keg that happened to lay in a position to receive it.

Here, perhaps, is an explanation to some of the disappearances that are so frequently heard of. Vessels set sail and are never heard from, and in many cases perhaps the injuries inflicted by these monsters of the deep have proved fatal. Powerful as are these fish, they have one enemy that is always present, and equally as powerful as man in its effects. It is the little parasite, (*Pennatula filosa*), and when-

ever it touches it is as sure as a shot, and disappears in the thick skin in much the same manner, entering their very vitals and goading them on to new acts of fury, and often, perhaps, causing the uncovcted attacks for which they are so justly noted. C. F. HOLDER.

New Bedford, 1875.

For Forest and Stream.

A DAY'S MOOSE HUNTING IN 1860.

WE had lain in camp ten days—three of us, with as many dogs; two noble moose dogs, having to judge from their looks, the blood of the bulldog, mastiff, beagle, and stag-hound, and a brindled bull terrier, possessed of all the pluck and endurance of his race, but with no more knowledge of hunting than a sheep, having been brought from Rhode Island, where he had never seen anything in the shape of game larger than a woodchuck. We were buried in the heart of the great forest of Northern Maine, fifty miles northwest from Patten, in the vicinity of Telos Lake, and had waited for a "crust" through days of rain, thaw, and fog till we were perfectly desperate. At length it cleared up, and on that eventful night we sat up till eleven o'clock, running out of camp every half hour to plunge our forefingers into the fast-freezing snow to test the strength of the crust. When it became too hard for our fingers to penetrate, we retired satisfied to our berth to dream of moose.

At the first glimmering of daylight the next morning we were on the moose; but as the shadows of night retreated, and the pale sun illuminated the wintry sky, it became rapidly overcast, and we saw that a snowstorm before nightfall was inevitable; and a snowstorm in the neighborhood of Katahdin has to be seen to be appreciated. However, we pushed on, and as the snow-shoeing was all that could be desired, we soon placed six miles between ourselves and camp without striking the first signs of moose; but when, as we were skirting the base of one of the numerous "spruce mountains" which are found in this forest, we suddenly missed our dogs. We had depended on them more than on ourselves to find a moose "yard," as instances have been known where a trained moose dog has scented the game nearly, or quite, two miles, and for the first three or four miles we had watched them with eager eyes, but had latterly grown more careless, and their sudden disappearance somewhat disconcerted us, as their feet hardly made a mark upon the hard surface of the snow. To add to our perplexity the snow began to fall, rustling fine and dry through the boughs and withered leaves. We slowly retraced our steps forty or fifty rods, and stood undecided which way to steer, when all at once the voice of old Major fell on our glad ears, so faint as to be scarcely perceptible, and apparently miles away. It was impossible to distinguish the direction, and equally impossible that the dog could get the apparent distance in the time he had been gone. Then the voices of the other two chimed in, seeming to float in the air overhead, and as we danced in circles over the snow, too excited to stand still, and too undecided to take any direct course, the noise grew suddenly louder, and at once burst on our astonished ears, filling the air with music, being not over one hundred yards away, and almost directly overhead. The mystery was solved. The dogs had run round the end of the mountain, (we being near its eastern extremity) and had started their game on the back side, which had bounded up its steep and almost inaccessible sides directly toward its summit. Of course the intervening ridge had all but cut off the sound; but when the animal and his pursuers reached the top the sound poured down on us in a flood.

To climb the mountain at the point where we were was simply impossible, and we tore around to its eastern end, while the deep and measured baying of the big dogs and the incessant barking of the terrier aforesaid, told us the game was at bay. We quickly divested ourselves of our snow-shoes, and commenced to clamber up the steep ascent. Being encumbered with a heavy rifle—the only one we had taken from camp—I fell behind my comrades, and their shouts, as they reached the top, instead of hastening my ascent, as was intended, very nearly caused me to tumble back to the place from which I had climbed with so much labor. Bathed in perspiration, and panting for breath, I at length gained the summit, flung myself on to my snow-shoes, and bounded forward, hearing, as I ran, the voice of Bill (the Rhode Islander) frantically endeavoring to call off his dog, which, mingled with the barking, snarling, and yelling of the dogs, made a din more easily imagined than described. I soon reached the scene of action, and the sight which presented itself to my view still has power to provoke a smile, although a gap of fifteen years stretches between. The dogs had roused up a yearling moose, which, making up in agility what it lacked in weight, was fighting as only a moose can fight. The old dogs, Major and Rolla, wary both from instinct and experience, had escaped almost scatheless; not so with the unfortunate bull-terrier, Jim Sharp. He had rushed in on that moose as he would at a pig or sheep, and the consequence was frightfully apparent—cut through the muscles into the cavity of the abdomen without dividing the tough skin, and the entire intestines apparently protruded against the loose exterior integument. How he preserved his equilibrium was a wonder, and still more wonderful was his indifference, or rather utter unconsciousness that anything was wrong. He rushed around and harked and bit as though his internal arrangements were in their normal condition, and appeared, in fact, delighted. My first care, after taking in the situation, was to endeavor to shoot the moose without sacrificing a dog. No such opportunity presenting itself, the animal gradually worked its way to the western extremity of the mountain, and maddened by fear and pain, jumped from the summit upon a ledge about four feet below, which was perhaps six feet wide, and stood with his head looking over an abyss of three hundred feet in depth, the mountain projecting over its base at this point thirty or forty feet. On finding itself in this frightful position, the animal planted all its feet firmly and stood as if carved in stone, with its back just above the level of the summit. Old Major calmly walked up behind the beleaguered and helpless animal, and fastened to him. By dint of command and hard words the other dogs were kept off, but Major proved utterly refractory. We dared not advance, for fear the moose would leap into the air, taking the dog with him, and the same consideration restrained me from firing. At length I lost patience, and with a peremptory command from Joe to "risk it," I brought the rifle quickly to my shoulder. A glance through the double sight, a report like the crack of a whip, with no echoes on that height to return the sound, and the animal dropped lifeless in its tracks, with its head hanging over the cliff, pierced through the neck. We removed the skin and disembowelled it where it lay. Then, in view of the difficulty of getting it upon the summit and down the steep sides of the mountain, we determined to throw it over the cliff, which we did, hearing a dull thud far below as the mass of flesh which so lately was a moose descended to the earth. We retraced our steps to where we ascended, and on getting round to our venison found it in a badly battered condition; but we hastily quartered and buried it. The snow by this time had fallen to a depth of three or four inches, and we struck out for camp taking a more southerly course than the one we had passed in the morning. I had forgot to state that, after shooting the moose, we held a "medical consultation" over the case of the unfortunate dog, Jim Sharp. His owner advised shooting him on the spot, but we outvoted him two to one. Poor Jim was stretched out on the snow, and at the end of half an hour we had the pleasure of seeing him restored to his natural shape. A handkerchief—which two weeks before was white—was then tied around his body, an old mitten furnishing a pad, and with a rope attached to his collar, he trailed along behind his master's snow-shoes, his looks expressing sheepishness and disgust. We had accomplished nearly half our return distance to camp, and were crossing an outlying spur, which rose gradually to the south into the Wassattiquoik Mountains, and had just reached its crest, when we came suddenly on the tracks of a large moose. It was evident that the only snow in them was that which had just fallen; but as that was the first which had fallen in a fortnight, it was of course not easy to tell whether the tracks were ten hours or as many days old. We were discussing in eager, but suppressed voices, whether it was best to hunt them out, or keep on our course and return on the morrow, when the two dogs, which had been lazily pushing their noses into the old "dents," suddenly faced to the south, raised their noses high in air, and with tails extended straight behind, walked a few steps, swinging their heads from side to side, quickening into a trot, and then bounding forward with an almost inaudible whine. Major lost the scent within a few rods of his starting-point, and ran a circle to recover it; but Roll kept straight on towards a knoll, which I observed at that moment, about a hundred yards distant. When within three yards of it, it rose as if blown into the air with gunpowder; the snow fell off, revealing a magnificent bull moose, blacker than any I ever saw. A wild yell from the astonished dog brought Major round like a flash, while the excited terrier spun round like a top, tugging and biting at his rope like a dog possessed. I started at once in advance, Joe being encumbered with the hide of the moose we had killed, and Bill with his dog. The noble game had started directly along the ridge, which rose but very little for the first half mile. The snow had blown and melted nearly all off it, the old snow or crust not coming above his fetlocks—just enough, in fact, to steady his feet. But with all this advantage he could not gain on the dogs one inch. So close was old Roll to his haunches when he bounded to his feet that he could not even settle into that long, ungainly lope or trot, which carries him over all ordinary obstructions, and which the animal will keep up hours after hours in a depth of snow that those to whom the wonderful powers and endurance of this "king of the forest" are unknown, would deem impossible. The first leap from his bed would measure fully eighteen feet; and this style of running he kept up greatly to my surprise, for old hunters had informed me that moose never galloped when pursued, but always trotted, and in my subsequent experience I have never seen the thing repeated. How long this could have been kept up will never be known, for a circumstance occurred which brought the race to an abrupt termination. Like all the broken and mountainous countries, these wilds are subject to tremendous gales, which leave their traces in windrows of giant trees, upturned or broken by their force. Two of these tornadoes blowing from different quarters, had turned up two rows of trees in the form of a V. Into the apex of this trap the animal had rushed in his blind haste. As it was nearly twenty feet high at this point, to leap over it was impossible, and before he could retrace his steps the dogs were upon him. He had run perhaps one hundred rods; I had made half that distance, so he was hardly out of my sight. There was no baying this time. The first intimation I received that the game was brought to, was the peculiar savage snarl a dog gives when he seizes it. At the same instant my ears were saluted by the heavy roars or "grunts," as hunters call it, of the enraged bull. The sound cannot be conveyed on paper; but the dull, heavy thuds produced by a sledge-hammer on the end of a post, when driving it into the ground, comes nearer to it than anything else I can think of. This is the animal's call to its mate in the pairing season, and I have never heard it uttered at any other time, before or since; but this fellow seemed an exception to his race in color, form, and actions. Upon reaching the spot where the fight was raging, all the stories I had ever heard of the activity, fury, and power of this noble animal were more than verified. Perfectly fresh, his short run not having blown him in the least, with no snow to impede his movements, as roaring with rage he dashed first at one dog, and then the other, he appeared the very incarnation of fury, and I looked upon him with a sort of fascination. Not less wonderful was the conduct of the dogs. The first charge made as I came in sight happened to be at my dog, and I involuntarily held my breath, for the windfall was directly behind him, and his destruction seemed inevitable; but the instinct of the dog was superior to my reason. He stood perfectly still, facing the moose, and as he rushed upon him, sprang between his fore legs, then out at one side, and fastened to his flank before I had time to realize that he was not crushed out of all shape. This, which seemed to me a mere chance escape, I afterwards came to know a good moose dog will do every time. The moose, in charging on the dog, invariably strikes directly downwards with each fore foot. This of course leaves the width of his breast between his feet, and through this space the dog darts, and usually contrives to fasten to him before the bewildered animal is aware that he has not trampled him under foot. Just as my companions reached the spot, old Major gave a tremendous upwards spring, and fastened to the animal's hinder parts; but his hold gave way and he fell back. The moose, as he felt him strike his haunches, delivered a tremendous kick, which, had the dog been at any distance from him, would have brained him on the spot; but edging, as he did, upon his leg, the effect was to launch him into the air as if propelled from a mortar. Had he struck a tree in his course his fate would have been sealed. Luckily the coast was clear, and he flew over and over like an acrobat, clearing the windfall in his course and alighting with a force that completely bewildered him for some moments. His absence produced a momentary cessation of hostilities, which gave me the wished for opportunity of delivering the fatal shot. The bullet struck him behind the fore leg, and going slightly "quarteriug," broke the opposite shoulder as it came out. He pitched forward on to his nose, came up again instantly, endeavored to stand on the broken shoulder, failed again, then reared upon his hind legs, and fell over backwards to rise no more, still uttering his "grunts," which only ceased with his breath. We quickly dressed and buried him, and taking his nose as a *bonne bouche*, started once more for camp, where we arrived long after dark, tired and hungry, but well pleased with our day's moose hunting in the wilds of Northern Maine. LIBBEY

For Forest and Stream.

GAME IN WESTERN NEW YORK.

ALTHOUGH game of all kinds in this State is scarce in comparison with that found in Western and Southern States, there is still very fair shooting to be had on game in its season for the sportsman who knows the habits and favorite haunts of that which he seeks. There are probably one hundred deer killed annually near the Pennsylvania border, in Steuben and other counties, while foxes, the white and gray hare, black and gray squirrels, raccoon, mink, and muskrat are found in abundance, particularly in the half mountainous section through which the Erie Railroad and its branches pass. Ruffed grouse are widely distributed, being found in small numbers in the woodlands of nearly every farm. Quail are also quite numerous, though many are killed by the heavy snows of our severe winters, whole bevies being sometimes found in the spring under the deep drifts in the fence corners Woodcock breed plentifully along the numerous lakes, ponds, rivers, creeks, trout streams, and the surrounding brush-covered bottom lands, whose rich, warm soil produces an abundance of food for these voracious feeders, and in favorable seasons a large brood is reared. Wood-duck are also found along these water courses. Ruffed grouse, quail, woodcock, and wood-duck are the only game birds that breed in this latitude, with the exception of a few duck and snipe that are belated on their northward flight, and seek the secluded and inaccessible recesses of the marshes and swamps adjacent to our lakes and bays, where their nests are made and their young reared. The wild turkey disappeared long since, and is a thing of the past. Of the migratory birds which visit us may be mentioned geese—which, however, are seldom shot—brant, loon, many varieties of duck—principally mallard—black, teal, red head, whistler, widgeon, shell-drake, coot, dipper, snipe, plover, and curlew, with an occasional rail. The spring shooting of migratory birds amounts to but little. Ducks are often poor and unfit for food, and snipe make so short a stay that comparatively few are bagged. A good bag is occasionally made in favorable seasons if the shooter can be kept posted upon their arrival, and reaches the ground at once; but in case "winter lingers in the lap of spring," and frequent frosts cover the marshes with a film of ice at night, it is useless to look for snipe. Immense flocks of pigeons formerly visited us in the spring, but for many years the flight has decreased until the number of these birds now met with in this part of the State is insignificant. Last spring, however, an unprecedentedly large flight, estimated at millions, issued from the dense forests of Western Pennsylvania and flew up the Cohocton valley in early morning to feed on acorns in the oak-covered ridges of that region, returning at night over the same route to roost. So vast was the body of birds that an area of many square miles was daily cleared of acorns and other nuts. The flight lasted for three weeks, and afforded grand sport, the birds advancing farther north until they were forced to fly from sixty to one hundred miles from their roost for food. From the fact that nearly all the birds shot were males, their crops being gorged with acorns at night and entirely empty in the morning, it was thought that the females were nesting, and high hopes were entertained of having grand spurt with the young brood, but the birds suddenly forsook the region, disappearing in some unknown locality, only a few solitary birds being seen during the entire summer. This extraordinary flight was referred to in a former number of FOREST AND STREAM.

The opening of the woodcock season, owing to an unfavorable spring, found the birds small and weak on the wing, and no genuine sportsman had the heart to molest them. Later in the season they afforded capital sport, and many fine bags were made. In view of the uncertainty of our spring season, a change in the law is demanded, looking towards the better preservation of young, half-fledged woodcock and ruffed grouse, which are now mercilessly slaughtered not only by the unscrupulous pot-hunter, but by persons claiming to be true sportsmen and gentlemen. Every old sportsman knows this abuse to be widespread and general. Both birds are often found in the same cover, and the weak fledglings are knocked over by the score. Woodcock and ruffed grouse are our very best game birds, and should be protected with jealous care until the young are fully matured, when they would be found in sufficient numbers to make glorious sport, and bags of which we would be justly proud. Under the present law, many birds are killed in the hot months of July and August, the most of which spoil before the weary and heated shooter reaches home, and the faithful dog is overheated and sometimes ruined under the fierce rays of an almost tropical sun, as some sportsmen of this city have learned by sad experience. Far different would be the case were the close season for cock extended to September 1st. The dictates of common humanity require such a change, and it is to be hoped that all true sportsmen will unitedly labor to secure this result.

Ruffed grouse are found in considerable numbers in all parts of the State, especially in the vicinity of dense cedar swamps, to which they resort for food and shelter during the severe storms of winter. At the expiration of the close season, whole broods are found together in the uplands, and furnish admirable sport with the aid of steady, well trained setters or pointers. If, however, the birds are only found singly and in pairs. A great many ruffed grouse are shot around Batavia, and Pete Tompkins, of the Dean Richmond club, gets his share of

m. A change in the law relative to quail opened the son October 1st, twenty days earlier than usual, and, ough many bevies were seen during the breeding sea- , very few have been killed. A great many excursions the country have been made by city sportsmen, who e almost invariably met with very poor success. The of 1874 prohibited, for three years, the shooting of il in the counties of Wayne, Genesee, Orleans, and gara, and the result has been highly beneficial. In one hese counties these beautiful little game birds have in- ased in a most gratifying manner. A general applica- tion of this prohibitory law over the entire State would so increase the stock of quail that the shooting would be good for years to come. In their present depleted condition, the bagging of even half a dozen birds is a matter of great labor and uncertainty, the tired and disgusted sportsmen oftener returning empty-handed. In view of their scarcity, it is a singular fact that a small bevy appeared in one of our public squares last October, and remained scattered in the vicinity for several days. A woodcock also, during the entire summer, paid his respects daily to a little clump of willows growing on the river bank in the very heart of the city.

The fall flight of snipe and duck was good, but plover were unusually scarce, hardly a bird being seen where hundreds are generally killed. Duck shooting was excellent in localities where legitimate sport has not been ruined by those infamous contrivances, floating batteries. A few years ago Cayuga Lake, Seneca River, and the extensive Montezuma marshes contiguous thereto, fairly swarmed with duck, and was the favorite resort of sportsmen who traveled long distances to enjoy it, but the introduction of batteries has utterly destroyed the sport. The greater portion of the birds are driven away to other feeding grounds, and the remainder are rendered so frightfully wild that they will not decoy, and cannot be shot. This do sportsmen at large suffer by the villainous avarice of a few contemptible market shooters, with their diabolical batteries. The extinction of these, and the extension of the close season for woodcock, is a consummation most devoutly to be wished. AGATE.

Rochester, New York, January 8th, 1876.

Fish Culture.

ABSTRACT OF THE FIRST REPORT OF THE STATE FISH COMMISSIONERS OF IOWA.

AT the last session of the legislature an Act was passed, creating the present Board of Commissioners, and another one appropriating three thousand dollars to advance the interests of fish culture in the State of Iowa. With this authority the Commissioners set to work to restore what had been lost, and to enrich the waters of Iowa with new species of fish.

Since the last session of the legislature, the laws enacted previous to 1874, and the laws enacted by the legislature in question, have been carried out and enforced to the full extent, or so far as the Commissioners could influence their operation and use their power. The consequence is that in many of the fish streams of the State there has been a marked increase of food fishes, and a general disposition on the part of the people to support the law. Fishways have been constructed, as will be shown hereafter; and many citizens have been so much interested as to start fish ponds of their own under the advice of the Commissioners.

With the small appropriation of three thousand dollars, a hatching-house, 20x40 feet, two stories high, has been erected near Anamosa, in Jones County, under the supervision of Mr. Shaw, one of the Commissioners. With that three thousand dollars the hatching-house has been erected, an assistant hired and paid, all the expenses have been paid, and a great number of fish have been distributed; and this day the property owned by the State is worth the amount of the appropriation expended.

The last General Assembly enacted a law requiring all dams erected after the passage of the Act to have constructed fish ways under the supervision of the Commissioners. So far, the law has been complied with, and fishways have been constructed according to the plans provided by the Commissioners.

Section 2, chapter 50, requires the Commissioners to examine and report in regard to the comparative cost and value of the various improved fishways. So great a variety of opinion prevails in regard to the merits of the various fishways, even among the best authorities, and the matter is of so vital importance to the fish interests of Iowa, that they have been unable fully to determine in regard to the adoption of any one of them, until they have more fully investigated the subject. A favorable opportunity for this purpose is looked for at the meetings of the International Association for the Protection of Game and Fish, this coming winter. This organization numbers several hundred persons, among whom are the most eminent fish culturists, scientific persons, Commissioners, and other gentlemen interested in the propagation of game and fish. It has the approval and support of the Smithsonian and other leading institutions of this country, and will bring to the discussion of the subject an experience gathered from every State in the Union. The cost of fishways in Iowa varies with the different kinds, the height of fall, amount of water, character of dam, and other circumstances from fifty to one thousand dollars.

The Commissioner's first duty after organizing was to proceed with the erection of a hatching-house at Anamosa on the Wapsee River, which would be in every way suitable for the proposed operations, which was placed in charge of Mr. G. F. Slocum, who has had charge of the house ever since it commenced running, and has most efficiently performed his duties. The total amount of spawn handled and fish distributed in the State, and spawn and fish on hand for distribution at the time of making this report is as follows: Shad in Des Moines river, June, 1874, 100,000; Iowa varieties, distributed 1874, 20,000; California salmon, 1874, 300,000; Penobscot salmon, 1875, 80,000; brook trout, 1875, 1,000; shad in Des Moines river, June, 1875, 90,000; Iowa varieties, distributed 1875, 5,000; California salmon on hand, 300,000; lake trout on hand, 835,000; white-fish on hand, 25,000; lake trout eggs sent to Decorah, 100,000, making a total of 1,856,000.

From the United States Fish Commissioners have been received, 600,000 California; 80,000 Penobscot, and 5,000 land-locked salmon spawn, as we understood it, gratuitously, and a comparison is drawn showing what these eggs would have cost had they been purchased. To the various railroads the Commissioners are also under obligations for kind attention from officers and employees while traveling with young fish and spawn.

To continue the work already commenced efficiently; and to introduce such varieties from the East as would require to be transported in aquariums, such as eels, smelt, alewives, etc.; to save from loss and plant in our inland streams and in the Mississippi, and utilize the millions of young fish that are annually destroyed; and to place Iowa in pisciculture, as she is in many other things, in the front ranks, would require an appropriation of $15,000, the same as given by Michigan, New York, and other States, and the Commissioners ask an appropriation of not less than $10,000.

Of the California salmon placed in the waters of the State the Commissioners are constantly receiving favorable reports, and they quote a number of letters from persons who have observed them. Of their success with the fish they entertain no doubt, and their value to Iowa will be incalculable.

Brook trout are found in the northeastern part of Iowa, but persistent fishing by unlawful methods has so decimated them that large baskets are very rare. A few spawn have been hatched and placed in a stream near Anamosa, where, should they thrive, spawn can be taken from them and placed in many good trout streams of Iowa.

The Commissioners have received, and successfully hatched and distributed 80,000 eggs of the *Salmo salar*, regarding their success with which the Commissioners are doubtful. It is thought possible, however, that confined to their inland lakes, they may assume the characteristics of land-locked salmon. These latter fish are thought to be particularly adapted to Iowa waters; 5,000 eggs were secured and hatched, but in two weeks after hatching they were attacked with dropsy of the food sack and every one died. The next effort, which will be on a larger scale, will probably more successful.

The commission made an effort to procure spawn of the lake or salmon trout, last year, which proved unavailing, as it was too late in the season before it was possible to make the effort. This season another effort proved more effective, and enabled the Superintendent to lay down in the hatching-house at Anamosa, 835,000 eggs, and to send 100,000 eggs to the Northern Iowa Piscatorial Association, at Decorah, where they are to be hatched out and distributed.

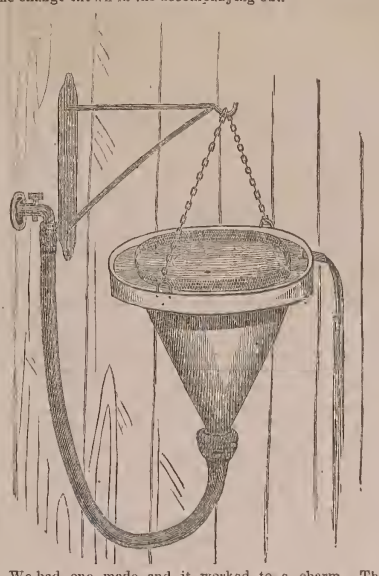
The Commissioners have now 50,000 white-fish spawn in the hatching-house, so far advanced that their eyes can be plainly seen.

The Commissioners have used their influence with the United States Commissioners in having 190,000 young shad placed in the Des Moines river, from which it is expected to have a supply of spawn. Three years ago, 22,000 shad were put into the Mississippi river at the falls of St. Anthony. A two-year-old one was caught last season at Clinton, Iowa, and two others have been caught at different points in the Mississippi river this season; proving at least that some of them are still living, and it is confidently hoped that next year, the season of their anticipated return, may prove the success of shad culture in Western rivers.

There are two distinct varieties of wall, or glass eyed pike, or pike-perch in Iowa waters; one called Jack salmon, the most common and very abundant, especially in Spirit and other northwestern lakes, is never caught of more than four or five pounds weight; while the large yellow wall-eye has been caught weighing twenty pounds. They are fine flavored, predatory in their habits, multiply much more rapidly than the black bass, but are not so generally adapted to all character of waters, are worthy of attention for suitable waters, and can be had from the sloughs of the Mississippi, as suggested in regard to other varieties, at proper seasons of the year.

The black bass is a native of Iowa, and is found in almost every stream of any size, although of late years, owing to the want of protection laws, and the barbarous habit of catching these fish in large numbers, just before and during their spawning season, they have been nearly exterminated in some of the smaller streams, and terribly thinned out in some of the larger ones.

The difficulty in artificially propogating this fish is of but little moment in Iowa, as they have them in millions hatched and ready for transportation to any waters it is thought advisable to stock with them.



The eel, the cat-fish, and the pickerel are all abundant in Iowa waters, but the latter is looked upon as a fresh water shark, and their extermination is suggested that their places may be filled with better fish.

Considering the small amount of the appropriation at their command the Iowa Commissioners have accomplished a great deal, and their report is filled with valuable and interesting matter pertaining to fish culture, and is worthy of perusal by every citizen of the State. It is to be hoped that the appropriation asked for will be made at the next session of the legislature that their work of usefulness may be extended and completed.

HATCHING FISH EGGS IN BULK.

READERS of FOREST AND STREAM will remember that after my failure to get young shad to Germany, I suggested hatching them at sea, and made drawings of cans for that purpose, which appeared in this paper of February 4th, 1875, and also in the *Live Stock Journal*.

At the request of Prof. Baird that can was tried this past summer, but did not work on account of the screen being so large (15 inches in diameter), in proportion to the necessarily small flow of water through a half-inch pipe. There was not force enough to move the eggs from the screen, and to flow more water would increase the labor of returning it to the reservoir too much. The can was then reduced to six inches in diameter, when it worked much better, but still far from perfect. It was about the 1st of July when my assistant, the late Charles Bell, suggested the change shown in the accompanying cut.

We had one made, and it worked to a charm. The original can had a screen at the top of the funnel, and then a cylinder above. This one in place of the cylinder has a rim of wire cloth enclosed in an outside flange of tin, which receives the water, and the bottom screen is placed where the funnel is only an inch and a half in diameter, on which the eggs could never rest as they were carried up in a central column which parted on every side to slowly fall in lines parallel to the funnel, until they again were brought in contact with the upward flow. It worked perfectly, and was afterward taken to Holyoke, Mass., where it was put up in the wash room, and a full account of the experiment concerning temperature, flow of water, time of hatching, etc., given to Mr. James W. Milner. A shad egg may require motion as well as circulation, and this the first can did not give. I think motion is required, because we flowed the same amount of water through each, and the old can would only accommodate as many eggs as could lie upon the screen, probably eight thousand, for which there was plenty of oxygen, yet but very few hatched, while the new one can be filled nearly full, as no eggs lie upon the screen. This can may possibly be used for the eggs of other fishes besides shad, and so hatch many eggs in a small space, if the force of water is proportioned to the weight of the eggs. In our trials we were limited to the quantity of water that one man could handle in six hours, for it was used over and again, just as we would have to do on a sea voyage, but it was too late in the season to get eggs when the announcement was made that the experiment was complete, and we were ready.

FRED MATHER.

Natural History.

[This Department is now under the charge of a competent Naturalist, indorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.]

AN INVITATION.

NO part of ornithology has excited more interest of late than that which pertains to the migrations of birds; and one of the first results of the agitation of the question has been the discovery of how little we know, not only in some cases, of the very fact of migration, but also of what causes lead birds to unitedly move from one region to another at distinct times. Accurate and numerous observations are needed upon the dates of arrival, departure, nest-building, varying abundance, and other events in the life of birds collected over wide areas and through successive seasons. And these observations would be of still greater value if accompanied by parallel notes upon the weather, the prevailing direction and character of the winds, the appearance of such animals and insects as are known, and the flowering of trees and plants. In short it is desirable, in order to know what influences act with most power upon the migrations of birds, to know the circumstances and conditions under which they are most likely to be present at any given point, and those under which they are found to be absent. Sometimes the northward march is delayed beyond the usual time, as in the Spring of 1874. What was the difference between that and the previous Spring, when the birds came earlier? It is a popular idea among the country people that most birds, and many animals, are able to perceive coming weather, and regulate their movements in accordance with this knowledge. Do careful observations bear out this notion as true, or disprove it? The United States Signal Service now advises us of the state of the weather in all parts of the country. It would be a great thing if, by the aid of these reports, we could learn to trace a constant connection between changes in the atmosphere and temperature, forseen by them, and the movements of the birds on sea and land.

This knowledge can only be gained by keeping our eyes open, and our note-books ready. Gilbert White, of Selborne, kept a "Naturalist's Calendar," which is a model

worth copying. Here are two extracts, as examples, the scientific names being omitted:—

Robins begin to sing	Jan.	1—13
Larks congregate	Jan.	1—18
Song sparrow heard	Jan.	1—14
White or aconite flowers	Jan.	1 Feb. 18
Skulkers small or slug appears	Jan.	2
Gray and white wagtails appear	Jan.	3—11
Mistel thrush sings	Jan.	2—14
White wagtail chirps	Jan.	22
Small snail appears	Jan.	28 Feb. 24
Earthworms encumber	Jan.	30
Barren strawberry flowers	Feb.	Mar. 26
Blue titmouse chirps	Feb.	1
Brown wood-owls hoot	Feb.	2
Hen pheasant sits	Feb.	3
Marsh titmouse begins his two harsh sharp notes	Feb.	3
Gossamer floats	Feb.	4 Apr. 1.

It is through such observations as this, continued year after year, that the natural history of England has become so well known, and so many persons there have become interested in it. Our American birds range over such a vast extent of territory that a record of one locality, however full, will not suffice, and we must have information from stations in all seasons, in order to accomplish the good result.

To elicit such important and interesting data, FOREST AND STREAM proposes to each one of its readers, the plan of noting down in reference to the birds of his district, observations, upon some or all of the following points:—

1st. Whether each species is resident throughout the year, is a summer or winter visitor, or only passes through in spring and fall.

2nd. With reference to each species in his locality, whether it is "abundant," "somewhat common," or "rare."

3rd. What species breed; and whether more than once in a season.

4th. Dates of arrival, greatest abundance, nest-building, laying eggs, hatching of young, and beginning of departure of each species, and when it is last seen in the Fall.

5th. What effect, if any, upon the relative abundance of particular birds, in retarding their arrival or hastening their departure, sudden changes of the weather, storms, and "late" and "early" seasons appear to have.

6th. Similar notes upon the appearance and movements of the quadrupeds, reptiles and fishes of the region; and upon the times of flowering of trees and plants.

7th. Other occurrences considered noteworthy.

Among the birds most likely to be reported upon, and which are the best exponents of the laws of migration, are the following, and to them especial attention is asked:—

Cat-bird.	Meadow Lark.
Blue-bird.	Baltimore Oriole, or Hang-nest.
Summer yellow-bird, or yellow warbler.	Phœbe bird, or Bridge Pewee.
Golden-crowned thrush.	Chimney swift, or Swallow.
Redstart.	Kingfisher.
Barn swallow.	Red-headed woodpecker.
Goldfinch, or thistle-bird.	Woodcock.
Song sparrow.	Killdeer plover.
Chewink, or Towhee-finch.	Wilson's snipe.
Bobolink.	White crane.
Red-winged Blackbird.	Wood duck.
	Wild geese.

Now we are not so sanguine as to expect that because we address ourselves to every one of our readers, that consequently every one will reply in full; but we do expect to receive, and publish during the next year, a large number of notes upon the regular and irregular migrations of birds in all parts of the country; and thus to collect a fund of information from which, by and bye, important deductions can be made. Let no one think his observations, though few and short, are too trivial; and let no one think that now is too late or early to begin. In a few days the first of the Spring birds will make their appearance from the South, and go about their love-making, and the winter birds will betake themselves northward.

THE BOHEMIAN WAXWING.

IN the number of FOREST AND STREAM for January 6th, just received by me, I notice among the Answers to Correspondents, that a gentleman from Auburn, N. Y., inquires where he would be likely to find the Bohemian waxwing (*Ampelis garrulus* Linn.). As this is one of the most interesting birds found in this country, and one whose habits are still imperfectly known, I will contribute to the information what I have been able to obtain respecting this species, from personal observation during the past two months, in the hope that others of your many readers may do likewise, in case they have met with this bird at sometime or another.

Strange to say, although this bird has been known to European naturalists for more than a century, the description of the female of this species is partly incorrect, at least I find it so, in the latest work on ornithology to which I have access at present—the History of North American Birds by Messrs. Baird, Brewer, and Ridgway, (Boston, 1874). On page 397 it reads as follows: "Mate with the white of outer web of primaries, continued around end of inner webs also. Female without white on terminal edge of inner webs of primaries," etc. This I believe, is based on statements made by Degland, a European ornithologist; and I see that Prof. S. F. Baird quotes him on page 406, of his Review of American Birds, Part I (published by the Smithsonian Institution), for his authority. I have been fortunate enough to secure a fine series of skins of these birds in this vicinity during the last two months, comprising some thirty-seven specimens in different stages of plumage, from fully adult birds of both sexes to what I presume to be young of the year. I find in examining adult females that the markings on the wings are exactly like those in the male except that the so-called sealing-wax appendages are perhaps a trifle smaller in birds of the same age. In fact, and not to make this article too long, I will simply state, that I can find no difference whatever in the sexes, except, perhaps, in the extent and density of the black on the throat. The first two specimens which came under my observation, were shot November 23d, 1875, out of some willow bushes on Sylvies River. Since then, I have obtained them at different times, (generally preceding a snow storm) to within a week past. I have heard of a flock said to contain several hundred specimens, but the largest I have seen so far, was composed probably of fifteen individuals. Out of these I shot seven. I have more frequently found them single or in pairs. I don't know whether to call them shy or not, as I have found them exceedingly so at times, and then again exactly the reverse. They are excessively fat, and all of those obtained by me appeared to feed on nothing but the berries of the wild rose, which grows abundantly on the creeks about here. The only note I have heard them utter, resembles the syllable *tzear, tzear.* This can be heard for a long distance. Generally, however, they are silent. Their flight, notwithstanding their long wings, appears to me to be rather slow. I can confirm the account of their devotion to each other. When one of the birds has only been wounded, it is sure to draw the rest around him, and to give the gunner a chance for more victims. I consider the Bohemian chatterer nearly, if not quite the most handsomely plumaged bird found in the United States. I should be pleased to know whether it has been observed in other parts of the United States this winter.—CAPTAIN CHARLES BENDIRE.

Camp Harney, Oregon.

BIRDS OF ARIZONA.—Mr. H. W. Henshaw has published in the Annual Report for 1875, of Lieut. Wheeler's Surveys West of the 100th Meridian, an annotated list of the birds of Arizona, including 291 species. It is preceded by an introduction of great interest, and accompanied by several pages of notes contributed by C. E. Aiken, which abound in valuable observations. The history of the mammals also is not neglected. These gentlemen were members of the Scientific Party of the Survey, and the results attained exceeded in numbers of specimens those of any previous year's work. Of botanical specimens 9,000 were secured, including about 1,000 species, of which fifteen or twenty were new to science; 1,300 ornithological specimens, comprising skins, crania, sterna, nests, eggs, etc., of which nine species were new to the fauna of the United States, were taken, besides hundreds of reptiles, fishes, and insects; in short all branches of zoology and botany were well represented. *Paleontology* and *ethnology* also received much attention, and the report contains valuable matter in all departments of natural science.

—Mr. J. A. Allen, of the Museum of Comparative Zoology at Cambridge, Mass., who has made for himself a large reputation as a student of birds, especially with reference to their geographical distribution and the variations of form accompanying it, has lately turned his attention chiefly to mammals, and their classifications. A synopsis of Mr. Allen's Monograph upon the Rabbits was published in FOREST AND STREAM for January 27th. This Monograph when completed, which will be very soon, will be published by Dr. Hayden, as a continuation of the memoirs begun by Dr. Coues in his Monograph of the Mice. Mr. Allen has also long had in preparation an account of the buffalo past and present, and has collected an extraordinary amount of material bearing upon its history, habits, and affinities. This is now rapidly going through the press, and will make a quarto pamphlet of about 250 pages, to be published as one of the Memoirs of the Kentucky Geological Survey under Prof. N. S. Shaler—the fact that the buffalo formerly ranged over that State being sufficient reason for its publication there. This memoir will be bountifully illustrated. It is to be hoped that Mr. Allen will hasten forward his extensive studies on the Squirrels, to as happy a conclusion as he has those upon the rabbits; and that he will not soon cease his work upon American quadrupeds, which have been somewhat neglected by our later naturalists.

—Dr. Elliott Coues, whose recent volume on the Birds of the Northwest, published by Dr. F. V. Hayden, has attracted universal attention from ornithologists, has begun the preparation of a companion volume, to be styled "Birds of the Southwest," from material in the Smithsonian Institution, chiefly collected in New Mexico, Arizona, and Southern California. Dr. Coues' long residence in that region, as well fits him for this task, as did his northern experience for the welcome work included in his first mentioned book. Dr. Coues is also at work upon a Bibliography of American Ornithology, which is vastly needed; and already has about 6,000 titles in type. This will be of very great assistance not only to ornithologists—to whom, indeed, it will become indispensable—but also to every working naturalist.

ENEMIES OF BEES.—A serious charge has been laid to the tom-tits in England by writers in the London *Field*. They aver that tom-tits perch on the alighting board of a bee-hive, tap with their beaks till the bees come out, when they secure one and fly off. This accusation seems to have been well substantiated, for one gentleman caught in a day or two fifteen of the offenders in a mouse trap placed on top of one of his beehives, which was rapidly being depopulated by the bird. The tits would even pull away the small tin slides covering the entrance to a hive.

—*La Nature* for January 23d, contains an interesting account of the eider duck and "le macareux," (*Mormon fratercula*) of Iceland, by Drs. Ed. Heckel and A. Kermorgant. It is illustrated by two very excellent wood cuts.

—Quite a "colony" of robins was seen about Syracuse last Saturday and Sunday.

THE SHORT POMPANO (*Trachynotus ovatus*) AND THE AMBER FISH (*Seriola sp*).

U. S. FISH COMMISSION, FISH AND FISHERIES,
SMITHSONIAN INSTITUTION,
WASHINGTON, D. C., Feb. 7th, 1876.

EDITOR FOREST AND STREAM:—

The pompanoes from Pensacola, Fla., referred to in your last issue, one of which was sent by Mr. Blackford to the National Museum, belong to a species not nearly so common on our coast as the *Trachynotus Carolinus*. The short pompano (*Trachynotus ovatus*) is easily distinguished by the greater height of its body, which is nearly or quite equal to the half of its length, and by the prolongations of the anterior rays of the dorsal and anal fins; the lobes of the caudal, dorsal, and anal are blackish, while the general hue of the body is more golden than in the ordinary species. The short pompano is cosmopolitan; it has been observed in Australia; in the seas of China and India; in the Moluccas and about Ceylon; in the Maylayan Peninsula and the Red Sea. It occurs on the coast of South America and in the West Indies. It is probably the "pompynose" of New Orleans, though the other species probably also occurs in those waters. White at Wood's Hole last Summer, the seining party of the United States Fish Commission took three specimens of this species at the head of Vineyard Haven (Holme's Hole) Harbor; these were very young, not exceeding one inch in length, and were preserved in the aquaria for some days.

Mr. Blackford has recently sent to the museum another, interesting fish belonging to the genus *Seriola*, one of the *Carangidæ*, and not very remotely related to the banded rudder-fish (*Palatractus pinnatus*), which is frequently seen in our waters. It is very closely related to the fish known as the "amber fish" in the Bermudas, and as the "yellow tail" about St. Helena. This fish, which came from Key West, was forty-seven inches in length and weighed thirty-two pounds. Its specific relations are not yet determined. G. BROWN GOODE.

—A citizen of Hanover, N. H., sent 2,000 skunk skins to market last year.

—The sea otters of Alaska, whose skins are far more valuable than those of seals, are being rapidly exterminated by the indiscriminate slaughter of the females and the young.

—The otter is still to be found in New Hampshire. A correspondent writes us that Mr. C. O. Knox killed one recently in Ossipee that measured seven feet. Quite a number were killed last season.

—Mr. Samuel Bait, of Easton, Pa., who has been engaged in the trapping business during the present winter season along the Bushkill, has succeeded in capturing 142 muskrats, twenty-seven skunks, five minks, and several gray squirrels.

—An otter was caught in a steel trap near Mack's millpond, at Niantic, Conn, last week. It weighed fourteen pounds, and measured four and a half feet from the tip of its nose to its tail. It had put its foot in a trap before, and lost part of its toes. Another, four feet long, was caught in Octoras Creek, Chester county, Pa., a few days since.

—A hunter residing in the northwestern section of Bucks county, Pa., is said to have captured 175 muskrats and one mink during the present season, in the small streams along the line of Berks and Lehigh counties. On one day he caught as many as thirty. From eighteen to twenty-five cents are obtained for each skin, according to the quality of the fur.

TRAPPING ON THE NOTTOWAY.—A correspondent who visited the Nottoway region for the purpose of trapping, in December last, does not write very flatteringly of his success. On the first night of his arrival at Black's and

White s, his traps not having arrived he walked to the river and explored, found a good deal of old "sign" of beaver, but nothing very fresh; very little show of otter, no sign of mink, and not a great deal of muskrat. The letter continues:—

"The next evening by supper time we had set a number of Newhouse's best No. 2 for beaver, and a few No. 1 for mink or coon. Early morning found us at our traps, but nothing had disturbed them. The river is quite shallow, as we could cross it most anywhere with our gum wading-boots, and the banks rather low and covered mostly with bushes and briers, make it rather difficult trapping for beaver. We had carefully set a few more of our traps, when we suddenly came on a stake, to which was attached a long, rather heavy galvanized chain and huge No. 4 trap. We left it as we found it, and continued on up the river, setting a few more in what we thought good localities. Meanwhile, making close observations, we discovered five or six more huge traps, evidently set by inexperienced beaver trappers, judging from the way they were staked and style of chains used to fasten them with. One of the traps of extra large proportions we noticed was attached to a heavy trace chain about three and a half feet long, not one of them being chained by a genuine Newhouse double-linked chain. Next morning we visited the traps, but only found a muskrat or two and a rabbit's leg. Learning from a farmer on the opposite side of the river that there had been two or three trappers from Northern New York up and down the river for three weeks, and in reply to our question as to how many beaver and otter they had caught, he said they had caught five or six beaver, an otter or two and several mink, besides legging six or eight beavers and an otter or two—i. e., taking their legs off, or feet, by allowing them to get the trap tangled in brush or small trees. From this we felt satisfied that what few beaver there were remaining in the Little Nottoway were too well frightened to do much more with this winter, and further, we did not wish to trap on ground previously occupied by others. Had we felt like turning back and gone further below into Brunswick or Southampton counties, we might have had better success; but having got on the extreme western limit of the reputed beaver country, and having some acquaintances near Lynchburg, we decided to proceed, make a visit to our friends, and return home, hoping to have some more favorable reports from some others of the craft through your valuable columns.

TYRIAN.

SOMETHING ABOUT SKUNKS.

WESTON, Vt., January 29th, 1876.

EDITOR FOREST AND STREAM:—

I am often asked by friends and brother trappers how I manage to ridmy fox traps of skunks without being defiled by their odor. For the benefit of the uninitiated I will state that if there are any skunks living in the vicinity where fox traps are set they are sure to be taken, and till all are thus disposed of there is little chance of capturing foxes. When there is reason to suppose the presence of many skunks, it is best to set the traps early, in order to get them out of the way at once; setting in a manner not to take the fox—that is, less skillfully. To the fox trapper this animal is a pest and annoyance, for where the trap is made fast—as in fur trapping is desirable—he will in a brief time with teeth and claws greatly impair, if not wholly ruin a good setting-place. Sometimes he frees himself by self-amputation; in such case it is good riddance. They seldom get in a second time, as in their weak and mutilated condition they fall an easy prey to the fox, who is fond of their flesh; so much so that he will sometimes gnaw off the leg by which the skunk is held in the trap, and carry off his booty to be eaten at his leisure. Trappers cognizant of the above trait do not fail to use skunk's flesh for bait. Sometimes he is found asleep after a night of ceaseless toil to get free, when, if in good position, he may be carefully approached from the leeward, and by stepping upon his tail, at the same time dealing a smart blow upon the head with a club, he is easily and safely dispatched. But this seldom occurs, and the attempt to dispatch him when on the alert with clubs or stones, is to risk and often receive defilement. Firearms are out of the question, as a good trapper is sharry of their use on his range.

My favorite method of dealing with them is as follows: With a tough unmealed No. 15 or 16 iron wire I form a slip noose about five inches in diameter on one end, and a standing loop of two inches on the other, and a space of five inches between. The loop is attached to the smaller end of a light, stiff pole of eight or ten feet in length. With this firmly grasped in both hands I slowly and carefully approach, and slip the nose over his head, and with a quick jerk backwards and upwards lift him as high as the chain of the trap will allow, and thus hold him until he is strangled. The butt end of the pole may be brought to the ground and there held by a foot, the hands moved further in advance for greater ease. When taken by a hind leg I at once lower the trap to the ground and release the same with one foot pressed upon the spring; the pole may then be set in a secure position against a rock or other support while the trap is being reset. If the jerk upward has not been adroitly made, the wire may not draw as tight as it ought, in which case a discharge of the pungent odor will usually follow; but in this perpendicular position the discharge descends directly downwards, so that if the attack has been made from the windward, as it ought, there is no danger.

The approach is sometimes resented at first, but the gradual arching of the tail gives timely warning, and a careful retreat is necessary for a moment. The second or third attempt is successful. The animal by that time recovers from the alarm, and at most will merely sniff the air in your direction. With this device I have destroyed many hundred during the past thirty years, and do not recollect an instance where I have any of the odor about me, except I had inadvertently trod upon dirt that was defiled, and now offer it for the consideration of brother trappers.

C. L. WHITMAN.

The Kennel.

POINTING AND SETTING.

WE are in receipt of the following question from our correspondent, D. S., T., of Toledo, Iowa:—

"What is the cause of a bird dog's setting or pointing? A gentleman of this place says that it is the result of the dog's cowardice—that he is afraid in the first place to jump at the birds after stealing upon them, and that it is this peculiarity which makes them so valuable to hunters. Please unload wisdom on the subject."

The pause, point, or set, of the pointer or setter, is evidently not caused by fear, but for the purpose of steadying himself in order to ascertain by his wonderful powers of scent, the exact spot where the game lies, so that he may surely pounce upon it.

It is no unusual thing for cats to hunt, point, and catch birds, but we know that they, in their efforts, are guided more by sight than by scent. The wolf also has the same propensity to point before pouncing upon game, an instance of which we had an excellent opportunity of witnessing, while on a shooting trip to Floyd county, Iowa, about four years ago, with Messrs. J. J. Seitzinger, of Philadelphia, Theo. Morford, of Newton, N. J., and J. Y. Ross, of Milwaukee. One day while shooting on the south side of a roll of the prairie, our setter Clyde came to a point. We put up the birds—a pack of about twenty grouse, at two of which we emptied our gun. The birds passing over the ridge were lost to our view, but Mr. Fuller, our teamster, being in the wagon on the rising ground, we hailed him to "mark" down the birds, which he did, and just as we re-loaded and secured the pair of birds we had killed, Mr. Fuller cried out to us that a large gray wolf was after the birds, whereupon we hastened to get up in the wagon to see the performance. The grouse had settled about three hundred yards from us, and the wolf had evidently marked them down to a dot, and he was cautiously approaching to windward—beating the ground with the regularity of a well-trained setter or pointer, moving near the ground, and with great caution. As he struck the scent of a bird, he made a distinct point, head and neck distended, tail as straight as a spike, and in all respects, at that distance, with the exception of the ears, resembled many setters we have shot over. But he only held his point about ten or fifteen seconds when he made a lunge for the bird, which he missed, apparently by a hairs breadth, and the instant he found he had missed his mark he arose upon his haunches and watched the flight of the bird and marked it down. He then *re-loaded*, Oh no! he had no gun, but he commenced beating the ground carefully, and soon came to another point, and after standing a short time pounced in to catch the bird, but with the same ill-success. After seeing him make several such efforts, we concluded that with Clyde and our Tolley breech-loader we could make a better bag of game than he any day, so jumping from the wagon we made "a break" for that happy hunting ground without much respect for his wolfship, who, as soon as he found we were approaching, sneaked off with a cat like motion, and managed to keep about the same distance from us; and in order to graduate a "healthy" distance he would slip to a roll in the prairie and rise upon his haunches for an observation, and finally disappeared in the hazel brush. Who would say that a wolf would point from fear. We do not believe that by a prairie chicken he would "scare worth a cent."

THE KENNEL REGISTER.—As we go to press pedigrees for registration are coming in in numbers, but the lateness of the hour will prevent us from publishing the list until next week. We are receiving many letters approving of the plan, and it is also heartily endorsed by our sporting contemporaries.

MR. KENDALL'S FRANK.—During a flying visit to Binghamton the early part of the week, we had the pleasure of meeting many of the sportsmen of Broome county, among them Mr. Geo. W. Kendall, whose dog Frank, is the champion of the county in the field. Frank is a fine specimen of the red and white Irish setter, capital in color, and showing unmistakable signs of breeding. He is one of those dogs rarely met with, thoroughly broken on ruffed grouse, at which his owner thinks he has no equal. Frank was bred in Worcester, Mass., from a well-known strain, and is five years old.

MR. ARNOLD BURGES' BOOK.—We have received from Messrs. J. B. Ford & Co., the publishers, the advance sheets of Mr. Burges' book, "The American Kennel and Sporting Field," but have not this week either time or space to devote to such a criticism as the work is entitled to receive.

—A correspondent writes: "Who had the best kennel of good, stout, old-fashioned pointers—small size—at Chicago? I am growing old and begin to lean in the direction of a pointer pup. I think I can break one more dog." Lilly, belonging to Mr. Wheatley, of Memphis, although only awarded third prize, was to our eyes the best representative in the small pointer class. Lilly, who subsequently was placed first at Detroit, is to be mated with Mr. Steel's Flake, litter brother to Dr. Webb's Whisky. This cross with the celebrated Flash and Juno strain (the former, Dr. Strachan's dog, by Sir Frederick Bruce's George out of old Peg,) should result in some capital stock.

—Mr. Chas. J. H. Gunter, of Manchester, Carroll Co., Maryland, lost on the 23d ult., from distemper, his fine red Irish setter dog Sig. Sig, who was by Crouse's Dash, out of R. A. Hammett's Fannie, had the reputation of being the best field performer in the county.

—We know that Ranger is not only a *good* Ranger but a good *ranger*, but we did not mean to assert that he took a prize at Chicago for the latter quality. It was his whole list of good qualities that gained him the honor.

—Mr. W. Arthur Wheatley's lemon and white pointer bitch Lily, has visited Mr. Steele's Flake, own brother to Dr. Webb's Whisky. Lily was 1st (in small pointer class) at Mineola, 3rd at Chicago and 1st at Detroit.

—Among the best specimens of stylish high bred setters we have inspected recently, are those of Dr. A. Russel Strachan, of this city—Don and Sport. Don is a full sized, strong, well formed three-year old setter, colored light red, with some white markings, bred out of Belle the mother of Mr. N. Sel us' Dash and Bess, by Don senior. Sport is a jet black setter, rather under size, we think, but showing every indication of the high breeding of his strain. He is bred from the splendid brace of Gordon setters imported by J. G. Bennet, Esq. Don and Sport, Dr. Strahan, assures us have been exceedingly well broken by Dock Stewart. Some of Don's pups are advertised for sale in another column.

DR. ATEN'S DOGS.—We had the pleasure of visiting Dr. Aten, of Brooklyn, a few day's ago, and examined his splendid collection of game birds and wild fowl, most of which are very rare specimens, and they are artistically mounted. But what interested us mostly, was his brace of setters, Glen and Ned, and a more desirable brace of thoroughly broken dogs is very seldom met with, as will be seen from the following pedigree of Glen:—

Sire, Colburn's Dash; dam, Belle. Dash was out of Mr. Valentine's black and tan bitch, and Mr. Putnam's Dan. Mr. Valentine's bitch was out of Daniel Talcot's black and tan bitch, and his imported orange and white dog. Mr. Talcot's black and tan bitch was out of Wm. Watson's black and tan Gordon, imported. Belle was out of Hamilton Thompson's red bitch Jane, by his old Duke, (imported) a pure black and tan Gordon. Jane was out of Belle, by Mr. R. Robinson's Jack. Belle out of Mr. Thompson,s imported Fan by Scott Rodman's Dash. Fan was three-quarters Irish according to Mr. Thompson, therefore Belle is half Irish and half black and tan Gordon. Ned is a remarkably well formed, full sized lemon and white setter bred from stock of the Prince of Wales kennel, and shows distinctly his high breeding.

QUERY TO "J. W. M."—POINTERS.

SPRINGFIELD, Mass., Feb. 9th, 1876.

EDITOR FOREST AND STREAM:—

In your issue of Feb. 3d, "J. W. M.," in criticising the Baltimore Bench Show, says, with apparent "disgust," that "a split nose pointer took first prize." Why not, pray, if he was the best dog? I do not know that he was, and "J. W. M." evidently believes that he was not; but his condemnation is palpably because of the split nose. I believe that evidence could be accumulated from an army of sportsmen who have owned them, that split-nosed pointers are liable to be the very best of dogs, and a poor one is rare, indeed, is the exception. I do not mean to claim, as I have heard it advanced, that the double nose indicates necessarily a stronger-scented dog than the single nose, but do claim that the thorough double nose is an indication in a pointer of good breeding and purity of blood. And here I take issue with your respected Kennel Editor, and believe it to be true and capable of as positive proof as anything can be concerning the origin or early history of our sporting dogs, that the double nose is naturally inherent, and belongs exclusively to the pointer, and that its possession in the setter indicates somewhere an infusion of pointer blood. I have seen a few setters with the double nose that were fairly good, but none to equal the pointer with the same peculiarity; and indeed your Kennel Editor, in his late article upon the subject, confines his experience—if I recollect it aright—to one noble setter and his progeny. It is time, I submit, that sportsmen rid themselves of false notions concerning matters of this kind, and let performance speak instead of prejudice. The split nostrils of a pointer may look badly to one unused to it, but there is no reason that it should interfere with judgment of the animal upon the show bench or in the field.

If sportsmen will recall all the *real* split nosed dogs they ever knew, they will remember that with the divided nostrils there went the high, broad head, low set ears, and full, bright eye of an intelligent good dog. I am glad to see that the "pointer men" are making themselves heard in the papers. The setter has become fashionable, and the clean-limbed, sleek-haired, affectionate, springy pointer has been obscured too long. Give him a chance again, a fair field and no favor, and he will be found from to advantage. I disparage no good setter or no man that prefers him; but to my genial brethren of the gun who have owned and loved pointers as long as I have, been conferred with their docility, retention of knowledge when once broken, perfect in position when "on the point," superb carriage and pride when retrieving, together with all the qualities possibly possessed by the eulogized setter, do I look for recognition and approval.

When I read of some man's condemnation of the pointer because he will back from briers, I should like to show him a pup, with hide like velvet, who hunted his first two days on quail among the bull briers that fringe the shores of Long Island Sound until his mottled sides were ensanguined as were Lady Macbeth's hands; when from ears to hips not a finger could be laid upon him and not be frescued with his blood; and not a whimper out of him all the two days, and while this battle of brier and blood went on, two setters—and good ones, too—stood back.

E. H. L.

ALBANY, N. Y., February 8th, 1876.

EDITOR FOREST AND STREAM:—

Mr. Cullender, of Albany, N. Y., has purchased from Arnold Burges, of Maysville, Ky., the dog Rory O'Moore from the last August litter of his celebrated red Irish setter Rufus. Rory was on exhibition at the late Chicago show as one of the get of Rufus, and while there attracted a great deal of admiration on account of his fine proportions, exceedingly intelligent countenance, and beauty generally. He is the exact image of his sire, being a dark red, with no white, except on breast, and with hair as fine as silk, and he appears almost as intelligent as a human being. Rufus, his sire, is a winner of seven prizes, abroad and in this country, and is considered one of the handsomest dogs in America. Friend, the dam of Rory, is in the hands of Mr. Campbell, who bred and broke Tom, winner of brace and single stakes at Memphis, and he pronounces her one of the best dogs in the field that he ever saw. She was imported by Mr. E. H. Stoddard, of Dayton, Ohio., for whom she was purchased by Mr. Bickell. Mr. Sampson, of Troy, has also become the possessor of Sybil, a magnificent and most promising bitch of the same litter as Rory.

CAMP.

KIRBY'S LITTER.

LEESBURG, Va., Feb. 11th, 1876.

EDITOR FOREST AND STREAM:—

All the litter of the field trial setter bitch Kirby, by Pride of the Border, whelped Nov. 20th, 1875, have been disposed of by Capt. Foster. He keeps two of the litter himself, viz.: Count, a blue Belton dog, and Brenda, a black, white and tan bitch. Duke, a black and white dog, (with some blue ticks) has become the property of Powell Harrison, Esq., of Leesburg, Va. Flash, a handsome dog, marked in the same way, goes to Geo. H. Nixon, of same place; while Henry Harrison gets Lara, a black and white dog. Roi, a blue black and tan dog, is owned by Maj. B. P. Nulaod, of Middleburg, Va., and Mab, a bitch marked in the same way, to Dr. M. G. Elizey, of Blacksburg, Va. John C. Higgins, of Delaware City, takes Belle, a blue Belton bitch, and the original owner of Kirby a blue black and white bitch, name not known by your informant.

T. W.

FLOWERS IN CHURCHYARDS.—As the beautiful custom of decorating the interior of churches is becoming much more common, we would suggest, at least in the country, for each Church to grow its own flowers, and thus accomplish *two* ends, decorating both the church and churchyard. We would, therefore, suggest that among the flowers planted should be some of the beautiful "Everlasting" flowers or Eranthemums which dry and preserve their colors. They are useful for Christmas decorations. At some future time we will give a list of *white* flowers. This is now a good season to prepare the ground or the beds, which should be well manured with well-rotted manure, and dug deeply.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.* Grouper, *Epinephelus nigritus,*
Drum (two species.) Family *Sciæ-* Trout (black bass,) *Centropristis*
nidæ. *atravirus.*
Kingfish, *Menticirrus nebulosus.* Striped Bass or Rockfish, *Roccus*
Sea Bass, *Sciænops ocellatus.* *lineatus.*
Sheepshead, *Archosargus probato-* Tailorfish, *Pomatomus saltatrix.*
cephalus. Black bass, *Micropterus salmoides;*
Snapper, *Lujanus caxue.* *M. nigricans.*

[*Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.*]

FISH IN MARKET.—Fish continues in abundant supply, and we note several novelties this week. Turbot, so called, have appeared in market from Nova Scotia, and the vexed question as to their relationship to the English turbot can now be determined; they sell for 25 cents per pound. Bass (striped) are being received from the Mirimichi, price 20 to 25 cents; smelts, 15 cents for Eastern and 25 cents for Long Island fish; salmon (frozen) 50 cents; mackerel, 20 cents each; shad, very fine, 50 cents each for Savannah's to $1 25 for North Carolina's; white-perch, 15 cents per pound; Spanish mackerel, 45 cents; frost-fish, 8 cents; halibut, 18 cents; haddock, 8 cents; king-fish, 18 cents; cod-fish, 8 cents; black-fish, 15 cents; flounders, 12½ cents; sea-bass, 18 cents; eels, 18 cents; sheepshead, 30 cents; white-fish, 30 cents; pickerel, 18 cents; salmon-trout 20 cents; black-bass, 18 cents; green turtle from Key West, 20 cents; terrapin, $6 to $12 per dozen; scollops, $1 per gallon; soft clams, 40 to 60 cents per 100; hard shell crabs, $4 per 100; soft shell do., 75 cents per dozen.

SMELTS.—The question was asked some time since as to the range of the smelt, and we mentioned the fact that trout fishermen on Long Island claimed to have taken them in the streams contiguous to the Great South Bay. In confirmation of this we find that large numbers of these delicious fish have been received in market during the past week from Long Island, although we have been unable to ascertain the precise locality in which they were taken.

THOSE NEEDLE POINTS.

AND now Mr. Editor, we have a lady discoursing on needle points. Not Dame Juliana Berners, but Miss Sarah McBride, and the most sensible and philosopic discourse yet. For why has nature given predatory fishes those recurved teeth—practically barbed—unless it be to hold their slippery prey. I agree with Miss McBride that in fishing with a short stiff rod and short line, particularly from a boat with a hook without a barb—if the fish are taken singly—they may be whipped out pretty effectively. But with two or three fish on a line pulling in all directions, when one or more will be pretty certain to have some slack, did uncle Seth ever try needle points under such circumstances? Let me give my experience in such a case.

One afternoon with two incipient fly-fishers, I visited Jerry Comfort's trout ponds, twelve miles or so from Philadelphia, and as I provided the tackle, in mercy to my friend Jerry, I carefully filed off all the barbs of the hooks on which the flies were tied, and when we got to the sides of the ponds, made the whip of each of the novices of three flies without their knowledge of the hooks being barbless. The result was as might have been expected. Of three fished hooked at almost every cast only one was landed; sometimes none, for the fish even on the stretcher fly would frequently get some slack in the leader and of course get away.

I had let Jerry into the secret and it was near supper time when we had not half enough trout for a fry. So with a knowing wink, he said he would call his son Rob., a lad of twelve years; perhaps his hooks would hold better. Rob. came with his barbed hooked flies, and landed three at a time; and so did my young city friends with Rob.'s tackle. After supper, driving home, I told them of the joke I had played on them. THAD'S NORRIS.

ROCHESTER, January 15th, 1876.

EDITOR FOREST AND STREAM:—

I see by your last issue that Mr. Bracket thinks he could not kill a salmon with a barbless hook. I don't know that he could; I know that *I* could. Now we will suppose a case: Suppose I had a salmon rod and three hundred feet of line with a good sized needle hook, all in good order; and suppose I was skillful, knew how to reel in and let out, and keep a steady strain, such as a skillful angler knows how to keep, and I had that hook hooked into the button-hole of Mr. Brackett's coat; could he get away without putting his hands to the line or the hook? No; he could not get away. He might jump, and run, and rare, and pitch, and flounder, turn somersets, and hand springs, and turn himself inside out, or lie and sulk, but he could not get away, and I would laud him without a gaff.

I will say, for Mr. Brackett's edification, that I have taken nearly all kinds of fresh water fish that take a hook, and many kinds of salt water fish, including the salmon, with hook and line, and no one but a bungler will ever let any fish get slack enough to unhook himself, even if there is no barb on the hook. SETH GREEN.

When Uncle Seth handles a fish, he plays to win. Nevertheless, a lively salmon will sometimes run back on his track so swiftly that a double multiplying reel could not take in the slack fast enough to prevent his unhooking himself. By the way, how exhilarating it would be to watch the old veteran play such a lively chub as Walter Brackett! We would bet one of the latter's best pictures against a patent hatching box, that Brackett would break away.

In a subsequent letter Mr. Green writes:—

"I am getting little slaps all around through the press on needle point hooks. Let them come. The great thing is to be equal to any emergencies that may arise in whatever you undertaks to do. When I stocked the Caledonia Trout Ponds I took all the trout from Caledonia Creek with a fly. I found that I killed some by using a hook with a beard. I broke the beards off and killed less; then I made the needle point, and could take one-third more fish than I could with any other, and never kill any, unless they were hooked in the gills.

SETH GREEN."

MASSACHUSETTS ANGLER'S ASSOCIATION.—A meeting of this association was held at its rooms in Bostou on the evening of the 9th inst., the President, Dr. Ordway, in the chair. Several new members were proposed, and among those elected to membership were Hon. J. K. Baker, of the Governor's Council, and Dr. E. Lewis Sturtervant, of Framingham. Letters were read from the Fish Commissioners of Main and Vermont, requesting that the association use their influence with the Massachusetts Legislature to have a law passed giving a close time to trout from October 1st to March 1st of each year, which were referred to the Special Committee on the subject of Trout Laws, appointed at a previous meeting.

A committee was appointed, consisting of S. W. Hathaway, Franklin Williams, and F. R. Shattuck, to petition the Legislature, in the name of the association, for a close time for lobsters.

A valuable contribution was made to the library by Dr. D. Humphrey Storer, a copy of a work on "The Fishes of Massachusetts," of which he is the author; also, by Dr. Ordway, a volume entitled "Hints on Angling in English, Scottish, and Irish Waters," together with a valuable specimen of a "South Sea Spinning Trawl," for the cabinet, from Dr. B. H. Mana, to each of whom a vote of thanks was passed.

After the adjournment the members partook of a banquet in which fish, both scaly and shell, formed a prominent feature.

FISHING NOTES FROM EAST FLORIDA—*Smyrna, Feb. 5th.*—Fishing remarkably good this winter in these waters. Many large bass, groupers, snappers, and some jew fish taken every day. At Enterprize on the St. John's, anglers are taking many black bass with the fly, and several shad have been taken in the same way. The river is so low that boats cannot go up to Salt Lake at present. At New Smyrna, Messrs. Jones, Falls, Leonard, Hibbens, Cummings, Anderson, Winslow, Benson, Clarke, and Dr. Etting are fishing. Deer, bears, and wildcats are plenty near New Smyrna. S. C. C.

MOVEMENTS OF THE FISHING FLEET.—A busy time the past week among the fishermen, and a large fleet have been on the wing bound for Georges and the Banks. The season has fully commenced, and another week should bring along several of the Georgesmen from their first trips of the season, which will give quite an impetus to business. There is a fair demand, and the approaching Lenten season bids fair of making the market quite brisk. There have been 5 arrivals the past week with herring, and 11 from the Banks. The receipts are 210,000 pounds of cod-fish, and 171,000 pounds of halibut. The latter has been sold at 5 and 2½ for white and grey. There are 95 vessels now absent on Georges and at the Banks.

The fresh fish fleet have done a good stroke of business this week, landing as handsome lots of cod-fish as were ever brought into this port. One vessel caught 32,000 pounds in four days' fishing, and others have done equally as well. The catch has been so large that they could not be disposed of fresh. One concern has bought nearly 50,000 pounds for salting.—*Cape Ann Advertiser, Feb. 11th.*

—We are indebted to Mr. E. B. Paxton, of Detroit, for two fine stuffed specimens of the whitefish, taken from the Detroit River at that place.

TROUTING IN NOVA SCOTIA.

GREENFIELD, Mass., Feb. 12th, 1876.

EDITOR FOREST AND STREAM.—

To the true lover of the beauties and attractions of nature, what sport is more seductive than trouting? And what recreation tones up the worn-out nerves and depleted muscles of an office-weary man, like the exercise and excitement of a few weeks spent in lolling along the banks of a good trout stream? But the avidity with which the sport has been followed in and near the more thickly settled portions of our New England make the expectations with which a man starts out on his trip in the morning, far exceed the realities which he is able to produce at night, and he sighs for the time and means to visit some of the far-famed regions described by some of your correspondents.

For two or three years ill health has been the excuse to convince me that my means would afford a trip to Nova Scotia, rather than a doctor's bill (and how much more agreeable the prescription!), so I have learned the ins and outs of the St. Mary's District and the region about Sherbrooke, and passed many happy hours with the rod and fly in the forests and streams which abound therein, and excepting at the head waters of the Columbia river, I have never found so attractive a region for the sportsman. The expenses of the trip are not heavy, the fare from Boston out and back being only $25, and charges in the provinces quite low, when compared with those in the Moosehead and Moosehemagmatic countries. Last summer, in company with three friends, and under the guidance and care of that veteran of the rod, Newell Snow, Esq., manager and part owner of the Sherbrooke gold mines, we had some days of fine fishing on the Liscomb and on Indian River. We packed out of the Liscomb woods at least 120 pounds of fine trout, many of them three pounders, as the result of a half day's fishing, mostly caught by two rods.

I will not tell the story of our two day's tramp in the Indian River Swamp, owing to the want of knowledge of our guide, or perhaps more to the trail being completely blocked and destroyed by a whirlwind in 1873; but if ever there were four tired and hungry, yet happy fellows, we were the ones, when we discovered a settler's cabin, near night of the second day, and the bread and milk set before us by that settler's wife was, to all appearances, as well appreciated as was ever a meal at Delmonico's by the most fastidious of the race.

Good accommodations are furnished at the Sherbrooke House by Capt. John McDaniels, (himself no mean sportsman), at prices within the reach of all. Teams and boats can be had at all times, and attendants, if wanted, at the most reasonable charges.

The season for trout fishing is from the middle of August to the middle of September, while those who go for salmon should be on hand in June. An English gentleman, a resident of Sherbrooke, by the name of Painter, takes many salmon every season with the rod and fly, but the streams are so thoroughly netted that these fish are not so abundant as they were formerly. F. M. THOMPSON.

ARE THERE NO TROUT IN THE NORTH PLATTE RIVER?

COUNCIL BLUFFS, Iowa, Feb. 7th, 1876.

EDITOR FOREST AND STREAM:—

In your issue of Jan. 20th, 1876, I notice the question is asked, "Why are there no trout in the waters of the North Platte River?" The writer refers the question to Prof. Baird, and remarks that if the Prof. cannot solve it, it may be set down as a thing that "a fellah never can find out." The first thing to be solved in relation to the above question is, is it a fact that there are no trout in the waters of the North Platte River? If it be true that there are no troet to be foned in that stream or its tributaries, then it would be proper to look for the reason therefor; but if there are trout in the North Platte River, then no reasnn could be given for their not being there.

I say there *are* trout in the North Platte River, and in at least one of its tributaries. I make this assertion, not from personal knowledge, but upon the authority of A. C. Graham and M. D. Hardin, two respectable and worthy citizens of this city. Mr. Graham informs me that he caught several very fine trout in the first stream emptyieg into the North Platte above Rod Rock, and Mr. Hardin says that he has caught them in the main river; and I have heard several persons speak of catching trout in Deer Creek, which runs into the North Platte. Mr. Graham says that he has found no trout in Sweetwater River, and I suppose that from the fact that your correspondent of the 3d ult. did not find them in that stream he concludes that there are no trout in the North Platte River or its tributaries; but the testimony of Messrs. Graham and Hardin settles that question against him. L. W. B.

Yachting and Boating.

PHILADELPHIA YACHT CLUB.—The Quaker City Yacht Club of Philadelphia was organized on Thursday evening, February 10th, 1876, by the election of the following officers: Commodore, Thos. T. Wills, yacht, Stella; Vice-Commodore, A. Baneroft, yacht, Lillie; Rear Commodore, Samuel Taylor, yacht, Wm. Tell; President, Jas. L. Wills, yacht, Kingston Goddard; Secretary, Chas. S. Salin, yacht, Phantom; Assistant Secretary, Wm. Summers, yacht, Lillie; Treasurer, L. B. Boyd, yacht, Ella. The movement is in the hands of gentlemen qualified to lend character to the project, and by their zeal and skill insure for Philadelphia new attractions for the Centennial year. The club is to be composed of cabin yachts only, not under twenty feet in length. There are now enrolled in the fleet thirteen yachts, as follows:—

Name.	Rig.	Tons.	Length. ft.	in.	Beam. ft.	in.	Depth. ft.	in.
Chas. Austin	Sloop	9	25		10		3	6
Columbia	Sloop	16	35		12		4	
Ella	Sloop	9	23		10		3	6
Fawn	Sloop	14	30		12		4	
Gideon Clark	Sloop	25	44		14		4	
Kingston Goddard	Sloop	18	35		12		4	6
Lillie	Sloop	10	25		10		4	
Lerves	Sloop	8	23		8		3	
Phantom	Sloop	20	37	6	13		4	6
Samuel Josephs	Sloop	16	32		12		3	9
Stella	Sloop	12	29	6	11	9	4	
Wm. Tell	Sloop	19	37		12	6	4	6
White Wing	Sloop	15	32		12		4	

We are indebted to the Secretary, Chas. S. Salin, Esq., for the above.

INTERNATIONAL ROWING REGATTA.

AMONG the athletic sports that will be held during the Centennial exhibition will be a series of boat races on the Schuylkill River, a broad, beautiful stream, acknowledged among rowing men as one of the finest rowing courses in America, having high banks on each side, and in full view of the Exhibition Buildings.

The races, while under control of the United States Centennial Commission, will be under the local management of the Schuylkill Navy, a boating organization composed of nine clubs, whose boat houses are on the east bank of the river within Fairmount Park. The leading boating associations of the country have consented to cooperate.

The Schuylkill Navy has been in existence since 1858, and has given a number of open regattas; and from its past record and the experience of its members in conducting races, we have abundant guarantee that this series of regattas in 1876 will be most successful.

The Schuylkill Navy, besides furnishing quarters for the boats for the visiting crews in their own boat houses, propose erecting temporary boat houses in the park, and will thus be enabled to accommodate all who may accept this invitation to take part in the races.

Arrangements have been made to hold the following races:—

First—An International Race will be held, open to all regularly organized boat clubs throughout the world, to be rowed in accordance with the rules of the National Amateur Rowing Association of the United States; the prizes to be a piece of plate each for fours, for pairs, for doubles, and for single sculls, and in addition, medals to be presented to each man rowing in the race, to be of gold for the winning crew, for the second crew of silver, and the remainder of bronze.

Second—An International College Race for four-oared shells will be held, the prize to be a piece of plate, with a gold medal to each of the winning crew; open only to under graduates.

Third—An International Graduates' Race will be held for four-oared shells, open only to Colleges or Universities; the prize being a piece of plate, and a gold medal to each member of the winning crew.

No person will be allowed to row in both International College Race and International Graduates' Race.

Fourth—Professional Races will be held, open to all crews throughout the world, for four-oared, pair-oared, and single scull shells for purses the amounts of which will be announced by the 1st of May, 1876.

The races will be held between the 20th of August and the 15th of September, and the entries shall be closed on July 15th.

An entrance fee of $25 will be charged for fours; $15 for pairs and doubles, and $10 for singles. The fee will be returned to all boats starting in the races, and is demanded as a guarantee of good faith in making the entry and to justify the committee in making the necessary arrangements for properly housing the boats of the entering crews.

The Amateur Races will be rowed in heats one and a half

miles straightaway. The Professional Races will be rowed in heats of three miles, one and a half miles and return.

Besides the above prizes the "Jury on Rowing" of the United States Centennial Commission, who will have an oversight of all the races, will award the Diploma and Medal of the Commission to the victors.

The National Amateur Rowing Association will hold their annual regatta over the same course (the Nations either previous to or immediately after the above International Races.

The following definition of an amateur oarsman, with the required pledge, will be strictly enforced for all entries in the amateur races:—

The President or presiding officer and Secretary of each club entering either of the amateur races of the regatta controlled by the Schuylkill Navy, will be required to certify on honor, in writing, that each member of the crew entered is strictly an amateur, and is not paid, directly or indirectly, for his services, either by place, emolument, or otherwise as a member, or by reason of his being a member of the club; that he does not enter in open competition for either a stake, public, or admission money, or entrance fee, or compete with or against a professional for any prize, and has never taught, pursued, or assisted in the pursuit of athletic exercises as a means of livelihood, or has been employed in or about boats, or in manual labor on the water."

Entries should be addressed to Jonathan Gillingham, Secretary, P. O. box 2013, Philadelphia, Pa.

THE PROFESSIONAL AMATEURS.

BUFFALO, N. Y., Feb'ph, 1876.

EDITOR FOREST AND STREAM:—

The amendment to the constitution of the National Rowing Association, passed at the recent meeting, would seemingly strike at an evil greatly to be regretted. It has become apparent to the rowing men of the rowing fraternity that the course pursued by one or more of the prominent clubs in gobbling up all the best of the men who have become known to the country by their successes with the oar is a bad look. It matters not whether these men are residents of the vicinity of such clubs, and would naturally join them or not. No, they are picked out wherever they are found. For the members of at least one club that I know of to stand boldly before the National Rowing Association and claim that their crew is composed of amateurs, is simply preposterous. The members of this club (they all know who I mean) all undoubtedly think I am making an assertion that I can't prove when I assert that their crew is composed of nothing but professionals, would go before the National Rowing Association and give expression to my opinion and conviction in the matter, as I do in this letter.

The first circumstance I will mention is the fact of the crew of any club spending from two to three months exclusively in practice many miles from home, and is enough, in my mind, to bar them as anything but strictly amateurs. If I were to move into the neighborhood of the club I mention, to-morrow, I couldn't join that club. Why? First, because I have'nt a sufficient income—I couldn't afford to pay the dues and assessments. Secondly, I have never distinguished myself at the oar sufficiently to counteract my lack of income; still, I have as much money as one who joined the club recently, and is now one of its crew. Had he applied to the club for admittance merely as a member, without any record as an oarsman he would have been knock-balled so high that he couldn't get back to consciousness in a month—but he didn't apply to them, they applied to him, and I say that at one time he joined (?) the club he ceased to be an amateur and became professional. The members will probably cry out, "We pay him no salary." We all know that. Certainly you don't pay him, or any other member of your crew a salary directly; but how about paying them indirectly? I don't believe a member of the club dare swear that none of the crew are not paid indirectly by taking care of them. I don't wish to infer that only one club is engaged in thus dodging the spirit of the law by ostensibly abjuring the spirit of it. There are others engaged in an ungentlemanly business, and I trust the National Rowing Association will try and investigate this matter now that the amendment has made the definition a little more explicit.

I don't mean to make any attack on he one member I speak of, I use his case to illustrate what has convinced me that the club he has joined (?) and others are not keeping the law.

Oxford and Cambridge don't appear to be at all anxious to meet our college boys on American waters. Probably they remember the warning received by their best professors at the hands of the Ward crew. They have always been perfectly willing that we should go over to them and row them on their own water, such over their course, every inch of which they are acquainted with; but when it comes to coming over here, that's another thing. "Why! blarst my eyes, we might get beaten you know." HAGESTOLZ.

TABOGGINING IN CANADA.—It is a crisp January day in a beautiful but too little known city of Canada; the thermometer says ten below zero; the snow is two feet deep and as dry as tinder; the scene is the side of a hill, steeper than any sensible being on a "Yankee" sled would dare to go down. On all parts of the hill are scattered in little groups gentlemen and ladies, boys and girls—of all ages, from fifteen to thirty—married and single, engaged, and still to have that pleasure. Instead of sleds they are dragging up the hill "taboggins," which is the Indian sled, and which finds a mate in the bark canoe. They are made of thin pieces of cedar wood which have been planed perfectly smooth; these pieces are bent up at the front so as to form a sort of runner, but the boards themselves lie flat on the snow, being fastened together above, so that the bottom is smooth. They are made of all sizes, averaging about five feet by two, and can accommodate any number of people. They are so thin and limber that they bend over any obstruction which may be in the road, so that they are not stopped even by large pieces of ice. They may be used to go down the steepest hills, where no sled could stand the strain. And here all the fun comes in, since the danger is necessarily very great. Often a load will upset, and girls and boys will be flung together into a huge drift; then of course the screaming and laughing is immense, except when one has a leg or arm broken, and then the laugh is more likely to appear on the other side.—*Harvard Crimson.*

USEFUL RECIPES.—A new compound for polishing and cleaning metals is composed of one ounce carbonate of ammonia disolved in four ounces of water; with this is mixed sixteen ounces Paris white. A moistened sponge is dipped in the powder and rubbed lightly over the surface of the metal, after which the powder is dusted off, leaving a fine brilliant luster.

Lemons can be preserved by varnishing them with a solution of shellac in alcohol The skin of shellac formed is easily removed by rubbing the fruit in the hands. Varnish made with alcohol will get dull and spongy by the evaporation of the alcohol, which leaves water in the varnish, as all commercial alcohol contains water. Take thin sheet gelatin, cut it in strips, and put it in the varnish; it will absorb most of the water, and the varnish can be used clear and bright till the last drop. The gelatin will get quite soft; it can then be taken and dried, and used again.

There is no simpler remedy for preventing cider growing sour than mustard seed. After the cider has fermented and reached the desired palatable condition, put one pint mustard seed to a barrel of cider, and bung tight.—*Scientific American.*

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

C. S. R., Fulton, N. Y.—Please inform me if there is any way of making a tent both waterproof and fire-proof? Ans. See answer to W. A. L.

W. J. K., Phœnixville, Penn.—Which has the greater attraction for a ball shot over its surface, land or water? Ans. The attraction of gravitation is the same in each case.

SURSCRIBER, Webster.—I have a gun 29 inches long, but it shoots too close for brush hunting, and I think I shall have it cut off to 28 inches. Do you think it will make any difference in the penetration? Ans. No.

TROY, N. Y.—Being anxious to purchase a bull terrier—dog preferred—I take the liberty of asking you where one could probably be procured? Ans. Address Henry Gardiner, M. D., No. 1! South Fifth avenue, N. Y.

W. A. B., Montpelier, Vt.—Will you please inform me what is "Greenheart," so popular in the manufacture of fishing rods, and from where does it come? Ans. It is a wood imported to this country from Demerara, W. I.

J. F. D., Greensburg, Pa.—Can you give me any information in regard to Wm. Webster, gunmaker, of Warwick street, London? If, or were his guns considered first class? Ans. We cannot find his name in the list and know nothing of the guns.

P. L., Philadelphia.—Can you tell me where the nearest trout streams to Philadelphia are located, and some good places for striped bass? Ans. No good trout fishing nearer than Lycoming county, and no large bass nearer than the mouth of the Delaware.

PANFUS, Readington, N. J.—Please give me the address of Mr. Saltus, owner of the red Irish dog Dash, so engraving of whom, with his companion Bess, ornaments the title page to your issue of Feb. 3d, 1876. Ans. A letter addressed to Mr. Saltus at this office will reach him.

R. M., New York.—A dispute has arisen concerning the origin and meaning of the word "Banshee." Can you give us any information in the matter? Ans. The Banshee is the familiar "spook" or spirit, supposed by Irish families to foretell, by their wailing song, a death of some member.

BOB, Brooklyn.—Will you please inform me of the address of the firm manufacturing Adirondack Lake boats? Ans. Newcomb, Essex & Co., N. Y., have the reputation of being the builders of good Adirondack boats. W. E. Martin, E. Peck, G. Phillbotts, and others, of Saranac Lake, are good makers.

L. P., New York.—Our English pointer bitch had some puppies last week, but cut them up, all at once. Does this happen very often, and is there no remedy to prevent it? Ans. We know that some bitches will eat their pups; the only way to prevent it is to watch them closely. It is said if they are well supplied with water at the time they will not do it.

N. E. S., Urbana, Ill.—Please tell me how much and what kind of powder, and how much and what size shot for a No. 10, ten-pound Parker gun. I want for duck shooting. Also your opinion of the No. 4 Hazard powder, compared with Orange or Curtiss & Harvey's. Ans. 1. 5 drachms powder and 1¼ oz. No. 4 shot. 2. Equal to either of the others.

C. W. S., Albany, N. Y.—1. I have a Remington rifle, 30-inch .44 calibre, 77 grain charge, how far will it shoot accurately? 2. What is the length of the Creedmoor barrels, Remington and Sharps? 3. Who makes the .22 sub-calibre rifle barrel for Remington military rifles as described in "Wingate's Manual?" Ans. 1. One thousand five hundred yards. 2. Thirty-four inches. 3. E Remington & Sons.

J. W., Gloucester.—1. Where can I buy a good fox hound—one with keen nose, and that will stick to the track and not give up? 2. We shoot the fox. Now which is the best dog—one that runs fast or slow? Also, which would be best—a fox hound, or fox terrier? Ans. Address Peter Knox, Newton, Sussex county, N. S. 2. It depends on the ground, but Mr. Knox will post you.

W. A. B., Montpelier, Vt.—1. Will you please inform me what Belmontyle oil is and where it can be procured, as I see you recommend it for gun barrels? 2. Where can I obtain catalogue of the Parker guns? Ans. 1. Belmontyle oil can be procured from almost any gunsmith. Mr. H. C. Squires, No. 1 Courtlandt street, this city, has it we know. 2, Write to Messrs. Parker Bros., West Meriden, Conn.

G. A. D., Chickopee, Mass.—1. What are the indications of good blood in an Irish setter—in a pointer? 2. Is "Burges on the American Kennel" a standard authority? Ans. 1. Our space will not permit us to answer this question. Read the back numbers of this paper, or consult Stonehenge, Dinks, and other authorities. 2. Mr. Burges' book is not yet out of press; it is therefore rather early to state whether it is "standard authority" or not.

W. C. S. & SONS, N. Y.—In what county of Pennsylvania or Virginia can two friends and myself camp out from about the 1st of June until the 1st of November, and have good fishing and shooting (the latter more particularly) without any danger of being interfered with? Ans. Pike county, Pa. Take Erie Railroad to Port Jervis; then stage. You will find plenty of good camping ground within ten to fifteen miles of Milford. No shooting until after July 4th.

C. J. H. G., Manchester, Md.—Why does a gun shoot better on some days than it does on other days? I use the same powder, the same number of shot, and the gun is in the same clean condition. I go out some days and drop every bird; other days I feather the birds and cannot get them down. Ans. All guns vary in their shooting, more or less. The cause of your not being so successful in killing some days as well as on other days arises, in all probability, from the want of proper aim.

M. P. M., Franklin, N. Y.—1. Does the English hard shot do as good work in the field as soft shot? 2. Does it not strain the barrels more, being hard? 3. How many pellets to the oz. of No. 10s and 11s? Is it lighter, and if so, how much? Ans. A series of experiments we published last week would indicate that the hard shot gave better penetration, but the soft shot better pattern. 2. Yes. 3. Tatham's No. 10—828 pellets; No. 11, 1,348. The chilled shot is much the lightest.

SHEDLEY, Homorton, Pa.—The barrel of my Winchester has become leaded in recent use at target practice, a thing that never occurred before. Was using some of the No. 44 cartridges, long. Have heretofore always used No. 44, short. What is the cause, and what the remedy? Ans. The cause is probably owing to the charge in cartridge; one fits the gun and the other does not. The remedy will be in using a little turpentine, or petroleum, or half-and-half of benzine and fine lard oil before the leading becomes too hard.

F. H. R., Warren, Pa.—I have a W. W. Greener pin-fire, No. 12 shot gun. It has a set of the finest locks I ever saw on a gun. Can the gun be converted into a central discharge without changing the locks, or in any way injuring them? Who would be a responsible party to change the gun? About what would be the cost of changing the gun in the best way? Ans. By sending your gun to us we can have it altered to a central fire in a workmanlike manner, without changing the locks, except in the formation of the hammers. The charge will be $35.

W. T. R., New York.—1. What is your opinion of the Miller Recoil Check, recently patented for attachment to the stocks of guns. Would you recommend owners of fine guns, desiring to shoot heavy charges, to adopt it? 2. How many pellets to the ounce of English No. 6 shot? 3. Do you consider castor oil superior to tallow for rendering hunting boots or shoes impervious to water? Ans. 1. We are not yet prepared to give an opinion as to the utility of the patent recoil check. 2. 270 pellets to 1 oz. of English shot. 3. We consider castor oil decidedly the best.

R. H. D., Canandaigua, N. Y.—I have been told the present system of artificial impregnation of fish eggs, as practiced by our commissioners at the State Hatching House, is wrong, and has been given up by some of our old fish culturists, they having decided to let the spawners deposit their eggs in their own way on gravel beds. Is this a fact? Do you know of any lake that has been well and successfully stocked with fry grown from artificial impregnation? Ans. Your information is all wrong. Artificial impregnation is the means used by all Fish Commissioners. Cayuga Lake, in this State, may be mentioned as a case in point.

AQUADALE, Wenonah, N. J.—I have prepared a pond containing about 3,000 cubic feet of water, for the purpose of breeding goldfish, and desire to know the best place to procure pure stock. I find that the Philadelphia dealers obtain their stock from Long Island, and I presume you know who breeders are in that region, for they probably have headquarters in your city. Ans. T. B. Ferguson, Fish Commissioner of Maryland, residence 122 North Charles street, Baltimore, pays special attention to breeding of goldfish. The Long Island breeders are unknown to us, but Messrs. Greenwood & Seymour, No. 15 College Place, this city, can furnish you with Long Island fish.

SETTER, Philadelphia.—I have a Bismarck pup seven months old. I am afraid he is troubled with worms. I gave him one of your areca powders; it gave him one small passage and made him vomit a greenish substance. He has no appetite and is very spare of flesh, yet large boned, 20 inches high; head, 9½ inches long; weight, 40 pounds; yet is very thin; lively, but nose dry. What would you advise to do for him, as I should like to get him in good trim for next fall? Ans. If you had followed our directions in giving the remedy, a cure would have been, in all probability, effected. We would advise you to try the areca nut again, as it almost invariably cures when properly given.

W. H. S., Philadelphia.—Is there any rifle club in Philadelphia; if so, who is the president, where is their range, will they receive any more members, and what is the cost to belong? 2. Would a Wesson rifle, 44-100 calibre, 28-inch barrel, do for long range shooting. 3. What is the price of Smith & Wesson's new breech-loading navy revolvers? Ans. 1. The Philadelphia Rifle Club, C. Miller, President; initiation fee, $12; annual dues, $6. Each member is required to purchase one share of stock, costing $25, and which bears six per cent. interest. For further particulars inquire at 534 and 536 N. Third street, Philadelphia. 2. No; if by long range you mean over 500 yards. 3. $23.

E. V. B., Elysia, Ohio.—Three parties are shootings match (pigeons). 1. B. is called to the score, when he gives the word pull. The bird flies about four yards from the trap and lights on the ground, from where it again rises. B. shoots and kills the bird. Is it right to score the bird? 2. C. is called to score, shoots and killed his bird, which falls on the line of bounds, (80 yards), one-half the body inside, and one-half outside. How should the bird be scored? Ans. 1. B. is entitled to his bird. 2. We can find no rule among the club rules for pigeon shooting applying to such a case as you state, but we would give the shooter the benefit of the doubt. In rifle shooting a ball striking the outer edge of a ring counts for the value of the circle inside the ring.

R. L. W. asks receipt for making prepared mocking-bird food and relishable nutrian cement. Ans. 1. Mix two parts each of corn meal, pea meal, and one part of mass meal; mix to a little lard, not enough to make greasy; sweeten with molasses, and then fry for half an hour, stirring constantly so as not to burn. Put in covered jar. Moss meal is made by drying and grinding German moss seed. 2. A good aquarium cement, suitable for salt or fresh water, is made by taking ten parts by measure of litharge, the same of plaster of Paris, a like quantity of white sand, and one part of finely powdered resin. Mix, when wanted for use, with boiled oil sufficient to make it of the consistency of stiff putty. It is better to allow it to stand three days before using.

P. M. A., Chester, Pa.—What is the best authority or book of instruction on fly fishing? I have heard "Frank Forester's" well spoken of but have never seen it. Ans. No book of instruction on fly fishing has ever been published in this country. The art cannot be taught. What is the best book of instruction on billiards? Ans. The illustrated handbook of billiards by Phelan. Published by Dick & Fitzgerald, No. 18 Ann street. What is the best authority and book of instruction on boxing; also, a good book on athletic or physical exercise? What is the difference between boxing and sparring? Ans. Price's "Science of Self Defense;" to be had of same publishers. No difference between sparring and boxing. Is there any way of getting the pike, perch, catfish, etc., out of a lake and substituting trout in their stead? Ans. The only sure way is to draw off the water. You might put in black bass.

W. A. L., Yarmouth, N. S.—1. Where can I get a good pattern for a tent to hold two or three persons, and to be as portable as possible? 2. Do you know of any preparation for making a canvas tent water and fire proof? 3. Are the barrels of a double gun usually made thicker a little in, or towards each other; Brunstead says they are, Bogardus says they are not? 4. What is best for a coating, and what for stopping a leak in a canvas covered wooden canoe? 5. Will shot or round ball fired perpendicularly into the air strike the ground in their descent with the same force that they have on leaving the gun? Ans. 1. Of Eston & Co., No. 17 Ann street. 2. Immerse in soluble glass distilled with boiling water to 25° Baume. Before quite done immerse in a solution of sulphate of alumnia and sulphate of copper, one part of each to ten parts of water; then dry slowly in the air. 3. Yes, they are. 4. Putty, if in the wood, and patch, if in the canvas. 4. No.

W. G. R., Greenburgh, N. Y.—1. Would you recommend me to have a muzzle-loading gun that scattered too much, re-bored. Would it injure the barrels, or is there any other way to prevent scattering? Where shall I have it done, and the cost? 2. Do you recommend Hazard's FFFG. powder for ordinary shooting? 3. What is the proper charge of powder and shot for my 12-bore gun? Do you think a pattern of 160 or 180 at 40 yards a good target? Ans. You can have your gun re-bored without injuring the barrels at an expense of $3.50 to $5; or you can make it shoot closer by using concentrators. Send it to this office and we will have it done for you. 2. No, not for shot gun purposes; but we do most heartily recommend their No. 4 duck, and the FG. for rifles. 3. Probably 3¼ drachms of powder and 1¼ oz. shot; but we do not know the weight of your gun. This is one of the things a man must find out for himself by experimenting. 3. Yes, remarkably good.

TEXALL, Boonton, N. J.—Would you call the gun described by "Pacific" in your paper of Jan 20th, page 376, last clause of his article, right barrel, 180, left, 220 pellets, a choke-bore, or a modified choke? 2. Is there such a thing on record as shooting No. 8 shot (soft) through a Curtis & Harvey can at 30 yards, with 12-gauge gun, or is that a fair test for a gun? I have no trouble in getting through one side and denting second side, but there does not seem to be solid substance enough left in the shot to pierce the second side. Is it the fault of the gun, or is this not a fair test for penetration? What would be better? 3. What grade and size of oriental gunpowder should be used in place of C. & H. No. 6 diamond grain, and where can I get it in New York? Ans. 1. A choke-bore. 2. No record of the kind; your gun would probably do it if you used chilled shot. 3. Address the Oriental Powder Co. at No. 13 Broad street, Boston. They have no advertised agent in this city.

TO COOK MUSHROOMS.—Peel both tops and stems, put in a stew-pan, with an ounce of butter and a pinch or two of salt to each pound, and serve up hot. This will answer to eat with fish, flesh, and fowl. *To fry them*—peel, dip in egg, and roll in cracker dust, season, and fry as with oysters.

THOMPSON & SON, 338 Broadway, use no sugar of lead in waterproofing their suits. Sugar of lead will not stand washing, and among sportsmen is considered detrimental to health, making them liable to rheumatic attacks. Thompson's suits are guaranteed to be thoroughly waterproof, even after being washed, and are as good and cheap as any other suits in the market.—*Advertisement.*

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
123 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, FEBRUARY 17, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

THE CHICAGO CUP.—With our present issue will be found a handsome engraving of the prize presented by us at the recent Chicago Bench Show. As a work of art it has never been excelled by any similar piece of plate, and reflects the greatest credit upon the designer, Mr. Hirzehfield, and the manufacturers, the Meridian Britannia Co. We would also call attention to the excellence of the engraving, the drawing of which was executed by Mr. Jacob Glahn, and the cutting by Messrs. Sandford and Lohman, all of West Meriden. The dogs at the base are the celebrated Laverack setter Countess and Mr. Dilly's pointer Ranger, winner of the first prize at Chicago. This beautiful prize was awarded, entirely to our satisfaction, to Mr. J. H. Whitman, not only for his fine display of dogs of one breed and family, but as a recognition, concurred in alike by judges and exhibitors, of his labors in bringing this, the largest Bench Show ever held in America, to a successful issue.

"DER HUND."—Our readers will remember that we noticed recently the departure of Mr. R. Von Schmiedeberg, a well-known New Jersey sportsman, and owner of fine dogs, for Leipsic, where he was to join *Der Waidmann*, the German sporting paper. Mr. Von Schmiedeberg writes us that upon his arrival it was deemed advisable to start a new paper, to be known as *Der Hund*, (The Dog,) to be devoted solely to this subject, and the object of which will be to encourage breeding from pure specimens, to instruct in the medical treatment of dogs, and to develop a knowledge of many breeds now existing in Germany but unknown abroad. There is much in this that will be of interest to many of our readers whose thoughts still turn to *Vaterland*, and also to those who, although Americans by birth, speak the language and frequently travel in Germany. To all such we would commend the enterprise of Mr. Von Schmiedeberg and his associates.

THE AMERICAN PHILOLOGICAL SOCIETY will hold a meeting on Wednesday, February 23rd, at Cooper Institute, commencing at half past seven P. M., when Prof. J. C. Zachos will read a paper, entitled The Phonetic Character of the English Language and the best Methods of Teaching it. The public are invited to attend.

CAMP LIFE IN FLORIDA.—For those who are prevented from taking their anticipated trip to Florida we can commend this book as a substitute. The graphic descriptions of the most interesting and beautiful part of Florida are only exceeded in interest by the localities themselves. Everybody who is at all interested in the State should have a copy.

RAILWAYS IN CHINA.

IT would be worth the long journey by land and s
be present at the opening of the first railroad in C
which is announced for June next. To see the crowi
gaping coolies, the ill-concealed astonishment of the ui
classes and the quiet indifference of the upper-ten and
literati. It is related of a veracious merchant of Shangl
that when the first steamer anchored off the "bund,"
quietly replied to a query, "Hab got plenty all sar
Peking!" But the puffing, snorting, "land dragon," w
hold quite a different place in his estimation from t
steamer. The latter is but a junk propelled by son
means known only to the outside barbarian, while the l
comotive can find no parallel in his imagination. It ca
not be claimed that this little railway of nine miles and
half is to produce any wonderful effect in the way of
"opening up" new country. Nor will the native travel go
far towards paying its expenses. The benefit will accrue,
first, to foreign commerce, and secondly to the world at
large as being the strongest wedge yet driven into the
tough knot of Chinese conservatism. A glance at the lo-
cation of the termini of the road will explain both these
propositions. When approaching the mouth of the Yang
Tsze, with the exception of a group of outlying rocks
known as the Saddle Islands, the only indication of the
proximity of land is the change in the color and consist-
ency of the water from the deep blue of the ocean to the
pea-soup like substance, which carries the loam of plains
a thousand miles away. A line with length but neither
breadth or thickness is first seen, and almost before the
traveler is aware, he is steaming by paddy fields and low
grazing grounds, dotted with occasional villages and more
conspicuous temples. The river here is divided by the isl-
and of Tsung Ming; a hundred years ago but a speck of
mud, now an island of many miles in length, with a popu-
lation numbered by the hundred thousand. The north
bank of the river is miles away and out of sight. After
steaming for some hours, the white walls of Woosung are
seen on the south bank, almost on the point formed by the
junction of the Wang-poo River with the Yang Tsze.
The Wang-poo enters the larger rivers at right angles with
the latter's course, and its mouth is protected by a bar
through which a channel is buoyed. Woosung, in itself,
is but a miserable little village. What importance it has
had in the past is owing to the fact that previous to 1860
the well-armed opium ships, used as storehouses for "the
drug," were anchored here. They were subsequently
moved up to Shanghae. The French Government have a
"godown," or magazine, for the storage of coal, and some
of the foreign residents have built themselves bungalows
on the river bank. Shortly above Woosung, on the Yang
Tsze, is the larger village of Paoushan, protected by a fort,
whose long line of grass-grown embrasures, partly filled
with native guns, is the most picturesque object in the
neighborhood.

Nine miles above Woosung, on the Wang-poo, Shanghae
is situated; first the foreign settlement, and, beyond, the
walled city, completely concealed by the forest of masts
belonging to junks anchored in tiers off the town. The
foreign settlement of Shanghae is divided by the Soochow
and Yang-king-pang creeks into three parts. That lowest
down the river, and where the terminus of the railway
will be, is known as Hong Que, and as the American con-
cession. The next, between the creeks, is the English con-
cession, and contains most of the mercantile *hongs*, or
houses. That above the Yang-king-pang is the French
concession, and, being largely occupied by Chinese, is, in
reality, but a suburb of the native city.

The travel between Shanghae and Woosung will, there-
fore, as far as the natives are concerned, be light. As for
freight, the nine miles between the ports is a matter of no
moment to the Chinaman in the voyage of his junks. For
foreign traffic, the establishment of the railroad will be of
inestimable benefit in allowing ships—many of them of
large tonnage—to receive and discharge their cargoes while
anchored in the Yang Tsze, or just within the bar at Woo-
sung. Not only will the expense of towing up and down
the Wang-poo be saved, but many vessels are now obliged
to have their cargoes lightered down to them, an expensive
and tedious operation.

The building of this road, for which contracts have been
made and the material placed on the ground, will be, as
far as the mechanical part of it is concerned, a matter of
perfect simplicity. The land is as level as a billiard table,
and no stream wider than a ditch to be crossed. Labor,
cheap in price and fair in quality, can be had in any quan-
tity. The greatest drawback, if any are experienced, will
be in overcoming in the minds of the people the fear of
Fung Shuey, that dreaded, incomprehensible spirit of wind
and water which enters so largely into the Chinaman's sys-
tem of domestic economy and daily life.

In building railways in China, if this first effort leads to
further attempts, the great difficulty will be in choosing
such routes as are not already opened by the admirable
water system which prevails almost throughout the Em-
pire. The annihilation of time and space is a matter of
no moment to John, but he does appreciate the protection
afforded him by the barbarian arm against his own lawless
classes and legalized "squeezers." A competition be-
tween railways and steamers would be much more favora-
ble to the latter in China than in any other country. And
it must be remembered that the Chinese are utterly with-
out that go-ahead spirit which has developed so strongly
in the Japanese. The result of this first experiment in
building railways in China will be watched with interest
by the whole civilized world. If successful, it is not dif-
ficult to prophecy the destruction of that stoical and skep-
tical conceit which has been the barrier to her progress.
The railway may yet prove to be the true missionary to
China, and the shriek of the whistle, the blow which is to
break the hollow shell of her whole political and social
system.

ULTRY AND FISH DISPLAY AT UTICA.

THE Central New York Poultry Association has been
holding an exhibition in the City Hall, Utica, during
last week. The awards have not reached us in time
publication, but a personal inspection made on Satur-
it was most gratifying. The limits of the hall de-
to the purpose were scarcely sufficient to contain the
and we observed but few poor or indifferent fowls.
the judges must have found it difficult to decide in
stances. The light Brahmas were a particularly
as were also the Houdans. We thought we had
e better white Legborns, but, as Artemus Ward
y, "fowls are not our forte," and we can only
eneral terms and as an amateur. The display,
luded turkeys, ducks, pigeons, peafowls, rabbits,
remarkably fine one and a credit to every ex-
eth Green had a number of fish on view, includ-
ens of brook and salmon trout, salmon, black
pike, shiners, and cat-fish; also fry of trout,
, and white-fish, in various stages of develop-
the unhatched egg to the little fellow just re-
the umbilical sac. This exhibition, which
e direction of Mr. W. D. March, was a great
etion. A patent incubator was also in opera-
tities of little chicks pecked their way into
esence of the spectators.
ire of the exhibition was the display of wild
Johnson's Menagerie, which usually winters
in Ut

A V ANTIQUE.—We have referred in another
colum opening of a supposed Indian mound in
Florida a visit to Utica last week we were some-
what st learn that many of the most remarkable
antiquit in the mound had been removed, and
through esy of Col. Skinner, the veteran Field
Editor o temporary, *Turf, Field and Farm*, the
Historical So Utica were about being placed in pos-
session of th luable of the relics so recently un-
earthed. The ably no city in the Union, of equal
popul ation, w eady so rich in collections of art
and *virtu* as Ut itizens are many of them gentle-
men of culture e traveled all over the world; her
contributions to of science and politics embrace
some of the fore ds of the day. In no place then,
would this gener f Colonel Skinner's be more ap-
preciated. The a this valuable work of ancient art
which reaches us, h is vouched for by the Colonel,
is as follows:—P the opening of the mound,
which is elsewhere , we note the discovery that a
certain cement usec ructure is said to be identical
with that used in th e of Diana at Ephesus, which
leads to the suspicio he wilds of Florida has been
discovered a work n art of the age of Pericles.
The antique in questi s to consist of a small figure
which was used in y the disciples of Diana at
that period. We awai information on the subject
with much interest.

GAME SECTION.

The O Laws.

A bill has been introdu the Legislature of the State of Ohio, and inde ly passed the Senate, which, if allowed to beco will so seriously interfere with the prosecution sports, that we are surprised at not hearing of a protest from all the sportsmen of the State. Th it now stands, makes it unlawful for any person t n the enclosed land of another, to shoot game with ous express permission, and affixes fines and imprisonment as the penalties. To place it in the power of an individual to so restrict another in a pursuit that has always been looked upon heretofore as lawful and honorable, without any previous notice as required by the laws of trespass in other States, seems to us as simply monstrous. In this State a notice posted in a conspicuous place is always required, and the law appears to work well. In New Jersey, the most conservative of all in the matter of protecting the rights of farmers, as well as in the cause of game protection, the law requires the land owner to give notice or warning through the public prints that his land is closed against sportsmen before he can prosecute for trespass. We would suggest to the sportsmen of Ohio, that they have rights which are entitled to some consideration in this matter and that they take action toward the Bill being so amended as to require the farmer to give notice or warning of some kind before he has them cast into jail as trespassers.

DISTRICT OF COLUMBIA.—A Bill has been introduced into the House of Representatives making a game law for the District. It provides close seasons, for quail from January 1st to November 1st; for grouse from February 1st to September 1st; for woodcock from January 1st to August 1st; for snipe and plover from May 1st to September 1st; for ducks, geese, and brant from April 1st to October 1st, and only three days shooting in each week to be allowed during the open season. Rail, ortolan, and reed or rice birds, are

protected from July 1st to September 15th; deer from January 1st to September 1st, and song and insectivorous birds at all times. The other regulations, regarding batteries, trespass, and Sunday shooting, are similar to those in force in this State.

FISH AND GAME IN ONEIDA COUNTY.—Under the Act which permits the Boards of Supervisors of counties to pass regulations regarding the protection of fish and game within their limits, the Supervisors of Oneida county have prohibited the shooting of woodcock before the first of September; a capital ordinance, and one that we should like to see made a State law. They have also prohibited the catching of trout by *any* means for periods varying from three to five years in certain streams.

BROOME COUNTY.—A law is now in force in this county which works some good. It positively prohibits the sale of game of every description, whether in or out of season within the limits of the county. This takes away from farmer's boys a great inducement to snare grouse, as they have no convenient market for their disposal.

NEW YORK CITY.—The usual monthly meeting of the New York Association for the Protection of Game was held last Monday at the residence of Hon. Robert B. Roosevelt, Vice-President of the society, No. 26 East Twentieth street. The chair was occupied by Mr. Royal Phelps, President, and a large number of members were in attendance. After the reading of the minutes of the last meeting, the President read a long list of communications received during the past months from the Middle and Western States. The majority were from the organizers of newly formed protective associations, modeled after the New York society, requesting copies of game laws, by-laws, and such other information as they most needed. Several gratifying testimonials to the valuable services performed by the association in protecting game in New York, and the commendable manner in which its example was being followed by other States were also read and placed on file. Mr. Roosevelt said that he had invited the Assembly Committee on Game Laws to attend the meeting. Mr. Sherman, the Chairman, had replied, regretting their inability to be present, but requesting the association to put itself in communication with his committee. Mr. Ludington, on behalf of the Committee on Amendments to the Game Laws, stated that the bill forwarded by the association had been introduced in the Senate by Mr. Kennaday, and the Chairman of the Committe on Internal Affairs had promised the latter to report it. The reports of various other committees were then presented, and the bill of Mr. C. E. Whiteside, senior counsel, for services performed during the past year, amounting to $517.62, and that of Mr. Cuthbert, junior counsel, for $166, were ordered to be paid.

Mr. Alfred W. Craven stated that he had promised some Washington Market game dealers to present their views to the association in relation to the sale of venison. They propose that deer be killed in November and December only, and sold up to March 1st, instead of February 1st, as now. They complained that they were unable to dispose of the game within the prescribed time, as venison had scarcely more than begun to come in when the season for its sale expired. In addition, they claimed to be unable to dispose of the vast quantities of venison coming in from the West during the month of January. Counsel for the association was of the opinion that it would be impossible to pass any law preventing the killing of deer in September and October, their being among the members of the Legislature too many sportsmen who went shooting in these months. As to extending the sale of game to March 1st, he thought it would be impracticable, for the reason that often the game would not keep. Most of the late game, to be sure, came from the West, but if that were allowed to be sold here, they could not protect their own game. Besides, the sale of frozen game late in the season was very unhealthy. It was first frozen for a month, then thawed for a similar period, and, should it be sold in that condition in our warm spring days, it would be anything but healthy food. As it was, the greater portion of it was only kept from becoming prutrid by being cooked up with spices, in which condition it was served in the restaurants of this city. The same remarks applied to frozen fish, the fat of which, under the thawing process, became decomposed and destroyed the flavor, so that after being frozen for any length of time the choicest fish lost its flavor, and became no better than the poorest. Their game laws, he thought, were so nearly perfect now that it would be difficult to improve them, and he should therefore vote against any change. Mr. Phelps also opposed any concessions to dealers, or change in the game laws, and the matter was dropped. The resignation of Governeur Morris, Jr., was accepted, and the meeting adjourned. The members were subsequently entertained at supper by Mr. Roosevelt.—*Times*

TORONTO, Feb. 5th, 1876.

EDITOR FOREST AND STREAM:—

This afternoon ever-welcome FOREST AND STREAM of the 3d inst. arrived, and I find in it an article on "Provincial Associations for Canada," in wh ch mention is made of our association, just formed in Toronto. The writer of the above mentioned article is in error, and I trust you will allow me to explain to you, and through your columns to your many readers in Canada, the origin and object of our association.

We have a game law here—not by any means a perfect one, and I regret to say that, in the majority of places in Ontario, it is a dead letter. There are several Game and Fish Protective Associations in Ontario, scattered through the Province, but they experience great difficulty in procuring convictions, owing to the fact that it is next to impossible to induce a man to inform on his neighbor, owing to the ill feeling such information would produce. I thought an association might be formed here with members from parts of the Province where at present no associations exist, and after consulting with some fellow sportsmen, I issued circulars to some sixty gentlemen in Toronto, calling a meeting to consider the desirability of forming such an association. This meeting was held on the 8th of December, and all present expressed themselves in favor of the idea, and resolved that it would be desirable to form the association. A committee was appointed to draft rules and by-laws and to draft a petition to the Legislature urging the alteration of the present game laws as regards the close seasons for certain kinds of game.

Our association is not a provincial one and was not intended to be one. We do not think the country is ready for a provincial association as a sufficient number of country associations do not at present exist. One of our objects is the encouragement of the formation of local associations, and when a number of these exist it will be time enough to form a provincial one. During the one month of our existence we have induced some sportsmen to undertake the formation of an association at Berlington, and we hope to be able to induce many more to do the same. Many of our members have expressed their willingness to inform us of any infractions of the law that they may hear of. We can then appoint a man from the neighborhood where the offense was committed to work up the case, if we can obtain one; if not, a detective will be sent from here without costing a great deal. A counsel can be obtained in most cases from among our members in that locality who will not make us bankrupt by heavy fees.

We regret that one association should feel aggrieved that they were not consulted about our formation, but we do not see in what way it concerns them, except that they, if they have the objects at heart which they profess to have, should feel pleased that another association is formed to assist them in enforcing the laws. The petition which we have prepared embodies the following changes in the law:—

The present law allows woodcock to be shot on and after the 1st of July. We propose that the close season be extended to the 1st of September. The present law allows all ducks to be shot on or after the 15th of August, and also permits the killing of certain kinds of ducks, such as red-heads, blue-bills, and others, which are not supposed to breed here, in the spring. We propose that the spring shooting of all kinds of ducks and snipe be prohibited, and that the close season be extended to the 1st of September.

These are the amendments which we propose, and our petitions have been very largely signed by sportsmen from Windsor to the Ottawa. Some opposition has been offered to the clause which proposes the abolition of spring duck shooting, mainly on the grounds that the laws of your States bordering on Canada make no provision for the prevention of spring shooting. A very large number of ducks breed in Canada, and if they were not disturbed very many more would breed here, and our shooting in the fall, as well as the shooting in Michigan and New York, would be very much benefitted. Snipe also breed here, but the law allows them to be shot as late as the 30th of April, and during the month of April they are laying their eggs and in many cases hatching out their young.

We do not doubt from the encouragement we have received that our proposed amendments will be carried, and then, if the law is properly enforced, we shall again have an abundant supply of game in Canada. Apologizing for occupying so much of your valuable space, I remain,

T. HERBERT MARSH,
Secretary and Treasurer Ontorio Fish and Game Pro. Assoc'n.

FROM THE HEAD OF THE OHIO RIVER TO THE GULF OF MEXICO IN A BARNEGAT DUCK BOAT—2,155 MILES OUT.

EDITOR FOREST AND STREAM:—

Having completed my geographical studies of the connecting water courses of the continent in Eastern North America (which I followed in a paper canoe weighing fifty-eight pounds) from the Gulf of St. Lawrence to Cedar Keys on the Gulf of Mexico, during the season of 1874 and 1875. I had a strong desire to pass the present winter in extending my investigations over the great river highway of the West, the Ohio and Mississippi Valleys, down to New Orleans; thence, (after making a short portage across that city), easterly to the point where I ended last season my long "voyage of the paper canoe," at the mouth of the Suwanee river, Florida.

The novel character of the paper canoe voyage had given such notoriety, through the papers, to my lonely journey that I was frequently interrupted while hurrying southward along the interior waters of the Atlantic coast by the generous and profuse hospitality of the Southern people, so that I ended my canoe voyage of above two thousand five hundred miles, and entered upon the waters of the great Mexican gulf as late as April, 1875.

To insure rapid, or rather continuous traveling, I determined to give up my favorite paper canoe, which had carried me across the tidal currents of Hatteras, and more than thirty other inlets of the ocean, and adopt the strong and secure home-like accommodations offered by the little Barnegat duck boat, or "sneak-box." For forty years our wild fowl hunters on the New Jersey coast of Monmouth, Ocean, and Burlington counties had been slowly perfecting this little craft. She, in the Centennial year, was all that could be desired—a novel boat, compact, light, strong, seaworthy, and yet destitute of sheer. A fair rowing boat, a good sailer, and better than any other model for the size, a comfortable boat to live in, a safe and stiff boat to shoot from. George Bogart, a surfman, at Manahawken, built this little craft. Our fine yacht builders rarely build these boats; a good "sneak-box" builder is not an expert in the construction of yachts. It requires a peculiar gift, as "Natty Bumpo" would say, to model a "sneak-box," or make an axe handle. This boat is usually adapted to one gunner, and its smallest dimensions would give this result: Length over all, 12 feet; beam, 3 feet 11 inches; depth amidships, 12 inches; weight, about 150 pounds. With the prospect of a voyage of nearly three thousand miles before me, from the frozen regions of the North to the genial climate of the seaboard of the Southern United States, it was necessary to have this duck boat built in the most substantial manner, to withstand ice, snags, and the effects of heat and moisture. Her shell is of half-inch juniper, or swamp cedar, calked to above water lines. The convex deck is made of tongued and grooved cedar of the same thickness as that of the bottom and sides. She does not leak a drop. The heaviest rains have not yet penetrated her deck. Three men can stand upright in this little craft without disturbing her equilibrium, unless they make considerable effort to effect that end. Two thin hair cushions, and a cotton comfortable, with two blankets, with the hatch cover dropped lightly down on to the combing of the cockpit allowed me to enjoy a warm nights' repose in Pleasant Run, three miles below Cincinnati in December, with mercury down 3° above 0, and ice forming under the boat two or three inches in thickness. Late in November the little boat, loaded inside with provisions, bedding, etc., (this boat is not easily strained), was shipped on the cars from Manahawken, Ocean County, New Jersey, to Philadelphia, carted across Delaware avenue to the Pennsylvania Railroad freight depot, and again transported by rail to Pittsburg, at the head of the Ohio river. On December 2d I reached the point of departure, and immediately put the boat into the Monongahela side of Pittsburg, and embarked in this new boat, yet unrried, for the Gulf of Mexico. It was very cold; and here, under the smoky clouds of the smoky city, my trials commenced. The Alloghany on the west side, with the Monongahela on the other side of the city at their junction below Pittsburg, give birth to the Ohio. With a swift current I decended the Monongahela, and, to my surprise, viewed the vast fields of floating ice covering the Ohio as they whirled along the current out of the Alleghany. For two days I was in the floating ice. It melted and disappeared before I quite reached Wheeling. The Ohio was followed for one thousand miles, from December 2d to December 31st. Then on a heavy rise in the Ohio I entered the great "Father of Rivers," the mighty Mississippi. Nineteen days of hard pulling, and the friendly assistance of a rapid current, and the little "sneak-box," reached the boat house of the Southern Boat Club, foot of Lonisiana avenue, New Orleans. She had run above one thousand miles between the 1st of January and the morning of the 19th on the Mississippi river. Having slept and lived alone on this little boat, running at nights into creeks and bayous to escape the steamboats which are moving at all hours on the great rivers; keeping aloof from towns and people as much as possible, I now begged the polite Mr. Deckbar, of the Southern Boat Club, to allow me to leave my boat in the tastily-built club establishment until the next day. Every kindness that Mr. Deckbar could offer was shown me. Quietly, the next morning in a furniture spring wagon, we made a portage of two or three miles, from the boat house into the New Basin canal, and I rowed along it about five miles to Lake Pontchartrain, where, securely tied up to the sides of the canal, and inside of the breakwater and lighthouse, I found a small fleet of schooners awaiting a change of the easterly wind then blowing. Here I was confined for several days, much to my regret, waiting for settled weather before venturing out upon the gulf journey to Florida. Capt. M. H. Riddle, harbormaster of the New Basin canal, is the principal amateur hunter at this point on the lakes. Parties from the North visiting New Orleans will find him always ready to direct them to hayous where birds are to be found. This light-draft, decked, and cabined sloop is well fitted for cruising to the islands outside of the limits of Lake Pontchartrain. I had traveled above two thousand miles quietly, sometimes relieving the monotony of the river journey by pulling alongside of a flat boat to converse with those rough characters, who drift from point to point, the champion floaters of the world. These men are civil, and frequently friendly; but the large towns and cities flood the canoeist, or "sneak-box" voyager with visitors with whose company he would willingly dispense. These roughs ply you with impertinent questions, as if they believed you were traveling to advertise the business of your boat-builder. They receive your honest replies to unpleasant criticisms, made upon a boat of novel construction, as if you were trying to deceive them. With a little knowledge of pulling a boat in smooth water, they are ignorant of that experience which traveling upon rough water gives to yachtsmen, and fishermen; yet they advance with confidence their criticisms so boldly as to make the boat voyager feel that his own experience is worthless and contemptible, no matter how many thousands of miles he may have sailed, rowed, paddled, and poled on the creeks, rivers, bays, and sounds of seven or eight countries besides his own. The "sneak-box" unfortunately got into the New Orleans *Bulletin*, and, as usual, the roughs came out first to overhaul the new humbug. I hid the boat in the saw-grass behind the breakwater. They came in parties of two and three. With a coarse salute they desired to know if I was "on a bet," to which I replied, "on a bet? no; *I am a Sunday-school Superintendent!*" "Oh! Ah!" they would asperate. Then continue, "who pays you for making such a long pull?" "Nobody." "Then what are you doing it for?" "I am simply studying geography." "Studying what?" "Geography." "Gog. raly! now that's too thin; come and take a drink?" "Thank you, no." Then off they go, these gentlemen, and pronounce "that fellow as a humbug, and a Sunday-school preacher." Ask any canoe traveler to relate his experience with this class of visitor, and he will tell you "for safety and comfort keep away with your boat from large towns. Now among the fishermen of the seaside towns we do not experience this trouble. They are curious to examine boats of novel construction. They know by experience if the lines of your little craft are trustworthy. They help you along with advice, and information. Excuse me, Messrs. Editors, if, after five thousand miles of travel, during two seasons of boating; often dodging this class of seamen, (the fresh water roughs of our large American towns), I have, for the first time, publicly given them this gratuitous notice, which is offered, not for their benefit, but as a caution to inexperienced canoeists, and young travelers about to set out upon the delightful study of the noble water courses of the American Continent. Having entered upon the waters of the Gulf of Mexico; having left behind me towns and cities which supply, in great excess of demand, the class of persons just noticed, I feel like doing justice to the kind-hearted, open-handed class of men who wrest from Nature's lap their toilsome livelihood upon the coast of Mississippi, Alabama, and Florida—the fisherman, the oysterman, the turtler, and sponger. Until another opportunity, I am yours. N. H. B.

Biloxi, Miss., Gulf of Mexico, February 1st, 1876.

FLORIDA MOUNDS.—If the story told by the Palatka *Herald* of the 22d ult., is correct in all its particulars, a most promising field for exploration has been opened to archaeologists. Dr. Kenworthy (Al Fresco) and other Floridain explorers have repeatedly urged upon scientific bodies and others interested, the opening and examination of the Indian mounds scattered throughout the Peninsular. The story which we reprint below must be taken *cum grano salis*, as it may only be a clever hoax; and yet these mounds must contain something, or have been built for some purpose. Even should the Palatka story turn out a fraud, there is still no reason why investigation should not be made until this mound building question be settled. The *Herald* story is as follows:—

"We learn that the Indian mound on Murphy's Island was opened, or rather entered, by a party on Wednesday last. This mound is one of the largest on the river, and has excited more than ordinary interest among our scientific visitors. But Col. Hart, proprietor of the island upon which the mound stands, heretofore persisted in his refusal to have this relic of past ages disturbed. On Wednesday, however, a party from the Putnam, with others, took a steamer for the island. It was agreed to open the mound at its base. After making a breach of thirty-five feet, they discovered a hard wall made of coquina or shell rock. This wall was cemented, and was ornamented with various

figures of warriors with bows and arrows, and various reptiles. After much difficulty a breach was made in the wall, and, by the light of a torch, several of the party entered. Much surprised, they found themselves within a vault eight feet high, with rooms 12x15 feet long, with armed warriors encased in niches, all in a state of petrifaction. This is certainly a most wonderful discovery, and has produced a profound sensation. In view of this important discovery Col. Hart has stationed a guard to prevent parties making way with these wonderful objects. Murphy's Island will, no doubt, become the Mecca of the St. Johns River."

The Rifle.

MILITARY RIFLE PRACTICE.

THE very able report of Col. Wingate, the General Inspector of Rifle Practice, is worthy of a much more elaborate abstract than our limited space permits us to make, and we would suggest, not only to every member of the National Guard, but to every rifleman, to procure a copy and read it. The results accomplished during the past year are but an indication of what will be done in the present. The wise action of the National Rifle Association in opening its organization to affiliating associations and permitting the free use of the Creedmoor ranges to certain of their members; in fostering team matches, and in arranging an unusually attractive programme for the spring meeting, cannot but be felt. During the May meeting it is expected that a large number of military organizations will send representatives to participate in the Creedmoor matches; at this time it is proposed to hold a convention of riflemen to discuss various subjects looking to a strengthening of the movement.

There will be several novelties in the military matches this year; one in which rifles will be handicapped as to distance instead of points. The Seventh Regiment are, we hear, doing excellent work in their weekly matches for the regimental club prizes. The plan adopted by this regiment in their team matches, in not allowing the same team to participate twice, is likely to turn out a large number of marksmen.

There is one point, however, to which we should like to call the attention of the National Rifle Association, and that is, that rifle shooting is by no means confined to the militia. The rifle, although the military weapon, is also, in this country at least, rapidly becoming the civilians source of amusement and recreation, and what we might call the Rifle Movement, is likely to be supported as much by gentlemen not connected with military organizations as by those who are. This is merely a suggestion to the leading rifle association of the country that it may do what lies in its power to encourage this other great body, the abandonment of the rifle by which would result in general indifference throughout the country.

—

Col. Wingate, as General Inspector of Rifle Practice for the State, has submitted to the Adjutant General at Albany his annual report, giving in a summarized form the work of the militia with the rifle during the past year. The recommendation of the use of the sub-calibre rifle and Vose's aiming tripod has resulted in the distribution of 100 rifles of 22 calibre, which will be used for armory practice. The report details the manner of transporting the troops to Creedmoor and the numbers who have visited the range.

An aggregate of 7,670 men fired at the 100 and 150 yards ranges, and in the third class of these but 3,285 received the qualifying average of 25 points in the possible 50. Firing again at slightly longer range, 802 passed into the second class, and of these, 533 gained places in the first-class and qualified as marksmen. The requisite for a marksman's badge is a score of 25 in the possible 50, made in five shots at 200 and 500 yards. It will be seen that but about 7 per cent. of those who practised gained that average. The practice has been carried on under the brigade officers, two companies from each regiment in a brigade being ordered down daily.

During the year the Fifth Division, under command of Gen. Husted, has taken up rifle practice, and good ranges have been provided at Sing Sing, Tarrytown, and other places on the Hudson. Ranges have also been established at Rochester and Oswego. Albany and Buffalo are to be provided in a short time. The shooting during the year at the different ranges has demonstrated the fact that the men comprising the country regiments were better average marksmen than those who composed city organizations. The report recommends the iron targets at Creedmoor be removed and canvas ones submitted.

It is recommended that the sights on the Remington rifles now in use be so changed as to permit of elevation of fifty degrees with a single alteration. Regarding carbines, Col. Wingate advises that a seventy grain charge be substituted for fifty grains now used, and that the sight be altered so that carbines may be used for 500 yard ranges. In conclusion the report says that the rifle practice of the year has doubled the efficiency of the National Guard, and that the standard of Creedmoor is now as high as at Wimbledon.

—

The following is the resolution adopted at the last meeting of the National Rifle Association, relative to affiliating clubs:—

Resolved, That all rifle associations or clubs, practicing in accordance with the rules of the National Rifle Association, by annually paying to its treasurer the sum of twenty-five ($25) dollars, and forwarding to it a copy of their by laws, the names and addresses of their officers, and the number of their members, certified as correct by their secretary, shall thereupon become entitled to the following privileges (which shall also be enjoyed by those military organizations joining at half rates):—

I. To annually nominate ten of their members, who shall be entitled to all the privileges of annual members of the National Rifle Association during the spring and fall matches, and for one week prior to each thereof.

II. To have the names and addresses of their officers, and the scores made during the year in their two principal association, club, company, or troop matches, to be certified as correct by their secretary, printed in each Annual Report of the National Rifle Association, and to receive twenty-five copies of such Report, to be forwarded to their secretary without charge.

III. To send a delegate (or in cases of associations or clubs having a membership of over fifty, a delegate for every fifty members in good standing upon their roll) to confer with the Directors of the National Rifle Association, at a convention to be held in the city of New York, in the month of May in each year, and as near the spring meeting as possible, in regard to the rules and fall programme of the latter, and the general interests of rifle practice in America.

IV. To receive in each year the bronze medal of the National Rifle Association, to be competed for by their members, as may be prescribed by their officers.

Resolved, That in view of the advantages arising from the publication of the scores of the various associations and clubs in a single volume, and of the benefits to be derived from an annual convention of riflemen, all rifle associations and clubs are requested to affiliate with the National Rifle Association without delay, in order that their records may appear in its Report, which will be published during March next.

RIFLE CLUBS.—We desire to prepare a complete list of the Rifle Clubs of the United States and Canada. We shall therefore feel greatly obliged if secretaries of clubs will forward us, on postal cards preferred, simply the names of their organizations and list of officers.

CONLIN'S GALLERY.—The tenth competition for the FOREST AND STREAM badges was shot February 10th. Mr. Farwell won the first badge for the second time, with the highest score ever made in the gallery, 4 5 5 5 5 4 5 5 5 5, 48. This score also carries with it the champion pin until the score is beaten. Mr. T. C. Banks won the second badge, and Mr. A. H. Forrester the third badge. The eleventh contest for the badges will be shot Thursday, February 24th, 1876, commencing at 4 o'clock P. M., and the *Turf, Field and Farm* cups will be shot for to-night. All comers will be welcomed.

On Monday evening an interesting match was shot between two teams chosen respectively by Mr. Chas. A. Cheever and L. V. Sone. The conditions were as usual, except that the contestants fired 15 shots each. Mr. Cheever's team won by a total score of 358 to 339. The individual totals were as follows:—

Name.	Total.	Name.	Total.
L. V. Sone	57	Chas. A. Cheever	66
C. E. Beckwith	58	Chas. Blydenburg	62
J. Blydenburg	60	J. S. Conlin	55
W. B. Farwell	66	J. Tragesser	60
Jos. Wood	43	J. O. Wright	54
H. D. Blydenburg	60	Wilson McDonald	60
Total	336	Total	358

CREEDMOOR, JR.—Some few weeks ago gentlemen connected with the Home and Continental Insurance Companies, held a match at this range which resulted in the defeat of the latter company. On Saturday, February 12th, the return match took place, resulting in a victory for the team from the "Continentals." The score was as follows:—

CONTINENTAL.

Name.	Score.	Total.
Lloyd Roberts	4 4 4 4 2 4 4 4 4 4	38
C. E. Trusiow	4 3 4 5 5 4 4 2 3 4	38
C. A. Schermerhorn	3 4 4 3 3 3 3 4 4 4	35
G. H. Hope	4 3 4 4 3 3 3 3 4 4	35
Walter H. Ernest	3 3 3 3 4 2 4 3 3 3	31
W. Ellsworth, Jr.	4 4 4 2 3 3 2 3 2 2	27
Total		201

HOME.

Name.	Score.	Total.
W. Wilson	3 2 4 5 4 4 5 4 4 3	38
W. R. Hobart	3 3 4 4 4 5 4 3 4 4	38
W. H. Kecey	5 4 3 5 3 4 2 3 3 3	34
F. B. Southwick	3 4 4 0 4 3 5 3 3 4	32
J. W. Hitchcock	3 3 4 3 3 3 3 2 5 3	32
H. J. Ferris	3 4 3 0 4 4 4 3 2 3	30
Total		202

Next Saturday afternoon there will be a return match between the Citizens' and Continental Insurance Companies.

HELLWIG'S GALLERY.—The eleventh weekly competition shooting in lying position took place at Hellwig's gallery, February 9th, 1876. The following were the winners: Capt. Wm. Lindsay, first prize, 48; Dr. D. P. Austin, second prize, 40; Robt. Wheeler, third prize, 30. The next competition takes place February 16th, 1876.

—MILEY'S GALLERY, NO. 24 COURT STREET, BROOKLYN.—A rifle tournament commenced at this gallery on Monday last and will continue until April 8th. Among the prizes is a handsome 44 callibre Ballard sporting rifle.

GLEN DRAKE.—The directors of the American Rifle Association have announced that there will be three matches at this range on February 22d, 1876, Washington's birth-day. A Military Match, for which three prizes are offered, open to members of National Guard, in uniform, military rifles only. An All Comers Match, for the same number of prizes, open to any rifle within rules, and a Subscription Match, constitute the entertainment. All the matches will be shot at 200 yards range off-hand. Stages will be in waiting at the depot, and those who purchase return tickets from New York will be entitled to ride to the range and back free of charge. That the attendance will be large there can be no manner of doubt, as those who have ever been to the matches of this association will go again and take their friends. On Saturday, February 12th, 1876, the match for the Holden rifle, presented by Mr. Homer Fisher, took place. The scores were not completed and the balance will be shot off during the coming week. The conditions of the match calls for shooting at 200 and 500 yards ranges, off hand at both distances. The highest score thus far is that made by Capt. A. W. Peck, 200 yards, 4 4 4 4 4—20; 500 yards, 5 3 5 5 3—21; total, 41.

SYRACUSE.—The match between the teams of six from the Amateur Rifle Club of Roehester and the Yates Dragoons Club of Syracuse was shot in the gallery of the latter club on the evening of February 10th. The rifles were the 32-calibre Wessons; distance 110 feet; target the second-class reduced to one-tenth size, (bulls-eye 2, 2-10 inches); Creedmoor rules. The follow ing are the scores:—

ROCHESTER TEAM.

Name.	Score.	Total.
C. E. Rider	5 5 2 4 5 5 4 5 4 5 5 5 4	67
G. F. Stillson	3 5 3 5 2 3 2 3 4 5 5 5 2 5	55
H. T. Hart	5 4 3 4 3 4 4 4 5 4 4 3 4 5 5	61
J. H. Brown	5 4 5 5 4 5 5 3 5 5 4 5 4 5	68
R. B. Yates	5 5 5 4 5 4 4 5 3 5 5 4 4 3 3	65
S. A. Servis	4 4 5 5 3 4 5 5 4 5 5 5 5 4 4	65
Total		381

SYRACUSE TEAM.

Name	Score.	Total.
W. S. Barnum	5 5 3 3 5 5 4 5 5 4 5 3 0 5	60
O. G. Jones	5 5 5 5 5 4 4 5 5 5 5 5 5 5 5	73
L. Barber	2 0 0 4 5 5 4 3 4 4 5 5 5 5 4	55
F. Singer	5 5 4 5 5 5 5 5 5 4 5 4 4 4 4	69
A. O. Adkins	5 5 3 3 2 5 5 5 5 5 4 4 5 5 5	68
H. Hertzog	3 5 3 3 0 3 5 5 3 5 4 5 5 5 4	56
Total		381

The judges were E. Angevine, of Rochester, and D. M. LeFever, of Syracuse. Major Auer, of Auburn, acted as referee. It will be seen that, although the aggregate counts were equal, Rochester won, having made no misses. The shooting of Jones and Singer of the Syracuse team elicited great admiration from the numerous spectators.

Another report of this match reached us from our correspondent "Seneca," subsequent to the above being placed in type.

MONSEMERE.—The eighth competition for the Harris trophy took place on Tuesday last. Mr. Doughs Smythe was the winner for the third time, and thus became the owner of the rifle. The scores were as follows. D. Smythe, 74; G. L. Morse, 73; H. J. Quinn, 73; H. Maynard, 69; G. Underhill, 67; and F. Shonnard, 67. A moving man target will be introduced at this range on Washington's birthday. On the same day a match for a medal for members of the Seventh Brigade, N. G. S. N. Y., will take place.

RHODE ISLAND.—Last week Messrs. F. G. Rabbeth, E. Thomas, and E. T. Freeman, members of the Rhode Island Amateur Rifle Club, shot a string of twenty shots at the range at Valley Falls, distance 628 yards:—

Name.	Score.	Total.
Rabbeth	4 5 4 5 5 5 5 5 5 5 5 5 5 4 5 5	96
Thomas	3 5 4 4 3 5 5 5 5 4 4 5 4 5 5 5 4 6 4 5 5	89
Freeman	3 4 3 3 5 4 3 5 3 3 2 3 4 5 4 4 4 3 5 4	74

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl.

GAME IN MARKET.—But a few days more are left to the quail exterminators, and the activity in making the best of their time is seen in the abundance of birds in the market, and the fall of the price from $5.50 to $3 per dozen. Our other quotations are without change. Ruffed gronse are worth $1.50 per pair, and pinnated the same. Canvas back ducks, $3 to $3.50 per pair; red heads, $1 to 1.25; sprig tails, black duck, and widgeon, 90 cents to $1; broad bills, 60 cents; teal, 75 cents to $1; brant, $1 50; geese, $1.25 to $1.50 each; rabbits, 50 to 60 cents per pair; hares, 40 to 50 cents; wild pigeons, $2.25 to 2.75 per dozen.

HOY'S WILDERNESS.—Can any of our readers furnish us with information regarding this locality; how to get there, guides, etc.?

PIGEON MATCHES.

LANCASTER, Pa., Feb. 11th, 1876.

EDITOR FOREST AND STREAM:—

The event of the season took place here yesterday afternoon between the two best shots in this locality for $20, the conditions being 25 single birds, 21 yards rise, (from one trap), trap and handle for one another, each man furnishing his opponent's birds and they were the best I ever saw leave a trap, all being strong and swift of wing, consequently the rather poor score.

Name.	Score.
Al Rauch	0 1 1 0 0 1 0 0 1 1 1 1 1 1*0 0 1 1 0 1 *0--12
Joe Grfel	1 0 1 1 1 1*0 0 0 1 1 0 0 1 1 1*0 1*0 1—12

26 yards rise.

Al Rauch	1 0 1 1 1—4
Joe Grfel	1 1 0 1 1—4

*Dead out of bounds. †Snap (defective cap.)

Rauch had some little advantage in birds, having some "incomers," particularly at the 26 yards rise. Grfel's were all "drivers" but a few, and he missed most of them. Rauch shot a 9½ lb., 10-bore Scott & Son; Grfel shot a 9 lb. 4 oz., 10 bore made by W. B. Hall, Lancaster, Pa.

POINTER.

RYE, N. Y., Feb. 14th, 1876.

EDITOR FOREST AND STREAM:—

Two matches have taken place at this village during the past week. A large number of enthusiastic shots live in and about the town, and the result is that a match has only to be announced to bring together large crowds. On Saturday, Feb. 6th, Mr. Frank Abbott and Geo. Govers shot at double birds for a purse of $50. The snow which covered the ground was glistening, sparkling white, and it was supposed it would interfere with the marksmen, and that poor scores would by the result. Five pair were to be shot at, 18 yards rise, from traps five feet apart, 80 yards boundary. The match resulted in a victory for Abbott. The score was as follows:—

F. W. Abbott	11 11 11 11 –8
Geo. Govers	11 11 10 10–6

Several sweepstakes followed. On Friday, Feb. 11th, 1875, a match for $50 had been arranged to take place between Josiah Buckley and Mr. Withers. The latter failed to appear until too late to shoot the match, thinking that it was liable to rain. The match will take place on Washington's birthday, Feb. 22d, 1876, at Beck's Central Hotel. In order to afford some amusement, two amateurs were matched against each other to shoot at five birds each, 21 yards rise. The match proved to be a very interesting one, the scores made being as follows:—

P. Hont	1 1 1 0 1 0 1 1 0 1 1–8
Hilborne Ross	1 1 1 0 1 0 1 1 1 1–8

Mr. Beck always keeps constantly on hand sufficient birds to allow of practice or matches at any time. On the 22d of February there will be several matches shot. Mr. Daniel S. Budd, Jr., is to shoot against a gentleman not named, for the sum of $100 during the coming month.

***

A SUBSTITUTE FOR BIRDS AT SHOOTING MATCHES.

TIVOLI, N. Y., Feb., 1876.

EDITOR FOREST AND STREAM:—

The scarcity of pigeons sometimes makes it necessary for the sportsman to devise means for recreation and practice. This necessity has led me to invent a trap, which will be found an excellent substitute for live birds. It is made as follows: Take a piece of plank two inches thick, six inches wide, and three feet long. In one end of this fasten a stout staple, on the other end hinge a latch, which should be two and a half feet long; this should have four notches cut in its upper end. The make a spring of hickory or ash, pretty stout, and thirty inches long; a small piece of board one foot long and several blocks three inches square and one thick and the apparatus is complete. Fasten the trap firmly to the ground with posts; insert one end of the spring in the staple, bend it over the one-foot board and catch it in a notch of the latch. Lay a block on the spring and pull the latch, when the block will be thrown twenty-five or thirty yards.

By making five of these traps and shooting matches at twenty-five yards rise, good sport can be had. Any one can make a trap in two hours. If any one doubts its efficacy let him try it. By cutting the block in a curved shape they can be made to twist in the air, and can be thrown in almost any direction.

KELLY.

HAGALOO BIRDS.

January 23th, 1876.

EDITOR FOREST AND STREAM:—

Perhaps the following anecdote, which was brought to mind to-day while talking over "ye dayse y't have pasede," may be worth space in your columns:—

In 1874, while my friend G. H. Crane and myself were snipe shooting in Sanilac County (Mich.,) we had occasion to put up our horse at one of the squatters in that region. On calling for the team the old woman, who evidently was the "Boss" of the shop, exclaimed, pointing to the bunch of snipe which George had, "What air yer goin' ter do with them things?" "What things?" answered George. "Them, *them* yer things." "Oh! the snipe?" "Snipe? Is that what yer call them hagaloo birds?" George shot through the open door with a yell, and she turned in me. "Well, snipe is what yer call them, do yer? I never heard no name for 'em before but hagaloo birds. Wat yer goin' to do with the darned things?" "Eat them." "*What!* eat them? You fellers must be darned hard up for vittles."

Would it not be well for our naturalists to remember that name? When I go "hagaloo" shooting again, I shall try and call on "Mrs. John Philander Warren Horris," as she informed me was the "hoft" of her name. ARCHER.

CHOKE-BORES.

"GLOAN" ON GREENER.

EDITOR FOREST AND STREAM:—

Whenever discussion is had in the public prints, on matters of public interest, by those who seek only the public good, and not their private gain, I recognize to the fullest extent, the right of every person to participate. But I deny the right to any one who interferes for the sole and palpable purpose of puffing himself and his business, and who thus desires to obtain gratuitous advertising for both.

Hence I deny the right of Mr. Greener to reply, in the manner he has, and with such evident motives, to an article of mine, which in nowise aspersed him, and which did not attempt to deal with the merits or demerits of his guns. That article was written to raise the question of the priority of inventure of the choke-bore. It referred incidentlly to a quotation from an English paper, previously published by you, as to Mr. Dougall's modified choke system, and its design was to protest against the fallacy of excessive choke-boring. It was a discussion bro dly upon the merits of systems. There was no "special pleading" about it, for any one, or in any one's behalf, and it received, with complimentary remarks, the editorial sanction of the FOREST AND STREAM, which it could not have received if it had been of such a character.

If Mr. Greener, as a practical gunsmith, had seen fit to criticise it without reference to himself or his guns, such a course would have been proper; but when he interlards his criticisms with praises of himself and his guns and their performances, I submit that it is not only improper, but impertinent and unwarrantable. But Mr. Greener has done more than that, surreptitiously, under cover of replying to me, and by perverting my meaning, he has attacked a rival by name, depreciated that rival's abilities, and sought to extol himself by his rival's defeat. He may think that is honorable, but yet even if I am "a Yankee," as his sarcas fically calls me, I beg Mr. Greener to understand that he cannot make me his stalking horse for such assaults, nor use me as a catch-penny.

With these views of Mr. Greener and his behavior I can soon say all that I deem it necessary to say about his statement. Mr. Dougall was among the defeated at the *Field* trial, and, therefore, it is wholly unnecessary to count out, pellet by pellet, where his targets as compared to Mr. Greener's, or those of other makers at that trial. The fact itself is sufficient that, so far as the trial goes, and only that far—and the qualification is most important—Mr. Dougall was not a winner. The guns he had there shot miserably. But it will be difficult to make the owners of Dougall guns in America believe that the figures shown at the trial are true indicia of what his guns will do. They know better; and the very circumstance that some of his shots ran down as low as fifty-two and fifty-eight is sufficient to show them that it was most unusual and accidental. So I dismiss Mr. Dougall. And this much more as to Mr. Greener. Mr. Greener predicates all his boastfulness upon winning that trial. He asserts that it was rigidly and fairly conducted in every detail. He ought to see that this assertion is made good, or else the position he will occupy will be humiliating and disgraceful indeed. Was it fairly conducted? Until Mr. Pape's charges are successfully denied, and until the *Field* Editor accounts for the loaded wads, which he admits were used, it will take more than more assertion to convince the sportsman on this side of the Atlantic that it was fairly conducted. Mr. Pape is a *Field* trial winner himself. He charges openly, over his own signature, that there was dishonesty. He points out the men who counted the targets, and affirms that they were discharged for false counting and other knavery at Wimbledon. Mr. Pape tried by every means in his power to get another sight and another count of the targets. He offered money for them, but could not get them. He then consulted legal gentlemen in hopes to get them by legal process, but, inasmuch as the title to the sheets of paper was in the *Field* proprietors, he failed. He then denounced the whole proceeding in the newspapers of both countries as a cheat, and, up to this time, there has not been, to my knowledge, an authentic denial by the parties implicated. It is true, that afterward the prominent competitors signed a card stating their belief that it was all fair, and how could they do otherwise, but yet the proprietors would not give up the targets, and the question still is, why was not Mr Pape, or any one else allowed to look at the targets after such a demand by him, and after they had received such a supposed vindication? It therefore comes down to this, either Mr. Pape cannot be contradicted, or else he is a person so utterly insignificant, and so entirely unreliable that his grave accusations can be treated with silence, and with scorn. There are those who would like to know which is the true solution. I will not go any further in the matter, for if, as Mr. Pape claims, he alone is the true winner, and if it should turn out that the pretended winner is a fraud, we need not trouble ourselves very deeply as to the statistics of *such* a trial.

But, Mr. Editor, there is one admission inadvertently made by Mr. Greener which rises in importance far above his personal contests and jealousies. It goes to the root of the principle we were discussing when he thrust himself upon us. It bears fundamentally on the question of this excessive choke boring. He says a gun shooting at a pattern of 217 "would riddle the birds at 30 yards." Now what think you was the pattern of his winning gun? Why, 351! Shall we infer that that wouldn't "riddle the birds" at 20, or even 30 yards?

And if it is admitted that this boring was truly excessive, and was only made to win the trial, the query remains, of what use to us was such a trial, honestly or dishonestly conducted, and how much should we care who was the winner of it? GLOAN.

The following remarks from so practical a man as Mr. John Rigby, cannot but be of interest to our readers, and we are glad to find that his views on this subject coincide so nearly with our own:—

DUBLIN, Ireland, Jan. 7th, 1876.

EDITOR FOREST AND STREAM:—

As the subject of choke-boring attracts so much attention just now I will give you some facts drawn from this season's experience here. I find that about one in ten of those who have tried full choke bores (target guns) here have wholly approved them. The great majority consider them only fit for special kinds of shooting, and a respectable minority condemn them altogether. We have had in many instances to modify them and increase the spread of the shot, retaining the strength of shooting, and always with satisfactory results. A judicious application of the principle to one or both barrels is the true method of utilizing it. Target trials, which give the palm to the closest-shooting guns, pressure to mislead sportsmen, who seek the gun that will give them the heaviest bag. As an instance of this, we sold one of the guns tried at the *Field* trial to a fair shot, and after careful experimenting has decided to have the choke taken out of one barrel and the spread of the other increased. He admits that he makes very long shots, but misses so many near ones and occasionally mangles his birds so badly, that (long shots being the exception in his shooting) the balance of advantage is in favor of a wide spreading gun; yet this very gun was not considered to shoot close enough to be even placed at the *Field* trial. Another instance is instructive. A friend of mine ordered a gun from a maker who guarantees his guns to put in two hundred and ten pellets out of 1¼ oz. of No. 6. The gun tried on game was pronounced satisfactory, and was advanced as a proof that the full choke did not miss or mangle. After a time it occurred to the owner to try it at a target, when the fact appeared that it was not full choke. It only recorded 160, but shot evenly, and had a spread nearly equal to an ordinary gun. The purchaser referred to me, but I told him to be well satisfied, as it was a better gun for his shooting than it would have been if up to the guarantee; and he is now convinced that such is the case.

These remarks and experiences apply to general shooting in these islands. Elsewhere, if wild fowl shooting be the chief object, they do not apply. In any case the sportsman must exercise his judgment, and not take it for granted that the closest shooting must necessarily be the best suited to his purpose. From my short experience of American shooting I would certainly not select a full choke-bore for either prairie fowl or quail. JOHN RIGBY.

AKRON, Ohio, Feb. 7th, 1876.

EDITOR FOREST AND STREAM:—

Our trap shooters in this place are enthusiastic over choke-boring; but our fielders as emphatically condemn it, as most of our shooting is done in cover, and most of the game shot is probably killed within twenty-five yards. There is one point relative to pattern given by shot guns at varying distances that I have not seen touched upon in your columns for more than a year. I cannot illustrate this point better than to give you the results of some experiments made with my two guns—one a muzzle-loader, 11 gauge, and the other a 12-gauge breech-loader. At thirty yards the pattern of the breech-loader was twenty-five per cent. better than the muzzle-loader; at thirty-five yards they were about equal; at forty yards the boot was on the other leg, and the muzzle-loader was ahead nearly fifty per cent., and at seventy yards the ratio was one to three. The body of the charge from the muzzle loader held nearly the same diameter, the number of pellets was somewhat diminished, most of the outside shot flying wide, while the charge from the breech-loader at that distance tried to go nearly over the end of the barn. I found similar results in testing another breech-loader, 12-gauge, against my breech-loader at thirty yards. The guns were about equal, though the other gun was using half a drachm more powder than mine, and two sizes finer grain of powder. At seventy yards my gun was beaten clear out of sight. The breech-loader I speak of gave, if anything, better results than my muzzle-loader. Can some one of your many correspondents enlighten me as to the wherefore of this? Both of my guns shoot closer with the left-hand barrel than the right, and I find this a great convenience when I miss a bird, or when two are flushed. IRON.

Billiards.

ALL SORTS.—Wm. Sexton and John Bessinger were to have played on the 8th for a purse at Philadelphia....The four handed game between the Dions, Garnier, and Sexton for a purse of $1,000 is reported as coming off in March ....John Keans, for many years foreman for Phelan & Collender, is permanently located in Boston at the branch establishment of H. W. Collender....The Thomas Bros. offer a gold watch and chain valued at $150 to any amateur player making the highest number of points at fifteen-ball pool between February 7th and March 4th. The balls are to be all red but two, which are to be of a blue color. The latter will represent the points, and the English pool rules will govern....Maurice Daily is hard at work in Florida getting ready for the coming campaign....*On dit* that Samuells, of Brooklyn, is getting up a tournament. The more the merrier....Vignaux writes he will play any body in Paris, France, for the challenge cup....Garnier and Izar have been giving exhibitions in Washington and Georgetown, D. C....The formal re-opening of Jno. D. O'Connor on the 7th was well attended. Sexton, in a 300-point three-ball game, again captured his late antagonist. Slosson and Rudolphe wound up the entertainment with a fine display of fancy shots....Rudolphe has issued two challenges. One to Cyrille Dion for the four-ball championship of the world and the diamond cue, and the other to any player in America for $500 a side at the three-ball game. He has deposited $350 with H. W. Collender to bind the first challenge. The diamond cue, emblematic of the four-ball championship of the world, was originally won by John Deery, in the tournament of 1869, and according to the rules must be held against all challenges for the term of two years and a half. C. Dion, the present incumbent, has had it in his possession since October 7th, 1873, the allotted time expiring on April 7th, this year. As he has been allowed to quietly rest on his laurels from the time the cue came into his hands, through forfeit by Albert Garnier, this contest should create unusual interest ...T. J. Gallagher left for Cleveland last week *en route* to Toledo to play Eugene Carter on the 16th. The backers of the latter have wagered $300 against $200 that he can capture Gallagher at the three-ball game....Shafer, of "Drew" notoriety, and Gates, lately of San Francisco, have reached Philadelphia....Philadelphia is threatened with two or three tournaments....Sexton will play Garnier in private for $500. Jno. D. O'Connor is the backer of the former.... It is now a settled fact that Piot will visit this country.

Rational Pastimes.

The metropolis was week before last the scene of a baseball *coup d'état*, which was most successfully accomplished by the four professional clubs of the West, four of the Eastern clubs presenting themselves as willing sacrifices to their western masters. The new move of the western club was made in the alleged cause of reform; but circumstances connected with the operations of the western club committee and their abettors in the revolutionary action which has resulted in the temporary establishment of the "National League," point to some less creditable incentive. At any rate, it is very certain that if reforming the existing abuses in the professional fraternity was the real object in view they have gone to work to obtain it in about as blundering a way as could well be imagined. The existing National Association of Professional Players is an organization which can be run in the interests of either the honest or the knavish class of the professional players of the country, just as either present a majority of delegates at the Convention. Last year thirteen regular professional clubs, of which the Mutual, Atlantic, Red Stockings, of St. Louis, Centennials, of Washington, Western, of Keo Kuk, and the New Haven were more or less coöperative, and the Boston, Hartford, Chicago, St. Louis, Athletic, and Philadelphia regular stock company organizations, entered the championship arena. Of these a minority of the players of the Philadelphia, Mutual, Atlantic, and Chicago clubs were suspected of "crooked" work in their season's career, the play of the Philadelphians being of such a character as to call for the enactment of a club law requiring each official to take oath that he would not countenance fraudulent play on the club nine before he can take office. Now, if reform was the sole object in view in the movement just made, why were the existing abuses taken hold of boldly and openly, and under the auspices of the National Association? The honest clubs enrolled on its books were in a decided majority; the movement was one calculated to elicit the hearty approval and coöperation of every true friend of the game, and there was no need whatever for the observance of the secret closed door manner of transacting the business which fathered the birth of the National League. The inconsistency shown in the proceedings is glaringly apparent in the fact that, while they threw out the Philadelphia club on the grounds of irregularities, they not only retain the Mutual club—equally open to suspicion—but also the St. Louis club, the management of which has actually engaged one of the most marked men of the Philadelphia nine, and also an expelled member of a Western club. There is widespread dissatisfaction expressed, not at the alleged effort at reform, but at the very weak way of accomplishing the end in view. A set of laws were adopted by the league which before a couple of months of the season have expired will prove to be practically inoperative. Besides which a bombshell of confusion, discord, and ill-feeling has been thrown into the professional camp which it will be some time before its ill effects will be removed. All the legitimate reform necessary could have been accomplished under the auspices of the National Association; and unquestionably if it could have been obtained then and there it was then time enough to organize a new association.

—The curling event of the season, the grand match North vs. South, took place at Prospect Park, February 3d, on which day some rinks were formed on the ice at the lake facing the Shelton House, at Prospect Park, the players participating including members of the Caledonian, and Thistle clubs, of Brooklyn, the Caledonian, Thistle, St. Andrews, Burns, New York, Manhattan, and Empire, of New York, and the Jersey City clubs. As usual the South players came off victors, this time by a total score of 239 to 203.

The prize flag and medal offered by Messrs. Hoagland & Stevens were won respectively by Mr. Robb, skip of Rink No. 3, and Mr. Kirkpatrick, of Rink No. 6, the former winning the flag by scoring eleven points above all competitors.

D. Faules, as skip, made the highest score on the North side, 31, and J. Stevens on the part of the South, 34.

CHECKERS.—Messrs. McEntee and Wright, of Syracuse, have been playing a series of games for the championship of Onondago County. The following will show the result:—

McEntee	3	Wright	3	Drawn	4
"	3	"	3	"	4
"	1	"	2	"	7
"	2	"	5	"	3
Total	9		13		18

Mr. McEntee has heretofore beaten all contestants, but Mr. Wright seems to have been enough for him.

New Publications.

BOOKS RECEIVED.

FOOT NOTES; OR WALKING AS A FINE ART. By Alfred Barron. Published by the Wallingford Printing Co., and for sale at this office. Large 16mo, 330 pages. Cloth, $1.50.

Now that the shooting and fishing season is over, and the gun and rod are laid aside until the first warm breath of spring shall bring the snipe back to us, and open the trout streams once more, the sportsman, whether he be disciple of St. Hubert, or good old Isaac, finds time for contemplation and for study. For your true sportsman is a contemplative creature, and the instinct which takes him to the field is not, as some would have us believe, a simple desire to slay, but the outcome of his love of Nature—a longing for the fields and trees, and clouds and sky. In reading Mr. Barron's book, if there is one thing we miss it is that he does not speak, in describing his rambles, of the whirr of a bevy of quails; of the drumming of a grouse; or the quick jump of a hare from her form. Everything else is there that we who love the woods know so well, and much more beside; for while we have given our eyes and our thoughts to our dog, and marvelled perhaps only at his display of almost reason, our author has gone deeper, and thought out the weightier problems of life, as seen and felt from out of doors, and by the lanes and meadow-paths rather than the dusty highways. These "Foot Notes" are charming reading, and worthy of an honored shelf in every sportsman's library. Not a book to be read through at a sitting, but to be taken up only when the tight boots are off and the slippers on; when the smoke from the pipe curls around us, and we have an hour to give to dreaming and quiet rumination.

The *American Naturalist*. The *Naturalist* for February exceeds the anticipations justified by the January number. It leads off with an article from the pen of Dr. C. C. Abbott, who is becoming well known to our own readers, on "Indications of the Antiquity of the Indians of North America, Received from a Study of Their Relics." Dr. Abbott has long studied the archæology of this country, and no one is better fitted to generalize from the soundness of facts at his command. H. D. Minot gives an account of the "Summer Birds of the White Mountains," which contains many entertaining notes; Dr. J. G. Cooper contributes another interesting paper on the "Garden Birds of California;" and Dr. Cones replies to Mr. Allen's criticism upon his revival of ornithological names conferred by Bartram, whom, as an ornithologist, he champions; so that ornithology is not neglected. "Haickel's Gastræ Theory," by Alexander Agassiz; a historical article on museums, by Dr. H. A. Hagon, and an illustrated account of the chirp of the mole cricket, by Mr. Scudder, who, in former volumes of *The Naturalist* has descanted upon the songs of other species of crickets, cicadas and grasshoppers, completes the table of contents. The reviews and general scientific notes and news fill the last twenty-six pages with extremely readable matter.

T. B. Peterson & Brothers, Philadelphia, have in press and will soon issue Mrs. Oliphant's new novel, "An Odd Couple," printed from advance sheets; also, "Married Beneath Him," by James Payn, in uniform style with "Lost Sir Massingberd" and "The Clyffards of Clyffe," by the same popular author, published by them.

TENTH ANNUAL STATEMENT

OF THE

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and annoyances of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feh17 tf

RARE CHANCE

To Buy a Fish Farm.

Business engagments compel me to sell my farm, of about 25 acres, containing house, barn, hatching house, and fish-ponds. The place is well-furnished with choice fruit, and is a fine location for a fish, poultry, and fruit farm. Price low.

FRED MATHER,
feh17 tf Honeoye Falls, New York.

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first class.

For Sportsmen.

A trusty friend, in weariness or trouble: a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

Pope's Rifle Air Pistol
FOR TARGET PRACTICE.

JUST THE THING FOR SPORTSMEN AND military men. Shoots darts or slugs a distance of 50 feet. Perfectly accurate. By practicing with it one may become a dead shot. Each pistol is put up in a neat box, with 6 darts, 6 targets, 100 slugs, ramrod, claw, wrench, and skeleton gun stock. Price $5; nickel plated, $6. Sent by mail on receipt of price and 35 cents postage.

One of the many testimonials from the Commander-in-Chief of the U. S. Army:—

"It is surely ingenious in mechanism, quite accurate in aim, and useful in preparing one for the more serious handling of the ordinary rifle.

W. T. SHERMAN, General."

Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers, dec23 tf

Sharps New Long Range Rifle.

I have now in stock a complete assortment of Rifles of all well known and reliable makers, and having made special arrangements with the manufacturers, am able to sell at their prices. Have just received a stock of SHARPS NEW LINE OF LONG RANGE AND OFF HAND RIFLES. Riflemen are invited to call and examine. They will be cheerfully shown to all who take an interest in Rifle Shooting. REMINGTON, BALLARD, WESSON, AND STEVENS RIFLES, all lengths and calibre. Every Rifle purchased can be tested in the 100 yard range on the premises. Liberal arrangements made with clubs and associations. Send for illustrated circular. HOMER FISHER, 260 Broadway, cor. Warren St., N.Y. dec23 3m

Short and Long Range Creedmoor, Hunting, and Gallery Rifles
OF ANY CALIBRE, RIM AND CENTRE-FIRE.
SCHOVERLING & DALY,
jan20 3m Nos. 84 and 86 CHAMBERS STREET, NEW YORK.

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.
These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fast like movable anvil made of steel. The nickle cone also prevents misfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3¼ inches.
Shells and Loaders, and description Price List, can be obtained from all the leading sportsmen's houses throughout the country. **GEO. E. HART & CO.**, 363 and 365 Market st., Newark, N. J.

From Captain Bogardus, Champion Wing Shot of America.
MESSRS. GEORGE E. HART & CO.,
Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,
may13-1y A H BOGARDUS.

Wild Animals Wanted.

The Goss Revolving CartridgeHolder
CARRIES PAPER OR METALLIC SHELLS, either end up, revolves on centre slides weighs but 1¼ pounds, and is only 1¼ inches wide. Holders have at top so as to quickly receive the shells, and, being elastic, *securely* clasp the same.

For ease of action and rapid shooting it excels anything of the kind invented.

PRICE, C. O. D., $6.50.

In ordering, give the size of shells and a *loose* measurement outside of vest.
jy23-1y N. S. GOSS, Neosho Falls, Kan.

ZELL'S ENCYCLOPEDIA NEW & REVISED EDITION AGENTS WANTED

The experience of five years has proved that this Compact and Reliable Work of General Information is better adapted to the wants of all classes of the community than any other work of the kind ever published. It has been proven by IMMENSE SALES,
BY THE
Numerous Commendatory Notices Received,
And by its uniform
SUCCESS WITH AGENTS.
The edition of 1876 has been
THOROUGHLY REVISED TO DATE.
It contains 150,000 articles, 3,000 wood engravings, and eighteen handsomely engraved and colored maps. The work is issued in parts, and a specimen copy, with map, will be sent to any address, free of postage, for twenty cents.

BAKER, DAVIS & CO., Publishers,

Orange Sporting Powder.
ORANGE LIGHTNING POWDER,
The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to sportsmen of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,
For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,
The best for rifles and for all ordinary purposes. Sizes F.G., FF.G., FFF.G., the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,
21 Park Row, N. Y.

Sole proprietors and manufacturers of the celebrated RANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

DITTMAR POWDER
MANUFACTURING CO.

MY NEW IMPROVED POWDER can now be loaded from an ordinary powder flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR.
Neponset, Mass.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

CHAMPION GUNS OF ENGLAND
PAPE'S
Unrivalled SportingGuns.
Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12-Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

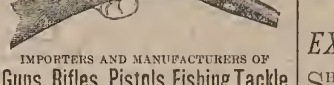
Out of a class of 18 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place. Its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape	Davidson
2d—Pape	Davidson



60 yards, Long Range, Sporting Boring.

1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight; 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address
NORTH OF ENGLAND GUN WORKS,
Newcastle on Tyne, England

H. C. Squires, No. 1, Courtlandt st. New York.
THE GREAT
London Gun Trial,
1875.

W. W. GREENER'S
Far-Killing Prize Guns.
Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bore. Winner in the Wear and Tar Trials, July, 1875, 2,500 shots fired without deterioration.
W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.
I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price, viz: $75, gold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.
Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.
Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.
Send 25 cents for large Illustrated Catalogue of Guns, and including Game Laws for all the States, and summary of Great London Gun Trial. Ready March 1st. jan15 1y

TRAP SHOTS and others requiring Guns specially built, on our new system for DOUBLE-CLOSE SHOOTING, with increased PENETRATION, can have their wishes carried out WITH DESPATCH.

Without Extra Cost.
Send for illustrated descriptive particulars and price sheets to our
BRANCH OFFICE, 29 Maiden Lane,
NEW YORK CITY.
MANUFACTORY, PIONEER WORKS,
jy1 Birmingham, England

J. D. DOUGALL'S
EXPRESS SHOT GUNS.
(Title registered.)

SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180 and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to
59 St. James's Street London.

JOHN RIGBY & CO.,
Manufacturers of Fine Guns and Rifles.

Pattern taken by our Close-Shooting 12 Bore, 1 1-8 No. 6, 40 yards. HIGHEST PENETRATION AT FIELD TRIAL 1875.

MUZZLE-LOADING MATCH RIFLE.
PRICE LISTS, &c., ON APPLICATION TO
24 SUFFOLK STREET, DUBLIN, or
72 ST. JAMES STREET, LONDON.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,
Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 30 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
aug26-tf Established 1780.

W. W. GREENER'S
DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaran, Williams & Co., Agents, St. Louis, U. S. A. Address
W. W. GREENER,
St. Mary's Works, Birmingham, England.

THE AMERICAN NEWS COMPANY, AGENTS.

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 22, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. *The Wyoming does not carry passengers.* The Juniata is a favorite ship with the traveling public, having passenger accommodations of the finest superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families *en route* for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

Kay Shot Concentrating Cartridge.

No creasers, turners, or topwads required. Loads in half the time usually required. Fifty per cent. better distribution and greater penetration secured. Send to your gun dealer for sample. Jan3-1y

MANUFACTURERS AND IMPORTERS OF

FISHING TACKLE!

50 Fulton St., N. Y.

N. B.—Sole manufacturers in this country of the celebrated

Green Heart Rods,

for Trout, Bass and Salmon.

McBride Flies.

HAVING BEEN FOR THE PAST twelve years associated with my father, John McBride, in the manufacture of fishing tackle, I feel competent to continue the business and supply the custom with the same quality as heretofore. Parties supplied with casting lines and artificial flies for Pennsylvania trout streams, Adirondacks, the Maine Woods, Lake Superior, Thousand Islands, Canadian, and other waters. Anglers not acquainted with the nomenclature of these flies, by mentioning the locality where they intend fishing, will have the varieties best suited to those waters sent to them. Flies copied from any natural insect or pattern desired. SARA J. McBRIDE, (successor to John McBride) Mumford, Monroe county, N. Y. Dec7-1y

"BUT."

SOME men tell of their piscatorial skill,
Of the number, measure, and weight;
Of how many times their creel did fill,
And the novelties used for bait;
But, what'er the amount of their angling joys,
I can better the record yet,
By the greater measure, and avoirdupois,
Of the fish that I *didn't* get.

I have hooked that fish on the breezy sound,
When trolling far out from shore;
I worked him careful, and played him round,
Perhaps an hour, or more;
And *just as* I got him, full in view,
(About four feet long—you bet;)
The miserable line just snapped in two,
And the beggar is going yet.

And then that time on the Saranac,
When "Bob," and "Jim," were along;
Somehow or other, I had the knack
Of putting it to 'em strong.
An old sockdolager then I struck,
(My line was the first one wet;)
Ten pound brook-trout! but just my luck;
That's *another* I didn't get.

But it's no use talking—I'll venture to say,
If those fish I *had* once got in;
You might do your prettiest many a day,
Before such a prize you'd win.
So while I don't brag, and am no ways prond,
I have smiled at accounts I've met,
And thought to myself, I could beat the crowd,
With the fish that I *didn't* get.

T. W. A.

For Forest and Stream.

Bird Hunt with Guyon.

I HAVE long intended writing a letter to your very interesting journal, but the press of business has prevented me from engaging in field sports almost entirely this season. But on a recent visit to Memphis, by one of those *contretemps* which caused me to miss the connection of the railway trains, I was forced to spend a day in the city of Corinth, the home of your brilliant correspondent, Guyon, who is an intimate friend of mine, besides being connected to me by marriage ties. So of course I called on my cousins, and the greeting of the Guyon family made me feel quite at home. Guyon, besides being a thorough sportsman, is one of the most accomplished physicians and extensive practitioners in North Mississippi. He keeps a kennel of setters and pointers and a variety of sporting guns. I found him going into ecstacies over a new Tolley gun, yet I was forced to laugh in my sleeve when he acknowedged he could shoot an old muzzle-loader he had had transformed into a breech-loader, but it was, he said, apologetically, because it fitted his shoulder best and he was more accustomed to it. We mounted a couple of his good steeds, and whistling, Nora, Kate, and Belle, three beautiful bitches, the two first pointers, the last a setter from the kennel of Col. W. H. Sherrod, of North Alabama. Nora is an old favorite, but Kate, who came to him from the kennel of Pious Jeems, is a worthy rival of the petted Nora. But we are off; and as we ride over the breastworks where American met American as Greek met Greek in the olden time, I could not keep down the bitter memories of the past. There, battery Robinet still stands, the only monument to my friend, the gallant Col. Rogers, of Texas, who fell within its enclosure amid his foes. So gallant was the charge he made that even Gen. Rosecranz, who commanded the Federal forces, said, "he deserved a monument as an American soldier, although fighting against the Union." As we rode farther on up the M. & R. R., we passed over the spot where my own brave command were engaged. I had the honor then to command the —— Regt. of Mississippi Cavalry, under that Murat of Southern chivalry, Gen. Frank C. Armstrong, who has recently crossed the bloody chasm and taken to his heart a Northern bride; and may he be as happy in his new love as his old soldiers wish him to be. History has never recorded the battle of Corinth correctly. It is there the gallant Van Dorn was defeated, even when he felt assured that victory was in his grasp. I will here make an explanation of facts that came under my own observation: We struck the enemy first at Chewalla, on the Memphis & Charleston Railroad, drove them back on the outer woods near Corinth. Armstrong's brigade marching left in front occupied the left wing of the Confederate Army. We advanced until the left rested on the M. & O. R. R., north of Corinth. Then Old Pap (Gen. Sterling Price) charged the outer works and captured them. What was done on the right I could not see, but I could hear the constant roar of artillery and the rattling of small arms all along the line. Night closed in upon a victorious Confederate Army. Could Van Dorn have then said, as Joshua did, "Sun, stand thou still upon Gideon, and thou moon, in the Valley of Ajalon!" the history of Corinth would have been different. But that lovely October night folded her mantle of glittering stars over the slumbering Confederate soldiers, dreaming of a victory on the morrow never to be won. Van Dorn's plan (as he afterwards explained to me at my own house) was for the infantry on the left to begin the attack when his signal gun fired at dawn. The hissing shells that echoed our signal gun from the Federal batteries still reverberates through the halls of memory, recalling a dream of by gone old soldier days. But alas! the infantry commander on our left for some cause failed to come to time. Courier after courier was sent to hasten the attack, but that officer was asleep in a farm house (so I have heard). The attack should have been in echelon—the left striking first, then the centre, under the immediate command of Gen. Price, then the right, under Gen. Mansfield Lovell, to be hurled on the rear of Corinth. The Federal forces had received at daylight large reinforcements, which had double quicked twelve miles, and arrived utterly exhausted. Had the attack been made then, Van Dorn believed he could have charged over these exhausted reinforcements and taken Corinth; but they had until nearly ten o'clock to rest, and then Gen. Price charged from the centre and and was repulsed with heavy loss About this time I was ordered to report with my regiment to Gen. Lovell. I thus passed along the entire line of battle. When I reached Lovell's Division I halted my command behind a hill so as to screen it from fire, and proceeded alone to Gen. Lovell. I shall never forget him as I saw him then. In my heart I bore him a prejudice for the fall of New Orleans; but at that moment I forgave him all, for amid the bursting bombs and hissing balls, he sat a magnificently caparisoned charger, himself arrayed in a conspicuous uniform of cavalry, directing the fight,

"Shadowy like a spirit of fire,
Shrined in its own grand element."

I reported my command ready for his orders. He replied, "I don't know what Gen. Van Dorn sent you for; I've got no use for cavalry here. Col., look at my men fight; isn't that beautiful?" It was indeed very grand, but I could never see any beauty in standing under fire when not cugaged myself. At this moment a courier dashed up with an order from Gen. Van Dorn for him to withdraw his division from the engagement. He turned to me with a glance of defiance, and said, "I don't know what Gen. Van Dorn means. I've got a position here, and can whip anything that can come out of Corinth or hell, and I don't want to leave it."—(his words). I told him of our repulse on the centre and left. Dropping his head, he said, mournfully, "I will have use for you now, Col. I want you to cover my retreat." With consummate skill I watched him withdraw his division from the battle field in perfect order, as if they were only retiring from a dress parade. The enemy were so severely punished that no attempt was made to follow, and I slowly retired in his rear, keeping always a front to the rear without seeing a foe.

But my reveries are broken by an exclamation of Guyon —"steady, Kate! Pious, here the birds are." We quickly dismount and approach. Kate stands like a marble statue. Nora is creeping up to her as if she was walking on eggs, when the scent strikes her nose, and she stands as fixed as if her feet were rooted in the earth. Belle timidly crouched in the rear, like a daughter of Niobe stricken with a shaft from the bow of Diana. We walk up, and flush: whir-r-r. I fire each barrel, and with each bring down a bird. Guyon gets a double with his first barrel, and with his second brings down a towering cock that had whirled off to the right for a bit of timber which he is never destined to reach. We replace our shells and Guyon gives the word, "seek dead." The birds are quickly found and retrieved. Here I will take issue with some of my sporting friends on retrieving dogs. I do not want a dog that is not a retriever, and as for its affecting the dog's nose, it's all bosh. I have seen my dogs too often bring in a dead bird and the next minute stand on a live one. The covey have alighted in a field of sedge and we move forward, and soon Nora has a point, with the others backing her. A firm old cock rises as we advance, and I make a clean miss, and as he goes off Guyon gives him a parting salute and he drops to earth. At the report of Guyon's gun, another rises on my left and I cut him down. Here Kate became excited and made a break. "Down Kate!" She remembers in an instant, and drops almost on a bird, which rises and gets off before we are ready. We now move off, five birds rise and three of them fall, and the others go off, leaving Guyon and Pious disputing the odd bird. I really think Guyon killed it, but the next thing to being a good shot is being a good claimer of doubtful birds; so we sent the doubtful bird to the bag and again moved forward. One arose and both fired at close range, making doll rags of it. Another got up under Guyon's feet. He turned, fired, and missed. At the same instant I fired and he fell a winger. We sent the dogs after it and Nora brought it in alive. We again moved forward and several more got up; both fired. Guyon killed one and I killed one and missed another. We then gathered up our dead birds and retraced our steps for the horses. We mount and enter a field from which the corn is partly gathered, but the peas that had been planted with the corn still covered the ground. Nora, ahead and going at full speed, halts as if a chasm had opened before her, and stood as rigid as an iceberg. Kate and Belle back her gracefully. We dismount and advance. Again, as the whir-r of wings scatter the pea pods, we each bring down a brace of birds. Belle breaks at the fire, and an angry exclamation from my own thoughtless tongue sends the timid little bitch skulking back to the horses. Confound a timid dog. I never would have one. The harder headed they are the better I like them. I can then train them to do my bidding with a combination of love and fear; but training with love alone always exhausted my patience. The covey sought an asylum in a blackjack thicket, where we had some fancy snap shots, a style of shooting in which I claim to excel most amateurs, and we came out of the thicket with Pious two birds ahead of Guyon. Again we mount, and Nora, who excels on coveys but is not so good for single birds, has another point, and we dismount and advance to her on foot; and as they rise Guyon bags two, and "tell it not in Gath; publish it not in the streets of Askelon," Pious Jeems never touched a feather, after all his boasting snap shots. The birds alighted in a beautiful meadow, and as we advanced Nora ran forward and flushed one; but Kate has a point and stands as stolid as Lot's wife, with her head turned back, for she had nearly passed her bird before she had caught the scent, and now she is in an attitude that would charm an artist's eye. Nora and Belle back her gracefully, when a scent strikes Nora's nostril from one side, and she turns and rivals Kate in attitude on a point of her own. As we advance a bird rises to our side, which Guyon topples over, the game little bitches still holding their points. Guyon takes Nora, and I Kate, and each bags his bird. After replacing our shells we give the command "hie on," "seek bird," and each of the pointers dash forward and pick up their dead birds. But look at Kate with a dead bird in her mouth! She is pointing another six feet off in the grass. Look at that, Guyon, and tell me how retrieving impairs a dog's scent. If Kate can hold a dead bird in her mouth and wind a live one several feet off in

he grass, it does not appear that her sense of smell is affected very much by the dead bird. I advanced, and as it arose bowled it over. "Feteh, Kate," and the noble little bitch—a worthy daughter of my old favorite—brought in the one she held in her mouth, and then dashed back and retrieved the others. Old Kate, her dam, in her prime, was the equal, if not the superior, of any dog I ever saw, excepting her grandfather, old Frank, who died ten years ago. They are pure native American stock, having been bred with the utmost care in my kennel for over a quarter of a century. I have never sold one of my puppies, and am not advertising my stock; but I do candidly believe that for intelligence, beauty, nose and endurance, my breed of pointers are equal, if not superior, to any sporting dogs, setter or pointer, on this or any other continent. And I do not know of a real first-class pointer in North Mississippi or West Tennessee that does not boast of a strain from my kennel. I see in the pedigree of Mr. Arthur Wheatley's Lilly, whose portrait illustrated the 23d of December number of the FOREST AND STREAM, claims a progenitor in a dog called Morgan from my kennel. Although digressing somewhat, I must here tell a joke on my friend "Guido," of Memphis, who has some dogs that have borne off prizes in dog shows.

He carried out four of the best Memphis could produce to hunt against our mutual friend Dr. A. F. McKinney, of Germantown, Tenn., who has a pointer named Lee, bred in my kennel, and one I did not prize as above ordinary, as compared with others of my stock; and Lee beat the entire quartette of Guido's, finding seven out of eight coveys of partridges (or grouse), surpassing all competitors in speed, endurance, and nose. Old Kate is now useless for hunting purposes, owing to an injury received from the kick of a horse, which fractured her nose. Dr. McKinney has her now to breed for himself and his Memphis friends. Look out for those puppies in the Bench Show at Memphis next fall and in future field trials.

Excuse me, Messrs. Editors, for this long digression on my favorites; but the pointer is one of my hobbies, and after years of experience with both setter and pointer, I must give the preference to the pointer for southern climates. We have very warm days here all through the winter, especially in the early fall and later in the winter, in which the setter soon knocks up, and in hunting over our prairies in long, dry seasons the setter will give out for want of water when the pointer is but little incommoded by thirst. I would not disparage the setter by an invidious comparison. He is good in his place—superior to the pointer in very cold and wet weather, as the pointer is to the setter in hot and dry weather. But as I have wandered so far from my text I will close my hunt with Guyon, and tell you of our visit at night to Mary. Kind reader, do you wonder what Old Pious is up to, and he a married man, grim and gray, from exposures of war, wild sports in the field, and, Guyon might maliciously add, some "early pieties" in visiting a fair young damsel with so sweet a name.

> "Art thou named Mary, maiden fair?
> Such should methinks, its music be,
> The sweetest names that mortals bear
> Were best befitting thee.
> And she to whom it once was given,
> Was half of earth and half of heaven."

Gentle reader, Mary is the name given to the Commandery of Knights Templer, of which noble Order Guyon and myself have the honor to bear the Red Cross, with its motto, "*In Hoc Signo Vinces*," and to our courteous Sir Knight Guyon and the noble Knights of Mary Commandery, not forgetting Wheatley, Bryson, and Tytus, of the Memphis sports, whose courtesies are gratefully remembered, I would send a greeting with a sixth libation from

PIOUS JEEMS.

Lochinvar, Miss., Jan. 4th, 1876.

For Forest and Stream.

SOME DESCRIPTIONS OF HANOVER TOWNSHIP, MORRIS CO., N. J.

I FANCY some will say, "Why, that place is not worthy of note." But we, with equal earnestness exclaim, "Ho! all ye lovers of nature, ye hunters and fishers; if ye wish for enjoyment, come hither." Boonton is northwest of us, and who is there that has not heard of the town of Boonton, so famed for its great iron works? It is truly set upon a hill and cannot be hid. The iron works were built in 1830 and have been greatly improved upon since. The Rockaway river runs through the town at the southwest, and forms a cascade of about thirty feet fall. In this vicinity the scenery is exceedingly picturesque. The river is both useful and beautiful, for it furnishes all the water power for the manufactories. The iron is brought in its crude state from the mines, which are numerous in the mountains north of us. Morris, the only city our county contains, is directly south of us, and is not this place worthy of note? As we enter it from the south one of the first buildings that attracts the eye is the great white mansion that Washington made his headquarters in the winter of 1779 80. It is truly an elegant little city; its inhabitants are wealthy, and for the most part its churches, dwellings, and stores are handsome and tasty. Now, let us speak particularly of our own township, which is thought to be the earliest settlement in what is now Morris county. As we have said, it has an area of about sixteen square miles. We have Boonton on the northwest, but the Rockaway river forms most of our northern boundary. On the east we have the famous Passaic to divide us from Essex county, and this river, the largest and most circuitous in our State, takes its rise in the highlands of this county. Rockaway township is on our west, and as we have said above, Morris city is directly south of us. Whippany river flows through the township, taking a northeasterly direction and its little tributary, the Parsippany, rises in the mountains in the western part of the township, and flows directly east to empty its waters into the stream above named, about a mile and a quarter from its mouth. Now, what is singular and beautiful, these rivers all meet and unite like dear friends. The Passaic receives the waters from them all, but many a pretty little freak is cut by them before this great union. We shall soon show you that these four rivers are the most neighborly streams you have seen. First, the Little Parsippany, which is only ten miles long, flows into the Whippany in the northeastern part of the township; then the Whippany, after flowing about a mile and a quarter further northward, empties into the Witching Rockaway; the latter receives all, and hurries along for the space of a mile, forming many curves and nooks, which are picturesque enough. It gracefully delves up the water to the grand old Passaic, who needs it, for it has in all seventy miles to travel and wants plenty of water to dash over the falls at Paterson and Little Falls, and also plenty to carry its steamers and do other arduous work. The Passaic and these, some of its tributaries, overflow their banks in wet seasons in our township and elsewhere. The land is so flat that in Hanover alone we have some thousands of acres that are frequently inundated. This forms what is called the natural meadow, and great crops of hay are yearly cut therefrom, and the farmer depends greatly upon this crop. Now, in consequence of these many rivers the country abounds in game, and is rich with beautiful scenery. A sail on the Rockaway is lovely. It is, to our mind, the most beautiful river of the four; its banks are delightfully high, covered with soft, velvety grass, and shaded in many places with groves of majestic forest trees. Its course is very irregular, and it turns and winds most bewitchingly. Its waters are clear and deep, its current exceedingly swift, and there are places where this river is obliged to find its way among rocks and stone, which lie in its bed. These spots are some of the most picturesque we have ever seen, for the rocks appear above the surface and the river picks its way among them like a maid with dainty feet. The Passaic, in our vicinity, has not as swift a flow; it is rather sluggish, but there are spots where its banks are also clothed with beauty. The Whippany—when we speak of this stream we bring in its faults reluctantly, for does not our own farm border on this river? and we look with partial eyes on whatever we hold most dear. It is honored in that it flows through Morris city. It takes a northeasterly direction from its source, and flows through Morris and Whippany, thus far being made exceedingly useful and not at all lacking in beauty. Its water turns grist mills, cotton and paper mills, and no doubt does other useful work; but from Whippany the stream flows in a lazy, sluggish manner, the current being almost imperceptible; it flows through the natural meadow, and passes on our own little peninsula on the west, Hanover Neck dividing us from Rockaway Neck. By-the-way, these rivers form necks of land in their vicinity, and we have the two mentioned above and others that we will not at present name.

But to return to "our river," as we are wont to call the above. We must confess that, except in times of freshet, it is here hardly deserving the name of river, and friends sometimes in derision call it a creek, a brook, and even a pond. The banks are weedy and marshy, so of course in no ways beautiful; but when the heavy rains fill it to overflowing we have a river, and assure you it is at such times almost a half mile in width. These streams all abound in fish, and as good fish as can be expected for fresh water growth. We have the pickerel, pike, catfish, eels, and others. At one time there were sixty-six bushels of these varieties taken from the Passaic in this vicinity.

The hunting is fine; in early spring we have the snipe. It hides among the reeds and pokes its long, sensitive bill in the mud and marshes to find the insects and worms. Oh! how our sportsmen delight in the snipe shooting. One reason for this is, the difficult matter it is to become expert at the business. The gunner has to guess instinctively when and where he shall shoot, being especially careful not to aim where the bird is, but where it is to be. We have not only several species that are erroneously called snipe, but the real genuine English snipe. Before the snipe season commences the ducks begin to claim attention, and these streams are frequented by the large black duck, the teal, canvas-back, (rather scarce), wood duck, widgeon, and others. These make the spring time lively. July commences woodcock hunting, for in summer these birds come to the wet banks of the rivers and marshes near. We do not have them now in abundance, but the sportsmen are in great abundance, and the sport often quite exciting, and happy the man who carries away ten or a dozen of these truly delicious birds. Again in the fall we have the snipe and ducks, a few woodcock, and a few quail. Now, we have only mentioned the principal game birds; there are others that are often thought worth hunting, but we do not consider them worthy of notice here. Occasionally flocks of wild geese fly near enough to cause an excitement, and sometimes they lose they lives for their presumption. Pigeons are at times quite plenty. Perhaps as often as annually we have a visit from some wandering bald-headed eagle, and such wanderers generally lose their lives, for what gunner could or would resist the temptation of a shot at the king of birds and our national symbol? In the winter, when the sportsmen are especially dry for sport, we have known them to have a rabbit chase, and these little animals are plenty enough in our midst. We not only have game and fish, but fur. The muskrats have been so plenty here that to shoot sixty in a day was considered only an ordinary day's work; they are scarce now in comparison, but still hundreds are shot every winter. Many a mink skin has no doubt been paraded in Filth avenue that grew hereabouts. But were I to mention the different kinds of fur procured here, it might provoke a smile from some one who at present has his thoughts only on seal skin; but there are a great many skins sold from these parts, and the fur hunting fever often runs so high that even the glossy black cat has to scamper for her life or lose her pretty hide.

We would know that the Indians once dwelt here were history silent upon the subject, for the signs are unmistakable. Indian arrows are often ploughed up, sometimes a hatchet, or tomahawk, and other tools. And on our own farm there is said to be an Indian grave. We have read that it was customary with the Indians of Jersey to put family utensils, bows and arrows, and sometimes wampun into the graves of their friends. Some of these articles mentioned were, we believe, found in the said grave which was discovered in ploughing or digging. Along the banks of the river, and in these groves, has the poor red man lived and hunted, and the little Indian canoes have sped along the waters upon which we now sail. The ill-fated Alexander Hamilton, who fell in 1804, in a duel fought with Vice President Burr, is said to have paid many a visit to these meadows and groves for the express purpose of hunting.

And now, friends, we think what we have written is enough to show you that Morris county, and Hanover township are worthy to be noticed in FOREST AND STREAM.

A. D. W.

—The wild pigeon, it is reported by knowing forresters, will be plenty in the Pennsylvania woodlands the coming season, on account of a fair promise of the beech-nut and mast crops upon which the birds feed.

For Forest and Stream.

FOX-HUNTING.

YES, I do know something about fox hunting. More than I did, though I don't believe the experience quite paid for the trouble of obtaining it. At Greenbriar, North Carolina, in the winter of 1870, I was of course acquainted with the whole town. I could shoot well upon the wing, and, another thing of greater importance toward winning the respect of my new acquaintances, was a sure shot with the revolver. In spite of my position as a "carpet bag" Judge, they were all very friendly to me, and very willing to do anything possible for my amusement. They were all enthusiastic fox-hunters, and they had a pack of hounds whose noses were marvels of accuracy. Reynard might double and twist his prettiest, but he was certainly a gone fox when that pack opened on him. They often entertained me with glowing accounts of the fine runs they had, always urging me to accompany them next time. At length, carried away by repeated solicitations, I began to believe there must be something in it, and expressed my willingness to go, only I had no horse. They said they would be only too glad to provide me, and the next morning early a small darkey brought me over a big jackass, with a note from "massa" advising me of the place and time of meeting—the time being as soon as I could get there; they were waiting for me. I had but one suit of clothes and a plug hat, and donning these I rode over to Mr. H.'s, where I found the party all ready, and anxious to be off. They gave me a small brass horn, with instructions when the dogs got after a fox to keep as near them as possible, and whenever I viewed them that I must blow my horn to spur on the pack, and as a signal to the rest. Before long the dogs made game and dashed off, we all following after as fast as we could go. My jackass was as good as the best, and the way we smashed through the brush and briars was a caution. Once in a while I caught sight of the pack, and then, of course, I blew my horn and hied them on, as did every other man near me. The haying of the hounds was right royal, and though I had lost my hat at the first rush, and now had a handkerchief tied around my head, the excitement was glorious, and I made up my mind that riding after a fox, even upon a jackass, was something to live for. There were now three of us ahead, and as we came to a sluggish creek the horses of my companions went over with a bound. I came up to it with an extra dash, expecting that my steed would follow suit; but instead he stopped stock still upon the brink, as though struck by lightning. I didn't do anything of the kind, but kept right on straight over his head, landing flat in the black mud of the farther side. I scrambled out the best way I could, and scraped myself off with a stick, thoroughly disgusted with fox-hunting, especially upon jackasses. The long-eared animal had left for home, and, having no alternative, I sadly and soberly followed after.

In the evening several of the fox-hunters came to see me. They had had a fine run—a glorious run—and had caught the fox some four miles beyond where I had met with my mishap. Their enthusiasm interested me in spite of myself; besides, I did not like to give up beaten. If there was so much in fox-hunting I was bound to see it.

As good luck would have it, the next week I had an opportunity to purchase a fine horse. The price was well up, but there was no doubt about his excellent qualities, which were more than confirmed upon trial. I also bought me a horn of my own, and made up my mind that I would show them that I could ride, and keep ahead, and if one horse wouldn't do it I would get a span. At the next meet I was on hand in good time. The weather had been rainy for the last two days, and though the ground was somewhat sticky, the scent would lie splendidly. There were twelve of us, and we set off in high spirits. Three miles out of town the dogs struck a scent, and rushed away as usual, we all after them as well as we could. Through the fields and the thickets, and the rail fences and the mud holes, we tore along, the old horse taking everything without a pause. I had run my companions out of sight, and could hear the hounds ahead discoursing what they call "sweet music" in large quantities. Soon I came up near them, so I blew my horn and hied them on, excited with the speed and the dash. I wound up with a hurrah that might have been heard a mile. The fox was evidently near at hand, and I blew my horn and hied them on every time I had the breath to spare. Before long we came out into a clearing. The hounds dashed through a fine cabbage patch, and I close after them, trampling down all the cabbages except one, and brought up all of a sudden by a small log cabin, the pack circling around, apparently at fault. As I rode up, blowing my horn, a man came to the door. I inquired hastily if he had seen the fox go by. "Fox be hanged!" replied he, "your hounds have been hunting my old yaller dog till he is almost dead; he is now under the bed." I drew off my forces as quietly as I could. The man, not knowing the condition of his cabbages, was very civil, and directed me what course I should take to get home, where I was bound to go as soon as possible. Of course I had to take the fox-hounds with me, and I had no end of bother keeping them together. So we went about a mile, when all at once, at right angles with the road, away went three or four of the leaders, and the rest after them. Here was a fox scent for sure, and, catching the enthusiasm, I leaped my horse over the old rail fence, blew my horn, and hied on the dogs. Straight into the woods the trail led, and straight into the woods went we all, the dogs baying like mad, and I hieing them on and blowing my horn. Twenty rods more and up flapped a stray turkey; perhaps it was a wild one, but we were hunting foxes, and savagely I called off the dogs which had surrounded the tree in which the turkey sat, and each individual fox-hound appeared determined to climb it. I laid into them with my riding-whip until my arm was tired, and slowly led them out of the woods. When I struck the road it did not seem to be the same road I had left at all. I hadn't heard a sound from my friend for more than two hours, and I was somewhat anxious in regard to my whereabouts. The dogs were very uneasy but my savage manner awed them. The country became more hilly and broken, and all at once, quick as a flash off went the whole pack in full cry again. Here was a fox and no mistake. I inwardly begged pardon of the dogs, as I knew that they were all tired out; but here, upon a *bona fide* scent, they started off as fresh as new. I blew my horn and hied them on, being bound to catch this fox and go into town with his brush in my cap. Away went the pack with entire willingness, and my noble old hot

after them. The pack ran with their heads up; the scent was warm, the ground grew rougher and rougher, and the joyous yelp of the pack was enough to excite a dead missionary. Again I blew my horn and hied them on. They were in full cry, and I was so hoarse that I could not speak above a whisper. Still I blew my horn at every jump. The pack disappeared around a hill, and at once there arose a tremendous row. They had got him sure. I blew my horn to encourage them, putting the spurs into my gallant steed. I pushed ahead to be in at the death, and as I dashed around the hill almost rode over an old woman, who, with a big club, was beating off the pack, which, tracking her old sow, with a litter of fourteen pigs, through their morning wanderings, had at last brought them to bay in her front yard. I am not sure but that the old sow could have whipped out the dogs alone, but with the old woman to help they hadn't a chance.

Jerusalem! and is this fox hunting? I called off the dogs, inquired my way to civilization, and some time after dark I might have been seen—with a lantern—pursuing my weary way into the thriving town of Greenbriar. The fox hounds, when I reached the borders of the town, I pelted with rocks until they scattered and went home. I went home also, and when my friends came in, hinted vaguely of a black fox which had led us off, and that the sport for a time was glorious.

My horse was for sale cheap. Not that but he was a good horse, but he knew the truth, and appeared intelligent enough to tell. ALIQUIS.

For Forest and Stream.

AUSTRALIAN LEGAL WIT.

WHEN I was in New South Wales, in 1871, a very good thing was going the rounds from the Court of Sessions. Chief Justice Sir ——, Bart., was presiding. The docket was full to an extent theretofore unparalleled, and the session was correspondingly prolonged.

The day before Good Friday was reached, and a "heavy" day it proved. The sittiug was protracted until bench, jury, barristers, and all, dinnerless as they were, were ready to sink from fatigue and hunger. At length Sir —— announced that the court would adjourn until *to-morrow.*

The feeling of the poor overworked souls, who had been looking forward to at least one holiday's respite from their labors, can better be imagined than described. In blank dismay they sat looking at each other, and a silence as of death crept over the whole court.

Then slowly arose to his feet the old Attorney-General. He was an intimate friend of the C. J. Both had come out from England together, here they had labored together for more than thirty years, and a ray of hope gleamed upon the barristers as they saw him prepare to address the Court. Very deliberate in manner, and slow of speech almost to hesitancy, was Mr. Attorney-General. Leisurely raising his eye-glass, and turniug his gaze upon Sir ——, he briefly observed: "I beg leave to remind your honor that to-morrow is Good Friday." And down sat Mr. A. G., and down went his eye-glass.

"I am well aware of that," responded his honor, "but the pressure of business upon this court is so immense that —in short, I feel absolutely compelled to sit to-morrow."

Dead and awful silence once more. Then, with a deep sigh of resignation, the tall form of the A. G. slowly attained its altitude once more, and again the deliberative eye-glass beamed upon the bench as he plaintively drawled forth:—

"Well, your honor—all I can say is—is—that your honor—is—the first judge—that I have ever heard of—who ever proposed—to sit on a Good Friday since *Pontius Pilate.* N. W. BECKWITH.

THE LAST.—We have heard of the man who, when shooting, split the limb of a tree, over a river, on which a quantity of pigeons were roosting and caught them all by the toes; who afterwards linked a couple of bullets and cut off the limb; who then waded into the river to bring out the limb, and in doing so caught a bushel of shad in his boots. But that story becomes truthful beside the following, which we find in the Halifax *Citizen* of the 5th inst., which paper credits it to the Annapolis, Nova Scotia, *Farmer:*—

"Mr. J. Tufts informs us that he is indebted to the Rev. Mr. Bangs for the following story. A man named Langley, belonging to Digby Neck, went to the head of St. Mary's Bay to shoot wild geese. Seeing a moose on the opposite shore, he fired. At the same moment a porpoise jumped and the bullet went through it, afterwards killing the moose. The porpoise floated ashore, and Mr. Langley used it as a raft to paddle to the moose, on reaching which he discovered a hole in a hollow tree made by the bullet which had passed through the porpoise and the above named animal. In that tree a colony of bees had laid up a winter's supply of honey, which was flowing through the aperture made by the bullet. Stretching out his hand to grasp a plug to confine the honey, he caught a rabbit by the leg and hurriedly threw the animal from him, striking eighteen partridges, all of which he killed."

FLORIDA NOTES.

HOMMOSASSA, January 17th, 1876.

EDITOR FOREST AND STREAM:—

Living in the only sea board city of cold New Hampshire, I had read much in your paper, as well as in your book, "Camp Life in Florida," regarding the above place, and the latter part of December, in company, with a friend, concluded to spend the winter in Florida, starting from Boston, with tickets over the Fall River Line via. Bay Line of steamers from Baltimore, through Weldon, Charleston, Savannah, we finally reached the grand center of railroads, Jacksonville, and put up at the Metropolitan Hotel, which had just changed proprietors, and luckily hit "just the place," for it was evident that the new landlord, Mr. Barnett of Indiana, who had just taken charge, knew how to run a hotel. The charges are three dollars a day, and the table luxuriant, nobody wants better. On the first thing we did was to hunt up "Al Fresco," and we found the worthy Doctor was a little to spry, for he had already left his card at the hotel for us. A great many Northern people have wondered who was this chap that had written so many and such valuable letters on the sports, climate, and topography of this earthly paradise, and we were not surprised when we found him to be one of the dearest beaded men it was ever our fortune to meet. The Dr. is a retired physician, and one of the most respected citizens of Jacksonville. His residence is on one of the most charming spots in the city, and contains, with its surroundings, every element of refinery and good taste, while his unassuming hospitable halls fills just the niche to make everybody feel at home when they enter his domicil. Every facility for information was at once placed at our disposal, and hour after hour would the Dr. sit and map out spot after spot where one could obtain hunting and fishing to their heart's content. After a short rest we took up our line of march for this spot, and here let me advise all sportsmen who come to this section what to avoid. Don't ship any of your traps by the New York and Fernandina line of steamers. A whole week was consumed by us in obtaining our traps after the steamer was due, and the agent at Fernandina is about as thick a wooden-head as it was our fortune ever to meet. Ship all gun traps, if you have any, *via.* Savannah, even at the slightest additional cost. It will prove a saving investment. The most direct route here from Jacksonville is by the way of Cedar Keys, and don't move a step in that direction, but wait at Jacksonville till you get a reply from Jones that he will meet you at the Keys before you start; if you don't, you will rue it. Our experience in that line made us wish we had staid over and over again. There are no first-class hotels at the Keys. The Cedar Keys House is the best place there, and the landlord tries to make people happy; but it is a small place, and the market not of the best. Finally, finding we could not communicate with Mr. Jones and get a reply under a week at least, we, through the kindness of Mr. Gove, editor of the *State Journal,* and one of the best of fellows, got a boatman to take us over in one of the small schooners for the sum of ten dollars. Our crew consisted of the captain and his mate, a young street Arab of some twelve summers, and who was to serve the double purpose of mate and cook for the first few hours; we came to the conclusion that we were fortunate in our selection, and things went on swimmingly. Our little mate seemed to understand sea faring life, and gave us some of his experience —said he had been tarrling with an old chap called Gornus, who paid him for his two weeks' trip twenty-five cents. We concluded Gornus had cheated the little chap, but before we got to the month of the Homosassa we thought he got well paid, for without any exception he was the laziest little rascal I ever saw. The weather during our trip was splendid, not a cloud in the sky, and we in our shirt sleeves all day long, with the thermometer at 75. One of the most curious things in sailing along the coast is, that although we are from 10 to 15 miles out to sea, and the main land hardly discernible, yet we could go overboard and wade to it with the water not up to our waist. The sea was so calm that three days and two nights were consumed in sailing to St. Martin's Keys. These small islands we reached at early dawn, and as the thousands upon thousands of sea birds of all kinds and descriptions were just starting from the rocks and bushes, the air was black with them, and their cries completely drowned all other sounds, while millions of beach snipe circled in the air and flittered about from one island to the other. On the reefs stood, like sentinels, hundreds of cranes, their white plumage glistening in the sun. Passing these reefs, a few hours' tacking with a head wind, and the mouth of the Homosassa gladdened our sight, rounding the point and a cheer went up, as Mr. Jones, with a boat load of oranges, came out from the river, bound for the Keys. He stopped and supplied us with oranges, as our provisions had run short, owing to the long trip, and finally, with the tide, we reached the wharf at Homosassa. An account of what we saw and what we did shall be given in my next letter. AXE.

—

JANUARY 25th, 1876.

In my last letter I had got to this place. On arrival one glance at it is sufficient to know that you are at home. Dr. Kenworthy's description conveys but a faint idea of the place, or the reception you meet at the hands of Mrs. Jones. The only trouble here is the size of the place for the number who wish for rooms. A little description of the place may not be unpleasant reading. The house is a pleasant one, surrounded by a veranda. As you sit looking toward the boat landing a fine garden is laid out, while on either side are splendid orange and lemon trees, and the fruit is the finest I have ever seen in Florida. The grounds comprise 6,500 acres, so you have plenty of room. There is always a demand for fruit, after guests have been here once, still I suppose one could have a box sent, if application was made in season. I see in your last issue some inquiries were made as regards the place and what to bring here. I was in the same fix, but a letter from "Al Fresco" settled that matter. Ducks have not been plenty this far; but as for fishing, this place beats the world. The warm weather at the North has kept the ducks in that section. Last year, it is said, they were here by the acre. Alligators are quite numerous. Yesterday we killed five and brought them in; they averaged about eight feet in length. It don't do to take stock in all that is said by tourists in killing alligators. It is hard work, but lots of sport. You may shoot at one, and unless you kill him at once, which is seldom done, down he sinks, and you must have a harpoon, or you lose him. If he goes in deep water he is lost. Very many think because they fire at one and he goes down in the water, they kill him; but I have seen them with three bullets in the head, and the negro has hard work to hold him, even if he does get a slit cut in his tail. What one needs most is a boat, and if you have a Bond's patent you are all O. K. They are just the things, and the only thing that I have seen that is any use here. Plenty of fishing tackle is another requisite, and powder, shot, and shell; all these things can be had at Jacksonville, and as cheap as at the North. Old clothes are also good things, and take plenty of them; fine feathers are in no demand here. Rubber boots are good things, but the moccasins of Good, of Manchester, are tip top. Mr. and Mrs. Jones look out for the inner man, and you can rest assured of being well provided for—one wishes for no more. The house is full, and if you want to come you must write weeks before you start, if not, you will be disappointed, for, as Mrs. J. says, the house is not rubber and won't stretch. Sufficient to say, if you want a good time, get to Jones', if you can. AXE.

WHERE TO ROUGH IT.

We have received many inquiries as to a suitable place or places for "roughing it." In the following letter Mr. J. H. Batty, the well-known naturalist and hunter, gives some valuable information on this point.—

EDITOR FOREST AND STREAM:—

As there are many of your subscribers who wish to "rough it," and do so in a country where there is no danger from hostile Indians, I give the following notes for those who may "pull out" from some frontier town for new months next spring. Denver, St. Paul, Cheyenne, Fairplay, or any mining town in Colorado or Montana, will be a good point to start from. Do not spoil what might be a pleasant trip by following a wagon train, over dusty plains and rough roads, through endless sage bushes and prickly pears. Start out with confidence well fixed for any emergency, and if traveling on the plains, keep near the river bottoms, where cotton-wood timber abounds, and an undergrowth of willows, aspens, box-cedar, and "bull" berry bushes. The game naturally collects in the scattering belts of timber in the bottoms, and the hunter has but to watch some favorite sand-bar, or grazing grounds on the edge of the timber. I will guarantee plenty of game in the Missouri Valley, any where from Fort Benton to Fort Abe. Lincoln, or the western terminus of the Northern Pacific R. R. One can go to Bismarck and thence by supply boats to any woodman's camp on the upper "Mesuri." Woodmen and trappers are occasionally "taken in" by the Dakota's or Sioux Indians, yet if one employs a good hunter he can hunt in comparative safety. The scenery on some parts of the Missouri River is grand and picturesque. Large cliffs rise perpendicularly out of the water, and their flat vertical sides cast gloomy shadows over the muddy waters. In many places the limestone and granite rocks loom up on both sides the river, looking in their curious forms like the ruins of some giant city. Many rocks have spires running high in the sky, and others have natural windows and cornices which adds to the sight the delusion of a ruined city. Among these rocks the mountain sheep collect in large bands, running out in bold relief on projecting crags, and wonderingly watch our passing boats. In the evening the wandering prong horns—antelope—are seen gazing from the tablelands above, or wending their way in cautious, though broken lines, down well worn trails among loose rocks, occasionally stopping to nip the green grass on the natural shelves or flats, preparatory to taking their evening drink, when reaching the river. The white-tailed, or mule deer, are found in small bands, and singly in the willow bottoms, and the large wide spreading track of the ponderous elk is seen on every trail. At night the bulls roam about bellowing—I cannot call it *whistling* as some people call it—their continued bugle-like notes until the canons and valleys echo to their cries. Bruin is occasionally found; yet further back in the mountains he is most frequently met. The slap of the beaver's tail is often seen to break the calm of "the rolling river," and the numerous slides cutting into the river banks shows plainly where the beavers get their timber for dams. In many places I saw minks skipping along the sand-bars in a playful manner until they reached the friendly banks. Was it not for the parties of friendly (?) and benevolent red men who occasionally visit this hunter's paradise, the naturalist and hunter could enjoy himself to the fullest extent. He could travel hundreds of miles through the most interesting country by "hull boats," canoes, or skiffs, and not have to pack a pound necessarily.

Cat fish are abundant in the river, though trout are only found in its tributaries and lakes in the mountains. There are too many Indians in the mountains for one to wander carelessly about, and they often turn up rather unexpectedly in two buttons.

In the Sierra Madre Mountains in Colorado, a few score miles west of Denver, parties can hunt in safety, and find game in abundance. In 1873 I killed deer—mule deer—in the foothills in South Park, and in some localities they were common. On the range of mountains running from Mt. Lincoln to the Horseshoe Mt., there are plenty of antelope, and they can be reached from Fairplay in two or three hour's ride. I have often left Fairplay in the morning and killed and packed an antelope back to camp in season to have some of its chops for an early supper.

Deer are often found along the South Platte above Fairplay, yet I never succeeded in taking but one there, as the country lies bad for still hunting. There are good trails—for the country—running for miles into the Rocky Mountains west of Denver, and with a few pack animals one can roam for weeks over snow-capped mountains, hunting deer, sheep, antelope, and bear, and in the valleys does are found at evening, also dusky grouse, marmots, coyotes, foxes, &c. In fact the collector need not wander about long in search of a living target when he has crossed the South Platte or "Arkansaw" rivers. The Mighty Arkansaw is formed by several large boiling springs in a natural pasture lying among rolling hills of pines. I have followed the brook until it becomes a large river from the Tennessee Pass to a point west of the Buffalo Mts. A day's ride through the pass and beyond the source of the Arkansas, brings the adventurer to Pacific water, and the head of the Eagle River when is the prettiest stream I have seen in the Rocky Mountains. Another day's ride down the river and trout can be caught with grasshoppers by the hundred weight. Opposite that almost inaccessible mountain, the Holy Cross, the fishing is best, and mule deer, bear, and elk abound. It was at that point I first heard the so-called elk "whistle," as one came tearing through the bushes, mistaking my picketed horse for a cow. Several days after I hunted with a rifle for elk, but all I had to show for my climbing, fallen timber, and loose rocks for the time, was soreless moccasins and a bouncing big porcupine, which smelled so strongly of spruce that it made my companion sick, who helped me pack him on a pole to camp. In conclusion, I would say, that if there are any persons who wish to "rough it" and do not know where to go, I will direct them to a good country by addressing me at the FOREST AND STREAM office, or at New Utrecht, N. Y. J. H. BATTY.

Natural History.

[This Department is now under the charge of a competent Naturalist, indorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.]

NATURAL HISTORY AT THE CENTENNIAL.

A COMMITTEE was appointed by the counsel of the Boston Society of Natural History, at the meeting of October 23d, 1875, to make definite propositions to the Massachusetts Centennial Commissioners' Department of Education and Science with regard to the part, if any, which was to be taken by that society in the Centennial Exhibition. Such propositions were prepared, and are now being considered, their adoption depending upon the action of the present Legislature in appropriating the necessary funds. The plan is as follows:—

First—That the society furnish a printed account of their past history and present condition and operations. This would include an explanation of the arrangement of the museum and its uses in connection with the educational system in Massachusetts; information with regard to the Lowell lecturers on Natural History, and the Teachers' School of Science supported by Mr. John Cummings.

Second—That the society endeavor to furnish plans of their building. The building is claimed to be one at least, if not the best of its class yet constructed. Together with these plans, the committee would propose to show drawings of the cases and furniture. The cases are probably, though made in the plainest manner, unsurpassed in efficiency, and will compare favorably with the elegant structures of the New York, Smithsonian, and British museums.

Third—That the society furnish a synoptical collection exhibiting the extent and quality of the museum and its mode of arrangement. The museum contains a classified series of collections. The visitor is first introduced to minerals in the Mineral Room, then to the association of minerals in the form of rock-masses in the Geological Room, then to the characteristic fossil plants and animals of each stratum of rock in the Palæontological Rooms, then to the systematically arranged plants and animals of the present time, which occupy all the rooms of the remainder of the building. The same natural order is preserved in each room or department, the elementary forms being shown first, and the more complex in one or more series of ascending scales. In order to show this plan fully, and make an impression upon all persons interested in education and science, it would be necessary to allow one or two cases to each department, this being in about the proportion of one-twentieth or one-thirtieth. The whole number of cases necessary would then be fifteen, and when set up would occupy 105 feet of inner measure. Their other dimensions should be as follows: Depth to wall, eighteen inches; height from floor, seven feet. The attractiveness and beauty of

such a display would be very great independently of its value as an expouent of advanced views with regard to the proper uses of specimens in public museums, but the cost to the society would be very considerable, not less than $2,000.

Fourth—That the society also exhibit selected portions of its New England collectiou. This follows the preceding collections, and supplements them. It contains all the species of minerals, fossils, plants, and animals found in New England. The specimens are meant for the use of those seeking special information with regard to any particular form found in this vicinity and serve as illustrated sources of reference for the correctiou or confirmatiou of facts observed in the field work of the teacher or general student, which last work can only be intelligently entered upon after the study of the general connections of things in the type collections. This department could be completely illustrated with selections occupying twelve cases, and the cost to the society of the preparation and care of the same would be at least $1,000.

The gentlemen having this matter in charge, all of whom are leaders in the society, and well-known teachers and investigators, are using every endeavor to bring the plan to a successful issue, and are pausing only until it is seen whether the Massachusetts Legislature will be sufficiently impressed with the importance of the thing to grant the $4,000 or $5,000 needed to defray the expenses. It is, unfortunately, somewhat doubtful whether this appropriation will be made, and the society, despairing of any other source of funds fears that all its efforts hitherto will prove to have been useless. This event would be a deplorable one. The biological science of the country will then have no other systematic exposition at the Centennial than that afforded by the Fish Commission, whose department is circumscribed; and the stranger of scientific tastes who visits Philadelphia next year must content his curiosity, and desire for a knowledge of the palæontology and zoology of the country with the meagre display made by a few taxidermists, whose object is artistic excellence rather than scientific information. We have lauded before the world our extraordinary educational facilities, and no feature of the home side of the exhibition will have more interest for intelligent foreigners than that illustrating our school system. But more and more every year natural history is coming to be a necessary and sought-for part of a liberal education; and, next to England, no nation has provided so well for teaching popular science as America. Under these circumstances will it not be an omissiou so noticeable as to be a disgrace if this important element of education in the United States, and particularly in Massachusetts, is left unrepresented? It would not seem to be very difficult for New England legislators to appreciate this, and to give ungrudgingly the small sum asked by the competent men urging it to properly exhibit natural history at the Centennial.

OUR "INVITATION" HEARD FROM.

It does not surprise us to find that the propositions contained in the article last week entitled "An Invitation," have attracted the attention their object deserves, and have already begun to bring responses, as will be seen below. Prof. Spencer F. Baird, of the Smithsonian Institute, writes as follows:—

"I am in receipt of the proof of the article you propose to publish in FOREST AND STREAM, inviting the collection of information in regard to the birds of the United States, and their geographical distribution during the whole or a part of the year. This idea is an excellent one, and should be carried out, and I wish you every success in the enterprise."

Prof. Baird was one of the earliest, and has become among the most eminent of American ornithologists. He first called attention to the study of the geographical distribution of animals in this country, and ascertained a large number of facts in connection with it which have since supplied to him and other workers material for partially working out the laws of climatic and seasonal variation. Commendation from him, therefore, is the best guarantee of the importance of the subject.

The subjoined contribution from Dr. Abbott is also timely, since it brings to notice some points in our article which may be misunderstood. Dr. Abbott has not made out a complete case against us, however, except as to his locality, for the blue-bird has not been observed to breed north of Lake Superior, and is certainly a true migrant as far south as Lake Erie. Only a few song sparrows winter as far north as Boston, and the meadow lark is completely migratory north of Massachusetts, Southern Canada being given as the northern limit of the breeding range of both. The goldfinch (*Chrysomitris tristis*), is resident, to be sure, in most parts of Eastern North America, but there are many things in reference to its nest-building, changes of plumage, and habits which are yet to be learned. For example. Does it universally breed, as late as it is known to do in some localities—Northern Ohio, for instance—where its eggs are rarely found before July 4th? And is this owing to a previous want of proper food for its young? If so, what is this diet, and how restricted is it? The southern range of our birds in winter is another point upon which information is needed. Dr. Abbott must remember that the brief list of only well-marked birds was intended for the whole country. Just such notes as his, from a hundred places, would soon let us into the secret of the home, and travels, and habits of all the birds. We are certain that an increasing interest will be aroused by the publication of these observations until every reader becomes an observer. Dr. Abbott's letter was as follows:—

"PROSPECT HILL, Trenton, N. J., Feb. 18th, 1876.
EDITOR FOREST AND STREAM:—

In your proposal for accurate data concerning the migratory movements of our common birds you refer to three species which I think can scarcely be considered as migratory; they are the blue-bird, song sparrow, and meadow lark. I have been familiar with these well-known species of New Jersey birds for many years, and can assert confidently that they are resident every month of the year, Within a week I have heard song sparrows singing as merrily as ever in flowery May; and only to-day, braving the chill northwest wind, blue birds were flitting from post to post of my lane fence, warbling their quaint, peculiar notes, too mournful by far to charm away dull care. The same is to be said of the meadow larks. While fully able to withstand cold weather they prefer warm; and will carefully hunt out, it would seem, sunny nooks in sheltered fields, from which you would have difficulty in flushing them. I have many a time chased a little flock of a dozen about a field, but without forcing them to take wing. They trusted to running, and were no mean contestants in the foot-race. They seem to have forgotten, at this time of the year, their old stands on the topmost branches of tall trees, and whistle not a note. For this reason, they are by many supposed to have gone south, but such is not the case.

A word or two with reference to the red-winged black bird, and the kingfisher, and I have done. The former must be considered in New Jersey as semi-migratory, as also must the crow black birds, for in scattering numbers they are with us until December, and not unfrequently the January thaw brings a few to the flooded meadows. This winter, now nearly past, the unusual "openness," or warmth ought to have caused many of our birds to come back, it might be thought. They did not, however, and for ten years, certainly, there have been fewer birds in this neighborhood than during any of the other winters. But in February, as usual, the red-wings put in an appearance in full force; as on Saturday, February 12th, I saw three large flocks; but ahead of this, in my note of a large "mixed company of crow black-birds, red-wings, and cowpen birds, seen in a piece of woods on January 29th." That day was pleasant until noon, when a cold wind sprang up. A stray kingfisher haunts nearly every mill-pond through the winter if the ice does not entirely shut him off from fishing, for I suppose he does fish then; yet I have often dipped a sure summer net in the same waters right after him, but got only water bugs.

In looking over your list again I see you mention the goldfinch, or thistle-bird. Is he not a rambler rather than strictly migratory? By migratory I mean *regularly* passing from one latitude to another, and returning thereto after a sojourn of a uniform length of time, comparing year with year for ages. CHAS. C. ABBOTT, M. D."

A CORRECTION.—We were somewhat chagrined upon receiving, during the past week, a letter from Dr. Elliott Coues, informing us of mistakes in the paragraph referring to him, which we published in the last number. We supposed our informant was sure of his knowledge, but seem to have been led into an unfortunate misunderstanding. Dr. Coues say that he is not writing and does not intend to write a "Birds of the Southwest;" and tells us what he is doing, as follows:—

"I am chiefly busied at present in writing a treatise on the zoology and botany of the United States Northern Boundary Commission, to which I am officially attached; reading proofs of various matters I have in press; getting up some lectures and addresses; reviewing books, and occasionally indulging in magazine work. As to the "Bibliography," I have in preparation a complete digest of ornithological literature from Aristotle to 1874, and have made such progress with it already that, if I live long enough and have good luck, I may go to press with it in the course of ten or fifteen years, or at any rate shall be able to leave the plan of the work to my children as a family heirloom."

—In FOREST AND STREAM for December 16th, 1875, we printed a list of birds observed in the vicinity of Minneapolis, Minn., by Thos. S. Roberts, not enumerated in Dr. Hatch's list. This reappears, with a slight rearrangement, in the *Scientific Monthly* for February.

GROWTH OF SALPA.—W. K. Brooks, of Cambridge, Mass., has recently communicated to the Boston Society of Natural History a preliminary account of studies he is making into the development of the *Salpa* chain, in which Sars first discovered, as he supposed, that curious method of reproduction which has since become so widely known and applied under the name of "alternation of generations." Mr. Brooks's researches seem to prove that the solitary *Salpa* is the female, and that she produces a chain of males by budding, and discharges an egg into the body of each of these before its birth. These eggs are impregnated while the individuals ("zooids") of the male chain are very small and sexually immature, and develop into females which, in turn, give rise to males the other way. We have here, not an alternation of generations, but a very remarkable difference in the form and mode of origin of the two sexes, throwing light upon the way in which they may become separated in forms that were originally hermaphrodite. Mr. Brooks is the author of several papers of great interest and originality upon the anatomy and embryology of mollusks.

—Mr. Alfred Newton writes a striking protest to the Loudon *Times* against the wholesale slaughter of birds for the sake of ornamental feathers. He quotes the proceedings of a single sale of feathers, to show that to supply that sale alone 9,700 herons (or egrets) must have been destroyed. All these feathers are said to have come from India last autumn. Mr. Newton observes that no country could supply 10,000 herons in a single breeding-season without nearly rooting out the stock. Moreover, 15,000 humming-birds and upwards were included in the sale, of which 749 were of a single kind. As far as we know, none of these birds really diminish the food available for man, so that in destroying them for mere show, we empty the world absolutely of a certain portion of its beauty and happiness—while the beauty is certainly by no means made up in the ornamentation of feminine toilettes which is thus procured. In this age of fine moralities, does no one really bestow a thought on the morality of such reckless spoliation of life as this?

Says an English paper: "The increase of rats in farms, hedges, rabbit-burrows, is to many quite unaccountable. The rule is, if you diminish one pest you make room for another. A few years since birds of prey, such as the hawk, grey-owl, carrion crow, etc., were plentiful, and all lived in the season on young rabbits, rats, mole, mice, etc., which kept them under control; now it is a rarity to see a raven, crow, hawk, owl, either grey or white. The result is of late year an extraordinary increase of rabbits and rats. In ferreting for rabbits, rats are often driven out and killed.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS.—One rufous rat kangaroo (*Bipsiprymnus rufescens*), born in the gardens; one great kangaroo, (*Macropus giganteus*), born in the gardens; one lioness and two whelps, (*Felis leo*), purchased; one mink, (*Putorius lutreolus*), presented by C. B. Rossell, N. J.; one Fournier's capromys, (*Capromys pil rides*), presented by Capt. J Evans, Philadelphia; one tortoise, (*Xerobates Berlandieri*), presented by Dr. Yarrow, Washington, D. C.; nineteen chequered tortoises, (*Emys ficta*), and one red-bellied terrapin (*Emys rubriventris*), presented by J. Fletcher, Philadelphia; one snowy owl, (*Nyctea nivea*), purchased; and one fulmar petrel, (*Fulmarus glacialis*), presented by W. H. Zern, N. J.

Fish Culture.

THE MAINE FISH COMMISSIONERS.

IT is reported that the Fishery Committee of the Maine Legislature has voted unanimously to recommend the abolishment of the Board of Fish Commissioners after September 15th, of the present year. It is expected that a lively fight will be made in opposition to the carrying out of this recommendation by the friends of the Commission when the subject comes before the Legislature.

We trust that this rumor is incorrect. It was apparent from the last report of the Commissioners that there was difficulty between themselves and certain mill owners owing to the refusal of the latter to obey the mandates of the courts as to erecting fishways through their dams. But it seems incredible that a few corporations can have the power of so influencing legislation as to procure the abolishment of such a valuable Commission as that devoted to the preservation and propagation of fish in the State of Maine. We probably err in ascribing this movement to this cause, and it more likely owes its origin to a disinclination to make the usual appropriation. We trust, however, that the measure may be defeated, and that the Commission may continue to exist. In a memorial, recently addressed to the Legislature by the officers of the Maine Fish Association the advantages of fish culture to the State are very clearly set forth. The last paragraph of the memorial would, we should think, alone be sufficient. It says:—

"The improvement of the fresh water fisheries is of importance in more ways than one. Not only will it aid in supplying the people with healthful food and recreation, but it will attract to our State great numbers of tourists from abroad. It is estimated by a gentleman who has given this matter some attention, that so large a sum as $100,000 was spent by tourists in Maine during the past year. A very large per centage of these people were sportsmen, drawn hither by our inland fisheries; and the better the fishing the more they will come. They are generally liberal in their expenditures, and leave behind them more dollars than they kill of fish."

FISHWAYS.

It will be remembered that a fortnight since, we published some correspondence between Hon. Thos. Logan and Seth Green relative to fishways in Ohio, a bill having come before the Legislature of that State repealing the law which compelled millers and others to erect chutes or fishways in their dams. The following letter from Mr. Logan explains itself:—

CINCINNATI, Ohio, February 7th, 1876.

Seth Green, Esq., Rochester:—

MY DEAR SIR:—Your very explicit letter of 31st ult., with accompanying documents are received. I am much obliged for the clear expression of your views, and the information relative to the success of Brewer's patent fish-way.

The bill which I referred to came up in the Senate and was defeated by only one vote. A motion to re-consider was carried and it is not unlikely that it will again be called up, whenever its friends find a thin attendance, or deem that they can force its passage. To you, who have witnessed so much legislative ignorance, prejudice, and unbelief, upon this subject, and have struggled so long for the success in fish culture, which you have now attained, it may seem that we are easily disheartened by such a result. But we had hoped that by this time, the public, and especially the law-makers, had come to a knowledge of the importance of the question. We did not think that our efforts to increase a food supply, which would benefit the people at large, could be met by such narrow-minded opposition, and such palpable selfishness and meanness. It is the fact, however, and we must face it as a fact. We shall renew our endeavors, and we will ultimately defeat the bill, if energy and perseverance can defeat it. In any future discussion we will be strengthened by the statements you have made to us, which cannot fail to prove a tower of strength. With thanks for the interest you have manifested, and sincere wishes for your prosperity and welfare, I am very truly yours, THOS. H. LOGAN.

STOCKING CANANDAIGUA LAKE.

A question was asked through our paper, last week, as to the success that had been met with in stocking the lakes of this State with fish. The following extract from a letter to Seth Green from Mr. G. A. Finley, of Canandaigua, furnishes satisfactory evidence of success. After request

ing Mr. Green to forward a quantity of salmon trout fry, the letter goes on to say:—

"For the last three years we have made it a point to get from 50 to 100 thousand salmon-trout fry, and see them deposited in our lake, and last spring we were rewarded for our labors by such an abundance of trout as has not been known here for twenty years. A single fishermun having caught as many as twenty-one in a day, and others caught them in lots varying from six to eighteen per day. Such fishing with hook and line, furnished sport which many of us never saw before. Such substantial evidences ought to convince the most skeptical, but we have in our midst a few who hold that artificial propagation of fish is a failure. But happily there are enough believers to encourage the good cause and help it along."

G. A. FINLEY.

JAPANESE GOLD FISH.—We learn from the Baltimore *Sun* that, Mr. Gillet Gill, has brought to Baltimore from Japan, some rare specimens of Japanese "king-ging-sahanna," or gold-silver fish. Mr. Gill, who has been to Japan five times, returned a few days since with seventeen out of seventy-seven fish with which he left Japan. They were brought to San Francisco by steamship, and from there to Baltimore by railroad, the latter being the fatal part of the journey to the fish. On the steamship they were kept in a tank, but in the transportation by railroad a tin can was used, with perforated top, the can being suspended by India rubber, and the fish protected by sponges inside. Mr. Gill had fears the attempt would prove entirely unsuccessful, and at one time the fishes were restored to vitality by giving them a liberal supply of Rocky Mountain snow. As it was, the havoc among them was considerable, a number having died, and twenty small ones were eaten up by their big brothers and sisters.

The survivors are all in vigorous health, and are fed on a diet of chopped liver. They are of a deep vermilion color, with brilliant hues, alongside of which the gold fish of America look pale. Several of the Japs are beautifully parti-colored gold and silver, a pair of these being also rare in Japan. They have large silver fan shaped tails, and have been named "Mr. and Mrs. He-No." Mr. Gill thinks these are the first Japanese gold fish brought to this country, and the Japanese commissioners at the centennial have made application for them as part of their exhibition at Philadelphia. He, however, intends giving them to the park commissioners, to be placed in Druid Hill Park for culture. The Japanese, who pay much attention to fish raising, have artificial lakes in their gardens, tastefully ornamented, in which the gold fish are kept, and are treated as pets by the family.

VEGETABLE DIET FOR TROUT.

RUTLAND, Vt., February 11th, 1876.

EDITOR FOREST AND STREAM:—

The question, whether trout can be fed on vegetable food, whether they thrive upon it, and are less subject to the diseases incident to confinement while fed upon it, are questions of fact, not of argument. Their determination is a matter for experiment, not of dispute.

Mr. Hale feeds his trout on corn bread. They learn to eat it without much diffienlty or delay. Nor does the age at which the bread feeding is first attempted seem to be material. Last fall he took from Shrewsbury pond 30 pairs of trout ranging in size from a half pound to a pound and a half in weight. They were caught just before the spawning season. They are now eating the bread as voraciously as those fed upon it for a year or more. True all wild trout caught and confined have to be starved into such a degree of hunger that they will take an unaccustomed food, just as the North Pole voyagers have to be somewhat hungry before they will relish blubber or pemmican. So, too, the Labrador cows may have some scruples to overcome before they chew with much gusto a cud of cod-fish. Dogs are as essentially carnivorous as trout, yet they will thrive well on corn bread, and on that alone. Trout unquestionably prefer worms to waffles, and if we bred trout for the greatest happiness of the trout, we would be forced to feed them on flies and grubs and little trout, for these they seem to like the best. While it is unquestionable that they can be made to eat bread as freely and voraciously as they will eat liver, and get into and keep in as good condition upon the one as on the other, it is also true that they will not grow as fast, or perhaps yield as many eggs upon the vegetable, as upon the animal diet. It is also true that an hundred trout, fed upon bread, will produce more meat for the table than an equal number fed on meat; and this for the reason that the vegetarians are healthier. Mr. Hale hardly ever loses a trout from the white mould so commonly attacking trout, wounded during the spawning season, or indeed from any disease. In his ponds the big trout do not eat the little one's, for the simple reason, that he is not guilty of the folly of keeping fish of different sizes in the same tanks. Then again, the bread fed trout are, to my taste, of better flavor than the liver fed ones.

Mr. Hale has hatched this season the eggs from the bread fed fish, and the young appear to present no more abnormities than those hatched from the eggs of the wild trout. The importance of the fact, that trout can be reared on a vegetable food consists in this: that in this way the rearing can be done at a money profit, and thus place the culture of trout among the profitable domestic industries. That trout will eat bread does not prevent their being fed with such animal food as would otherwise be wasted. Indeed, I have no doubt that it will be found most profitable to give them a mixed diet. Mr. Hale acts on this idea, for during the fall and winter he puts into the tanks, holding the half pound, pound, and larger trout, great numbers of little minnows, such as can be taken in large quantities in the spring holes and pools into which they gather for their winter quarters. He does this chiefly for the reason that the minnows, thus obtained are a cheaper food than the bread. If they could be had at all seasons he would feed them to his trout as far and as long as they were cheaper than bread. The feeding of minnows does not seem to wean them from the vegetable food, indeed, they rush for the bread, while the minnows are swarming around them, as eagerly as they rush for the minnows, when these are first thrown into the tanks. It is heretics to argue about the matter of trout thriving on a bread diet. They do so, and any body who will not believe the statements of those who know Mr. Hale's ponds, must continue in their unbelief until they visit them and see for themselves. It is possible that some of your correspondents would not believe it there, for "one convinced against his will, &c."

M. GOLDSMITH,
Commissioner of Fisheries.

STOCKING THE WILDERNESS.

ROCHESTER, February 16th, 1876.

EDITOR FOREST AND STREAM:—

A. B. Lamberton has gone to the Fulton Chain of Lakes with some fifty thousand young salmon trout to put in their waters. The Fulton Chain region is known as one of the most famous summer resorts in all the wilderness. Headley says of the section: "The Eight lakes are connected by streams, and form a group of surpassing beauty. They vary, both in size and shape, each with a different framework of hills, and the channel is ever from beauty to beauty. There they repose like a bright chain in the forest, the links connected by silver bars. You row slowly through one to its outlet, and then entering a clear stream overhung with lofty trees, seem to be suddenly absorbed by the wilderness. At length, however, you emerge as from a cavern, and lo! an untroubled lake with all its variations of coasts, timbor, and islands, greets the eye.

Wallace in his Descriptive Guide appropriately asks, "Where within its limits (John Brown Tract) can be found a brighter array of glittering links than the Fulton Chain? Where a much lovlier sheet than Smith's Lake?" The Eight Lakes are, moreover, the point of entrance to the best route through the heart of the wilderness to Paul Smith's and Martin's. There is a good hotel at First Lake, as you go in, which is described by Wallace as large and commodious, containing ample accommodations for one hundred guests, standing on a slight elevation that slopes to the water. It is twenty-five miles from Boonville by stage to the Fulton Lakes. Boonville is about forty miles north of Utica, and is reached by the Black River Railroad. There are numerous small lakes and streams in close proximity to the Lake House, (Arnold's) which are well supplied with speckled trout. Mr. Lamberton having lately bought the hotel together with a large tract of land, about First Lake, is going to stock the waters with brook and salmon trout. The tourist and sportsman will find it the Paradise of the Wilderness. The fish were obtained from the State Hatching House at Caledonia. A.

AN ERROR CORRECTED.

SAN FRANCISCO, Cal., Feb. 7th, 1876.

EDITOR FOREST AND STREAM:—

I feel it right that I should correct an error made by me about three weeks since in one of my communications to your interesting paper regarding the planting of Eastern salmon in the Sacramento river, about two years ago, by Mr. Livingston Stone. I stated—rather inadvertently, I confess, and without due consideration of the matter—that another party, whose name was in my mind at the time—Mr. Seth Green—had brought with him here, and had put into the Sacramento a quantity of these same Eastern fish. This was not the case. It was Mr. Livingston Stone who brought out to this coast with him, with other fish, 1,000 *Salmo salar*, or Atlantic salmon. I the more regret this my blunder, on account of the merit of transportation belonging to another party than the one named. I referred also to the quantity of young salmon, or grilse, which have been caught now for two winters at the Oakland Long Wharf near this city. I ventured a conjecture that these salmon were probably the result of Seth Green's importation of eastern fish, whereas, of course, if of any person's introduction from that portion of the United States, they were Livingston Stone's. But they have been caught in too great abundance—amounting to many thousands—to have been all the consequence of Mr. Stone's planting. On the contrary, nearly if not quite the whole of this fish bonanza at Oakland, is certainly due to the successful and judicious efforts, for several years past, of our worthy State Fish Commissioners, who have planted each year a million or more of young salmon, raised on the Mecloud river, in the Sacramento river. Several persons, and practical fishermen, too, thought these Oakland or bay salmon different from the true Sacramento salmon, and I am free to confess that I at one time became almost, if not entirely a convert to that opinion; but time and the best of judges have now decided the point without my doubt. They are certainly our Sacramento and San Joaquin salmon (*quinnat*) and no other. We owe, then, for our sport at Oakland, to our Fish Commissioners, and probably no other parties, unless a few of them may be some of, or the progeny of some of Mr. Stone's importation. I write for the purpose of truth in such matters, and I am always glad to have any errors I may fall into corrected.

E. J. HOOPER.

The Kennel.

THE KENNEL REGISTER.

THE opening of this book of record at our office has been received with expressions of approval from sportsmen of every section and we print below a list of over forty dogs whose names are already recorded in its pages. With regard to *litters*, we would say that where the dog and bitch and one of the puppies are registered we will issue certificates and stud book numbers for the rest of the litter without extra charge. We would feel obliged if gentlemen sending us pedigrees, or the names of dogs for registration, would see that color and marks are given. The stud book will be most carefully kept, and we expect at the close of the year to issue the first volume in a handsome yet economical form. That our contemporaries approve of our plan will be seen from the following extracts. Col. Skinner, the veteran Field Editor of *Turf, Field and Farm*, than whom no man in America is better qualified to speak on the dog question, kindly says:—

"From the day when the Bench Shows of dogs became an institution in this country, the necessity for a record of pedigrees, accessible to all kennel owners, became apparent; hence we are happy to announce to our readers the opening of a Kennel Register by our esteemed contemporary, the FOREST AND STREAM, the programme of which, as given in its last issue, we publish below. This is a happy conception of our neighbor, and we trust our zeal in the cause of field sports is too sincere to allow any contemptible journalistic jealousy to prevent us from giving it a hearty support."

The *Sportsman*, which, under the editorship of Messrs. Foster & McIntyre, so long identified with the *Spirit*, and Mr. Whitehead, has taken a position in the front rank of sporting literature, gives the Register the following pleasant indorsement:—

"Sporting dogs have increased so rapidly, both in value and numbers of late years, and the introduction of some of the best canine blood of England into our own kennels has given such an impetus to breeding, that it is quite time that steps were taken to keep a record in the shape of a stud book for registering pedigrees. Our contemporary, FOREST AND STREAM has established a kennel register for this purpose, which will be of immense value to breeders, as well as purchasers, of fine dogs, more particularly in the future, as enabling them to establish the lineage of their pets. The contents of the book will be published each year in the form of a handsome Kennel Stud Book, illustrated with portraits of famous dogs. The plan has our hearty indorsement, and we commend it to such of our readers who may own fine dogs."

SETTERS.	POINTERS.
Mr. C. H. Raymond's Pride of the Border, Fairy, Rock, Rod, and Guy.	Mr. Miller's Flirt.
Mr. Gleott's Flash.	Gen. A. S. Webb's Fritz.
Col. Granville P. Hawes' Bonnel Carre.	Dr. W. S. Webb's Whisky and Daisy.
Mr. Tileston's Glengarry and Lou	Mr. G de F. Grant's Pat.
Mr. Tuecalore Mosford's Don, May, Pass, and Bon.	Mr. Tileston's Phil II. and Meg.
Mr. Von Langerke's Dash.	Mr. George M. Whiten's Duke.
Mr. G. H. Wild's Duke.	Mr. S. B. Dilly's Ranger and Queen.
Mr. Thos. Rodman, Jr.'s, Daby Dean.	Dr. Strachan's Flash and Shot.
Mr. A. H. Copeland's Norah.	Mr. F. W. Steele's Flake.
Mr. J. H. J. Doane's Chloe.	Mr. Benton's Max.
Mr. L. C. McCley's Judy.	Capt. Grafton's Jim and Ned.
Dr. Strachan's Don II. and Rake.	
Mr. James Gordon Bennett's Pixy and Gill.	
Mr. C. W. Copeland's Turk.	
Mr. J. W. Knox's Belton and Dimple.	
Mr. Snellenburg's Sam.	
Mr. Hobart's Ruby.	

—Mr. F. H. Bierbower, of Maysville, Ky., has sold to Mr. D. Bryson, of Memphis, a bitch puppy by Plunkett out of his imported Irish setter Kitty.

—While attending the Chicago Bench Show we became acquainted with Mr. Jesse Sherwood, of Edina, Knox Co., Missouri, an enterprising field sportsman and breeder of dogs, who, while at Chicago, secured a number of fine dogs, setters and pointers, among which were Czar, the pointer which took first prize in the small pointer class; Fanchon, a bitch puppy by Rufus out of Friend, of Burges's kennel; red Irish Beauty by Colburn's Dash and Waddells' Fannie, Irish and Gordon; Fly, a thoroughbred Irish water spaniel bitch, now in pup by McIlroy's Pat, of Janesville, Wisconsin. Also a very fine thoroughbred nine months old pointer dog, purchased from a gentleman from Chicago. The care Mr. Sherwood is taking in selecting stock for his kennel is evidence of his good judgment.

STUD DOGS.—In our columns of advertisements this week, it will be found that Leicester and Paris, the splendid brace of *Field* trial setters, imported by L. H. Smith, Esq., of Strathroy, Canada, imported from Mr. Llewellen's kennel, are to be used for stud purposes. We had an opportunity of inspecting those dogs while they were on exhibition at the Chicago Bench Show last month, and can say that better specimens of high bred dogs have never come under our observation, and we would suggest the propriety of crossing our native stock with such dogs when we have the opportunity.

OPERATION FOR UMBILICAL HERNIA.—Dr. W. S. Webb operated most successfully, a few days since, on one of Whisky's pups, now three months old, for the radical cure of umbilical hernia. It was performed by cutting down upon the hernial sac, reducing the hernia, removing the sac of peritoneum, and bringing the sides of the opening together by silver sutures. The pup is now entirely well.

THE POINTER "PHIL."—It was generally supposed that this fine old pointer, now the property of A. C. Waddell, had been imported by the late Col. Sam Colt, of Hartford, and many regrets have been expressed by owners of his progeny that he was without a pedigree. A correspondent writing to us from Fishkill-on-the-Hudson, under date of February 12th, asserts that Phil has a pedigree, and, moreover, is a native and not an imported dog. His letter is as follows:—

"Why Col. Sam gave out that he imported Phil (if he did) is more than I can tell, unless taking him from this place to Hartford is importing. I will give you a history of Phil, and am able and willing to prove what I say. Col. Colt bought Phil of John McDowell, whose post-office address is Fishkill Landing. Said McDowell raised and broke him. The father of Phil was a dog named Pierce, owned by a Mr. Fred Orthlep, engineer and draughtsman, Williamsburg. He was very dark liver color, and either he or his father was brought from Texas. The mother of Phil was a black and white pointer bitch named Sue, whose owner's name I will also ascertain. Phil has two own brothers, owned by the Messrs. Le Roy, of New Hamburgh, N. Y. G. W. B."

Our correspondent promises to make further inquiries and give us the result. The advantages of a Kennel Register are apparent from this single case. It stimulates inquiry and provokes discussion, the result of which will be to clear up many doubtful points in the histories of some of our celebrated native dogs.

ARE DOGS PROPERTY?—An Ohio jury has been found to declare that they are, and strange to say, the members thereof have some idea of the money value of a good dog. A case was decided last week in the Ohio Court of Common Pleas in which a Mr. Eastham sued one Swinger to recover damages for the killing of a Gordon setter. The report says:—

"The dog, it appears, had wandered away several miles from his owner's place of residence, having followed a neighbor who was going away some distance on business. Swinger's defence was that the animal was running at large, contrary to law; further, that he supposed him to be mad, and consequently shot him. The jury were charged that the fact that the dog was away without his owner's knowledge or consent, some seven miles, and out of sight of the one keeping or harboring him, was no bar to a recovery; provided the dog was on the highway going in the direction of home, or the person he had been following, and was stopped, headed off and maliciously shot. Under the Ohio statute dogs are not taxed so much *per capita*, but according to their assessed valuation. The animal in this case was rated at $100, and the jury, after a few minutes' deliberation, gave the plaintiff a verdict for the amount."

—A very singular circumstance happened to our friend Mr. David Bryson, of Memphis, a few days since. His bitch Madge, heavy with pups, was loaned by him to a friend under the impression that she would not pup for a month. The gentleman took her out hunting, and she pointed a quail which he killed. Madge dropped to shot, but when told to fetch she did not move, and when the gentleman advanced to her, it appeared that she had dropped a pup while at charge. He immediately started for home, but another pup was born before he reached there. Such a case as this never before came under our notice, and if there is any grounds for the belief that working a pregnant bitch is beneficial to her pups, this brace should certainly be possessed of very keen sporting instinct. —*Field.*

COLORS OF IRISH SETTERS.

BOSTON, Mass., February 13th, 1876.

EDITOR FOREST AND STREAM:—

Probably not one in the whole list of sporting dogs has caused more argument than the game Irish setter. Not only over the ocean, in years past, has this dog been the subject of many letters, but also here, anew are his merits, color, &c., brought before the notice of sportsmen. In your issue of the 10th inst., just at hand, a correspondent questions rather severely the opinion of a contemporary of yours, and would have us believe that the pure Irish setter is of all colors, which the writer of

this most emphatically denies. He seems to imagine that every setter, which is bred in Ireland or comes from Ireland, is an Irish setter.

Now, he is all in the wrong, and can find no recognized authority that gives the genuine Irish dog as of all colors. This reply is not written to involve a lengthy or personal controversy, but merely that men who buy liver and white, or black and white dogs, or dogs of any color but red, or red with white, for the pure Irish, may look into the purity of their purchase. But if such purchasers are satisfied with the lineage of their animals, of many colors, as being true Irish, then many a kennel will contain a bogus specimen of the gamy Irish dog, and many a dealer of arrant frauds will laugh in secret, at the ignorance or credulity of the purchaser. Let us promise by saying that we have never visited the best Irish kennels, neither have we traveled all over Ireland, but that is no reason why we should not place faith in men who have made sporting dogs their life study, and who have been in Ireland and know the color of the Irish setter.

Has "Georgia" ever become intimate with Ireland and the most noted Irish kennels, by personal observation? What does he know of the Irish setter, but what he has seen of imported dogs of that strain, or what he has read of them. The writer of this, being especially a lover of the Irish setter, has studded all the authorities pertaining to that dog, and not alone from his own personal experience, but from the letters of men who knew from personal experience what they were writing about, he firmly believes the only color of the genuine Irish dog to be red in its different shades, and with more or less white

Had "Georgia" carefully followed the letters of the most noted of Irish breeders, which at one time flooded the columns of the London *Field*, he would not now, I think, "emphatically deny that the Irish setter must be red, or red and white to be pure."

It has been the practice of some dealers to sell to sportsmen dogs of all colors as the pure Irish, giving no more proof of their purity than their own word, which is about as genuine as the dog they sell. This is not right, and it is done by those who either know not what an Irish setter is like, or else knowingly believe the purchaser to be ignorant. It is all bosh for any man at this day, to try to establish the idea of the thorough Irish setter being of any color.

"Georgia" quotes as authority, "Frank Forester" on the Irish breed. Now we all know that the lamented Herbert was the most fascinating of sporting writers; that he has never been excelled, either before or since his time, in descriptions of sport by flood or field. But he is not regarded as particularly an authority on matters canine.

Your correspondent also alludes to your venerable Kennel Editor, whose personal opinion ought to bear weight, as he is the oldest breeder living next to Laverack. Now with all due respect to the "Squire," let us go back one step farther and refer to Laverack himself. Does he publish the Irish setter as of all colors, or of any color but red, or red and white? He certainly does not. He only says that the dark red Irish dogs sometimes have a black taint to their coats, and that even this black tinge is the result of a distinct cross with a black setter, though he does not very much object to the color. So highly does he hold the true Irish dog, that he visited the best kennels in Ireland with the idea of purchasing animals to cross with his own breed, but he found with exception of a few strains, that the grand old Irish dog had degenerated, and finally he concluded that they would not mix with his own.

The two very best authorities on sporting dogs—"Stonehenge" and "Idstone"—do not acknowledge the pure Irish setter to be of all colors, but most positively assert that he must be red, with more or less white.

Yes: "Old Calibar" has advertised chestnut-colored Irish setters; but what is chestnut but a rich shade of red? But this shade of chestnut, as found in the Irish setter, is not a liver color; neither is it that of the chestnut grown dark and black by age, but it is the brilliant rich red of the chestnut as found when it comes with a gloss and a glow fresh from the burr. It is this shade of red which is the perfection of color in the Irish dog, and which, when the animal is in good condition, varies with every flush of light and shade, from the tinge of red mahogany in its highly polished state, to the hue of a golden red. Not that the color really changes, but that the sunlight gives the tinge of blood to a color which, in the shadow, has a deeper, darker hue—a hue such as one sees in old mahogany burnished to a deep red ochre tinge.

Hutchinson's "Bob," regarded as a perfect type of the Irish breed, Stonehenge says was a red chestnut in color. But he does not mean a liver color; neither does he mean such a color as we find upon our spaniels, but a rich red, the tips of the hairs looking as if "dipped in port wine—a blood red."

There is a great difference between a red chestnut and a liver color. For instance, look at some of the spaniels which have the liver color in perfection, and then glance at the red chestnut of a thoroughbred racer, or at the hue of the chestnut itself, when new and fresh, and the difference is too marked to be mistaken.

To be sure there are many dogs bred in Ireland which are of all colors, but the fact of their being born in Ireland does not make them Irish setters any more than does the birth of an Irishman in America make him an American. No doubt there are fine strains of setters bred in Ireland of different colors, but it is only the red dogs that have made Ireland famous for its setters; and it is only the red dogs which to day are recognized as the genuine Irish—dogs that if kept pure hold their identity and superiority no matter to what clime transported.

NIMROD.

Although we have much confidence in any allegation that may be made in regard to Irish setters by our correspondent, and notwithstanding one of our contemporaries alleges that those who say that there are Irish setters of other colors than red, or red and white, are either "knaves or fools," we are not yet convinced that it is so. We never have been in Ireland, yet we have had considerable intercourse with Irish gentlemen, and have done much shooting over Irish dogs, and those dogs were either red, or red and white, as those colors we admire, but for full twenty years of our life we did much shooting with the late Robert Gamble, Esq., of New Orleans, an Irish gentleman of large means, and an enthusiastic, skillful field sportsman; and through his influence and efforts we obtained some dogs from England and Ireland quite equal to any we have ever met with. With Mr. Gamble we have spent weeks together camped out on the prairie, when we had ample time to discuss the merits of foreign and domestic dogs, and all matters relating thereunto, and by that gentleman we were assured that there was almost as great a variety of color among dogs bred in Ireland as in England or America. We have frequently heard him speak of a kennel of jet black dogs belonging to a friend of his there.

Now, our experience has convinced us that, sometimes when a black setter is crossed with a red, or red and white one the pups may come liver color, or liver and white, perhaps we should say *chestnut*, or *chestnut* and white, the latter is fashionable, you know. Perhaps some will say that the black dogs were not Irish. How long does it take a dog to change his nationality? If there is no limit to this thing, will we ever have dogs which should be called American dogs, or must they to the end of time continue to be called English, Irish, or Scotch?

DISTEMPER.

QUEBEC, February 16th, 1876.

EDITOR FOREST AND STREAM:—

My Irish red setter dog Ponto, about eighteen months old, has lately had a severe attack of distemper, and soon became so ill that I greatly feared he would die. In FOREST AND STREAM, No. 26, Vol 5, I noticed a remedy given by one who signs himself "Canine" which recalled to my mind that I had seen some dogs, suffering from distemper, with a lump of wax (put on by their owners) between their eyes, and was told it was very beneficial. I gave Ponto two anti-bilious pills, which purged him well. I then clipped the hair off from close to the end of the nose well up between the eyes, covered a piece of linen with shoemaker's wax, and applied it on the bared spot warm. The next day the running from his nose was very profuse, and appeared to worry him a good deal. Some person recommended burning old leather under his nose. This I laughed at, but the day after, finding him very uneasy from the large quantity of matter still escaping, I decided to try it. An old boot was thrown on the fire, and when well scorched and smoking was put into a bag and the dog's head closed in and kept there as long as he could bear it. When the bag was removed he ran around sneezing, and in a few minutes appeared to have completely discharged the offensive matter, and was quite lively. I have left the plaster on, and every two or three days perform the smoking operation with most favorable results, and my dog is fast recovering his appetite and spirits. This remedy is so simple and harmless that I cannot refrain from giving it to you for the benefit of any of your readers who may have a dog suffering from distemper and are willing to try it. I did not try the arsenic mentioned by "Canine," nor have I given any medicine except the pills mentioned. His food, while ill, is oatmeal porridge, or sea biscuit in milk, or sheepshead broth.

STADACONA.

KENNEL PRODUCE.—Mr. N. Saltus' imported red Irish setter Lill III. has a very handsome litter of dark red pups by his Dash, whose portrait was published in this paper a fortnight ago These pups are very promising, on account of the merits of their sire and the blood of their dam, who is one of the handsomest in the country, and one of the highest bred; her pedigree was given in the account of the dogs' portraits.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.*
Drum, (two species.) Family *Sciænidæ.*
Kingfish, *Menticirrus nebulosus.*
Sea Bass, *Sciænops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Snapper, *Lutjanus caxus.*
Grouper, *Epinephelpus nigritus,*
Trout, (black bass,) *Centropristis atrarius.*
Striped Bass or Rockfish, *Roccus lineatus.*
Tautorlish, *Pomatomus saltatrix.*
Black bass, *Micropterus salmoides;* *M. nigricans.*

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—Fish continues to be in very abundant supply and moderate in price. We quote striped bass from North Carolina, 20 to 25 cents per pound; smelts, 15 cents for Eastern and 20 cents for green; blue-fish, 12½ cents; salmon (frozen), 50 cents; mackerel, 15 to 25 cents each, according to size; shad, Savannah, 50 cents each; North Carolinas, $1.25; the latter are very fine, weighing as high as six pounds each; white perch, 18 cents per pound; Spanish mackerel (refrigerated), 50 cents; frost fish, (tomcods), 8 cents; halibut, 15 cents; haddock, 8 cents; kingfish from Key West, 20 cents; red snappers, 25 cents; pompano, $1; cod-fish, 8 cents; black fish, 16 cents; flounders, 12½ cents; eels, 15 to 17 cents; sheepshead, 30 cents; turbot, 25 cents; white-fish, 18 cents; pickerel, 15 cents; sun-fish, 12 cents; yellow perch, 10 cents; salmon trout from Green Bay, Wisconsin, 20 cents; black bass, 18 cents; eiscocs, 12 cents; green turtle, 20 cents, terrapin, $12 per dozen; lobsters, 12 cents per pound; scallops, $1 per gallon; soft clams, 30 to 60 cents per hundred; hard shell crabs, 50 cents per dozen.

—The season for salmon and trout fishing in England and Wales opened on the 2d inst.; in Ireland many of the rivers were open in January. The prospects for a good salmon season are reported as being unusually good. Four fish weighing twenty-five pounds each were taken on the first morning in the Severn and sold for four shillings sterling per pound.

MOVEMENTS OF THE FISHING FLEET.—There have been 30 arrivals of the fleet the past week, 19 from the Banks, and 11 with herring from Newfoundland, New Brunswick. The receipt of fish, in round numbers, is 585,000 pounds of halibut, and 395,000 pounds of codfish. The shore fleet have not done much on account of the rough weather. Sales of fresh codfish at $3 per hundred weight, and haddock for $1.50.—*Cape Ann Advertiser, February 18th.*

THE FISHERIES AND SEA LIONS OF CALIFORNIA.

SAN FRANCISCO, Cal., February 4th, 1876.

EDITOR FOREST AND STREAM:—

I have lately met one of the Fish Commissioners of this State, and he informed me that there is little doubt that the Legislature will enact a law this session to remedy the evils to our fisheries in the use of nets with too small meshes by the Italian, Spanish, and Chinese fishermen. Whether the act for the protection of the sea lions will be repealed, there may be some doubts. A few interested parties for their preservation, as well as some others who do not believe that they effect so much destruction to fish as is believed by many, are making great efforts that they should be spared from either partial or entire extirpation. There are even some persons who contend that they do not devour or wound many fish, that they even live in part or in whole on other food, such as crustaceæ, or sea-weeds, &c. And yet they can hardly be supposed to be ignorant, so popular is that institution, that they are fed at Woodward's public park or gardens solely on fish, which they consume in large quantities too, and are so voracious that their keeper states they would eat double the quantity he gives them, did he throw it to them I really do not see what good carnivorous animals do us, unless as interesting studies of natural history in their wild condition, although we can examine their curious forms and habits, in a large pond at Woodward's well managed menagerie, and aquariums. We have had many articles in our newspapers on this subject, and we have had many remarkable theories and speculations regarding these seals and what they feed upon. One writer has said that a seal was observed from the Oakland Ferry Boat to gobble up a large shag or cormorant. This is not improbable, but still is hardly satisfactorily "proved," as the movements of both these creatures are so rapid in their proper element that it would take very quick eyes to be sure of the fact. But it is not improbable that they do live partly upon fowl as well as fish, and as these cormorants and many ducks as well as gulls, and pelicans, etc, live mostly on fish, the seals make some compensation and balance of animal life by destroying them This is all well, and must mitigate somewhat their destructiveness among all kinds and sizes of fish. It is difficult to decide which is the swiftest animal, the seal or the salmon, or the other rapidly swimming game, or carniverous fishes. I remember once reading of a gentleman in Scotland who so tamed a seal that he trained it to catch salmon and bring them to him, which he did in considerable numbers. The inference from this is easily drawn about the seal's activity, as we all, indeed, may observe both near the rocks at our Cliff House and at Woodward's Gardens.

Our Fish Commissioners have recommended the repeal of the law in favor of the sea lions, and it is quite probable that they know their business better than some outsiders and fault-finders, who are proverbially facile in pointing out medicines for the cure of every disease while they themselves raise the cry of "no quackery," (the signature of one of the most verbose and irreverent rambling among their communications).

Another intelligent arguer states that "in the years of our early settlement of the State, the rivers were filled with salmon, and the Bay teemed with numeless varieties of fish. The sea lions roamed its waters in undisturbed supremacy, and in numbers far exceeding the present time, and yet the waters abounded in fish, and its surface was covered with feathered inhabitants." What of this? The waters then so swarmed with fish that whatever quantities the seals consumed they could make no impression, of course, no visible or important diminution of their numbers, but now, and for years past, both the fishermen with their small meshes to their nets and the Sacramento River netters for salmon and sturgeon, have so swept the fish from the waters that now every remedy should be resorted to to cure the evil, and the diminishment of the seals should be one of them.

Besides, Mr. Kaeding, of the sporting firm of Liddle & Kaeding, who has been here from the earliest days, and has watched all these matters, assures me that the seals were allowed to be killed from 1853 to about 1864, to say nothing about it before that time, and he attributes the plentifulness of the fish within those years, particularly, to the seals having been in a great measure killed out. But there are interests at stake, besides the having fish cheaper, and with most of this opposition to the repealing the law.

E. J. HOOPER.

CASTING THE FLY.

CHATHAM, Miramichi, February 13th, 1876.

EDITOR FOREST AND STREAM:—

I read with interest the remarks of Mr. Geo. Dawson on "Fly Casting," copied in your issues of 3rd and 10th inst., from the Albany *Evening Journal*. I cannot imagine a successful side-cast and have seen it practiced only by beginners. Our best anglers practice the direct movement, which, at its beginning, lifts the line almost bodily from the water, rolls it back in a gradually unfolding and graceful loop until it is almost extended its full length behind at an angle of from 10° to 15°; then brings it forward in form almost the exact reverse of that produced by the first motion, the extreme end of the line, and the leader only resting on the surface. I may remark, that the awkard casting of many anglers is due almost entirely to a want of appreciation on their part, of the forces contained in a little greenheart, or bamboo under deft manipulation. The arc which the tip of the rod is made to describe is too great and made too regularly as to time. Your unpracticed angler whips his twenty-five or thirty feet of line out of the water with a savage jerk and almost, if not quite, thrashes the ground behind him with the tip of his rod, which he brings forward again with an equally vicious motion that almost barbs it in the water before him. Nearly all the force required for this kind of performance may be saved by beginning with a gentle upward motion, quickened when the line is straight, so as to lift it clear of the water and give it a sufficient impetus backward. The movement of the rod to the rear should be so arrested when it reaches from five to ten degrees beyond the perpendicular that it may move slowly backward until the practiced hand feels that the line has reached the point from which it is to be brought forward. The forward motion commences rather slowly, but is made brisk and sharp very soon, and so continued until the rod is a little more than straight over head. Here, one may say, the cast ends, for it is only necessary to let the tip of the rod follow the line by a slow and easy downward motion as it stretches out in front. In this cast the motion of the rod is direct, but not straight over head for those who acquire the art of making it use either hand, and it is done slightly on one side—the rod cutting a line about 15 degrees off perpendicular.

S.

THE KRIDER ROD.

PHILADELPHIA, February 15th, 1876.

EDITOR FOREST AND STREAM:—

As an old angler, I offer a few remarks on fly rods, and what I consider the best, and the material used in making. It may not only be interesting, but advantageous to brothers of the gentle art. I shall endeavor to explain in a familiar manner, otherwise it would be a waste of time and paper, and calculated to confuse the reader. Fly rods I have used made by some of the best makers, from the principal woods used in rod-making, such as split and glued bamboo, lance-wood, green heart, log wood, and iron wood. I must say for a seven or eight ounce rod, I have no hesitation in recommending split and glued bamboo. For the last few seasons I have been using a seven ounce split and glued bamboo made by John Krider, Philadelphia. I have frequently tested it on the principal trouting waters with great satisfaction. The Krider rod is made in an entirely different manner to any that I have yet seen. In making split bamboo rods, the great object is in fitting up the strips so as to save as much as possible of the enamel or outside shell which is really the life of this wood. The Krider rod is made in the following manner:—Eight or nine strips of equal size are fitted so as to get the enamel on the inside of each strip and form a centre. By fitting the strips in this manner the pieces can be well rounded and finished without the least danger of injuring or working off the enamel, as you have the principal part in the centre of the piece.

The old style of making split bamboo rods is in using four strips with enamel on the outside in rounding and finishing, working off the principal part or enamel. Some makers use six strips with enamel on the outside, which is much better than four, as the more strips used, if properly fitted and well glued, the better.

My motive in writing this is simply to introduce to brother anglers the principle of the centre enamel split and glued bamboo or Krider rod

W. J. P.

—A Georgia paper says: There is in Georgia a great deal of gun to the square inch. We opine that there are now at least three thousand tons of it in continuous eruption, carrying destruction to the whole family of *fera naturæ*, from stag to starling. It is also suspected that much of the artillery opens at convenient times upon beef cattle, hogs, and sheep. Without further comment, however we remit the suggestion to the consideration of the assembled wisdom of the State.

—The kangaroo has been introduced on several large estates in France, and is now hunted in that country as game It readily adapts itself to the climate

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

YACHTING IN FLORIDA.—The St. Augustine Yacht Club inaugurated the season on the 12th ult., with a grand regatta. The club house has been enlarged and improved, and the club now has on its rolls over 100 members, embracing many prominent yachtsmen of the North.

The day was beautiful, with a light breeze from the southwest. At 10 o'clock A. M. a national salute of twenty-one guns was fired. Visitors from Jacksonville and St. Augustine soon filled the capacious club rooms and piazza, and at half past ten o'clock a fine start of the second and third class yachts was made. The race was over the usual course of ten miles.

The America won the first prize easily, and the Ida Lynn the second by a few seconds; the Eagle won the third class prize by one minute.

In the afternoon the first class boats, Seminole and Belle of the Bay, were started, followed by the special class yachts, Julia, Maud, Lucy, and Nellie. The Seminole won easily in her class, but the special class race was closely contested.

At the finish the Maud managed to pass the Julia, coming in thirty seconds ahead, with extra time allowance, the Lucy being a good third.

BALTIMORE YACHTING NOTES.—Efforts are being made to render the coming regatta season more interesting and attractive than ever heretofore. The yachts are generally being overhauled and brightened up, and in some cases remodeled so as to increase their speed. The first regatta will take place on Whit-Monday, June 5th, the stakes being two silver pitchers, and the course from Henderson's wharf to the White Rocks and back, a distance of twenty miles. The following yachts have been entered: First class, Fritz Buckheimer, John Barrett, Jr., John Milroy, John Adams, Col. E. J. Chaisty, The Nattie, and Nathaniel C. Robertson; second class, Annie Laske, Joseph Hebb, and Joseph Cromwell. All the boats belong to Fell's Point and Canton clubs.—*Sun.*

EASTERN YACHT CLUB.—The following officers have been elected: Commodore, John M. Forbes; Vice Commodore, T. D. Broadman; Rear Commodore, Chas. Whitney; Secretary, Henry B. Jackson; Treasurer, Patrick T. Jackson; Measurer, F. D. Child. Regatta Committee, W. M. Whitney, John Jeffries, Jr., R. F. Clark, R. H. Steveuson, A. L. Huntington.

THE PALISADE BOAT CLUB.—The monthly meeting of this Club was held at Yonkers last Monday evening. The Recording Secretary reported a roll of forty-six active, and twenty-nine honorary members. The Captain reported that the club had rowed 5,030 miles during the ninety-one working days of the year, a daily average of 23¼ miles. The highest score, 617½ miles, was made by H. T. Keyser. Officers for 1876 were elected as follows: President, M. F. Rowe; Vice President, W. H. Guernsey; Recording Secretary, B. F. Vermilyea; Corresponding Secretary, R. G. Jackson; Treasurer, E. Underhill; Captain, C. H. Harriot; Lieutenant, H. T. Keyser; Trustees, E. M. Jackson, H. B. Starr, W. H. Stewart, W. F. H. Getty, W. H. King.

—Williams College has voted to withdraw from the College Boating Association.

—A number of gentlemen of Halifax, have organized themselves under the name of "The Fishermen's Rowing Association of Halifax," for the purpose of putting a crew into training for the contest at the Centennial Exhibition at Philadelphia. They propose to raise about $3,000 for the purpose of defraying the expense of the crew they will collect and put into immediate training. A four oared crew and a champion sculler are required.

—The winning crew in the four-oared shell race to be rowed in England this spring being the Thames and Tyne crews, will come to this country to row in the Centennial regatta. The Thames crew will be Higgins, Green, Thomas and Spencer, four noted oarsmen. The Tyne crew will be Boyd, Bagnall, Lumden, and Taylor. The stakes will be £400, and championship of England.

ENGLISH OARSMEN AND THE CENTENNIAL.—The last issue of *Bell's Life* has the following paragraph on this subject:

Whether the Universities, or either of them, will feel disposed to attend the Regatta at Philadelphia remains to be seen. It is not likely, however, that both will go, and whichever crew is defeated in the forthcoming race on the Thames, that same University will probably not enter for the American event. The successful University in that contest might consider the matter, but what would be the result of their deliberations on the subject it would be very speculative to foretell or suggest. The chief objection would probably be in the way of expense, but if a suitable crew can be found ready to give up their time, and should be willing to go, such an objection as expense, in a country like our own, ought not for a moment to come in the way. If the resident members of the University are unable to raise a sufficient sum for the purpose, surely there are many old University men "down" who would be only too willing to help in a matter in which they, to a large extent, are interested! This matter may, however, for the present, be allowed to rest, and the final point for consideration is whether England is to be represented at all at the forthcoming International Regatta. From information at our command, we are glad to say that we have every reason to believe that she will. The meeting has every likelihood of being a grand affair; it is to be principally an amateur gathering; it is to be held at a most convenient time of the year, and English amateur oarsmen, occupying the position they do in the aquatic world, will be failing in their duty if no British crew is present at the great aquatic *fête* which takes place at Philadelphia next August. Although nothing has as yet been officially decided, we believe the matter has been more than talked over in the London Rowing Club, and that one of the officers of that representative English Rowing Club—if we may so call it—well known for his indefatigable efforts, has already interrogated one or two gentlemen as to the possibility of their being able to find time to go, which will, probably, be the only objection that in this instance can be raised to a crew being sent. As time goes on we shall, probably, hear more of the matter, and, in conclusion, we feel certain that we shall only be echoing the unanimous voice of metropolitan oarsmen generally in expressing the hope that one crew, at least, from old Father Thames may be seen at Philadelphia next August.

Billiards.

AN INTERNATIONAL MATCH.—On Saturday, February 26th, William Sexton will cross the Atlantic to contest with Maurice Vignaux, the three-ball champion of the world. The Colleuder Cup, emblematic of that championship, was won by Vignaux while in this country, over a year ago. Sometime since he wrote a friend in this city, stating that he would not be able to go to New York until May, but if any player was anxious to compete with him before that time, he would gladly accommodate him at Paris. No sooner was the gauntlet thrown down than it was immediately taken up by our youngest American player, Sexton. Vignaux was cabled, and his reply challenge was received agreeing to the match. The match is already creating great enthusiasm in billiard circles, and hearty co-operation greets it everywhere. We confidently predict that no contest since that between Phelan and Secreiter, for a grand stake of $15,000, at Detroit, April 12th, 1859, will have created so great an excitement as that which is to come off in France next month. It is expected that a number of friends and representatives of the press will accompany Sexton.

THE CENTENNIAL TOURNAMENT.—It is now positively settled that we are to have a tournament at Philadelphia, purely Centennial in all its details, and free from all the objectionable features that have characterized those recently held in this city. The prizes are in the aggregate $5,000, divided as follows: $2,500 first, $1,000 second, $750 third, $500 fourth, $250 fifth. The $1,000 prize is a donation from Frank Queen, Esq., of the New York *Clipper*. Horticultural Hall has been engaged for the purpose from May 15th to 27th, inclusive. The official prospectus will be issued in a week or two.

National Pastimes.

GRECO-ROMAN WRESTLING.—It seems questionable after all, whether the style of wrestling which of late has come so much into vogue is entitled to the appellation given it, for, according to the account given by the correspondent of an English paper of one of the *fetes* given by the Prince of Wales in India, wrestling by the natives after the style of Messrs. Christol, Miller and Bauer, formed a portion of the entertainment:—

"The two wrestlers, holding their bodies as far away from each other as possible, clutch each other by the raised and projected hands, and then, if they can, get to closer quarters with a grip of head, shoulder, neck, or throat."

—There will be two base-ball conventions this next ten days. One convention of the National Association of professional players, which takes place next Wednesday, March 1st, at New Haven, and the Amateur Convention, which is to be held in Philadelphia on March 8th, at Assembly Hall, in Sansom street, at 10 A. M. At the former the Philadelphia, New Haven, Washington, Peabody, Chelsea, Lynn, Bridgeport, and other professional and semi professional clubs, will be represented, while at the latter only the legitimate amateur clubs will send delegates, among which will be the Knickerbocker, Gotham and Press Clubs, of New York; the Excelsior and Nameless, of Brooklyn, etc.

—Owing to the action of the National League in trying to make money out of the sale of their book of rules, the playing code of rules have been delayed in their issue for a month, and after all the League will be unable to print them, as none of the publishing houses will pay for the exclusive use of the work, it not being a saleable book.

—There will be three codes of playing rules in operation this season, one, the National Association code, governing all professional clubs not in the League; the Amateur Association code, governing all the amateur clubs, and the League code, which the eight clubs of the League will alone abide by.

—The first of the championship matches for the Western pennant, will be played in Louisville, April 25th, when the Chicago and Louisville clubs will meet for the first time.

—Ball playing was indulged in at Prospect Park, on Washington's birthday, by a lot of enthusiastic ball tossers, though it was cold and windy.

—The Mutual Club will, in future, be the representative club of Brooklyn among professional organizations. New York now has no professional club. They should have changed the Nameless.

TO MEND RUBBER BOOTS.—The following simple recipe on this point from the *Christian Weekly* may be found worth remembering:—Cut virgin or native India rubber with a wet knife into the thinnest possible slices, and with shears divide these into threads as fine as fine yarn. Put a small quantity of the shreds (say one-teath or less of the capacity of the bottle) into a wide-mouthed bottle, and fill it three-quarters full of benzine of good quality, perfectly free from oil. The rubber will swell up almost immediately, and in a few days, especially if often shaken, assumes the consistency of honey. If it inclines to remain in undissolved masses, more benzine must be added; but if too thin and watery, it needs more rubber. A piece of solid rubber the size of a walnut will make a pint of the cement. This cement dries in a few minutes, and by using three coats in the usual manner, will unite leather straps, patches, rubber soles, backs of boots, etc., with exceeding firmness. The India rubber, unvulcanized, can be obtained at most large stores where rubber goods are sold, and at some drug stores.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

H. M., Baltimore.—Is S. J. Bestor, of Hartford Conn., reliable on cocker spaniels? I wish to purchase one from him if he is. Ans. Yes.

G. W. R., Baltimore.—Please inform me if there is any duty on dogs imported into this country for breeding purposes; if so, what percentage upon the original cost? Ans. There is no duty on dogs.

C. P., New York.—Can you inform me what fishing and shooting is to be had in the neighborhood of Ann Harbor, Mich., in the season? Ans. Perch, pickerel, bass, quail, woodcock, etc.

E. C. J., Uncasville, Conn.—Please inform me where I can get a pair of close shooting breech loading shot barrels made to fit a muzzle-loading stock of the best quality? Ans. Address Clark & Snider, No. 214 Pratt street, Baltimore, Md.

S. W. B., Connersville, Ind.—The reason why your India rubber did not dissolve was because it was not cut in fine shreds. See a receipt published in another column.

J. M. C., Waterbury, Conn.—There is no such law in your State as that mentioned in the slip forwarded to us, unless it is some local enactment referring to the licensing of net and pound fishermen. The writer of the paragraph probably had no intention of being understood as referring to rod fishermen.

B. F. P., St. James.—Will you please inform me whore I can get a book that treats on poultry? Ans. Jos. M. Wade, No. 39 North 9th st., Philadelphia, can supply you at prices ranging from 50 cents to $5.

D., Chicopee, Mass.—I would much like to own the back numbers of FOREST AND STREAM, can they be had in bound volumes? If so, at what price. Please reply in "Answers to Correspondents. Ans. Yes; price $4 per volume.

F. H. G., West Newbury.—Will you inform me what "Belmontyle oil" is, and where is can be procured? Ans. Belmontyle oil is a patent preparation, and we do not know its ingredients. It can be had of H. C. Squires, No. 1 Courtlandt street, this city.

C. D. M., St. Marks.—1 Is the fox hunting good around Smithboro, Mass.? 2. Who are the best gun-makers in Boston, and where can I get a Remington rifle in that city? 3. What is the price of a full blooded fox-hound that will run a trail a long time. Please answer in your next issue, Ans. 1. We do not know. 2. See our advertising columns. 3. Address Peter Knox, Newton, N. J.

J. B., Hannibal.—1. Where, and at what price can I find an Irish water spaniel puppy? 2. What dog is best adapted for training to retrieve—on land as well as water? 3. What rifle of bore 32-100 would you advise me to buy? I want a good article? Does the Remington of this class rank high? Ans. 1. Address J. H. Whitman, Chicago, Ill. 2. The water spaniel can readily be taught to retrieve from land or water. 3. The Remington ranks high, but we cannot discriminate between manufacturers.

H. B. P., Davenport, Iowa.—1. What would a good second-hand Scott or Greener gun cost, 10 bore 32-inch barrels, 9 lbs. weight, top lever? 2. Where can I get those packs made of caribou skin? Ans. 1. It would depend upon the quality. Address H. W. Sackett, Pittsburgh Pa., who has one for sale. 2d. Address Frank Good, Manchester, N. H.

W. L. H., Princeton.—A and B are shooting pigeons, 21 yards rise, 50 yards boundary. B shoots and wounds his bird, which flies out of bounds but returns and falls dead and is gathered within bounds. How should such bird be counted? Ans. After a bird has once gotten out of bounds it is equivalent to a miss, and cannot be counted.

BRANDON, Bald Mountain.—I see by the papers the Providence Arms Co. of Rhode Island had failed. As this is the Company that manufactured the Peabody rifle, can you inform me if this rifle will be any longer made? Ans. The Company have resumed and are making the rifles again.

G. P., South Norwalk.—Will you please inform me which is the best sporting rifle, Remington or Sharps? Ans. Cannot answer questions of merit; they are both good. Does a breech loader cost any more for ammunition than a muzzle loader, after the first cost? Ans. Yes; unless you use brass shells, or reload your paper cases.

AUSTIN ORMIN, New York.—My better half finds her Winchester sporting rifle too heavy at the muzzle, and wishes to have a few inches cut off. Can this be done without materially affecting the power of the rifle, and how much would it be safe to amputate? Ans. Cutting it off would interfere with the magazine arrangements. Why not exchange for a carbine?

M., Baogor, Mo.—Which is the best route to reach Decatur, Peoria, Hannibal, and the intermediate shooting grounds, from Toledo? Can one rely on time over the road? Will it be pleasant to travel over, and what of the accommodations? Ans. Go by the Toledo, Wabash and Western Road. It will take you through the best country for game. The road is well appointed throughout, has superior accommodations, and is not surpassed by any road in the West.

J. W., Bridgeport, Conn.—I have a dog that is troubled with a kind of lice that I never saw upon any dog except him. Now, I take the liberty of asking you if you have anything that will kill or drive them away without hurting the hair, or a receipt for the same? Ans. Almost any kind of oil or grease will expel lice from animals. Anoint your dog thoroughly with oil, and after a day or two wash him well with carbolic soap, or common brown soap. If the above is not successful, anoint him with mild mercurial ointment, being careful that he does not lick it off.

T. M., Jr., New Harmony, Ind.—Does a dog get too old for breeding purposes? I have a very good pointer, the best bred dog we have ever had in this place. He is now about fourteen years old. He visited my black pointer bitch about two months ago; no sign of pups, do not know whether the bitch lost them, or the dog to old to do any good. Ans. Your dog is too old for stock purposes.

G. P., Jr., South Norwalk.—Will you please inform me which is the best rifle of these three—Remington, Sharp, or Whitney? Ans. We do not decide as to the merits of manufacturers. We would advise you to "mark, learn and inwardly digest." Will it cost any more for ammunition for a breech-loading rifle after the first cost than a muzzle loader? Ans. Not if you reload your shells. Which is the best length, a 34 or 40 inch rifle? Ans. 34 inch.

SUBSCRIBER, Easthampton.—1. Do you know of any place in New York where live quail can be found, and at what price? 2. If quail were introduced into the northern part of Vermont, do you think they would flourish there to any extent? 3. Is there any place near Montreal where good duck shooting can be had in the spring and fall? 4. I am about to purchase a shot gun, would you advise me to get one English or an American breech loader? Ans. 1. It is too late in the season to get live quail, but you might address Whitely & Morris, Washington Market, this city. 2. We do not think they would. 3. On the St. Lawrence, from thirty to fifty miles above Montreal there is excellent duck shooting. 4. Much depends upon the quality of gun you want. We cannot discriminate between manufacturers.

TO TAKE KEROSENE STAINS OUT OF CARPETS.—Sprinkle good dry pipe clay over the spots and pass gently over it a hot iron. Allow the clay to remain some time in contact with the carpet, and then remove by means of a good stiff brush. Repeat the operation if the first trial proves ineffective.

FOREST AND STREAM.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(POST OFFICE BOX 2832.)
128 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, FEBRUARY 24, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager

COACHING.

ALTHOUGH we think it a generation too soon, we wish the gentlemen who have undertaken the revival of coaching in this part of our country every success in their efforts. We use the word "revival" advisably, and in preference to "introduced," which is the term applied by some of our contemporaries, who forget that we have not always had railroads, and that coaching, if never followed purely as a pastime by any of our gentlemen of wealth, as it is, and was in England, was yet in olden times the only means of travel. And, in fact, this country is still the home of the stage coach, and affords more of that pleasurable excitement to be found "on the road" than is, or ever was, to be had elsewhere. In many parts of the West and Southwest, notably in California, Nevada, Colorado, Arizona, and New Mexico, the stage coach is the only means of communication between distant points, and our English visitor can not only be carried over the Sierras, by the rocky shores of the Pacific, and across great sandy deserts, but we can give him a taste of that variety in coaching which he has not known since the days of Dick Turpin and Claude Duval. The heroes of Hounslow Heath seem now almost like mythical characters, but our "road agents" still flourish in Nevada and California, while the playful Apache awaits the traveler in Arizona to relieve him alike of purse and scalp.

As for distance, a continuous trip can be made on the Pacific coast of a thousand or more miles, and lasting night and day for a week. Or the traveler can remain over at his will at any of the stations. Probably no coaching trip can be named to exceed in interest that which is made by starting at Gilroy, or Hollister, or the furthest point from San Francisco reached by the Southern Pacific Railroad, and driving through the Salinas Valley and over the coast range to Santa Barbara; passing through scores of those beautiful natural parks of live oaks, and attaining an altitude of five thousand feet or more. Thence following the coast with the wheels sometimes washed by the waves of the Pacific, through San Buenaventuro to Los Angeles, and through the lovely San Gabriel Valley to San Bernardino.

It is generally supposed that the horses used on these Western stage lines are miserable little mustangs, but this is a mistake. The "cattle" generally consists of fine American horses (so-called to distinguish them from the native stock). We remember once driving into Gilroy, where the cars were waiting to take us to San Francisco, behind us as handsome a team of six roan horses as could be turned out anywhere; and gotten up as to grooming and harness in a style that would not have disgraced "the avenue." Everybody has heard of Hank Monk, the Nevada coachman who took Mr. Greeley at such a pace over the Sierra Nevadas, and pretending to misunderstand his petitions for caution, exclaimed "Sit still, Mr. Greeley, I'll get you there in time." And every one who goes to San Francisco and visits the Geysers must have been struck with that remarkable bit of coachmanship, where six horses are taken down and around a mountain over a road barely wide enough for the wheels, with a steep precipice on one side.

As much as we wish for it, we fear that Messrs. Bennett, Douglas, and Kane will experience some difficulty in making their coaching club the success in point of numbers of teams that it deserves to be. We have as yet too limited a number of young men of wealth and leisure, who have at the same time the inclination and the ability to "tool" a coach, to ride a steeple chase, or follow hounds. Having no laws of primogeniture, even our large fortunes are, as a rule, cut up and divided between so many that even an eldest son rarely finds himself in a position to follow where his inclinations lead. Then again, the position of this city deprives the club of all roads but one, without the alternative of crossing the ferry. To be sure that one is very delightful, and has Jerome Park and the club house for a turning point, but variety is as essential in coaching as in anything else. The following pleasant paragraph, which we take from the London *Field*, shows that the originators of the scheme have the sympathies of their friends on the other side:—

"Our cousins, we are pleased to see by an article in the *New York Herald*, intend going in strongly for coaching this year. They have already established a coaching club of our own pattern, with a President, Vice-President, and other officers, and while last year at Jerome Park the club turned out with five coaches, this summer more than double that number it is expected will put in an appearance. Of course, Rome was not built in a day, but it says much for the growing taste that already so much interest has been excited about the club. American gentlemen can drive, as we know. Two seasons ago Mr. Tiffany was on the Brighton road, and those who sat behind Mr. Kane last summer during that pleasant drive to Virginia Water know how well his coach was horsed and how to a minute it kept its time. We hope to meet him and others of his countrymen over here again this summer; but meantime we congratulate the New York people on their new institution, and sincerely hope it will take root and flourish.

GAME PROTECTION.

Game Laws of New York.

WE presume that Mr. Royal Phelps was reported incorrectly as having said, at the last meeting of the New York Society for the Protection of Game, that he desired no change in the game laws as at present existing in this State. In fact, the amendments to the law, which we published a few weeks since, were prepared under the direction of the society of which he is President, and must have had his sanction. This amendment, if passed, makes the close season for quail until October 20th. We trust that the Assembly Committee will see fit to extend the close time to November 1st. The law regulating the sale of game should also have the attention of the committee. As it now exists, grouse and quail can be sold in our markets until March 1st, a most absurd regulation, and one to which, next to snaring and trapping, is owing to the rapid diminution in the number of game birds in this and adjoining States. We should also like to see summer woodcock shooting abolished and the close season extended to September 1st; not only on account of protecting the birds, but so that the merciless slaughter of chicken partridges by woodcock market shooters might be stopped.

We find in an exchange the following memorandum regarding Mr. Sherman's committee in the present Legislature,—

"The Committee on Game Laws of the Assembly has been subdivided into three divisions, with reference to the proper division of its labor. The first division consists of Messrs. Lyne, Webb, and Halliday, and has charge of "Tide-water fish, and game restoring to the shores of tide water;" and second division, on "Game and fish of the northern wilderness, and on the borders of the Great Lakes and the River St. Lawrence," consists of Messrs. Bowen, Taber, and Sherman; and the third division, on "Game and fish in the interior of the State, except in the northern wilderness, and on the borders of and in the Great Lakes and in the St. Lawrence River," consists of Messrs. Bowen, Green, and Sherman. The committee intend to make a revision and codification of the game laws, so that they may be more readily understood, and more efficiently administered than they are at present. The committee ask for suggestions from sportsmen who desire to assist them in their work. At present the laws are inconsistent, and are construed diversly by magistrates in different parts of the State."

MAINE STATE ASSOCIATION FOR PROTECTION OF FISH.—The annual meeting of this association was held at Augusta last week, when it was voted to memorialize the Legislature for a continuance of the work which is being carried on by the Fish Commissioners, and to recommend a revision of the Fishery laws of the State. It was voted to recommend, as far as practicable, general instead of special legislation for the protection and propagation of fish. The following officers for the ensuing year were elected: President, John H. Kimball, Bath; Vice-President, W. S. Badger, Augusta; Secretary and Treasurer, J. W. Clapp, Augusta; Directors, J. H Kimball, W. S. Badger, Wm. G. Davis, of Portland, E. M. Stillwell, of Bangor, S. D. Leavitt, of Eastport, Charles G. Atkins, of Bucksport, Prof. Jotham B. Sewall, of Brunswick, Wm. B. Hazeltine, of Belfast, Mannasseh Smith, of Portland, Henry O. Stanley, of Dixfield, Warren Johnson, of Augusta, Samuel E. Smith, of Wiscasset, S. C. Strout, of Portland, Seth D. Wakefield, of Lewiston, and G. D. Bisbee, of Buckfield; Executive Committee, J. H. Kimball, W. S. Badger, W G. Davis, Warren Johnson, and E. M. Stillwell.

The association has addressed a memorial to the Legislature in relation to fish culture, and calling particular attention to the unusual natural facilities existing in Maine for its prosecution. On the 12th inst., a bill for a general close time for land-locked salmon, trout, and bass was presented to the Legislature. It provides for an annual close time for certain fish in the State as follows. Land locked salmon, from September 15th to March 1st; trout, October 1st to March 1st; black bass, and Oswego bass, April 1st to July 1st. Suitable penalties are provided for violations of the law, and the fish particularized can only be caught by sportsmen who use single baited hooks, or artificial flies.

DOMINION OF CANADA.—The Game and Fish Protection Society of Halifax met recently, and elected the following officers: President, Mr. Robert Morrow (re-elected); Vice-Presidents, Lieut. Col. Clerke, and Mr. E. G. Stayner (re-elected); Treasurer, Mr. M. B. Almon; Secretary, Fitz Cochran (both re-elected); Council, Captain Todd, Eighty-seventh, Dr. Jennings, Benj. Smith (Kentville), F. H. D. Vieth, A. Downs, Charles Stayner, L. P. Fairbanks, M. B. Daily, L. G. Power, J. W. Jackson (New Glasgow), all re-elected; and Captain Barue, Sixtieth Rifles, and Mr. Charles Beamish as additional members.

"Among other interesting topics discussed," says our Halifax exchange, "was the subject of rabbit canning. It appears that since last autumn there has been an establishment in operation in Shubenacadie, where large quantities of these animals are put up in cans for exportation to the old country. To such an extent is this carried on, that from *six to eight hundred* pairs have been purchased in a single week; and these are brought, not only from the surrounding country, but from long distances. It is a question whether it would not be wise to extend the close season, which is at present from 1st March to 1st September, so that they can now be lawfully killed for six months in the year. This seems too long a time. We are glad that the society is moving in the matter."

—A bill has been introduced into the Maryland Legislature prohibiting the taking of terrapins or their eggs from May 1st to August 1st.

—The following decision of the St. Louis Court of Appeals, in a case of infraction of the game laws, settles the question as far as Missouri is concerned, and will be of interest to our readers:—

IN THE ST. LOUIS COURT OF APPEALS.

The State of Missouri, Respondent, vs. David S. Randolph, Appellant.
Appeal from St. Louis Court of Criminal Correction.

OPINION OF THE COURT.

Defendant was convicted on 23d of July, 1874, in the St. Louis Court of Criminal Correction, of a violation of Section 3 of the act of the General Assembly, entitled "An Act for the Preservation of Game," approved 7th February, 1874, by having in his possession three prairie chickens in July, 1874. The language of the act is as follows:—

§ 1. "It shall be unlawful in any place in this State to catch, kill, injure, or pursue with such intent, any pinnated grouse, commonly called prairie chicken, between the 1st day of February and the 15th day of August.

§ 3. It shall be unlawful for any person to purchase have in possession, or expose for sale any of the birds or game mentioned in the preceding section, 1, of this act, during the season when the catching or injuring the same is prohibited."

The conviction was upon the first count of the complaint, of having in his possession three pinnated grouse, on or about 8th of July, and defendant was fined nine dollars, being three dollars for each bird. The evidence is that three prairie chickens were cooked and dressed by the servent of defendant at a restaurant in St. Louis, for which defendant acted as proprietor, by the direction of defendant during the month of July, 1874; that on July 7th, 1874, there were sold and delivered to defendant in the city of St. Louis, six prairie chickens imported from the State of Kansas; and that on the 8th July, 1874, two prairie chickens were served to customers in the same restaurant.

We think there was evidence enough to support a conviction. It is urged by defendant that, inasmuch as it appears that these prairie chickens were imported from Kansas, there can be no conviction. But the act in question makes it a penal offense to have prairie chickens in one's possession from 1st February to 15th August, in Missouri, no matter where they were caught. It is insisted that if this be the meaning of the act, it is in violation of the Constitution of the United States, Congress alone having power to regulate commerce among the several States. We see nothing unconstitutional in the act. The game laws would be migratory if, during the prohibitory season, game could be imported from the neighboring States. It would be impossible to show in most instances where the game was caught. The State of Missouri has as much right to preserve its game as it has to preserve the health of its citizens, and may prohibit the exhibiting for sale within the State of provisions out of season without any violation of the Constitution of the United States. So far as we know this right has never been disputed, and its exercise by the absolute prohibition of the having in possession or sale of game within the State limits, during certain periods of the year, is no more an illegal attempt to regulate commerce between the States than would be a city ordinance against selling oysters in July.

The judgment of the Court below will be affirmed. The other judges concur. R. A. BATEWELL, Judge.

GAME LAWS OF JAPAN.—The Japanese have a general game law applicable to the whole Empire, which for brevity and conciseness is worthy of imitation. The doing away with close seasons, and having a "shooting season" instead is not a bad idea:—

ARTICLE 1. The hunting of birds and beasts with fire arms as a business is called *shoku riyo* (professional hunting); as a pastime, *yu riyo* (pleasure hunting).

ART. 2. Shooting without a license is forbidden.

ART. 3. Hunters, professional or amateur, must obtain a license and carry it with them when out shooting.

ART. 4. The license is not transferable; it is only for one season, and cannot be sold or lent.

ART. 5. Professional hunters must pay one *yen* ($1), and amateur hunters one *yen* ($10) for license.

ART. 6. No license shall issue to any person *non compos;* under sixteen years of age; unacquainted with the use of a fowling piece; or who has been convicted of a violation of these regulations.

ART. 7. Shooting is forbidden, even for a person having license; in towns; in crowds; within 100 yards of a house; within sacred inclosures; in fields bearing crops at the time; or on posted lands, the prescribed notice being two fowling pieces crossing each other and over them the four Japanese characters, denoting "shooting forbidden here."

ART. 8. No military rifles shall be used in hunting.

ART. 9 The shooting season is from September 15th to March 15th.
ART. 10. No shooting allowed from sunset to sunrise.
ART. 11. Hunters must exhibit their license on demand.
ART. 12 Land-owners must post their land prescribed in the last paragraph in article 7. and also enclose it with a line, cord. or temporary fence to render hunting thereon by licensed hunters unlawful.
ARTS. 13 15. The fine for infringing any of the above regulations is not less than three *yen* ($3) nor more than twenty *yen* $20) to be doubled for a second offense. the offender to be also amenable in damages and the informer in all cases to have half the fine.

LITTLE FALLS, N. Y., February 7th, 1876.

EDITOR FOREST AND STREAM:—

In your article "Game Protection," in the issue of February 3d, you invite suggestions relative to the proposed amendments of the game law, and promise to lay such suggestions before the New York Association for the Protection of Game.

There has been considerable discussion among the sportsmen of the Mohawk Valley relative to the close season for woodcock, and I believe it is generally conceded that the 3d of July is too early to commence the season. Many of the birds are so small at that time as to be unfit either to shoot or for the table. I saw woodcock with down on their heads which were shot 5th July last, little things hardly able to fly.

In this vicinity woodcock leave us soon after moulting, and we get very little or no fall shooting, and consequently must kill our birds early if at all.

Our association, and the sportsmen generally about here are of the opinion that the opening of the season should be deferred to August 1st, then we will have a week or two of shooting before the birds moult, and what we get will be better and stronger for the delay. I would suggest that the law be so amended that the season open August 1st. To defer the opening beyond this time would deprive us who live and shoot near the breeding grounds of any sport, and we certainly think we are entitled to our share. Large numbers of woodcock breed along the streams and springy lands at the edge of the great Northern Wilderness, and furnish a considerable portion of the migratory birds which delight our friends of the "Southern Tier." The season should be the same for all portions of the State, and the 1st of September, which is advocated by some, is too late for us in the central and northern portions of the State who obey the law, and endeavor to induce others to do so. We succeeded very well the last year in protecting the birds, and shall use our best efforts to enforce the law, but should the season open later than August 1st I fear we shall be unable to enforce the law at all, our tenure on those who disobey sometimes is too slight, and is controveried largely by public sentiment, and public sentiment says that the 1st of August is late enough.

WATTS T. LOOMIS,
President Herkimer County Sportsmen's Association.

BUFFALO, N. Y., Feb. 11th, 1876.

EDITOR FOREST AND STREAM:—

I noticed your remarks in regard to offering brook trout for sale in Batavia, in this week's FOREST AND STREAM, and trust the dealer will be made to suffer. One of the firms here have been doing the same thing, and I have put the District Attorney on his track, and he will be made to suffer the full penalty, if possible. I am greatly surprised at the lack of interest in the Forester Club, of this city, in matters of this kind. The club comprises among its members a large number of our best citizens, some of whom are ardent anglers and gunners; but they don't seem to care whether the game laws are lived up to by hunters and dealers or not. The firm I speak of, or any other, might offer brook trout for sale all through the close season, or black bass either, as they invariably do, and our citizens would look on with indifference—probably buy some of the fish without once thinking there is such a thing as a game law. I hope some of the members will read this and take it in good part, as it is meant for their benefit. HAGESTOLZ.

SALEM, Mass., February 14th, 1876.

EDITOR FOREST AND STREAM:—

I notice an article from Newburyport upon game protection in your last issue. Generally, I agree with the correspondent, though in the matter of snipe, I think there are other things than the multiplicity of sportsmen which affect our sport with this bird. Among my reasons are these: First, all observers of such things know that birds change their courses of migration, influenced by scarcity of food close pursuit, either too wet or too dry seasons. Then again, I think the turning up of the rich Western lands, bringing to the surface, or near it, much food, may affect our Eastern shooting. As regards the grounds about Newburyport, I think the mining interests have disturbed the snipe, and again many of the best fields are being cultivated, and they get encroached upon each year. About here, in the spring, and of late years, I have seen our pastures alive with woodcock, and tame too, but scarce any remain to breed. All sportsmen know that we have our good and bad seasons for birds. I do not think the sniping in this vicinity has grown so very much poorer in the last five or six years. Everything now is "Go West," and it is possible the snipe have accepted the invitation. Not to facts. I have known your friend "Dry Land," and another gentleman to bag thirty-five snipe in one day on the Newburyport grounds within four years. and have myself started forty in a day.

Since the time above mentioned, we have had no favorable late springs, and for a number of years back dry falls, and if spring shooting is stopped we shall have very little dog work in Eastern Massachusetts. However, this will be giving the "solid men" of the Rod and Gun Club all the better chances in the Connecticut Valley State, Nutmeg State, and so of course we of the sea-board must be content with an occasional waif and the bay birds. TEAL.

BROOKLYN, L. I., February 15th, 1876.

EDITOR FOREST AND STREAM.—

Under the heading of "Game Protection," in your paper of February 10th, I notice in a letter signed "Fred. H. B.," a strong plea in favor of the proposed amendment to the existing game law. With regard to woodcock, we, of Long Island have but little to say, and care as little, but in respect to snipe, we most respectfully venture to differ with the gentleman. A simple statement as to the prevailing scarcity of snipe, in this region at least, will, I hope, suffice all reasoning minds The extensive marshes heretofore abounding in the counties of Queen's and Suffolk, have of late been so drained and improved that the former grounds for snipe have almost entirely disappeared, and the number of the birds is yearly becoming "small by degrees, and beautifully less." In this region at least, we find snipe the most useful bird to train a young dog on, and should this law pass, we might as well establish a regular battue of dogs, and let the snipe have their own sweet will. In conclusion, we must submit, that, owing to the recent disappearance of the swamps, if we may shoot no snipe in the spring, we shall have more to shoot in the fall.

Hoping that the Legislative wisdom of the State now assembled in Albany will see the justice of our remarks, we can only repeat that if this amendment be past, with regard to snipe, a majority of the valuable dogs now owned in this State, will become practically useless, as it will take at least one half of the time allowed us to shoot, to get the dogs into the training which has become destroyed by their long enforced idleness. T. T.

—A petition is being circulated for more and better buoys at Fire Island Inlet. The three inner buoys being spars iustead of cans, it is said that they are entirely submerged when the tide is strong. The amount of travel through Fire Island Inlet, particularly in summer time, is scarcely appreciated. All of the towns on the Great South Bay procure their lumber, bricks, and many of their supplies in this way, to say nothing of the large fleet engaged in the menhaden fisheries. This matter requires immediate attention.

LONGEVITY IN MAN.

FLOURENS and Buffon consider that the natural term of existence of man is one hundred years. In Genesis (VI., 3), his days are numbered at one hundred and twenty years. Elsewhere in the Scriptures a good old age is estimated at three score and ten. At the present time the age reached by mankind is much influenced by circumstances—by hereditary influences, by the observance of sanitary laws, as well as by the necessary friction through life dependent upon labor, mental anxiety, and exposure to morbific causes, which in a great measure influence the standard of perfect health and longevity. In considering the conditions which constitute perfect health we must take into consideration the incidents which occur from the cradle to the grave, or tendencies imparted by progenitors to their descendants which admit of modification by training and education. A writer has remarked that "the Mosaic account of the origin and development of the Jewish race has a red line of genealogical doctrine running through it which presents features of the greatest interest to the student of mankind." The "*Fortes creantur fortibus et bonis*" of Horace is one of the many instances of a recognition of the same principle by profane writers of antiquity, which has received larger and more scientific treatment by philosophic inquirers of recent times.

The evidences to determine the existence and character of hereditary influences are derived from descendants, from collaterals, and from preceding generations. Great disparity of age is considered as exercising a prejudicial influence, although other points may be favorable. The offspring of blood relations are less capable of resisting morbid influence which sooner or later may be present. The change of climate has its healthful effect, and children born in tropical climates, from healthy parents, are apt to succumb unless transferred to colder climates. It has been found, according to the sanitary reports of the Bengal Presidency for 1871, that deaths in the plains of India of European children amounted to 91·4 per 1,000, while at the school on Mount Aboo, which is 4,500 feet above the level of the sea, deaths have only been 8 per 1,000. Hot house plants, over stimulated by fertilizers, are the exact phototypes of children reared in climates which change the normal period of development. The artificial mode of feeding hand-reared children has also a tendency to dwarf the brain growth. The processes of nutrition are stunted, and by this means the blood is impoverished which should support the muscle growth.

The period of manhood is fixed by law at twenty-one years, but physiologically there is no fixed period for man to obtain his majority. Until the age of thirty the great index of vital power, the chest, continues to expand. It has been shown that military recruits are capable of bearing more fatigue when men of maturity. In the United States the average height of males is five feet and nine inches, while that of females is five feet and two inches. In persons exceeding the normal height the chylopoetic viscera do not keep pace with the muscular and osseous system. With persons of smaller stature it is different. They are better nourished, and consequently better fitted for the brunt of life. The full growth of the body is reached in the decennium of life in the male; in the female at a still later period, but, according to Quetely, at the age of twelve the weight of both girls and boys is the same. Considerable deviation in the avoirdupoise of individuals may arise without impairing the prospect of longevity, and these deviations depend on sex, age, habit of life, employment, race, etc. Respiration and life are synonymous. Hence the value placed on a well developed chest which serves to keep up the combustion of the system. The vital capacity of adult human lungs is estimated as varying from 108 to 300 cubic inches.

The decline of life is governed by hereditary and the acquired vigor of the individual. Exhausting influences which effect nutrition will cause decay and premature old age, which is the only natural termination of life. It is recorded in the 14th and 15th Registrar-General's report of the mortality of England that of 395,396 deaths from all causes, 25,996 are said to have died of old age, or 6·5 per cent. This, to American minds, appears to be too much. The experienced physician in this country will not attribute this proportion of deaths to old age—to the wearing out of the machinery unaccompanied by disease. Intemperance has an important influence on longevity. It is very difficulty to ascertain when intemperance begins, but when it has left its permanent impress, then there is no doubt. Venereal excesses and the intemperate use of tobacco, all have their influence in breaking down strong and hardy constitutions.

The consideration of an age is important in reference to this *vis vitalis* of the individual. When persons appear younger than they really are it favors longevity, but the reverse indicates precocious development, and if manhood is reached it is a sign of prematnre decay and want of normal vigor. The occupation of an individual has an important bearing on his prospect for long life. Some employments are more favorable than others. Certain kinds of business develop the taints of disease, inherited or acquired, while others neutrallze, as it were, the inherent tendency to decay. As a rule, cities are not so healthy as rural districts, the rates of mortality often gives country residences eight per cent. the advantages. The modes of life must also be considered. The average duration of lives of thirty-five English sovereigns is 32.03 years, while statesmen's lives are reckoned at 56 years. Dr. Guy found the average of the learned professions to be 70½ years, and of these medical men are classed the highest, a circumstance which is surprising, considering the risk they encounter from exposure to contagion, and from mental anxiety. Among the trades the mortality varies much. Farmers, shoemakers, blacksmiths, carpenters, tailors, and laborers have better chances for long life than miners, bakers, butchers, and inn keepers. Diseased persons can often prolong life by pursuing favorable occupations. Asthmatics are improved by out-door employment, and those with heart diseases in pursuing a business free from excitement, or that does not tax their minds. Excess in drinking is admitted by physicians to be the frequent direct or indirect cause of fatal illness. A constitution enfeebled by the use of alcohol never recovers so readily and fully from enervating diseases.

It is a fact that the longevity of females is not affected by parturition, this statement is proven by the reports of the Registrar-General in England, which embraces a period of twenty-five years between the years 1847 and 1871, during which the number of deaths of mothers to 10,000 children born alive, was 49, or one in 204 parturient women. It would seem from this that pregnancy is women's safeguard. Hufeland iusists, in his "Art of Prolonging Life," that bachelors do not live to advanced age. The same is said of persons without occupations. The experience of most writers confirm these statements.

The procreative powers of man arrive at matnrity at the time of puberty, and are sometimes annulled at an early age by excesses, or by disease. Instances are on record when healthy men have become fathers at an advanced age. Thomas Bailey, in his "Records of Longevity," gives the following: "Thos. Parr, of Winnington, Shropshire, who died 1635, aged 152, married at the age of 80 for the first time, and lived with his wife for 32 years, but during her lifetime, and when 105 years old, he had an illegitimate child by Catherine Milton, for which he did penance in Alderbury Church. After the death of his first wife he married again at the age of 122, and had one child." The vigor of the offspring depends upon the vigor of the parents. It is, therefore, not physiologically desirable that there should be a great disparity of age between father and mother. The writer recollects a case where the father at 85 married a wife whose age was 30, and three children were born to them, all of which possessed the known weakness of intellect of their father, and at the age of puberty were scarcely able to take care of themselves. It seems desirable, in order to favor longevity, that both parents be in full vigor, for if the parents are very young, or very old, the same stamina of constitution is not imparted to their offspring. J. S. B.

—What Springfield does she does well. The great poultry show in that city, in which the Poultry Associations of Massachusetts and Connecticut had the assistance of the Rod and Gun Club, was a great success, due not less to the gentlemen of the club than to the breeders of fine poultry throughout the State, who sent their best specimens, and made a display worthy of the occasion. The efforts of the Rod and Gun Club will next be directed towards their great Beneh Show of dogs to be held on the 27th of April.

—Last week 25,000 California salmon trout, from the Donegal hatching-house, arrived at Easton, and were placed in the Bushkill, under the direction of Commissioner Mr. Howard J. Reeder, of the Pennsylvania Fish Commission.

—There is no better indication of the growth of field sports in this country than the manner in which public holidays are passed. The rifle butts and pigeon traps even at this season attract crowds who before looked upon the matinée as the popular means of amusement.

CAMP LIFE IN FLORIDA.—For those who are prevented from taking their anticipated trip to Florida we can commend this book as a substitute. The graphic descriptions of the most interesting and beautiful part of Florida are only exceeded in interest by the localities themselves. Everybody who is at all interested in the State should have a copy.

—I go to the woods after game; but if the game is not there, I get nuts; if there are no nuts I gather flowers or leaves; if all fail, yet I get health, a little woodcraft, or by grace of heaven, a thought. I am not of those who find that the road is only good to leave behind them.—*Golden Rule.*

—Robert B. Taylor, who resides in Gunpowder Neck, in Harford county, Md, killed the other day on Chesapeake Bay, a swan weighing 25 pounds and 2 ounces, and measuring 7 feet 6½ inches from tip to tip.

—Col. H. A. Gildersleeve, Judge of the Court of the City and County of New York, member of the American Rifle Team of 1874, and Captain of the American Rifle Team of 1875, writes as follows to the Sharps Rifle Company, Bridgeport, Conn.:—

E. G. WESTCOTT, Esq., President:—

Dear Sir: "I have used your different Rifles for the past two years with great pleasure and success.

"I regard them as second to no Rifle in the world for strength and simplicity of mechanism, excellence of finish, and accuracy of execution. No one need have a better arm than they have proved themselves to be in the International matches, at Creedmoor in 1874, and at Dollymount, Wimhledon, and Clandeboye, in 1875.

"Yours very truly,

"H. A. GILDERSLEEVE."

"New York, December 1st, 1875."—*Adv.*

THOMPSON & SON, 338 Broadway, use no sugar of lead in waterproofing their suits. Sugar of lead will not stand washing, and amongst old sportsmen is considered detrimental to health, making them liable to rheumatic attacks. Thompson's suits are guaranteed to be thoroughly waterproof, even after being washed, and are as good and cheaper than any other suits in the market.—*Advertisement.*

The Rifle.

THE N. R. A. PROGRAMME.

The fourth annual spring meeting of the National Rifle Association will open on the 25th of May. Three days will be required in which to complete the matches. The programme is as follows:—

FIRST—DIRECTORS' MATCH.

Open only to directors and honorary directors of the National Rifle Association. Distance, 200 yards; position, standing; weapon, any rifle within the rules; rounds, five, with two sighting shots; entrance fee, $1; prize, the Directors' Championship Gold Badge, shot for annually and held by the winner during the year.

SECOND—SHORT RANGE MATCH.

Open to all comers; distance, 200 yards; position, standing; weapon, any rifle within the rules; seven shots, with two sighting shots; entrance fee, $1. Ten prizes, aggregating $100.

THIRD—MILITARY MATCH.

Open to teams of five from any company, troop, or battery of the National Guard of New York, or any other State or Territory within the United States, to be composed of company officers and privates, certified to be members of the company they represent on March 1st, 1876; distance, 200 yards; standing position; seven counting and two sighting shots, teams to use the rifle their company is armed with; entrance fee, $1 per man. Teams representing organizations armed with carbines will be allowed to use the full shell. Prize, Trophy offered by the State, to be won three times before becoming the property of the organization; other prizes to be subsequently announced.

FOURTH—MID-RANGE MATCH.

Open to teams of five from any company, troop or battery of any State or of the regular army, navy, or marine corps, or rifle club; position, any without artificial rest; rounds, five; weapons, those using regular military rifles to shoot at 500 yards; special military rifles to shoot at 600 yards; "any" rifle to shoot at 700 yards; second class target, 24-inch bull's eye in all cases; each company, troop, battery, or club may send as many teams as they choose, and each team may enter for more than one distance by making a separate entry; entrance fee, $1 per man for each distance; prizes to be hereafter announced.

FIFTH—INDIVIDUAL MATCH.

Open to all comers. The terms are identical with those of the preceding match, except that the competitors will shoot as individuals instead of teams. The system of handicapping having proved unsatisfactory the Board of Directors have decided to give this new system a trial.

SIXTH—LEECH CUP MATCH.

This match is under the auspices of the Amateur Rifle Club and is open to all native born citizens of the United States, and to all resident members of the Amateur Rifle Club, regardless of nationality; distance, 600, 900, and 1,000 yards; position, any without artificial rest; rounds, fifteen at each range without sighting shots; weapon, any rifle within the rules; entrance fee, $1 for members of the Amateur Rifle Club; $2 for all others. Prizes, Leech Cup, to be held by the winner during the year, and a championship gold badge, valued at $50.

SEVENTH—PATRICK HENRY RIFLE MATCH.

Open only to the American team and reserve of 1875, (Dollymount); distance, 1,000 yards; ten rounds, without sighting shots; any rifle within the rules.

CREEDMOOR, JR.—The return match between the gentlemen of the Citizens' and Continental Insurance Companies took place on Saturday, the 19th, and resulted in the defeat of the Continentals by one point, the score being as follows:—

CITIZENS'		CONTINENTAL.	
Name.	Total.	Name.	Total.
F. W. Parker	39	Lloyd Roberts	43
G. W. Jones	38	G. H. Hope	39
J. Donaldson	36	C. E. Tompkins	35
R. Chapman	34	J. W. Oakley	33
J. W. Edwards	34	W. Ellsworth, Jr.	31
Total	182	Total	181

The final match of the Home and Continentals will take place next Saturday.

HELLWIG'S GALLERY.—The twelfth weekly competition in lying position took place at Hellwig's new gallery, 271 and 273 Eighth avenue, Wednesday, Feb. 16th. The winners of the prizes were as follows: B. Ginger, first prize, 45; Frederick Kessler, second prize, 40; R. C. Wheeler, third prize, 20. These competitions take place every Wednesday until the prizes are won.

FOUND.—A Creedmoor badge was found on Clinton street, Brooklyn, and left at Mr. Miley's Gallery, No. 26 Court street, where the owner can find it.

AMERICAN RIFLE ASSOCIATION.—The meeting on the 22d of February, at Glen Drake, was well attended by most of the noted off-hand shots of this city and vicinity. The arrangements were such as to win encomiums from all present, and the liberality of the Association bids fair to add to the numbers of its members and increase its popularity. Three matches were shot, all at 300 yards distance; canvass targets, of the third class. The management was such as to allow of the matches all being in operation at the same time. The subscription match prizes amounted to the sum of $30, divided between the three highest scores. In the all-comers' a gold badge of $25 value was the first prize, a silver badge $15 value the second, and $3 in cash the third. The prizes in the military match were the same as in the previous one. Lieut. Geo. H. Thompson was the officer of the day. Mr. Edward Gay, and Dr. A. Starr, took excellent care of the refreshments and the guests. We are pleased to notice that Sergt. W. H. Madden, of the Twenty-seventh Regiment, N. G. S. N. Y., was the fortunate winner of the first badge in the All Comers' Match. We give the highest scores in match below:—

Distance 300 yards; any rifle; trigger pull, 3 pounds; position, off-hand; 5 scoring shots.

Name.	Score.	Total.
Sergt. F. Backofen	4 4 4 4 4	20
Capt. E. Baker	3 4 5 3 4	19
Sergt. F. Backofen	4 3 4 5 3	19

Conditions—Distance, 300 yards; any rifle; trigger pull, 3 pounds; position, off-hand; 7 scoring shots.

Name and Regt.	Total.	Name and Regt.	Total.
Sergt. M. H. Madden, 37th	22	F. N. DeWitt	20
J. McGlensey	22	T. Duke	19
Lieut. J. A. Gee, 8th	22	T. M. Henderson	19
Sergt. F. Backofen, 47th	22		

Conditions—Distance, 300 yards; military rifles only, state pattern; trigger pull, not less than 6 pounds; position, off hand; seven scoring shots; open to any *bona fide* member of the National Guard.

Name and Regt.	Total.	Name and Regt	Total.
W. S. Bevans, 8th	27	Capt. A. W. Peck, 37th	18
Capt W. C. Reddy, 12th	22	Lieut. J. A. Gee, 8th	19
Capt. E. Barker, 8th	19		

MORSEMERE.—A new competition, to be called "The Off-hand Match," will take the place at this range of the Harris match now concluded. The conditions are: 10 shots off-hand at 300, and ten shots off hand at 500 yards, two sighting shots at each distance. The same rifle to be used at both ranges. Entrance fee, 50 cents for members and 75 cents for others, this match being open to all comers. The prize is a sporting rifle, to be won four times before becoming the property of any competitor.

SYRACUSE.—Competition at Yates' Dragoon Rifle Range for prizes as follows: For the five best strings of five shots each, 110 feet distance, a Barber & Lefevre Creedmoor rifle, valued at $100; for second best, a Smith & Wesson silver plated revolver; for third best, another revolver, handsomely finished. The following are the winning scores:

Name.	Score.	Total.
F. Singer, 1st prize	25 24 24 24 23	120
Charles Hart, 2d prize	25 24 24 23 23	119
M. B. Nicholson, 3rd prize	24 23 23 23 23	115

CALIFORNIA MARKSMEN.—The long-range marksmen of the Summer Light Guard, of San Francisco, Cal., indulged in a little shooting at the distance of 1,000 yards recently. The result is shown below in the strings of fifteen shots each:—

Name.	Score.	Total.
Capt. J. H. Burns	5 4 4 3 3 5 4 5 4 5 5 5 5 5 5	65
J. Robertson	4 5 3 5 5 4 4 5 3 2 3 4 4 2 3	55
D. Watson	4 5 4 3 5 3 5 5 3 3 5 4 4 4 3	60
T. E. Carson	2 4 5 5 3 3 4 3 4 3 4 5 3 4	54

The San Francisco Cadets, Capt. George Bigley, inaugurated their range at San Bruno, by practicing at the 200 yards range, five shots each, with very good results, as will be seen from the following scores, considering that it is only the second time these cadets have fired at that distance:—

Name.	Total.	Name.	Total.
J. Leary	21	G. Johnson	18
J. O. Den	21	F. M. Searcy	17
J. McNamara	20	H. Carrig	17
A. Bennett	19	Capt. Geo. Bigley	17

—The Harvard University Rifle Club had their regular monthly match at the range opposite Mount Auburn, Saturday last. There were eight participants in off hand practice at 200 yards, the grand Creedmoor average being 38.7.

—Mr. Geo. S. Schermerhorn, Secretary of the National Rifle Association, has received a letter from a resident of Austria, who innocently proposes that if the National Rifle Association will pay the passage and expenses to this country of a team representing the Tyrolese, he will undertake to select one. Mr. Schermerhorn has modestly declined the unique proposal.

THE CENTENNIAL MATCHES.—Owing to the impossibility of securing a rifle-range at Philadelphia, for the purpose of contesting the Centennial rifle matches, the Executive Committee of the National Rifle Association has decided to hold the tournament at Creedmoor, Long Island. While we should have preferred seeing the matches shot at Philadelphia, there is unquestionably no comparison between any range that could have been temporarily prepared there, and the permanent arrangements at Creedmoor. The success or failure of the meetings at Creedmoor this summer, rests almost as much with the railroad company as it does with the committees. The joint committees having in charge the final arrangement of the matches comprises the following gentlemen: National Rifle Association, Gen. J. B. Woodward, Col. G. W. Wingate, Col. H. A. Gildersleeve, Gen. M. T. McMahon, Hon. N. P. Stanton, James Gordon Bennett, Gen. Kilburn Knox, Hon. D. W. Judd, Gen. E. L. Molineux. Amateur Rifle Club, E. H. Sanford, George Crouch, G. S. Schermerhorn, Jr., Robert Johnson, A. Alford, W. B. Farwell, Major H. S. Jewell, William B. Conghtry, and Major Joseph Holland.

—The Long Island Shooting Club are about erecting a 200 yards rifle range on their grounds at Dexter Park. Canvas targets to be used.

—The Norwich, Conn., rifle club has decided to accept the invitation to affiliate with the National Association, and has taken the necessary steps to do so.

MILWAUKEE, Wis., February 19th, 1876.

EDITOR FOREST AND STREAM:

Yesterday, the 18th, being our regular practice day, a few of the enthusiastic members of our association proceeded to our range at Wauwatosa to shoot twenty-five shots at 500 yards. The weather was chilly and disagreeable, with a very strong 4:30 wind blowing. Under the circumstances the following scores may be considered very good ones:—

Name.	Score.	Total.
W. B. Sketch	4 5 3 4 5 5 5 5 5 5 5 5 5 5 5 5 4 5 5 5 5 5—124	
E. D. Bangs	5 4 5 4 5 5 5 5 5 5 5 5 5 5 5 5 5 5 4 5 5 5 5—122	
E. Fielding	*3 5 5 4 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 4 5 5 5 5 5—121	
Chas. Turner	4 4 3 3 4 4 4 5 4 5 5 4 4 4 4 5 4 5 5 5 3 3—105	

*Base of shell burst.

The chief point of interest in the above shoot was a contest between the veteran rifleman Sketch, who shoots a Remington gun, and Fielding, who glories in a Sharps. The parties are about as evenly matched as they well can be. The hopes of victory with both resting principally on an accidental bad shot of the other. In this case, the majority of one point for Sketch was gained on the first bad shot of Fielding's. This time the glory falls "where it will do the most good," (for the club) on Sketch. Than whom, a more generous victor, or thoroughbred, modest gentleman, would be very hard to find.

There is considerable interest being manifested now towards our association by the liberal ones of our city. E. H. Broadhead, Esq., President of the First National Bank of Milwaukee, has presented to the club two very elegant field glasses as prizes, one to be competed for at 200 yards, and the other at 500 yards, each to be won three times to become the property of the member so winning it. The competition for these prizes will not commence until the weather becomes pleasanter, in order to draw out all the club. I will send you the scores when the time comes.

WAU WAU.

THE BRITISH NATIONAL RIFLE ASSOCIATION.—The *Volunteer Service Gazette* says that the "Wet Wimbledon" of last year was, after all, not such a failure as might have been expected. The loss was only £800, caused by the absence of the general public. The entrance fees were larger than ever. The N. R. A. Report just issued says:—

"The entries for prizes were very much in excess of those of previous years; the shooting never was better at any of the previous meetings; and although the Council have to announce that the receipts were slightly less than the expenditure, it will be seen that the deficiency arose solely from the great falling off in the attendance of the public, consequent upon the exceptionally unfavorable state of the weather during nearly the whole of the meeting. Had the weather been favorable, there can be no doubt that the meeting of 1875 would, in every respect, have been one of the most successful since, our contemporary continues, the foundation of the Association."

The canvas targets are reported to have worked marvellously well; "not only did they withstand a constant rain, often accompanied with a strong wind, but they were perfectly visible, the marking was most accurate, and the shooting was never stopped for an instant." It was admitted on all hands that the shooting must have been suspended if iron targets had been used during such weather as prevailed at Wimbledon last July. We are glad to see that the Council intend to introduce canvas targets at the extreme ranges this year, though the change will probably render the continuance of long-range scores more complicated.

An arrangement for improving the back sight for rifles has been invented by Mr. S. Hill, of New Street Borough Road, London, says the *Broad Arrow*. Its object is to do away with the haphazard or uncertain aim, and blur from the effects of sun, strong light, and most especially from wind, the sighting bar being extra and traversing on front of old or other ordinary sliding or sighting bar. The top of the same having a reversed V to aim through, this peculiar shape prevents, to a great extent, the sun and light from affecting the aim. The bar is also made to traverse, by means of a screw, either right or left, thus giving a wind guage on the ordinary or back sight flap that is sufficiently open. With this apparatus the firer can always aim dead on his object, at the same time retaining the ordinary open bar and fixed foresight. It can be used on any rifle.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray. Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl.

GAME IN MARKET.—This is the last occasion on which we will have to quote game in our markets which was out of season, or under protection, two months ago. Quail have been in demand, and the price has advanced from $5 to $5.50 per dozen; grouse of both varieties are about the same as last quoted, say $1.50 per pair. Ducks are rather scarce, and slightly higher. We quote: Canvas backs, $3.75 per pair; red-heads, $1 to $1.25; mallards, $1 50 to $1.75; sprig tails, black ducks and widgeon, 90 cents to $1; broad bills, 75 cents; teal, 75 cents to $1; brant, $1 50; geese, $1.25 to $1.50 each; wild pigeons, $2.50 to $2.75 per dozen; hares, 40 to 50 cents; rabbits, 50 to 60 cents.

—Jack snipe have been seen and killed already in the marshes near this city—a good sign of the early approach of spring.—*Alexandria Gazette*, 17.

PIGEON SHOOTING.

Since the withdrawal of the Prince of Wales, and his brother, the Duke of Edinburgh, from the leading shooting club of England, the sport appears to have fallen into disfavor in that country, and the best pigeon shots go to the Continent for their amusement. The little principality of Monaco is now the great European center of "sport." Since the withdrawal of the gambling licenses from Baden-Baden and Homburg, it has become famous as almost the only place where public gambling is permitted, and as an additional attraction the authorities have organized these international pigeon matches. The last, which was shot on the 25th and 26th of January, was truly international in character, representatives of England, Germany, Belgium and France, being respectively first, second, third and fourth. That was a nice little prize won by Capt. Aubrey Patton, the Prix du Casino, a work of art valued at 3,000 francs, and nearly 20,000 francs in money; or, to put it in round numbers, about $4,000. To win this, Capt. Patton killed five birds at 29 yards rise, and six at 29½ yards, the conditions being, 5 birds at the first distance, and seven at the second, the winner being the only one who killed eleven out of the twelve, notwithstanding there were seventy-four competitors. Capt. Patton won this same prize last year, and at the present meeting he also won the Grande Poule d'Essai, another valuable prize, and was also successful in a match for £100, with the Baron Tschirschky, who was second to him in the principal match. One of his birds was retrieved while on the wing, by a clever dog named Nell, having been hit slightly hit, and just saved a tie.

PIGEON SHOOTING AT RYE, N. Y.—At Beck's Central Hotel, on Saturday, February 19th, several matches took place. The first was a match for $50, 15 birds each, 21 yards rise, 80 yards boundary. The score was as follows: Josiah Buckley, 0 1 1 1 1 1 0 0 1 0 0 1 0 1 0, killed 8, missed 7. Wm. Whithers, 1 0 0 1 0 1 0 1 0 1 1 0 0 1 0, killed 7, missed 8. Sweepstakes, 5 birds, 21 yards rise 80 yards boundary, $5 entrance:—

Name.	Score.	Total.	Name.	Score.	Total.
A. Theal	1 0 1 1 1	4	F. Davis	0 1 1 0 0	2
P. Hunt	1 1 1 0 0	3	Jas. Govers	1 0 0 0 0	1
A. Wilkinson	0 1 1 1 0	3	R. Benedict	1 0 0 0 0	1

Sweepstake same conditions:—

Name.	Score.	Total.	Name.	Score.	Total.
A. Wilkinson	1 0 1 1 1	4	P. Hunt	1 1 0 1 0	3

LONG ISLAND.—The members of the Long Island Shooting Club assembled in force, on Tuesday, to shoot for their club cup. The conditions were 7 birds each, 25 yards rise, nineteen entries. After a tie with Mr. Gildersleeve the cup was won by Mr. T. J. Thomas, who killed six birds in the first round. We have not space for the scores in full.

TOURNAMENT AT DAVENPORT, IOWA.—The largest gathering of sportsmen ever held in the State occurred at Davenport, Iowa, last week, no less than twenty-two cities being represented. Capt. A. H. Bogardus, the champion, was present, and his decisions as referee gave general satisfaction. The shooting lasted through four days. On the first a sweepstakes with 33 entries was shot, S. F. Gilman and W. Barker tieing on 8 birds each, the former finally winning first prize, James Joles the second, Henry and Charles Young dividing the third, and John and Louis Smith taking fourth and fifth.

On the second day there were 36 entries for the $10 sweepstakes; eight tieing on eight birds each; on shooting off, Capt. Bogardus outlived all opponents and took first prize. As the absurd plan of shooting out all who tied in the first round was followed, Mr. S. F. Gilman who had killed seven birds, took second prize, while seven men who had

each killed eight birds on the first round, got nothing.

On the third day there were 46 entries for the principal match, the rules being the same, eight single birds at 21 yards rise The first money, $122, was taken by W. F. Swearingen; the second, $102, by H. Smith; the third, $82, by W. Barker; the fourth, $62, by L. Schmidt; the fifth, $42, E. Dorwart.

On the fourth day there was an exhibition match of Capt. Bogardus, and a sweepstakes with 40 entries, in which the first money was taken by J. C. Smith, the second money by C. Schuck; third by Geo. Wells; fourth by Jas. Goshorn; and fifth by L. Frouk.

SAN FRANCISCO, February 14th, 1876.

EDITOR FOREST AND STREAM:—

Messrs. Eyre and Robinson shot a match at Bird's Point, Alameda yesterday, for $100; conditions being 16 single birds at 21 yards; and 8 pairs at 18 yards. The result was as follows:—Mr. Eyre—single birds, 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—16. Double birds—10 10 11 10 10 11 11 11—12. Mr. Robinson—Single birds—1 1 1 1 1 1 1 0 1 1 1 1 0 0 1—13. Double birds—11 11 11 11 10 10 00 11—12.

Subsequently Messrs. Kennedy and Robinson shot a similar match at 10 single and 5 pairs of birds which was won by Mr. Kennedy. A match has been arranged for $250 a side, between Mr. Robinson and Mr Orr. L.

ALLEGHANY, February 18th, 1876.

EDITOR FOREST AND STREAM:—

An exciting pigeon match was shot at Friendship Park on the 18th inst., in which there were thirty three entries. The conditions were 10 birds each, 21 yards rise. Messrs. Diem and Klonitz tied on 10 birds for first prize and divided. Messrs. Bloor and C. B. and T. B. Lovett divided second money. Mr. Marshall took third and Mr. Born fourth. Capt. Bogardus was present and gave an exhibition shoot. D.

[We regret that the crowded condition of our columns prevents us from publishing the full report sent by our correspondent.—ED].

ALLEGHENY, February 17th, 1876.

EDITOR FOREST AND STREAM.—

A pigeon match took place on the 16th inst. between A. H. Bogardus and C. B. Lovatt, at Friendship Park, Pittsburgh. One hundred single birds. The weather was cold with strong wind and spitting snow. Bogardus killed ninety-one, and E. B. Lovatt killed eighty-six. A. D.

"FINE" GUNS vs. "CHOKE-BORES."

HALIFAX, N. S., Feb. 2d, 1876.

EDITOR FOREST AND STREAM:—

In looking over several of the latest issues of your excellent paper—the *Field* of America—I gathered from the numerous communications upon "choke-boring" that the subject has excited the same interest and attention in America as it has done in England, and I therefore send you an account of the results of some experiments I have lately carried out, thinking it may prove of interest to many of your readers.

The gun with which I experimented was a 12-gauge, modified choke, by the celebrated makers J. & W. Tolley, of Birmingham, England, and had been lately sent out by them to a friend of mine. The gun against which I pitted it was also made by Messrs Tolley, having been built for me some eighteen months ago by them. It is not, however, a choke-bore, but a fine, 10-gauge of the very best quality, and the most powerful weapon of its gauge and comparative weight it has ever been my lot to possess during a long and varied experience of guns and gunnery. I may mention, to show its power, that, although but 6 lbs. 5 oz. in weight, I have, with a charge of 3 drachms Curtis & Harvey, and a full ounce of No. 8 shot, frequently killed English hares and rabbits, ferocious of life as they are, when fully sixty yards away. I had, therefore, in this gun, an excellent standard by which to test the new system of boring. The charge was the same for both guns; the shot, No. 6 English; the distance, 40 yards; the target for pattern, a 30-inch circle, and those for pattern some pads of 36 sheets I had made myself from some Pettit paper I had brought out with me from England. I will not go into the details of the trial from a fear of trespassing too much upon your space, but shall confine myself to stating the results at which I arrived, and the conclusions I have deduced from them. I found that the choke bore surpassed the fine gun in pattern and penetration, so as to render it superior; but not markedly superior to the latter in range. I found also that the charge of the choke bore was thrown with remarkable evenness upon the target—in fact, some of the patterns made were specimen patterns. Bunches of shot were conspicuous by their absence, and yet there was scarcely a spot on the target where a humming-bird could have escaped unstruck. This regularity of pattern is of course an unmixed gain. After a careful consideration of this trial I have come to the following conclusions, viz:

First—That the choke-bore is superior to the fine gun in pattern and penetration, and therefore, in range, but not to any very great degree.

Second That it is not worth while for any sportsman possessing a fine gun of known power to have it choke-bored, or to supercede it by a choke bore.

Third—That an extreme choke is not to be recommended for general game shooting, but might be useful for special work at long ranges.

Fourth—That large shot can be used in the second barrel of a choke-bore with advantage.

Fifth—That a well-made modified choke, say of 170 to a 180 pattern No. 6 shot, English, and 33 to 35 sheets penetration with 8 pellets, possesses the advantages, without the disadvantages, of both systems of boring.

I may add, in order to prove that in giving you my views upon the above subject, I am not speaking entirely "without book," that, during a sporting experience of twenty-two years, I have owned or used guns by almost every "crack" English maker, and have tried scores of weapons, and fired hundreds of shots at the target, the shooting power of guns having always been a matter of great interest to me.

FOREST AISLE.

THE ENGLISH GUN TRIAL.

LONDON, Eng., Feb., 1876.

EDITOR FOREST AND STREAM:—

The editorial to Mr. Pape's letter on the English gun trial in a recent issue of your paper requires a few remarks and some explanation, to enable your readers to arrive at a correct conclusion. Had Mr. Pape's letter appeared in an English sporting paper, I would not have troubled to reply, as his extraordinary conduct at the late *Field* Gun Trial is well known, and generally condemned by our English sportsmen. However, as he has thought proper to publish his letter in the American sporting papers, I think it nothing but just that the American sportsmen should know a few facts connected with the late *Field* Trial, (in which Mr. Pape played such a conspicuous part), and your readers will then be able to judge for themselves.

The first we heard of Mr. Pape on the choke-bore question was, that such close and strong shooting could not be done, and that it was a gallery dodge. When this was exploded by the Editor of the *Field* coming to try the guns in the open, and having proved that such was not the case, Mr. Pape then comes forward, and claiming the system as his own, declaring at the same time that he had made better shooting years ago. Mr. Pape's charge against the soldiers who helped to count the targets is both cruel and unjust, for he well knows that the soldiers were there only part of the time during the trial and then merely assisted in the work, by counting the shots on the targets outside of the centre pads, and the count was finally checked by others of the *Field* staff. The penetration of all the guns was decided by Mr. Cox, of the *Field* Committee. All this was done in the presence of the competitors. As to the Wear and Tear Trial, Mr. Pape is again misrepresenting the fact. He well knows that the winning gun was not entered in the Wear and Tear Trial; this was announced in the *Field* at the time—it was a fresh gun in the unfinished state. Mr. Baker's gun was the only one used in both trials, and this gun was fourth in the trial for the cup, and we beat this by 37 points in the wear and tear trial; the conditions, however, in this trial were totally different to those in the trial for the cup. This wear and tear trial extended over twelve days in wet and windy weather. By comparing the performance of Mr. Baker's gun in both trials it can be seen that there was an apparent falling off of about 70 points; this was owing to the altered conditions. Now, as to Mr. Pape's gun being disqualified as being dangerous to life, the plain facts of the case are these: The parties who watched the targets discovered a hole the size of a wad through the target immediately after Mr. Pape's gun had been fired. Upon investigation it was found that a round hole had been punched through the iron target the size of a 12-gauge wad, and about twelve shots lodged in the bottom of the hole embedded in the wood backing; some hollow wads were picked up that had evidently been loaded with shot. Each competitor having found his own wads the committee called a meeting of the competitors, and these addressed Mr. Pape as follows, explaining that a number of wads had been found that had been loaded with shot, and there requested that Mr. Pape would allow his gun to be shot over again by the committee. He promised to do so the next day, but failed to show up. He being suspected of having used the wads, they gave him the opportunity to clear up the matter, if he could, but he failed to do so. No other competitor was asked by the committee to allow their guns to be shot over again but Mr. Pape. Any one who cares to look over the *Field* reports and correspondence upon the subject, will find what we state to be correct. Mr. Pape is fond of charging people with fraud. He proves himself in this very letter, in reply to "Fair Play," that he is himself guilty of unfairness, if not actual fraud, by entering his own guns in the name of Davidson, contrary to the published conditions of the *Field* Trial. We have now done with Mr. Pape entirely, and we decline to accept any challenge coming from him. He evidently cannot bear defeat. W. W. GREENER.

[This correspondence is now ended, as far as we are concerned. Our columns are open to gentlemen who may desire to discuss any subjects relating to guns or shooting, but they can no longer be the medium for manufacturers' bickerings and recriminations.]

SOME NOTES.

DULUTH, Minn., February, 1876.

EDITOR FOREST AND STREAM:—

I have seen nothing of late regarding the cartridge question, and suppose it has been settled in favor of the cartridge and against the gun. On my annual shooting and fishing trip to the western part of this State last fall, I took three hundred U. M. C. Co.'s cheap brown paper cartridges, all of which were used by myself and an associate. I used about two hundred, but one of which missed fire. In my companion's gun several of them missed, but were afterward exploded in my own gun upon first trial. The guns were from same maker, but we had noticed that there was a difference in the chambers. The theory of the Superintendent of the U. M. C. Co., claiming that the trouble regarding the non-explosion of cartridges arises from the different sizes of chambers, is conclusive to my mind. We found the same results in using Ely's blue cartridges. To my mind, the coming cartridge is yet to be invented, unless Shuttevant's patent with moveable anvil, fills the bill. In theory, it seems to be the one I have been longing for, and trying to invent, but which, owing to my lack of inventive and mechanical genius, I have been unable to do. I am talking about paper shells, for I have been converted to them against my inclination.

I think I have found a method of carrying shells much superior to my belt or vest I have yet seen or read of. Having occasion to start suddenly, for a few hours' shooting, I had no time to don my shooting rig, so went in store clothes, having time only to snatch my gun and magazine, (or sachel), which I always keep in readiness for a sudden call. When we reached our grounds and started for the dogs, who were at point, I was puzzled as to the distribution of my cartridges, and hastily put them around in my different pockets. I found the change pocket in my coat answered the purpose better than anything I had struck, and I at once had my shooting coat made with such pockets—six on each side—two stories, with three pockets in each story. The pockets are just as deep as a paper shell before crimping—the breadth just sufficient to place three shells side by side, easily. If your shells are not crimped, the last one in will not fall flat, and you never will find your shot charge loose in your pocket. If they are crimped, as they ought always to be, the last one of the three will, of course, lie flat, but that will do no harm. Any maker of good shooting coats is at perfect liberty to avail himself of the hint. I will send my size upon application.

One more note and I am done. I have found the Western part of Minnesota the finest sporting grounds I ever hunted over. I have tramped in Northern Illinois, Southern Wisconsin, through Iowa, and Eastern Nebraska, but am much better pleased with Western Minnesota than the other localities. Game may not be plentiful enough for market shooting, but for true sport it fills the bill for me. While chicken shooting, we always find more or less ducks in the numerous ponds and sloughs, to give a pleasant variety in a day's shooting. Black-bass are abundant in most of the hundreds of beautiful lakes, and the charming scenery is not the least enjoyable feature connected with sporting in said locality. The last season I had the pleasure of meeting some of your New York and New Jersey sports on these grounds who had never before shot in the West, and they were wonderfully pleased, as well they might be. Come and see for yourself. CHICK.

SHOOTING AT CURRITUCK.

NEW YORK, Feb., 1876.

EDITOR FOREST AND STREAM:—

"Well, Lon, everything in the boat? Both guns, lunch, and bottles of ——water?"

"I reckon so." "Well, call Mary. Here she is," and off we go, drifting out into the bay, hardly a breath or wind, and warm as a June day, although it was the 20th of November.

Lon looks dubious. His face says plainly, "not much show for birds to day. Weather too warm, and when there is no wind, ducks are lazy and do not fly." Lon starts a white ash breeze, and the little boat skims along toward a small island far out in the sound. Ducks, geese, and swan lay in great numbers half a mile outside of the island, perfectly motionless—too sluggish even to eat. Occasionally a solitary duck starts off on a little skirmish, darts around the island, and then off to the north; and for those stray and misguided birds we conclude to put out decoys (after a learned discussion about the weather) on the northwest point. Lon thinks that if the wind blows at all and don't blow a little from the west, or a little south, or perhaps north of west, it will certainly blow easterly, or south, or north of east. Hence the selection of the northwest point of the island, and any one can see at once the wisdom of our choice. While Lon was putting out the decoys, Mary and I were busy fixing up a blind. As soon as I had nicely thatched up a nice front, Mary would come dashing through it, taking the bulk of it with her, and tearing down the balance. So I tied my Mary to a stake, got the rubber blanket spread and the guns out (a Scott breech loader, and a Moore and Harris muzzle-loader, both No. 10). Lon has stowed away the boat and we crawl in the blind with a good stock of patience, when comes a "sh-e-e-s-h" and "lie down, Mary," from Lon. I look through the blind and see a canvas back coming nicely for the decoys, little thinking what is in store for him. He settles over the decoys and up I jump with the Scott, and away goes the bird. Lon sings out, "hold well ahead of him." He was now going like chain lightning; fingers tighten on the trigger and down comes bird, feet up, stone dead, Mary jumps through blind, bird soon in hand, with scarcely a feather ruffled, and certainly a good 3½ pound duck.

I can be quite particular about that poor miserable duck, as that shot was to last me for four long mortal hours. What few birds flew seemed to know the fate of the canvas-back, and gave us a wide berth. We tried everything "for luck" but all to no purpose, and finally, in sheer despair, all fell asleep, Lon, myself, and the dog, sandwiched in the blind, the sun pouring down on us, and no gentle zephyrs to cool our cheeks; no honks of geese; no bark of the swan, or whistle of the duck to disturb our rest. How long I slept I know not, but I was awakened with a cold shiver going through me. The sun still shone, but the atmosphere had certainly grown colder by ten or fifteen degrees. I looked over the blind and saw to my delight a large black cloud bank, completely covering the northern horizon. A little breeze had already started up, and a commotion seemed to exist in the rafts of ducks, geese, etc., out in the sound. I woke up my companion who, on scanning the horizon, exclaimed, "In less than twenty minutes you will see the loveliest flight of birds you ever witnessed."

The indications of a young hurricane seemed certain; got rubber coats and hats ready, took in most of the decoys, and awaited the event. In less than twenty minutes it did come! Everything fairly jumped—spray flying, rain beating in our faces, the water a seething, boiling mass, ducks, geese, etc., on all sides, the immense flocks broken no, flying, and drifting by in small bunches, decoys going to the leeward at a fearful rate. And now the slaughter commenced. I put my gun on a pair of canvas-backs that decoyed splendidly; killed both and cut another out with second barrel; then the right and left barrel of the muzzle-loader at five geese, two knocked out with first and one with second, Mary going crazy—too many birds down at a time! Right and left at a mallard not thirty yards off—did not touch a feather. "Old man, you are getting excited," says Lon; got a small bottle of "Mumm" ready to shoot down my throat, which settled things. Rain coming down in torrents—no matter, blood boiling—haugt bang! successantly for three quarters of an hour, until the breech-loader was so hot that it was not safe to shoot. Cooled it off by using the muzzle-loader. Birds still coming, wind and rain increasing, and it becoming a serious matter about our making land before dark, some four miles distant. On counting game we had 49 ducks and 5 geese; 27 of the ducks were canvas-backs, 11 were red-heads, and balance mallard, wild-goose, and black ducks. For the time that the shooting was done it was the best I ever had in my ten years' experience at Currituck. One of our party, who laid upon a small bit of sedge grass, bagged sixty-two at the same time.

A great deal has been said and written about the shooting at Currituck but my experience has been that so much depends on the depth of the water and state of the wind, that it is simply a stroke of luck about hitting the right time to go. In the ten years that I have visited there, only two have brought what I call good shooting, although I have been satisfied, as the climate is delightful and the surroundings pleasant. The water does not rise and fall with the tide, but is subject entirely to the wind. Water is brackish, and great quantities of wild celery grass abounds, which is the attraction for the ducks.

C. H. R., Grand Hotel.

New Publications.

BOOKS RECEIVED.

THE AMERICAN KENNEL AND SPORTING FIELD. By Arnold Burges.

We have received the advanced sheets of Mr. Arnold Burges' new sporting book, published by J. B. Ford & Co., of this city. From a brief examination of the work, we are convinced that it is admirably adapted for the requirements of the field sportsmen of this country. His suggestions as to breeding, raising, and breaking dogs for field purposes, if strictly followed by shooters who raise and break their own dogs, will be of great service to them. In England, we believe, setters and pointers are rarely need to retrieve the game shot to them. In this country, however, the value of such dogs are justly considered much greater, when broken to this accomplishment—and in Mr. Burges' book will be found the same rules for thus breaking them, as we were taught by a German gentleman named Cober, who resided in Philadelphia fifty years ago, and it is a good one. And then, too, we find in this work a long list of pedigrees of some of the most prominent dogs imported and bred in this country, which will be found of considerable value to future breeders.

We entirely agree with our friend Col. Skinner, the *ancient* Field Editor of the *Turf, Field and Farm*, when he says he has often thought that too much stress was laid on color by importers and others. The Col.'s head is level upon this subject, and from his very large experience in the matter of field sports, his opinions are entitled to consideration; for when we commenced shooting and selecting dogs for the purpose, some fifty years ago, the Col. was looked upon as good authority in all matters pertaining to fur, fin and feather; and Mr. Burges, too, we are glad to find, is free from prejudice against any particular strain or color of dogs.

Taking the work altogether, we consider it well worthy of consideration from all field sportsmen. The book itself is handsomely gotten up, and, as an addition to the sportsman's library, reflects great credit upon the publishers. The illustrations comprise portraits of celebrated dogs from the kennels of Mr. Chas. H. Raymond, Mr. N. Saltus, Mr. Luther Adams, and Dr. Strachan.

DON, THE POINTER.—The animal in question was named Don, and was, in his master's opinion, the "prince of pointers." His scent was extraordinarily keen. For example, one day, when out shooting, he suddenly came to a point, and stood like a rock. His master went up to him; but no game rose, and still the animal continued to point. His master walked on in the indicated direction, until he was stopped by a stone wall, and on looking over it he saw a hare closely crouched to the ground. The keen scent of the dog had detected her in spite of the intervening wall. As often happens, birds got wild towards the end of the season, and used to rise well out of shot. Now Don knew the range of the game as well as his master, and invented a singularly ingenious mode of literally circumventing the birds. His peculiarly keen scent enabled him to detect them at a considerable distance, so that they would not be afraid of him. Instead of going directly toward them, Don used to circle round them, gradually contracting his lines until he came within range. He would then look back at his master, as if to say, "It's all right, we have them now;" and so they had.

STRUCK BY A SWORD FISH.—The brig P. M. Tinker, which lately put into Norfolk for repairs, was found upon examination to have the sword of a sword-fish broken off in her bends, about fifteen feet abaft the fore foot. The fish, in striking the vessel, must have come with great force, as the sword penetrated the copper sheeting, a four inch birch plank, and through the timbers about six inches; in all about ten inches. It occurred on the morning of the 23d of December, when the brig was eighteen days out from Rio, and in the neighborhood of Cape St. Roque.

—A York county marksman is engaged in shooting crows, and thinks it a good cause. The other day he fired into a flock, and with two loads killed sixteen.

New Articles for the Centennial Year.

Chapman's German Propeller, Decoy Bait, Trolling Pole, Line Holder, and Harpoon Combined.

State Kind of Fish to be Taken.

A Liberal Sample sent for Trial on Receipt of Money.

Also, the Minnow Propeller, Bass, Boss, Reversible, Georgia, International Minnow, and Spring Baits.
No agents employed. To be had of all first-class dealers in Boston, New York, Chicago, Detroit, Philadelphia, Pittsburg, and Montreal.

Rods, Reels, Hooks, Lines, Etc., at Lowest Rates. Also, Chapman's Electro Silicon Polish.

Enclose stamp, for Illustrated Catalogue, to

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. B. Lamberton, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial no not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

SUBSCRIBE FOR THE

SCIENTIFIC FARMER.

A 16-Page Quarto, issued monthly, and full of original reading matter. It is devoted especially to science, as applied to agriculture, and is the only journal in the world published with this avowed object.

It records all true progress in agriculture, and the latest results of scientific research. Chemistry, botany, veterinary practice, natural history, farm mechanics, rural art and architecture, rural law and entomology, are all prominently considered in its columns.

AMONG ITS CONTRIBUTORS ARE:

President W. S. Clark, of the Massachusetts Agricultural College, who has few equals as a writer on scientific matters.

Prof. C. A. Goessmann, who is acknowledged to be the first agricultural chemist of America.

E. Lewis Sturtevant, author of the "Ayrshire Cow," the "National Ayrshire Herd Book," &c.

A. S. Packard, Jr., editor of the "American Naturalist," and State Entomologist of Massachusetts.

Prof. N. Cresy, who is one of the foremost of our veterinarians, and is State Veterinary Surgeon of Connecticut.

Prof. Levi Stockbridge, whose experiments in cropraising, by special fertilizers, have created astonishing public interest.

Jos. N. Sturtevant, Esq., South Framingham.
Richard Goodman, Esq., Lenox.
Prof. J. Wilkinson, Baltimore.
Prof. H. W. Parker, Massachusetts Agricultural College.
Prof. S. T. Maynard, Massachusetts Agricultural College.
J. N. Bagg, Member of State Board of Agriculture.
D. P. Penhallow, S. B., Amherst.
AND MANY OTHER WRITERS OF NOTE.

Subscription price, only ONE DOLLAR a year, in advance. Postage free.

Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, now model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressely for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.
These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misafires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fast like moveable anvil made of steel. The nickle cone also prevents misafire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2½ to 3¼ inches.
Shells and Loaders, and description Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.

From Captain Bogardus, Champion Wing Shot of America.
MESSRS. GEORGE E. HART & CO.,
Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,
may13-1y A. H. BOGARDUS.

THE
PAPER STEM PIPE.
Just the Thing for Home and Camp Use.
Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by
J. H. Hubbard,
Selling Agent, Cambridge, Mass.

Orange Sporting Powder.
ORANGE LIGHTNING POWDER,
The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.
ORANGE DUCKING POWDER,
For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.
ORANGE RIFLE POWDER,
The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ½ lb.
All of the above give high velocities and less recoil than any other brands made.
BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.
SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.
LAFLIN & RAND POWDER Co.,
21 Park Row, N. Y.
Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

DITTMAR POWDER
MANUFACTURING CO.
MY NEW IMPROVED POWDER can now be loaded from an ordinary powder flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR,
Neponset, Mass.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder.
Hazard's "Electric" Powder.
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*
Hazard's "American Sporting."
Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.
Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.
Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs., and 1 lb. canisters. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.
SUPERIOR MINING AND BLASTING POWDER.
GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.
The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

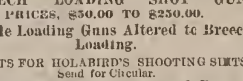
CHAMPION GUNS OF ENGLAND
PAPE'S
Unrivalled SportingGuns.
Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.
1875. 12-Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score raise counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.
1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.



1875. Long Range, 60 yards, Choke Bores.
1st—Pape, Davidson
60 yards, Long Range, Sporting Boring.
1st—Pape, Davidson
The Pape champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1⅛ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.
1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address
NORTH OF ENGLAND GUN WORKS,
Newcastle on Tyne, England
Dec2 NO AGENTS.

jy1 Birmingham, England

J. D. DOUGALL'S
EXPRESS SHOT GUNS.
(Title registered.)
SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Charge, 30 inches; 200 pellets; average, 19½ penetration, 27. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 130, and penetration 20, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to
59 St. James's Street London.

Gun and Rifle Manufacturers,
Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loador and INDEPENDENT EXTRACTOR.
The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold gripe now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.
Drawings of action and stronger will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.
Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.
NO. 25 SOUTH CASTLE STREET,
LIVERPOOL,
ang26-tf Established 1790.

W. W. GREENER'S
DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 32 competitors with 68 guns, also winning in all the other classes for the improved system of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaran, Williams & Co., Agents, St. Louis, U. S. A. Address
W. W. GREENER,
St. Mary's Works, Birmingham, England.

The Kennel.

STUD ENGLISH SETTERS, FROM Llewel'in's Kennel. Imported Field Trial Setters LEICESTER and PARIS. These celebrated prize winners will be allowed to serve bitches, either native or blue blood, at $50 each, gold. For pedigree, etc., address L. H. SMITH,
feb24 3m Strathroy, Ontario, Canada.

FOR SALE—A GOOD, STAUNCH, thoroughbred, well-broken Setter of the Gildersleeve strain; perfect retriever, and fine nose; color orange and white; price $100. Address H. S., at this office. feb24 tf

For Sale.

A first-class, thorough broke Pointer, coming three years old. Inquire at Forest and Stream office. 11

Champion Field Trial Blood.

Any American wishing to import the best English Pointer blood can do so, from the Drake or Belle strain, by applying to

R. T. LLOYD PRICE,
Rhiwlas, Bala, N. Wales, England.

This strain of pointers are not sold in England, and have produced more winners in the field than any other blood; in fact, they are to pointers what Mr. Laverack's breed are to setters. feb24 2t

FOR SALE—FOUR FULL-BLOODED Beagle Hounds—Three dogs, two years old, and one slut, four years old; all well broken; slow and close trackers; warranted.

J. T. KNIGHT, Jr.,
feb24 2t Christian, Lancaster Co., Penn.

SPRATT'S
Patent Meat Fibrine Dog Cakes.

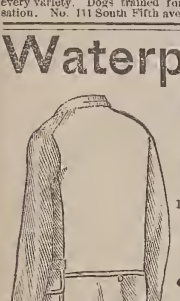
They contain meat and that anti-scorbutic fruit the date (the only substitute for fresh vegetables), and the exclusive use of which in the manufacture of dog food is secured to us by patent; they will keep dogs in perfect condition without other food, and obviate worms. Every cake is stamped "Spratt's Patent." Be sure to observe this. For sale by F. O. de LUZE, 18 South William street, New York, in cases of 1 cwt. feb17 2t

THE NEW YORK KENNEL CLUB have still two setter pups, four months old, for sale, by Dr Strachan's Don II., out of Mr. James Gordon Bennett's imported bitch Jessie; very handsome, red, and red and white; $75 for the brace. Apply to WM. STAPLETON, 49 East Twenty-third street, N. Y. city, or at this office. feb17 tf

PURE BRED SETTER DOGS AND bitches, broken and unbroken, and setter and pointer whelps for sale. LOW for cash. Address AMATEUR, Delaware City, Del. Dec23 tf

DOGS TRAINED.

SETTERS AND POINTERS TAUGHT to Retrieve, Point, Hunt, Charge, To-Heel, Hie-on, To-ho, and controlled by hand and whistle, for $50. Extra field practice, $50. Tricks taught. Dogs boarded for $6 per month. FRANKLIN SUMNER,
Brush Hill Road, Milton, Mass.
P. O. Address, Blue Hill, Mass.
Reference: Wm. R. Schaefer, gunmaker, 61 Elm street, Boston. nov18 6m



HENRY GARDNER, M. D., HAS CONSTANTLY on hand and for sale, medicines adapted to the cure of all diseases. Dealer in sporting dogs of every variety. Dogs trained for reasonable compensation. No. 111 South Fifth ave., N. Y. Oct 22

Caleb Loring.

IN a late number of the FOREST AND STREAM I find an admirable article on the late Caleb Loring, a true-hearted man, and the most renowned among Eastern sportsmen; and as its author hopes that other similar reminiscences may be volunteered, the present writer being for some years an associate with honest Caleb, wishes to add his tribute to the memory of his old friend.

Under the sod, dear Cale! That strong right hand that pulled so well the matchless oar and the fatal trigger, now but poor dust and ashes! When we think of friends departed, how vividly flash back upon our recollection, their very look, smile, step, and gesture! The tone of their voice, the ring of their laugh, are again audible to us, as if but moments, not years, had intervened.

Several years since, in the good old city of Boston, a few lovers of field sport formed a mutual association that they might often meet together and talk over the pleasures of rod and gun, and contrive ways and means for the enactment and enforcement of game laws. The club consisted of some twenty members, including officers, among whom were the late Capt. Henry J. Sargent, and Col. Fletcher Webster, "dead on the field of honor." Caleb Loring was one of its most active members, and here we first made his acquaintance. He was then well-known as a most expert sportsman, unrivalled in the pursuit of game and the handling of rod and gun. The club then occupied a handsome room in a large building at the corner of Summer and Washington streets, which was decorated with painting, and supplied with a billiard and card tables; no liquors, and no betting permitted. A good fire always welcomed one in the winter days, and the light of gas made cheerful the evenings. The club had also a convenient building of several rooms, constructed in the city, which was placed in pieces upon the cars, conveyed to the shores of Scarboro River, in the State of Maine, and there erected. This house was thoroughly built, and made secure by iron doors and window-shutters, and the key of it was always at the command of any of the members, who wished to enjoy duck, geese, and bay-snipe shooting; and very many hours of social pleasure were enjoyed under its humble roof.

One day, early in the month of April, Caleb came to the writer to propose a trip to the "shanty." He said that the Scarboro River was free from ice and that the geese and ducks were there in great numbers, and suggested that we should provide provisions and ammunition sufficient for a few week's consumption, and go forthwith to our shooting ground. This tempting proposal was at once acceded to, and at the dawn of the next day we were rolling through Washington street in a carriage filled with the *impedimenta* for our campaign. After a ride of ninety miles, the cars deposited us at a little depot, within a few miles of our shanty; and just at the dusk of evening we stood upon its piazza. It was not a cheerful scene. A cool Northeast breeze swept drearily across our river, and as it moaned through the dead, yellow salt grasses of the meadows, gave us but inhospitable greeting. But soon the rusty old door creaked upon its hinges, the iron bars were removed, the window-shutters thrown back, our guns and stores deposited in the parlor and kitchen, good fires blazing in our stoves, the evening lamps filled and lighted, the coffee pot and frying pan in full operation, and we, ourselves, made comfortable and happy after a substantial meal, in the smoking of the evening pipe. Our next business was to drag out two of our little boats from the boat-house, deposit in them a proper set of decoys, and launch and secure them, all ready for service in the morning. This done, we ascended through our trap door to the large sleeping room, which was provided with a dozen double bunks, with ample supply of blankets. Before break of day Cale was out of his nest, called me, and we descended to our little parlor. Coal was freshened up in the stove, coffee was disposed of, and then taking our guns, we stepped into our boats and rowed away in the dark, each for our selected shooting place. When sufficient light permitted, we set out our decoys and continued to shoot until ten o'clock, when we returned to the shanty, cooked our dinner, and after a good smoke, rowed out again to our decoys and continued the sport until dusk, when we returned home; enjoyed our supper, and then retired early to rest. This was about our daily routine for several weeks, except in very stormy weather, at which time we remained at home, employed in overhauling boats, decoys, and ammunition, and in reading, writing, chatting, and wishing for good sport on the morrow.

In all these sports, Cale exhibited superlative skill, not only in cutting down passing fowl, but in *approaching* them in his shell of a boat. This craft was cunningly trimmed on its edge with salt grass, and as it was almost even with the surface of the water, it was a common practice with him to *scull* noiselessly within fair gun-shot of a flock of geese, or of feeding ducks. He would lie flat on his back in the boat and propel it with a short paddle, passing through a hole in the stern of the craft. This he would do so skilfully, that I could not detect his sculling-hand project above the rim of the boat as he moved upon his game. So expert was he in cutting down a swift-flying bird on the wing, that I can readily credit the account of his killing, on wager, ninety-four woodcock out of a hundred; forty-one of which were got consecutively, as were also thirty-eight. Capt. Bogardus could have hardly excelled this shooting, nor could Frank Forester have done better. By the way, the latter splendid shot and writer reminded me of Caleb in many respects. They were of about the same (middle) size, both of dark complexion, and black hair and eyes; both of sinewy mould and energetic action. Both had great powers of endurance, defying wind and weather; both were prompt with the gun and quick with the trigger. Both were enthusiastic lovers of the gun, ready at joke and repartee, genial comrades; and Cale, at least, was ever in good spirits and kindly humor; never losing temper or equinimity, under adverse circumstances. We first became acquainted with Herbert at the office of the *Spirit of the Times*, in Porter's time, and though we conversed with him on rod, gun, and game, we had not the pleasure to be out with him in the field as he had but little prediction for wild fowl shooting. His choice sport was, with the help of a good trained dog, to hunt up quail, woodcock, partridge, and prairie fowl, more especially the latter.

As a specimen of Cale's quickness with the gun, we might mention, that on one occasion we saw him cut down six old squaws out of seven, with his double-gun, and then we thought that the survivor would escape, but no, for Cale caught up his heavy single ducking gun and stopped him at a very long shot.

We were both at the shanty when that terrific spring gale swept the Atlantic coast. It was that fearful storm when the famous Minot's ledge light-house was swept away with its two keepers. We had "turned in" that night with no forebodings of the hurricane, and the unprecedented high rise of tides that was impending. Our shanty was planted without cellar or foundation, at what was supposed to be a safe distance from the river, and beyond the reach of the very highest tides. In the middle of that night I was awakened by the heavy roar of winds and the mad rush of the waters against the building. I roused up sleeping Caleb and we hurriedly descended to our little parlor below, to find with dismay that the water was several inches deep on the floor. On opening the door to look out, we were made aware of the overwhelming fury of the tempest. The river was all around us, and we were isolated as in the middle of a lake and no land to be seen. The river was one sheet of plunging billows and tossing foam, the waves rushing like wild horses, with flowing manes, ready to trample down all opposition. The piazza was flooded deep with water, and the house trembling with fear. We expected every moment that it would be engulphed and swept away, and our only hope was in one of our boats, whose painter was luckily fastened to the piazza. But after watching the scene for an hour, we were relieved to notice that the water on the floor began gradually to subside, and soon we were safe from danger.

For several weeks we enjoyed a glorious time in that lonely shanty, having plenty of provisions and being supplied often with fresh eggs, milk, and butter, from the nearest farm-house. Our ice-house furnished a sumptuous supply of wild fowl of various sorts, quantities of which we sent away to friends in the Hub as tokens of our regards and trophies of our success. On Sunday's we were elegantly hospitable, as we at such times invited some of our rural neighbors to dine with us, and on these occasions we treated them with all "the delicacies of the season;" preparing for them nice cakes and puddings, and the very choicest game of our larder. These neighbors all protested that they never before had so rioted in rare abundance.

Caleb was a capital hand to kill a goose and produce him on the table afterwards. We had plenty of crockery and cutlery, sufficient for a large dining party, and as we disliked the trouble of washing and cleaning up dishes after each meal, we *dumped* them, when used, into a big basket, which would be heaped full by the end of each week, which was our general washing day. Fried clams, stewed clams, and baked clams, were our most frequent and favorite food, as they were handy to catch, and easy to cook. We would sometimes amuse the hour with reading elegant extracts from our old cookery book, and so discuss the merits of various delicacies—beyond our reach. Cale would read aloud with emphasis the best modes of preparing beef *a-la-mode*, boiled salmon, turkey with oysters, floating-islands, ice-creams, &c., and then would *move* that we have fried clams for dinner and I would second the motion, which was always carried. I would step out some fifty paces from the house and soon return with a peck of the big blue bivalves, to find Caleb all ready with his pan and pork, and the table set.

Those were jolly days, full of toil and excitement, but never to return; and we suppose that the dear old shanty may still remain on the shore of distant Scarboro River, and imagine that the ducks and the geese, and the bay-snipe, each in their turn continue to resort there, to scream and quack, and honk, and whistle as of yore, over the waters and the meadows. But many of the choice companions that were then there, are now low in the dust, and among them such kindly spirits as Loring, and Sargent, and Webster, and Dixon, and others, who will consort there no more for ever. Yet ere we close let us essay a few tributary verses to the memory of dear old Cale:—

Though eight years of the spring time
O'er thee have cast their blooms,
Red roses and blue violets,
Fair garlands, soft perfumes,
Yet as all loved who knew thee,
Though dead, thou art alive,
The true-hearted never perish,
Though lost, they still survive,
In life immortal, free from stain
Their memories remain!

When in the autumn stubble
The quail its plaint repeats,
When on the fallen hemlock
The drumming partridge beats,
When from the swampy thicket
The startled woodcock springs,
When o'er the salty meadows
The curlew speeds its wings,
When o'er the russet uplands
The golden plover soars,
When by the sandy beaches
The blackbreast skims the shores,
When o'er the bay's expanses
The circling black ducks sweep,
When all the wild geese squadrons
Follow the surging deep,
Then shall we miss and mourn thee,
And green thy memory keep. ISAAC MCLELLAN.

Greenport, Long Island.

VESSEL BUILDING IN THE UNITED STATES IN 1875.—The total number of vessels built in the United States in 1875, is 1,318, against 2,147 built in the previous year. The number of ships and barques built last year, however, exceeds that of 1874 and the two previous years. The

whole number of ships is 114. The number of steamers built in the same year is 340, which includes many small craft. Three-fourths of the sailing vessels were constructed in the ship yards of Maine, although Massachusetts, next in order, turned out the greater number of heavy craft. The grand aggregate of the tonnage built last year is fully up to the yearly average of the past quarter of a century.

For Forest and Stream.

A TRIP TO CRANBERRY LAKE.

THE morning of August 31st found me at Griffin's, *en route* to Cranberry Lake and vicinity. I was to be alone until I reached the foot of the lake; there I was to meet some friends who were going in *via* Clifton. A good substantial breakfast and a wish for good luck from Mr. G., and family, and I am off at eight o'clock with a small amount of tackle, luncheon for the day, and one of "Rushton's sporting boats," weighing twenty-nine pounds, on my shoulders for a seven miles carry to the landing.

Right here it may not be amiss to tell the readers how we carry such a boat, it being a mystery to the unlearned how one person can carry such a bulky and apparently unhandy article as a boat. We have a neck-yoke made of light framework, with straps across it near the centre, between which you put your head, the straps resting on the shoulders, and the boat turned bottom up over your head, the gunwales resting upon the yoke near the ends and balancing so well that you need but one hand grasping the gunwale to steady it. In this manner a man will carry a boat as easily as he would a pack of the same weight.

Three hours of moderate walking, including several rests, brought me to the river, where an hour was spent in resting and eating my dinner. At a quarter past twelve I took the stern of my little craft, paddle in hand, having first trimmed her by putting stone in the bow. The river was quite low, the gates at the reservoir dam above being closed to enable mill-owners below to make their annual repairs. I had no trouble, however, in getting along, as I could run in three inches of water, and half-past three o'clock found me at "The Caryo," seven miles up the river, having spent an hour of the time at Chaumont (sho-mo) spring hole in a vain attempt to catch some trout. A rest of half an hour, a carry of forty rods past the rapids, and a run of another mile, brought me to "the old Indian fishing ground," a place where a spring brook puts into the river, and once famous for the size and quantity of the trout taken. Here another half hour was spent fishing, but with the same result as before, and, night drawing near, I shouldered my boat and carried it past the rapids and mill, a distance of about a mile, to a place where the road and river met. A paddle of half a mile, and a carry of about equal distance, brought me to the reservoir dam, at the foot of the lake. Here I found that my friends had arrived in the forenoon, and with boats and guide had gone up the lake on to the flowed land at the inlet, leaving word for me to follow. Rather a cool proceeding I thought, considering that I was on time, but supper being a matter of more, or at least nearer, interest to me, I once more embarked, this time for my last pull for the day.

A short mile and my keel grated on the sand at the landing in front of the hotel. Here I was greeted by my friend E., who had been enjoying himself in the wilderness for about six weeks, visiting in that time most of the ponds and streams above the lake, and now so far on his way home. I also found several other gentlemen—some here for hunting and fishing, and some for the benefit of their health. A pull at something shorter than a paddle and stronger than lake water, a pull not all alone, a good supper, and, weary with my first day out, I soon sought my room to sleep soundly till the ringing of the breakfast-bell next morning awoke me.

September 1st.—To-day is fine, the lake is quiet, and at eight o'clock I am off on my ten mile voyage. An hour and a half of paddling took me out of open water, passing in the meantime Lightning Point, where Rev. W. H. H. Murray and party camped earlier in the season. Another hour spent in following the winding channel of the inlet among dead and fallen timber, where one was quite as likely to go wrong as right, brought me to the foot of the rapids, where I found my friends. They had been fishing with fair success, having a dozen or more very fine trout of one-half to one and a half pounds weight. An hour or so later we had dinner, when we tested the quality, and I may say quantity, of the catch to our entire satisfaction. In the afternoon, while fishing from the boat a short distance below our camp, a very large black bear swam across the river within ten rods of us. We did not see him till he had got ashore, and our guns were all in camp, but the way that bear got through the dead timber made us think that he was afraid there would be a funeral somewhere if he did not get out of the way. Of course after this no one cared to fish, and we spent the rest of the day paddling up and down the stream looking for bears, but none were seen. Night came—still, warm, and dark—and with "jack" and gun we "floated for deer." Two shots and one deer was the result of our labor, and we returned at midnight to camp.

September 2d.—To-day was spent in fishing, sleeping, and eating. The venison steak tasted much as it did last year, and it took about the same quantity to go around. Quotations for this market are: Fishing, fair; sleeping, quiet; eating, brisk, with a downward tendency. At night we again went for deer, and got a very fine buck within sight of our camp fire, W. killing him very neatly at a distance of about six rods, and, being his first deer by jack-light, he felt quite big over it. This was the only one we saw to-night, though we heard others back on the flow, where we could not get at them for fallen timber, and at midnight we again returned to camp.

September 3d.—To-day we fished, and jerked our venison. One thing we never forget while in the woods, and that is to eat. A man can eat oftener and more at a time here than anywhere else in the world, and if he does not work too hard he will gain flesh and return home feeling stronger and fresher than when he left it. To-day the ribs and brisket of our best deer were placed on a huge wooden fork and roasted over our fire of maple logs, and then, seated on the ground with a goodly quantity of other eatables spread before us, we made a meal that a king might have envied. Toward night our tent was struck and baggage packed, and one of the party, taking it in the largest boat, rowed down to the open water on the lake and put up the tent on the bank, while the rest of us waited till dark and then hunted down, arriving at camp at midnight, but without seeing a deer in the whole distance.

September 4th.—Broke camp at daylight and ran down to the foot of the lake, where we got breakfast. The rest of the party now left for home, while I returned to the hotel to put in the balance of the day resting and sleeping. To-day the hotel people went up the lake to obtain a supply of fresh meat for the table, and returning at night with two very fine bucks their guests are, as well as themselves, in the best of spirits.

September 5th.—It is Sunday, and rather a quiet one. Some of the party have gone over to Grass River, a distance of about three miles, just for a walk. Others are reading, or writing letters home, while another gentleman and myself take a row to the head of the lake and return. There is wind enough to-day to raise the white caps, but we enjoy our fourteen mile ride all the more for that. Evening finds our party all together again, and it is passed as most of our evenings in the woods are, in story telling. In this particular match our host, whom we call Captain, took first prize, and no ties to be shot off either. We all did very well on small game, but when it came to bears the Captain had us. He was asked by some one of the party if he could tell us how bears got the honey out of trees. He said, "I know how one didn't get it out once. You see I found a bee-tree in the spring and left it till fall before I should cut it. There was another tree just at the foot of this one, turned up by the roots, and some of the roots were sticking up long and sharp, and when I went there in the fall to get the honey I found a big bear with one of these roots stuck clean through him. I suppose the bees stung him too hard, or he lost his hold from some other cause, and fell right on this root. He had been dead just long enough so that the hair would come out."

September 6th.—To-day I went over to Dead Creek, a small stream emptying into Grass River, on the "windfall," and distant an hour and a half by a woods road from the hotel. I had a fine day's fishing, and returned at night with seventy fine trout, some weighing half a pound.

September 7th.—My friend E., and myself again visited Dead Creek to-day, fishing it above where I fished it yesterday. Our catch to-day was 103 very fine brook trout, of three-fourths pound weight and under. The greater number were small ones. On our return we found a team waiting to convey us home, and next morning we packed up and bade adieu to the lake, to the Captain, his family and guests, promising to return another season. A drive of fifteen miles, accomplished in five hours, brought us to Clifton, and, we might say, "out of the wilderness."

NOW AND THEN.

For Forest and Stream.

TROUTING IN THE WHITE MOUNTAINS.

NOT long ago you published a readable article by "J. G. M." entitled "Tronting Among the White Hills," in which, as a subsequent mathematical analysis by "X. Y. Z." conclusively demonstrates, the writer's catch was more remarkable for numbers of fish taken than for size or weights. Permit me now to say a few words on White Mountain angling as it was nearly thirty years ago. In each of the years 1845–6–7–8 and 9 I spent several weeks at "Old Crawford's," just above Nancy's Brook, in the Saco Valley, in pursuit of speckled trout. In 1852 and 1853 I repeated my visits, but found the fishing had much deteriorated. My last visit was in 1856 or 1857, and I was so disgusted with the barren condition of the streams that I abandoned that locality and transferred my affections to other points. Those were days when comparatively a small band of anglers had the sport to themselves; but even then pot-hunters were numerous. Harding, Hooper, Bemis, Ellis, Tuckerman. The well-remembered lineaments of each and all rise upon my recollection as I write. A worthy brotherhood! Peace be with them! In those elder days the boulders and trees along the beds of the various streams were to the writer as familiar as Washington street or Broadway. With rod always in hand except in time of freshet, many, many hundred weight of fish from first to last fell to his lot. Now, in all that time, how many pound and a half trout does J. G. M. suppose I captured? I will tell him. Exactly *one*, weight one pound ten ounces, and fish weighing a plump pound were seldom taken by any one. Mine would scarcely reach a score in number. Even then fish-talk ran upon the vanished glory of the streams, and I have often heard the old man Crawford say, that when he first settled there he could take as many pounder's as he wished at any time during the proper season. Yet, here comes a recruit, whose opening casts are rewarded with a pond and a half fish. *Credat Judæus.*

In those days I made it a business to carefully return to their homes all fish not fully reaching my standard of size; others did the same, and in general about one-half of all the fish taken were restored to the water. At best the fish were small, and at a later period I made the acquaintance of localities where my penchant for sizeable fish was fully gratified. In proof of which I now offer a few grains of truth for J. G. M.'s benefit, my original diary now being on my desk as I write.

At daylight on the morning of August 9th, 1872, I awoke from my broken slumber, aroused my two Indians, and ordered them to get my canoe ready for a few casts. For two and a half days we had been forcing our way up stream through pools and rapids, and had finally attained our objective point the evening previous, with just time enough left us to extract from the tea-kettle its cheerful song, to greet our tent, and make due preparation for passing the night. We had no neighbors save moose, bears, caribou, and other wild animals. It had rained in torrents for some days, the stream was high for the time of year, somewhat turbid, and in good order for angling. The weather had now settled, and at intervals during the night and early dawn the plash of heavy fish could be heard breaking water in the pool, on whose border my tent was pitched, making sweet music for the tired sportsman's ears. At half-past five exactly, I stepped into the canoe, and quickly anchored just in front of our camp. For some two hours and a half I wielded my trusty greenheart to the best of my ability, and when, at a quarter past eight, having tried the length and breadth of the pool, some three hundred yards in length, I gave it up disheartened and returned to shore for breakfast; a more disgusted man never stepped out of a canoe. But mark; I had taken plenty of fish, such as they were. As my canoe struck the beach my attendants threw out one after another; one, two, three, yea, some eighteen or twenty speckled trout, averaging at least three pounds apiece. These fish and many others, had been positively persecuting me. As a mere matter of curiosity we weighed a number of the largest, which showed by one of Prouty's best spring balances, upwards of four pounds each, the very largest five and a half pounds, plump. From the beginning to the end of this bit of angling, I had given every fish except two, as much slack line as possible at the moment of striking, to the end that he might reject the fly and go about other business. I had only captured those which, hooking themselves, left me no choice but to lower the point of my rod and direct the stearsman to take hold of the line and pull the fish in by hand. If the hook tore out, as often happened, so much the better. I lost the only two fish whose acquaintance I was desirous of making, by the hooks coming away from them after a moments strain, probably hooked in the skin of the lips. These two fish were "heavy weights," but to me, at that time and place, the large trout were no more than were the finger-links in those early days among the mountains, when I regarded the capture of a two-pound trout as the acme of any angler's ambition.

My diary goes on to state, that after a hurried breakfast, unwilling to give it up so, I ascended the stream to the next good pool, where I had good sport, and was comparatively unmolested by the ravenous speckled nuisances. At one o'clock I returned to the camp, with just five salmon, weighing 28, 25, 26, 10½ and 29 pounds, respectively. At some future time I may take occasion to communicate my experience in search of salmon, for the benefit of whom it may concern. I certainly entertain some convictions on the subject measurably different from anything I have read in my favorite authors. In fact, I set down much that I read on this subject as pure, unmitigated hosh, undoubtedly worked in to use up printers' ink, and to make additional pages.

In connection with the above, allow me to state, in regard to one or two of your answers to correspondents, that there are two rivers Nouvelle on the north shore of Bay Chaleurs; Nouvelle Magnasha, near Dalhousie and Little Nouvelle, just to the eastward of Paspebiac Point. The former is the noted river. Port Daniel is not at the mouth of Petite Nouvelle, but is some twelve or fifteen miles to the eastward. In company with a friend, I once tried angling for trout from the point of a sand spit, at the mouth of Nouvelle Bay. The time of year was unfavorable, about the 1st of July, it being, as we were informed by Indians, just between the early and the late runs of fish, and the weather was raw and cold, in fact, a good imitation of a Boston east wind. We fished in the salt water of the bay, and took back to Dalhousie ten fish, averaging nearly if not quite three pounds. This is my entire experience at Nouvelle Magnasha. RUSTICUS.

HOY'S WILDERNESS.

One correspondent asks for information regarding Hoy's Wilderness, and another kindly furnishes it. If as represented, this would be a glorious place for a summer or fall camp, and we doubt not that Lloyd Kitsmiller will find himself called upon many times during the coming season:—

UNIONTOWN, PA., February 25d., 1873.

EDITOR FOREST AND STREAM:—

You ask for information in regard to Hoy's Wilderness, how to reach there, guides, etc. We have obtained from Wish Miller, of this place, who is an old hunter, and well acquainted with the wilderness the following, and give it for the benefit of any of your readers who may be desirous of visiting that place for hunting and fishing:—

Oakland, Maryland, on the line of the B. & O. Road, is the point where you leave the railroad. A team or teams can be found at this place to convey parties across the "Backburn Mountain," a distance of thirteen miles; thence to a place called "Shook Shop"—Abernathy's, about eight miles thence to the "Pine" region—Wm. Kitsmiller's—about seven miles. This is as far as you can go with a wagon, but horses can be had at Kitsmiller's to take you three miles further on to his brother's Lloyd Kitsmiller, and you are at Hoy's Wilderness. Lloyd is an old experienced hunter and fisherman, and always ready to give any information in this line, and also to act as guide. The old Dobbin House, a short distance from Kitsmiller's, and in the very heart of the Wilderness, was built many years ago by a Baltimorian, for himself and friends to occupy during the hunting and fishing season, long since deserted, but left in charge of Lloyd Kitsmiller, is a splendid place for a party to stop. The house has plenty of room, with furniture and bedding, and will cost the sportsman nothing. Kitsmiller will provide it with a cooking stove, and play the genial host and guide, for a nominal sum, (plenty of the extract of maize) for hunters are his delight and a godsend in this out of the way place.

It is seldom one hears of a wilderness with a lordly mansion in its very centre. Deer, panther, bear, wild cats, turkeys, and in fact, game of all kinds right at the door of the palatial establishment, with all the comforts of a city within. The Blackwater is full of the beautiful speckled trout, and Kitsmiller guarantees them by the thousands. The fall of Blackwater is always a good guide, and parties can locate themselves by the fall, for it can be heard for several miles—having a perpendicular fall of eighty-five feet. STANDARD.

—Mr. Gunning (appropriate name), of Chincoteague Island, a few days since, after having imbibed sundry mixtures of "bug juice," came to the conclusion that he was Nimrod No. 2, and that he was "called" to go a-hunting on this particular day. So, after wrapping around his portly bosom enough ammunition to kill half the ducks in the bay, he meandered up the island. Half-way up the island Mr. Gunning was observed to "draw a bead" on Uncle Kennel Jester's nose. The latter individual dodged behind an old wreck, and as Gunning closed up in front, Mr. Jester could have been heard to exclaim, "Spare us, good Lord!" Mr. Gunning finally caught sight of one of Mr. Jester's feet, and lowering his fowling-piece, he burst into a loud laugh.

"Hic! goo—joke (hic) old man—(hic) thot 'er nose (hic) was 'er red-hot—so lon'."

And he staggered away.

As the evening shades drew down over the island Mr. Gunning was found leaning over an old log, while at intervals in the afternoon he had been hanging away at a lot of wooden decoys, anchored a short distance from the shore. But his fun was over, for the unfortunate sportsman had shot off the thumb of his right hand.—*Snow Hill Messenger.*

—The annual grasshopper legislation has begun in Kansas with the passage of a bill giving a state bounty of five dollars a bushel for grasshopper eggs, and fifty cents a bushel for young grasshoppers.

Fish Culture.

ABSTRACT OF THE TENTH ANNUAL REPORT OF THE MASSACHUSETTS COMMISSIONERS ON INLAND FISHERIES.

THIS voluminous Report opens with a description of the operations of the fishways during the past year, the action of which have, upon the whole, been satisfactory, certainly as regards all other fish but shad. The fishway at Holyoke was, last spring, put under the care of Charles D. Griswold, of South Hadley, who closed it twice a day for the purpose of noting what was in it. A great number of silver eels, lamper eels, and suckers went through to the river above; also, quite a number of black bass, striped bass, chubs, perch, bream, and a variety of smaller fry made their way through. On the 5th of July, Mr. Griswold found two yearling shad near the upper end of the way, and subsequently quite a number of these fish passed over. On July 6th, among the number of yearlings was found one mature shad, measuring nineteen inches, and weighing about four pounds. These facts are important; first, as showing that it was the yearling male shad, bred above, that led the way and probably attracted the others; secondly, these fish, having passed freely over, the question whether the Holyoke fishway is a suitable one for the passage of shad is settled. All efforts hereafter will be directed to putting fish above the dam, and such improvements as can be made around the foot of the way.

It having been found that the Lawrence fishway was so located that, although other fish passed up freely, the shad would congregate in the pool below the dam, an alteration was made, and new works constructed leading to the pool. Fishways have been built in the Neponset River, but, with the exception of the individual exertions of Mr. Estey, no efforts have been made to restock the river; nor have the towns bordering on the river ever appointed fish wardens to look after the fishways. It was suggested to change the location of the fishway in the Taunton River, but the Commissioners considered that it was unnecessary to go to the expense of building a new fishway, unless assurance was given that parties interested will stock the waters above with shad or salmon. The California salmon would probably do well in this river, and the spawn and fry of both these species of fish can be had on application to the Commissioners. The fishway at Turner's Falls is completed for the passage of salmon.

THE ALEWIFE.—Owing to over fishing in previous years there has been a scarcity of this fish, and the Commissioners consider the practice in some towns of annually selling at auction the right to take these fish to parties whose interest terminates with the season, as one of doubtful policy.

SHAD.—On the Merrimac River there were taken during the season 1,433 shad, from whom were procured 6,670,000 eggs; hatched and turned in above Lowell, 825,000. A quantity (not stated) were delivered to Mr. Estey for Neponsit River; the balance turned in at North Andover. The establishment at this place during the past season appears not to have been carried on with the usual care. Orders were given Mr. Hardy to have all the spawn and young fish not required elsewhere carried above the Lawrence dam, while the report shows that less than one-sixth of the whole number taken were thus deposited. In 1871-2 nearly eight million young shad were turned into the Merrimac. The catch last season is reported to be the largest in twenty-five years, and at Newburyport they were salted and barrelled as in olden times. The shad operations on the Connecticut River are summarized in a letter to the Commissioners from Mr. Jos. W. Milner, giving the following figures:—

Connecticut River, above dam, from Smith's Ferry to Mount Vernon, Vt., 1,265,000; at fishery, 580,000; total, 1,785,000. Streams in New England other than Connecticut River, 320,000; Started for Germany, 400,000; rivers in United States other than New England, 530,000; total from Connecticut River, 3,035,000.

The Commissioners again recommend a law requiring net fishermen to report the number and variety of fish taken by them and the market value. The statistics which would be thus obtained would be very valuable.

TROUT.—The Commissioners make the following suggestions as to the cultivation of brook trout, which they claim would not exceed in expense that of fencing an acre of land:—

"At the foot of the stream, or where the owner's right terminates, should be constructed a dam sufficient to insure a depth of not less than six feet of water, and the overflow carefully screened; above this a number of small dams should be made, the distance between them being determined by the fall of the stream; not being so near as to flow back upon each other, but far enough apart to allow a portion of the stream to remain unchanged. Nor should they be so high as to materially change the temperature of the water. Small fishways or shutes should be built over these dams to enable the fish to pass and repass.

"Around the dams, right and left, trenches should be made for the purpose of raising young fish and conducting the overflow in time of freshets. The trenches for the young fish should be gated so as to give, at all times, an even flow of water. It is desirable that the water falling over the dams should be broken and aerated as much as possible. At the head of one of the trenches may be built a small hatching-house; or wooden troughs with covers could be used instead of the house. The south sides of the ponds and the stream, if it is open to the rays of the sun, should be planted with willows, and portions of the stream covered with plank or slabs for the fish to hide under. During spawning season the fishways may be screened, the fish caught and stripped, and the eggs impregnated by the dry method."

SALMON.—About 250,000 young salmon (*Salmo salar*) were distributed in the headwaters of the Merrimac under the direction of Commissioner Wodleigh, of Laconia. Young salmon are reported very plenty in the upper waters of the Merrimac, and more or less continue to be caught in the mackerel seines in Massachusetts Bay, and forwarded to Boston and New York markets. A large number of salmon spawn will be received in January from Bucksport, and still more may be expected in October from California.

LAND-LOCKED SALMON.—The Commissioners have, as yet, been unable to procure a supply of the spawn of this valuable fish; but now that the hatching-house has been removed to Grand Lake stream and placed in charge of Mr. Chas. G. Atkins, who has succeeded in obtaining 900,000 spawn, the portion coming to Massachusetts will be sufficient to supply the demand. The Commissioners have asked for the control of one or more pouds in which a number of these fish can be placed, so that in time they may not be obliged to go out of the State for their spawn.

CALIFORNIA SALMON.—Eighty thousand spawn of these fish were presented to the State by Prof. Baird. Something over 75,000 of them hatched, producing very healthy young fish, which will be ready for distribution about the 1st of January.

The Commissioners have made a full investigation into the condition of the fisheries in North River, in Plymouth county, and its tributaries. Formerly, shad and alewives abounded in this river. Of these the shad have become almost extinct; and although alewives still annually ascend the stream in considerable numbers, they have ceased to be of any special pecuniary benefit to the bordering towns. No river in the Commonwealth is better adapted to become a good shad and salmon stream; and the value of such a fishery would greatly exceed that of any supply of alewives, however abundant. With this view they recommend the passage of an act prohibiting fishing in North River for the term of five years; and in the hope that the Legislature will adopt this recommendation, they have already placed in the river 25,000 California salmon, to which they propose to add an equal or larger number annually until it is thoroughly stocked. The supply of shad already in the river will be sufficient to stock it with that species of fish, if allowed to propagate undisturbed for the period named.

The Report contains a voluminous appendix, in which is included a valuable "Sketch of the Progress of Fish Culture in New England," by Theodore Lyman.

HATCHING YELLOW PERCH.—I find the following record of one of my early experiments in fish hatching, made in the city of Albany, N. Y., in the spring of 1868, just before I bought the farm at Honeoye Falls and commenced fish breeding as a business.

April 20th, 1868, while fishing a few miles below Albany, took and impregnated 10,000 spawn of the yellow perch (*Perca flavescens*). This fish is known in the South as "ringed perch," "raccoon perch," and "banded perch." The spawn comes in a long ribbon, or rather a cylindric one, double like a stocking leg, but with numerous wrinkles; the eggs are seen as bright spots the size of a pin head scattered through this mucous mass. The spawn was partly pressed and partly pulled from the fish and put into the old wash basin used as a boat bailer with water, and the milt from several males put with it. Took it to Albany in my dinner pail, and remembering that the aquarium at the State Geological Rooms was empty, I asked permission to use it for hatching, which request was kindly granted by Prof. Hall, Curator of the State Cabinet. Noticed life the third day; about 100 dead—all dead by May 1st, don't know why.

I found that this fish hung its spawn over twigs under water, and have found it often hung in the gill nets I was then using. Have often seen it hanging high and dry at least a foot out of water, where it was laid at a higher stage of the river. My spawn was hung on a twig near where the water entered the tank to insure a circulation.

May 2d, took about 20,000 and put in same place, raised the curtain, but the sun did not strike the eggs; life in over two days. Some one let down the curtains and pushed down the strainer on the waste pipe; about two-thirds of the eggs went down the waste pipe, (it was in three bunches,) half the remainder dead, probably from handling, as I was informed that somebody lifted them out. The embryos are in constant motion in the egg—a regular beating movement like clock work. In ten days from impregnation 1,000 hatched from the 3,000 left, notwithstanding the eggs were often disturbed by visitors. Six days after hatching, the sac was absorbed, and I fed them clotted blood every day. My notes say: "In twenty days they had all disappeared down the waste pipe, but had not yet lost the embryonic fin." I regard the latter statement as a little doubtful; for though I looked at them with all the light I then had, I now look back on it as only a faint glimmer, and myself as a very green specimen of a fish culturist, and I was not at that time very familiar with "embryonic fins."

I have not seen the young of this fish since, but remember that they swam when hatched, and that the sac was a bright dot that did not protrude much from their little transparent bodies. I hope to repeat this at the Centennial this summer, and think I can now see with more light. My kind pisciculturalfriend, please bring me fish eggs of any kind, from sharks to sticklebacks, is the earnest request of

FRED MATHER.

STOCKING CANANDAIGUA LAKE.—We noticed last week that the stocking of this lake had been successfully accomplished. The following letter, addressed to Mr. Seth Green, Superintendent of the N. Y. Fishery Commission, by three well-known gentlemen is so important as placing the matter beyond a question, that at the risk of some repetition we print it in full.—

DEAR SIR:—

Three or four years ago Canandaigua Lake, like many others in this State, seemed to be nearly depopulated of fish, especially salmon trout. The very free use of seines, gill nets, and all other appliances for catching fish seemed to have nearly exhausted the supply. Trout were so scarce that the most experienced fishermen frequently labored a whole day faithfully with hook and line without catching more than one or two fish, and sometimes not any. In 1873 a few of those taking an interest in such matters took upon themselves the task or restocking our lake by transporting the young fish from the State Hatching House at Caledonia. After raising by subscription funds sufficient to defray expenses of transportation, we procured and placed in our lake about one hundred thousand salmon trout fry. Again, in 1874, we deposited in our lake one hundred and fifty thousand trout and twenty thousand white fish. In 1875 we secured about seventy thousand trout, making a total of three hundred and twenty thousand young salmon trout, and twenty thousand white fish in three years. Now for the results. In the spring and summer of 1875 the fishing in Canandaigua Lake was such as had never been known before. It was not remarkable to make a catch of eight to twelve trout in a few hours, and some were fortunate enough to take even more. The largest catch of any one person in a single day was twenty-one fine salmon trout, taken with hook and line by trolling. This very decided increase, taken in connection with the fact that very many of the fish were uniform in size, makes us believe that there were of those placed in the lake in 1872 and 1873, (there were about twenty thousand trout put in in 1873 by other parties), and that a greater portion of the fish we put in are yet to come on as sizeable fish for catching. Consequently, we expect the number of trout caught this coming season will exceed the number taken last season. We design putting in another lot of the young fish this winter, as the results are so very satisfactory as to convince the most skeptical, and all those who have fished in Canandaigua Lake for the past few years, were last season thoroughly convinced of the efficiency and practicability of the artificial propagation of fish, and that our barren waters may be restocked to any extent by this process. We give you these results to let you know that the efforts of the Fish Commissioners and Superintendent of the State of New York are appreciated in this locality.

Very respectfully, yours,

G. A. FINLEY.
GEO. B. CHAPIN.
LAROY BENHAM.

FISH CULTURE NOTES AND ANSWERS.

BY FRED MATHER.

SMALL BAIT.—A seal was recently caught in the Delaware river, at Trenton, N. J.....Miss F. W. Webber, of the Cold Spring Trout Ponds, says: "The eggs from trout fed on curd alone produced young, of which not more than a third were perfect fish, but were monstrosities with double heads, or curved spines, and were subject to "blue swelling".....A French scientist has invented a new bait: A bottle is lowered into the water and lighted by electricity, it attracts the fish from some distance and they follow it into the net.....A "golden trout" is reported found in California, but lacks confirmation. Prof. Gill has not yet described this auriferous salmo.....The six-pound Maine trout has been stolen from the ponds of B. B. Porter, Oakland, N. J.....Genio C. Scott calls the whitefish a "sucker-mouthed, succulent delicacy," and still they retail for only twelve and a half cents per pound, and have never struck back.....The Grand Rapids and Indiana Railroad has issued a pamphlet entitled "Northern Michigan and its Summer Resorts," which gives description of the grayling and its habitat.

ANSWERS TO INQUIRERS—DR. M. V.—We have no spawn or fry to sell, and will have none; there are others still furnishing it who will be glad to fill your orders. Glad to know that your experiments have been so successful that you are continuing them.

M. J.—Prof. G. Brown Goode has charge of the exhibition of the United States Fish Commission, which will exhibit models of boats and clothing used, plaster casts of fishes, all the products of the fisheries, as skins, oil, teeth, bone, shells, coral, sponge, preparations of flesh and roes, as dried, salted, smoked, pickled, canned, etc., oils, spermaceti, gelatine, isinglass, glue, manures, etc. All the implements used in capture of fish by civilized and savage men, as bows, arrows, spears, harpoons, lines, hooks, floats, sinkers, reels, rods, artificial flies and baits, nets of all kinds, traps, weirs, etc., models of smoke and salting houses, plans of piscicultural establishments, hatching apparatus, fishways, and everything pertaining thereto. Address Prof. S. F. Baird, Washington, D. C. If you have anything of interest in this department, either ancient or modern, send it. The food fishes will be displayed by Mr. Eugene G. Blackford, of Fulton Market, N. Y., in refrigerators. This is also part of the display of the U. S. Commissioner. The Agricultural Bureau will exhibit live fish in both salt and fresh waters, and want specimens of wild and cultivated fish; also, reptiles and crustacea, and all the small fresh water forms that are either food for, or enemies of young fish. These will be shown either alive or in alcohol. Mr. Mather will have charge of this, and we will state the plans more fully when they are perfected.

M. C.—Smelt are found in fresh water, notably in Lake Winnepiseogee. They spawn about the last of April in that locality, and their period of hatching is about two weeks. We believe that Dr. Fletcher, of New Hampshire, has hatched them. They are called "frost-fish" in some parts, we have heard.

PHILA.—Seth Green is Superintendent of N. Y. Fish Commission, and his address is Rochester, N. Y.

IND.—You should get your trout eggs before March; get your bass as early as possible so that they know the pond before spawning; they spawn in May and June.

—The report which appeared in the Boston *Journal* a few days since, to the effect that the Maine Fish Commission had been abolished, the act to take effect Feb. 15th, 1877, was incorrect, and has been contradicted by that paper.

—The Legislature of Wisconsin has appropriated $10,000 for the propagation of fish, and the Milwaukee *Wisconsin* thinks that the Northwest can be made the fishing ground of the country.

—Twenty-two States have undertaken the propagation of food fish, and Kentucky and Georgia will soon bring the number up to twenty-four.

Woodland, Farm and Garden.

THE POMEGRANATE.—The pomegranate is one of the most profitable fruits grown. The trees bear fruit in three years from the cuttings, and will grow on the most ordinary soils without irrigation. The pomegranate is a delicious fruit, and possesses medicinal qualities of great value. It will bear shipment better than any other fruit. It may be barreled up and sent around the globe in good order. The padres of California made their hedges of pomegranates and "tunas," or the high-growing prickly pear, which were not only cattle proof, but "things of beauty." The flowers of the pomegranate are a beautiful crimson in color, and look as though made of wax. This fruit, however, reaches the greatest perfection in China, where the trees attain considerable size—as large or larger than a dwarf apple or pear.

LIST OF ORNAMENTAL SHRUBS.—As this is the proper time for planting shrubs for decorating pleasure grounds in the Southern States, we append a select list. Shrubs once planted will yield an ample reward in the shape of flowers for an ordinary lifetime. As they bloom on the wood of the preceding year, therefore, to secure a good bloom, they should be well sheaved in, or pruned, as soon as the bloom is over. Then they push out plenty of young wood to bloom the following year. If left until Spring, and then pruned, you loose much, if not all, the bloom. We now give the list. All of them can be procured of any good nurseryman, and cost but little more than bedding plants, and require no protection in Winter, and no renewing:—

Dwarf white and pink flowing almond corchorus, deutzias daphne mezereon, forsythia hydrangeas, previt, cornelian, cherry, wiegela rosea, Missouri and other currants, dwarf pavias, Persian, white, and common lilacs, spiræas, guelder rose or snowball, magnolias, conspicua and grandiflora, jasmines, (yellow and white), mespilus, fringe tree, fly, and Tartarian honeysuckle, pyrus, japonica *creeping* plants, gelsemium nitidum honeysuckles, passiflora jasmines, climbing roses, mist tree, or rhus catinus, bladders seuna, and many others.

Although the above list embraces the most desirable free bloomers, the common crab apple tree (*Pyrus coronavia*) that grows wild all through the Southern States, is highly spoken of as an ornamental shrub, and will also probably make a good hedge plant. In can be propagated from seed, and from cuttings of the root about an inch long, planted in a hot bed. The pyrus japonica and pyracantha can be propagated in the same way. Let our Southern friends begin the year by endeavoring to make their homes more attractive by planting, painting, good carriage drives, etc., with fine avennes of live oak or tulip, poplars, or cedars of Lebanon.

LIMA BEAN SEED.—Many gardeners have been annoyed by their lima bean seed failing to vegetate, and attribute it to the seed rotting by too much moisture. We are of opinion that the most frequcut cause of failure is from planting *immature* seed. Mature seed is white and plump; immasure is greenish and shrivelled. Good seed should be allowed to ripen on the plant; *if picked green* it can never be relied on.

ACORN FOOD.—The Indians in California make a wholesome food from acorns by shelling them, and pounding them in a mortar to a fine powder, and pouring water on it until all the bitter taste is removed. It is then dried for future use, or baked in cakes, or parched, when it tastes like chestnuts.

FLOWER POTS in parlors and sitting-rooms are rather unsightly unless kept very clean or painted. Our better *two-thirds* gets a roll of dark green wall-paper, and pastes it over the pots, and with care in watering, it lasts all winter.

CALIFORNIA RADISH.—A new variety attains a large size. In Illinois one weighed seven pounds, and they *averaged* 8 to 12 inches long, and 8 to 10 inches in circumference, and were as solid and crisp as early spring radishes.

CAULIFLOWERS.—If you want large cauliflowers water them well and frequently in summer, or better still, plant in rich swampy ground not *too* wet.

HORTICULTURISTS IN COUNCIL.—At the last regular monthly meeting of the New York Horticultural Society, at Cooper Institute, thirty-five new members were admitted, and Messrs. Marshall P. Wilder, of Boston, Charles Downing, of Newburg, and Thomas Hogg, of Yokohama, Japan, were chosen honorary members. Mr. Bennett, of the Committee on Plants, reported that a large number of valuable specimens had been received for exhibition. A firm on Bay Ridge sent several beautiful buds of the new tea-rose "Duchess of Edinburgh." This promises to be a great acquisition to the present stock of tea-roses, the color being very beautiful, and the plant rare. An exquisite group of violets, grown in pots, came from the gardens of the President. L. B. Parsous & Sons, of Flushing, Long Island, exhibited several specimens of the *Juniperus Japonica aurea*, a member of the red cedar family. This plant is of moderate growth, and keeps its golden tint under the severest trials. The present samples were sent from Japan by Mr. Thomas Hogg, who also forwarded the following additional rarities: the *Cryptomerica Japonica pygmea*, a dwarf coulfer, peculiarly adapted to both open ground and pot culture, especially the latter. It is very hardy, contrary to the nature of the ordinary Cryptomerica, and is comparatively unknown. The *Athyrinium Japonica variegata*, a very permanently variegated fern from Japan, is a very hardy and handsome plant, and has also been heretofore unknown in this latitude. Several samples of the *Gymnogramina decomposita*, a rare golden fern, coming originally from the Kew Gardens, were likewise on exhibition. On motion, a committee of five was appointed to represent to members of Congress the propriety of abolishing the duty on plants. Mr. Lynch, of the Committee on the June Exhibition, reported progress. Arrangements had been made to secure the Twenty-second Regiment Armory, on Fourteenth-street, near Sixth Avenue, a building which would furnish them over ten thousand available feet of space, and afford ample opportunity for a horticultural display of the largest proportions. Mr. William Elliott, of New York, called attention to the species of plant swindling which had been carried on for years past in certain localities on Broadway, and which it behooved the honest members of the profession to put a stop to. A few days ago he called, in company with a brother member, at a shop kept by a foreigner, and asked to see his latest novelties. He was shown a "strawberry tree," and was told that the fruit produced on it was almost as large as a man's fist, and of a flavor equal to the best cultivated strawberry. Rose plants, which the French dealer affirmed would grow striped, scarlet, yellow, black, and blue roses, of nearly six inches diameter, were offered at ridiculously low prices. Asparagus, which ordinarily takes three years to mature, was sold at the same place, warranted to produce a crop within six weeks. Seeds of this vigorous plant, which usually retail at fifty cents per pound, were offered by these Continental horticulturists at five cents a piece, or over one hundred dollars a pound. The gladiolus, which is known to horticulturists only in pink and white, is offered for sale by these enterprising gentlemen, in blue. A blue gladiolus, a plant never before recorded, would be worth $1,000 as a mere curiosity, and yet these French and German dealers on Broadway, were selling plants which they termed "blue gladiolus, at $1 a piece. On motion, a committee of five was appointed by the President to examine into the matter, and ask of Mayor Wickham that respectable horticulturists and the public be protected against this species of imposition. After transacting some further business the society adjourned.—*Times.*

—The forest trees in Winthrop, Me., are found to contain immense numbers of caterpillar eggs upon their branches this season. Unless some providential destruction overtakes them, there will probably be an abundance of caterpillars next year in that section.

Natural History.

[This Department is now under the charge of a competent Naturalist, indorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.]

NOTES FROM OUR CORRESPONDENTS.—A. B. Covert, collector for the University at Ann Arbor, Mich., describes the capture, last October, of a white song-sparrow, the tail and wings of which had cream-colored shaft lines. He also tells of a white robin which for five successive years built her nest in the door-yard of Prof. A. J. Edgston at Three Rivers, Mich. None of the young, however, were white.... Mrs. E. J. writes that she was surprised to see a very lively phosphorescence in the wake of the steamer, during a voyage up Loug Island Sound about Feb. 1st, and asks if it is not somewhat unusual to observe the light of large phosphorescent animals so late in the winter.... "Senex," (Stratford, Conn.,), commenting on the mildness of the season, mentions that frogs were seen and heard piping in his vicinity on New Year's day.... Fred Mather, (Honeoye Falls, N. Y.,) tells us that on Feb. 21st he saw a crayfish (*Astacus Bartoni*) with young in the tail appendages. The young were about one-fourth of an inch long. The writer never saw them so early in the season before. He proposes to feed the mother, and note when the young feed, and their rate of growth.

BIRDS RESIDENT AT NEW HAVEN.

The birds which remain in the vicinity of New Haven, Conn., during the *entire* year, and their comparative abundance, I have observed to be as follows.—

Red tailed hawk. Common in summer; rare in winter.
Red-shouldered hawk. Common in summer; rare in winter.
Great horned owl. Rare at all times.
Mottled owl. Common summer and winter.
Barred owl. Common at all times.
Downy woodpecker Common summer and winter.
Golden winged woodpecker. Common in summer; rare in wioter.
Kingfisher. Common in summer; rare in winter.
Robin. Common in summer, and not rare in winter.
Blue-bird. Not rare in winter, and common during the summer.
Chick-a-dee. Rare in summer; common in winter.
Cedar-bird. Common throughout the year.
Purple finch. Rare in summer; common in winter.
Yellow-bird (*Chrysomitris*). Common summer and winter.
Song sparrow. Common in summer; rare in winter.
Meadow lark. Rare in winter, but common during the summer.
Crow. Common both winter and summer.
Blue jay. Commonly found all the year.
Wild pigeon. Rare in summer; rare in winter.
Ruffed grouse. Common summer and wiuter.
Quail. Common throughout the year.
Dusky duck. Rare in summer; common in winter.

Possibly there may be one or two more species, but having carefully observed the habits of our birds, I am inclined to believe that all are included in the above list.

SPECULATOR.

ANIMALS OF NORTH AMERICA.—In his recent dissertation upon the geographical distribution of animals in the Nearctic Realm, published in the Bulletin of the National Museum, No. 1, Prof. E. D. Cope gives the number of species of vertebrates found in America, north of Mexico, as follows: Mammalia, 310 species, 139 of which are rodents; birds, 756 species, nearly half of which belong to the "singing birds"; reptiles, 257 species, 132 of which are serpents, and 82 lizards; batrachians, 101 species almost entirely of the frogs and toads and the salamanders; fishes, 825 species, making in all 2,249 vertebrates, which is probably less than the truth, for many fishes, both of the ocean and of fresh waters, remain undescribed. Probably 50,000 is below the mark as an estimate of the number of species of insects, and 1,000 species are to be added for the myriopods, spiders and crabs, besides the worms. The number of mollusks of North America is about 1,824, of which 400 are marine, 1,034 live in rivers and lakes, and 400 are terrestrial and air-breathers. The *Radiata* include about 275 species, and the *Protozoa*, which are well-represented in our waters, perhaps as many more; but these have not been enumerated.

THE COMING OF THE BIRDS.—The *Times* says that Major W. H. Spera, of Ephrata, Pa., has prepared the following notices of the time that the various migratory birds arrived in Lancaster County, Pa., last year, it will be interesting to compare it with the dates of the arrival this year: Robin, February 3d, large flocks seen February 17th; blue jay, February 11th; blue bird, February 17th; meadow lark, March 10th; red-winged blackbird, March 17th; crow blackbird, March 18th; flicker, March 18th; pewee, March 15th; thrush,(?) March 17th; kill-deer, March 19th; Whip-poor-will, May 2d; chimney swallow, May 9th; barn swallow, May 11th; house wren, May 1st; night hawk, May 4th; pigeon, large flocks May 31st and April 1st.

HEDGEHOG'S COAT.—In the bristles of the common hedgelog we find a very curious bit of mechanism. The hedgehog has no horny studs, either fastened into the skin, as in the armadillo, nor yet has he a bone-formed dome, covered with horny scales as in the tortoise. Instead of this his horny covering assumes the form of spines, or bristles, each set firmly into the skin at one end. These bristles the owner can erect in groups, with all the points outward, presenting a most formidable array of weapons; but the hedgehog has also power to lay back all these sharp pointed spines in one direction, viz., from his head backward. In this position they form a carpet, which, if smoothed the right way with the hand, is as soft as velvet. In order to find out how all this mechanism was carried out, I have dissected a hedgehog, and was surprised to find how very slight are the muscles which command the spine. They are fine strings of fibre, very similar to the *corrugator supercilii*, or frowning muscle in our own forehead; in fact, when a hedgehog curls himself up, he begins to work with a tremendous frown as he tucks his head inwards. The muscles that work the spines are attached to promiuences which project from the back bone, and especially do they spring from the ribs, which I find to be of unusual strength and abnormal width for so small an animal. * * * Being anxious to settle the point mentioned by White, as to whether the spines of the hedgehog at birth are soft, I obtained a hedgehog from my brother-in-law, the Rev. H. Gordon, Harting Rectory, Petersfield. To my great delight I one morning found, among the straw in the box, one baby hedgebog just born. There had been probably a large family born, but the mother had eaten them all except this one. Here is a life-sized picture of him. White was correct. The spines were soft and flexible at the birth of the little beast; they were little dumpy spikes, much resembling the incipient feathers of a young bird. Even in the few hours the hedgehog lived these bristles grew considerably.—*Frank Buckland's new edition of White's "Selborne."*

BOSTON, February 18th, 1876.

EDITOR FOREST AND STREAM:—

When, in 1827, I was living in Ayrshire, Scotland, a mulatto boy, who lived near us, brought me, one April day, a young sparrow (*Pyrgita domestica*) which I gave into the care of my good mother, who named it Philip. For two weeks I fed the little fledgling; it was then able to provide for itself. Every fly or spider which escaped the searching seeons fell a victim to her (she was a hen-sparrow); and we never caged her—she roamed at liberty. When my mother wished her company she would go to the door and whistle, or call "Philip!" and the little creature would issue from a hedge or hawthorne near by, and perch upon her head or shoulder. When winter came she would sit on the window-sash and listen to the howling wind, turning her head from one side to the other, with that knowing air peculiar to some birds' then she would fly to my mother, and nestle down at the back of her neck, in the white cambric neck-handkerchief she always wore, and remain there for hours. Philip was our guest at table, hopping from one person to another, grateful for my crumbs. If my father drove her off, she would fly upon his bald head and peck at his scanty hairs. When winter fairly set in she took a fancy to a pitcher to my bedroom, which stood on the shelf which my mother ornamented with old china and antiquated goblets. In this pitcher the little lady built her nest, collecting straws, feathers, and threads for the purpose, and here she retired every night. Philip not only claimed the pitcher for her own, but the shelf on which it stood. As her fame spread, for paragraphs appeared in our *Gazette* noticing the remarkable bird, strangers from miles around would come to see her; and if they put their fingers on the shelf or pitcher she would peck at them with the fierceness of a Scotch terrier.

In one of her rambles she found a mate. He every evening escorted her home, and left his fair lady at my bedroom window, which I left open for her entrance. Every morning he came to the window and called her. She always answered while flying from the pitcher to the window, and if it happened not to be open she would perch on my head, and pull my hair till I woke and let her out. We soon discovered that the pair were building a nest abroad. After this we saw no more of Philip for three months, and we all feared she had fallen a victim to some gunner; but at the expiration of that time, to the joy and surprise of us all, particularly of my mother, she flew into the house, hopped on to the tea table, and seemed perfectly at home again. She then examined her nest in the pitcher, which appeared to want some repairs, as she busied herself about it, and then took possession of it for the winter, living in the family as before. The next spring she left us, and again returned as winter approached. This she continued doing for five years. Finally she did not come back, and we could only conjecture that she died the death of a sparrow. J. C. K.

A LETTER OF PROMISE.

ANN ARBOR, Mich., February 30th, 1876.

EDITOR FOREST AND STREAM:—

Your issue of February 17th is at hand. I shall arrange my notes on the arrival, breeding, and departure of the birds of lower Michigan, taken about here, and send them so that they will reach you March 1st. In regard to the idea that birds are able to perceive coming weather, I find the following among my notes: "Ann Arbor, April 23d and 24th, heavy fall of snow; find many blue-birds and song sparrows frozen in the woods and fields." Now, if birds are able to foresee the coming weather, why had they not departed, and escaped death? I expect the birds to arrive this spring much earlier than usual. A few blue-birds are here, and are singing merrily about the house this morning.

A. B. COVERT.

RECENT ARRIVALS AT THE CENTRAL PARK MENAGERIE.—Two monkeys (*Macacus cynomolgus*); one ocelot (*Felis pardalis*); two badgers (*Taxus Americanus*); one red deer (*Cervus Virginianus*); one five-horned sheep (*Ovis aries*), from the Atlas Mts., northwest Africa, presented by Mr. S. E. Martin, Morocco, Africa; one herring gull (*Larus argentatus*), presented by Samuel W. Francis, M. D., Newport, R. I.; two bullfinches (*Pyrrhula rubricilla*); two black-caps (*Sylvia atricapilla*).

W. A. CONKLIN, Director.

The Kennel.

—We have inquiry from a correspondent in Cuba for a colley, or shepherd dog. Can any of our readers, either in the United States or Canada, inform us of any thoroughbred ones for sale; dogs say from two to three years old?

—In answer to many inquiries, we would say that the address of Mr. S. B. Dilley, the owner of Ranger, is Lake City, Minnesota, not Michigan, as erroneously printed before.

SPLIT NOSE POINTERS.

St. Louis, February 24, 1876.

EDITOR FOREST AND STREAM:—

If E. H. L. will read again J. W. M.'s article, in FOREST AND STREAM of February 3rd, concerning the Baltimore dog show decisions, after J. W. M.'s assurance that he meant no reflection on the winning pointer because he had a split nose, the article will assume another appearance. J. W. M. merely rediculed the idea of the judge awarding the prize, simply because he once owned a good dog with a split nose. Had he once owned a good dog with his left eye punched out, and a big wart on his right lip, and two inches of his tail chopped off, no doubt he would have witheld judgment, unless a dog similarly provided with these requirements (?) had been on exhbition. Equally ridiculous is the reason given by another of the judges, that because the dog was light-colored (white I think) he could be seen farther in the field, and should have the prize on the bench. Where did this judge learn that color in pointers secured any points on the bench? If my memory serves me, only ten points are given for the combination of color, symmetry, and style. It is said one judge declared Stromberg's dog too finely bred. What was the dog at the show for but to show his fine breeding? Had it been a field trial, it would have made no difference what his breeding was. J. W. M. made his criticisms of the awards to correct, if possible, the flagrant errors of judgment on the part of the directors, and of the judges after they were chosen. Baltimore can get up as fine a display of sporting dogs, owned by her citizens, as any city in America, comparatively speaking, and since quite an interest is awakened there on the subject, let her go to work right to make her next show a grand success; but by all means let her get competent judges. If any gentleman is asked to be a judge, and does not feel sure that he knows enough about a dog to pass judgment, let him be candid enough to decline to act. But J. W. M. has something to say to E. H. L. about his pets—the split nose pointer. When he went home, after reading E. H. L.'s article, he took down from his book-case the first work on the dog that came to hand—Youatt—having made up his mind to quote only from one author, be his views what they might, and to select only our worst. Youatt says, "The French pointer is distinguished by a furrow between his nostrils, which materially interferes with the acuteness of smell." Lewis, the author of Youatt's work, American edition, can't see why the split nose—"the slight deviation from nature"—should affect the properties of the olfactory apparatus, but does not question that they are inferior in scenting powers to English dogs. "The furrow is merely a deformity," he says, and "must have been originally the result of accident, but has been extensively inherited by succeeding generations until it has become a distinctive mark of a class of dogs."

The split nose is a deformity, nothing more or less, and a very ugly one at that, as E. H. L. will admit, if it were found in a man, a horse, a bull, or any other animal. A hair lip in a dog would be just as desirable. The peculiarity does not belong to pointers either, for Joe Turner, of Baltimore, has a little terrier with it, and Henry Malcom, of Baltimore, has a bull bitch with it also, and there are plenty of curs in St. Louis with it. If E. H. L. thinks it an improvement in the pointer, he can get some of Turner's or Malcolm's stock to cross with his pointers. Did he ever hear of a split nose pointer winning on the bench or in the field in England? J. W. M. does not deny that a split nose pointer can be a good dog, but he does deny that the dog is a good one because of his split nose, and he denies that the split nose makes any dog better than if he had a perfect nose, and he denies that the split nose makes the dog more stylish or higher headed. And he asserts that when that split nose dog gets briers or tough grass caught in that split nose, he will wish he had the old ordinary sort of a nose for the once. With kindest feelings for E. H. L., I remain, yours truly,

J. W. M.

WASHINGTON, D.C., February 26th, 1876.

EDITOR FOREST AND STREAM:—

I would like to add my testimony to that of "E. H. L." in relation to split or double nose pointers. I have owned and hunted one for the last eight years, and never shot over a finer dog in my life. He was staunch and reliable on all kinds of game, and his get have all turned out well. His mother and sire were imported during the summer of 1860, and he was one of a litter of seven, all dogs, born on shipboard. His sire and dam were a deep rich red, and he took after them in color. This coming summer, if he lives, Barney will be fifteen years old, and I am afraid has days of usefulness are over. Last fall Barney was only good for a few hours a day, but the time he did hunt was well put in. I never saw him make a false point, or flush a bird in my life.

I agree with "E. H. L." that evidence can be accumulated which, while it may not show the superiority of split nose dogs, will not show them inferior in the least to their single nose brothers. I hope others who have owned double nose pointers will give a notice of their usefulness.

JAS. N. DAVIS, JR.

PORTLAND, ME., February 18, 1876.

EDITOR FOREST AND STREAM:—

In the FOREST AND STREAM of 17th inst., I have just read a letter by "E. H. L." on the subject of pointers and "split noses." I think, from what I have seen of pointers, that they are far inferior to setters for our work here in Maine, and, while I have no doubt that the pointer is *the dog* for the Western prairies, I think his friends are claiming too much when they hold that he is better for general New England shooting. Now, I am a lover of setters, and am so strong in my preference that I would not "take the gift" of the bluest-blooded pointer in this country on the condition that I should keep him and shoot over him here in Maine, because the well bred pointers, (that I have seen), "with hide like velvet," will "hunt for two days among bull briers," if his owner has the heart to let him; but he is equally sure to come out at night (of the second, if not the first day) with "this mottled ados ensangumed as were Lady Macbeth's hands," "when from ears to hip not a finger could be laid upon him and not be frescoed with his blood.

Now, no one doubts the courage of the well-bred pointer, but who, save a butcher, could enjoy hunting with an "affectionate" dog, with whose "docility" he has been "comforted," and then glory in his coming in at the end of the second day of his master's sport, so torn and lacerated that his proud master could wash his hands in the gore canding from every "frescoed" pore of his velvet-skined favorite. Because I have a good setter, and E. H. L. has a good pointer, is no reason for each to decry the other's dog. The impartial truth is that both dogs are good. For some work the setter is best; for other work the pointer, and perhaps in some cases they are equally good.

In regard to the "split nose" business, I think argument is unnecessary, if not absurd. It is simply a defect—i. e. a "cleft palate"—and E. H. L. might as well argue that a sportsman with a similar deformity would shoot better than a man perfectly formed, as claim that a dog with the same deformity is better than one perfectly formed. In either the deformity does not affect the special qualities sought for, and, as it is a deformity, I for one should far prefer a well-formed dog to one with the unsightly deformity of a cleft palate, even if the deformed one happened to be a little better.

But as to this point I will only say, further, that I read with much interest the article by your Kennel Editor upon this subject, and think there is nothing to be said in addition thereto. My own experience has been too limited to be of value as testimony; but such as it is I will give it. I have known personally three split nosed pointers and two split nose setters, and not one of the five was worth "a tinker,s condemnation," although two of the pointers and one of the setters were of undeniably good stock, and of one of the pointers, in particular, I know that his mother was called the champion of "Tantremar Parish" His father was a very fine dog, all his brothers and sisters were splendid dogs, and he was perfectly worthless.

One word more as to the merits of the two dogs—setter and pointer—I have never had the good fortune to meet with an "affectionate" pointer, although I have seen many that were clean limbed, sleek-haired, springy, etc.; but I have rarely seen a setter that was not affectionate, and most of them very strongly so; and this latter quality of the setter would alone cover a "multitude of sins" if they existed in him, as they do not, *me judice*. I admit that, as E. H. L. claims, the pointer's "retention of knowledge when once broken" is far superior to the setter's in the field, and also believe that they are easier to train, save for retrieving, but I don't think any one would think of calling a pointer a "lovable" dog, and I know some who do call a setter thusly. MAC.

If sportsmen, in giving their experience in regard to the merits of the two varieties or dogs—setters and pointers—would divest themselves of all prejudice in the matter, amateurs who are looking for information upon the subject would be less frequently led astray in selecting their dogs to shoot over. We know of no one who has given the matter a more thorough practical trial than ourselves. We have made periodical trips to the prairies during the past twenty years, sometimes using pointers and sometimes setters, with the view of testing their qualifications, and now let us say that we cannot agree with our correspondent that the pointer is the best dog for the Western prairies. During the first month of grouse shooting there, say from the 15th of August, when the season opens, until the middle of September, a pointer would, no doubt, be equally as serviceable as any setter, and perhaps not be quite so much affected by the heat. But we do not advise our shooting friends to go to the prairies to shoot grouse, snipe, and ducks before the middle of September. It is true that during the first few weeks of the season much larger bags of grouse can be made, but then the weather is frequently so excessively warm that there is little comfort for man or dog, and then frequently large lots of game spoil on the hands of the shooters before it can be used, consequently, years ago, we resolved never to go to the prairie to shoot before the middle of September, and then we find not only enough grouse to make excellent sport, besides the fine snipe and duck shooting to be found after that time up to the 1st of November; and during that time we have found that the setter is decidedly preferable to the pointer.

We have, however, done much shooting on the Ohio bottoms in Virginia and Ohio, and in other places where the Canada thistles abound, the burs of which become so wound into the feathering of the setter as to almost make him useless. In such places the pointer is decidedly the best dog to shoot over.

In regard to retrieving, our correspondent is in error when he says that the pointer is inferior to the setter. When a dog is broken to retrieve artistically, as we have our's broken, there is no difference between the two—either will find and retrieve the game surely when ordered.

NATIVE AND IMPORTED SETTERS.

NEW YORK, February 23d, 1876.

EDITOR FOREST AND STREAM:—

Very seldom has anything aroosed such a general interest amongst the sportsmen of America, as the question: "Which are the best and most saltable dogs for our hunting, the imported English or our own setters?"

Many sportsmen, and mostly the Knights of the so-called Bluebloods and importers of English dogs, stick to a certain strain, and don't allow any fresh blood of other strains in their kennels. Hereby they invariably *in-breed*, the father to his own get, brother to sister, etc.; and as this is against all natural laws, sportsmen should, as much as possible, not practice it, as it after a while must degenerate the offsprings.

One writer asked, some time ago, when writing against American dogs and sportsmen: "Which dog would the sportsman of America breed from, one that is a very good field performer, without known pedigree or one that has never been hunted and knows no birds, but whose pedigree we have and know?" Here, I say, it should depend solely upon the dogs themselves. Every good judge of a setter would soon detect that a dog is not pure, should the sire have been a bull-dog; but should this good field performer be also good in shape, coat and color, and have some strong, good points, which I wanted to improve on the offsprings, as the bitch is weak in these points, I should most surely take this dog, even without pedigree, if the pedigreed one should not be better in said points than the bitch. FOREST AND STREAM has said very correctly, that hardly one out of twenty sportsmen knows how to handle a dog right in the field, and I believe that not one in the same number is judge enough of dogs to select right and suitable mates in breeding. Not only the shape and coat—the body of a dog should be considered—but his disposition and field qualities as well.

If I should have a bitch, slow in her action, with passable scenting powers and a very short head, I would not mate her with a dog that was also slow, had no better nose and head than the bitch, and if he had an English pedigree a mile long. No, I should take the fastest dog available, with better nose, and a long better formed head than the bitch, even if I only knew about his pedigree, that dam and sire have been simply trusty Yankee setters. The pedigrees have shamefully been neglected by the most of our American sportsmen, and I hope that in a couple of years nobody need breed to a dog where only dam and sire is known. To keep a detailed record of the looks and disposition of each dog, would be a very interesting addition to the mere names in pedigree.

Many sportsmen breed also too much to color alone, and think that by crossing a black and tan with a red setter, or a red one with a lemon and white one, they would fare worse than breeding to a dog of the same color, although he might be much inferior in every respect. Let all sportsmen remember, that the highest perfection of a setter consists of "good field performance, good shape and coat, and that to accomplish good field performance there must be a faultless shaped body."

It would be ridiculous to say: we had no good American dogs, and as much wrong to run all English dogs down, as both countries have good and bad ones. But if some newly imported setter represents the best of England, I am bound to believe that many of the American breeders have been *fully* as successful as their English cousins. For example, look at the difference in shape, disposition and color, of the imported Laveracks. Pride "is a rather noble, well built," dog, but slow in his action; Fairy "is not so well proportioned, too short legged, but never theless very fast, and Ruby was not much bigger than a "Dachshund," and was by no means a bitch to give credit to the English dogs. Mr. Purcell Llewellin, by crossing some selected dogs of the Laverack with the Rhoebe-strain, seems to be the most successful breeder now in England, as in the offspring of this *cross*, called the Field Trial breed, he has combined good field qualities with fine coat and forms.

By carefully crossing the imported English dogs with some of our American good ones, we will get offspring which may excel both. This has been done already, as many fine setters were imported long before the latest *rush*, "and in my opinion we have now some dogs fully as good as the best in England." JUSTUS.

KENNEL PHONETICS.—The red Irish setter bitch Roby, (see FOREST AND STREAM Kennel Register, No. 32, page 11, book A), owned by W. R. Hobart, of Newark, N. J., dropped a litter of fourteen, six dogs and eight bitches, to Dan, the property of Judge C. E. Pratt, of Brooklyn. All the pups are red, or red and white, very little white. Ruby is from a pair of red Irish setters, imported in 1873 by Gen. Ducat, of Chicago. Dan is all red, from the Rodman Dash strain, (see Burges's pedigrees, No. 130). These pups cannot fail to do justice to their breeding.

The black pointer bitch Mab, belonging to G. A. Strong, of West Meriden, Conn., recently gave birth to ten puppies, six dogs and four bitches, sired by Pete. Mab is of the De Peyster strain.

ST. AUGUSTINE YACHT CLUB, *February 23d.*—Their first regatta of the season of 1876, occurred on the 12th inst., and although the arrangement of starting the second class and third class yachts in the morning, and the "Special" class and first class in the afternoon, seemed to offer a good chance for a day's sport, it unfortunately happened that a light west wind, alternating with flaws, calms, and baffling breezes, made the morning's sport rather tame, and the result more chance than otherwise. In the second class the America, Belle, Ida Lyon, Saucy Kate and Traveller, were the favorites for the winners of the first and second prizes among the number of starters; and as the first three boats entered the race in splendid order, and the first with a record second to none, wagers of kid gloves and segars were freely made by the ladies or gentlemen, who backed the bias of their wishes or judgment. The America had the leading call among them, which she proved to merit by winning the prize, the Ida Lyon and Traveller making a close fight for the second place, the balance of the fleet being nowhere. In the third class the little Eagle and Emma won the victory over their "small fry" competitors. Much regret was expressed at not having had a better wind, and as usual the absence of the much talked of eight knot breeze was attributed by the tail-enders as the cause of their not having been in the van. However, with the afternoon race, there was wind enough to suit, a steady south east wind having come up. The large yachts, Seminole and Belle, of the Bay, were started, and the former reasserted her claim to the championship by winning the stakes. But the event of greater interest lay in the special class race. The Lucy, Julia, Maud, Daisy Burns, and Nelly, appeared at the buoys, and all seemed in good form, but as for many seasons the Julia had proven herself the fastest boat in East Florida, the prize for her class was anticipated as her property. This boat may be remembered as the Brooklyn Belle by some of our readers, formerly visitors at the Ancient City. At the signal the boats all obtained a good start, the Julia having the lead to the first buoy, about a mile south of the city, which she rounded and bore away before the wind for the ship's channel and the buoy at the other extremity of the course, 2¼ miles distance. The Maud, which seems to follow the fleet at the start, had obtained a second position, and a minute or two later rounded the southern buoy and followed in the Julia's wake. A stern-chase continued for two-thirds of the ten mile course until the second round. The greatest interest was experienced by the fact that the little Maud previously untried had challenged issue, tack and tack, with the Lady Champion, and was showing not only a clean pair of heels but trim ankles, and eventually won the prize fairly, without the time allowance due her from her longer opponent.

The Ancient City greatly rejoices on the occasion of these regattas, and the spirit of yachting has been gradually developed during the past four years, principally due to the efforts of Messrs. Edgar, one of whom was nominated this year for Vice-Commodore of the New York Club, but who waived the office, it is understood, in favor of a friend. Commodore Morse is a son of the lamented Sydney E. Morse, and cousin of the patron of the Morsemere Rifle Range. The Secretary, R. F. Armstrong, is an officer of the Royal Halifax Yacht Club of Novia Scotia. Dr. J. H. Janeway, late of Fort Wallace, Kansas, and Major Randolph, both of the United States —th Infantry, are owners of the yacht Belle. The Club includes nearly 100 members, who are representatives of nearly every section. It is the chief centre and source of the winter's pleasures in St. Augustine, and the natural outcome of the social aggregation of gentlemen here who are identified with yachting interests at home. Their club house is replete with every comfort, and is the favorite resort of members and their guests. The St. Augustine Yacht Club deserves great credit in having passed through the early ordeal of a career. It is to be hoped they will not strand upon the rock of many such organizations; but to have a Commodore, Vice-Commodore, Measurer, Doctor, and a full organization similar to the large Northern clubs, and to propose and adopt a uniform this year, in view of the number of boats owned in the fleet, is rather forcing matters into the aesthetics, and is hardly favored by all the members, some one of whom suggested yellow dress coat and red embroidered anchor on the flaps. This sensible rebuke, it is to be regretted, did not prevail. We favor the healthy and hearty amusement of yatching, but deprecate "the snobs" in all organizations, who generally develope the

tendencies alluded to, and choke off the success attained by their predecessors. However, with these side remarks, we wish the sport success, which it is pretty sure to have, where the facilities are so abundant as in St. Augustine, and where so many yachtmen congregate.

HAL-A PENDLE.

February 23d.—Yesterday, on Washington's Birthday, the yachts of the club participated in the first Corinthian regatta ever held in Southern waters, which scores heavily to their credit. No person ought to own a yacht unless he knows how to sail her; else what is he to do when emergencies arise? We would go so far as to make this qualification a condition of membership in any club. The *personnel* of the St. Augustine Club, we know, is not made up of fair-weather sailors. The test of yesterday proved that. It did not blow "great guns," but it called sand bags to windward, and lively work. Every one had to look sharp. It was not a dirty day in the full acceptation of the word, but the weather was variable enough to suit the most capricious. It was calm, fresh, squally, and rainy by times. It adapted itself by rotation to the seagoing and working qualities of each craft that entered, thereby enabling them to show off their best points to best advantage. Spectators had ample scope of view from the balconies of the houses that girt the bay. There was a lively knot of them also at the club house, and on board the graceful U. S. Surveying steamer, the Bache, which lies at the landing. The harbor of St. Augustine is full of islands, reefs, sand-bars, and currents. To win a race, one must be familiar with these. A peculiarly constructed flat-bottom boat is also required, such as are built here and no where else. This information will save much disappointment to those who contemplate bringing Northern yachts here. Letter writers generally forget to mention these important facts.

Those yachts that waited at moorings for the starting signal were the Belle, 25 feet; Ida Lyon, 21 feet; Saucy Kate, 24 feet; and America, 25 feet, with the Belle outside. We give the names of the crews:—

Belle—Maj. W. F. Randolph, S. Betton, and two others whose names I do not have.

Ida Lyon—R. F. Armstrong, A. F. Lafarge, Dr. J. Symington, and C. E. Bryce.

America—D. Edgar, W. N. Brooks, and H. Godcy.

Saucy Kate—Com. Morse, N. Edgar, F. H. Bangs, and Mr. Bradbury.

The boats got a good send-off, with a light wind abeam. A favoring puff, however, gave the Saucy Kate a start, which she kept to the finish, being winning boat by nearly six minutes. All were handled admirably, and were well bunched up to the first turn. After that the wind freshened, and then came a squall, with heavy black rain clouds, which the vessels had as much as they could do to stand up under. The Ida Lyon was crippled, and went to grass. Lulls and spurts followed—nip and tuck between the Belle and America, and the Saucy Kate snapping her fingers at the foremost. All well to the second buoy and home, and a good dash for the second five miles, with hope still left for the hindmost. After rounding the first buoy, second turn, the America lost good time on a mud flat, which she inopportunely stopped to investigate, and soon afterwards the Belle crippled her rudder, and limped toward home with peak dropped and an oar out. When the America touched bottom the Kate was a good two miles ahead, but, nothing daunted, she took to water again, and was overhauling her competitor fast when the latter passed the home line, and "settled it." Start, 10.38:45; finish for Saucy Kate, 12:35:20. The prize was a handsome piece of silver plate. The conditions of the race were from moorings twice around the club course (ten miles); allowance, one minute per foot; entrance, $2; club rules.

It is pleasant to state that Capt. John M. Peudleton's yacht Traveller, which carried your reporter, sailed the entire course, keeping good company with the contesting boats, and adding much to the interest of the race, so far as spectators were concerned. Your correspondent wishes to thank the club for courtesies. HAL.

BOSTON YACHT CLUB.—The members of this organization to the number of fifty, assembled Tuesday evening, February 23d, at the American House, and partook of their annual dinner. Previous, however, to the sitting down to the good cheer, a special meeting of the club was held, Commodore Benjamin Dean in the chair, and Thomas Dean acting in his capacity as Secretary. At this meeting several new members were elected, and the following letter was read:

BROOKLYN YACHT CLUB,
BROOKLYN, Feb. 11th, 1876.

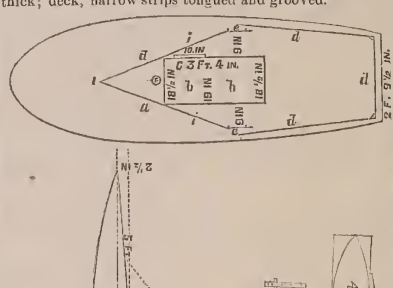
Thomas Dean, Esq., Secretary Boston Yacht Club Boston, Mass.:—

Dear Sir—I have the pleasure to advise you of the following resolutions passed at the last meeting of the club:—

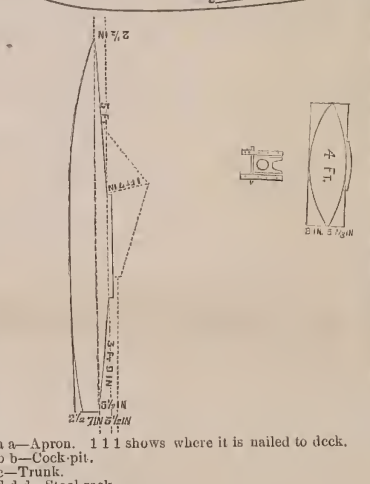
"That a committee of five be appointed of which the Flag officers shall be three, to confer with the Boston Yacht Club, and to arrange, if possible, for a meeting of the fleets during the coming summer, at such time and place as may be mutually agreed upon, and to report to this club for their action."

The following named gentlemen were appointed on said committee:—Commodore John S. Dickerson, Vice Commodore John R. Platt, Rear Commodore J. G. Johnson, Captain Thomas B. Asten, Mr. Thomas Manning.

Hoping to be advised favorably, and with kindest regards, we remain yours truly, WM. LEE, Secretary.



On motion of Augustus Russ, Esq., it was voted that the communication be referred to a committee, to report at a future meeting, consisting of the Commodore and four other members to be appointed by him.



Commodore Dean appointed as his associates on the committee Vice Commodore W. H. L. Smith, Rear Commodore Geo. B. Darfee, Treasurer Augustus Russ, and the Secretary, Thomas Dean.

THE BARNEGAT SNEAK BOAT.

MR. BISHOP'S voyage down the Ohio and Mississippi Rivers and through the Gulf of Mexico in a Barnegat sneak boat has attracted so much attention towards this description of boat, and we are in receipt of so many communications on the subject, that we reprint herewith from our issue of April 23d, 1874, a full description, together with diagrams fully explaining mode of construction. A working model of the boat can be seen at this office; we are indebted for it and the description to Mr. Robt. B. White, of Shrewsbury, N. J. The boat, of which the cuts below are a representation, is of the following dimensions:—

Length, 12 feet; width midships, 4 feet; width of stern, 2 feet 9 inches; depth of stern 7 inches. Sprung timbers all of one pattern, 9-16x13-16 inches; distance apart 8 inches; deck timbers natural bend, 1 inch x¾. Cock-pit, inside measurement, length, 3 feet 4 inches; width at bow and stern, 18½ inches; midships, 19 inches. Combing, height of inside at bow and stern, 2¾ inches; midships, 2 inches; from bottom of combing to top ceiling, 13 inches. Trunk on port side, set slanting to take a 15-inch board trunk placed alongside and abaft of forward corner of combing. Rowlocks, height, 6 inches; from combing, 9 inches; middle of to stern, 4 feet 7 inches, made to fold down inboard and to fasten up with a hook. Stool rack runs from rowlocks to stern, notched at ends into fastenings of rowlocks, also notched at corners and hooked together, rest against a cleat on deck outside, and are hooked to the deck inside. In a heavy sea the apron is used. It is held up by a stick from peak to combing. Thus rigged the boat has the reputation of being able to live as long as oars can be pulled. The apron is tacked to the deck about two-thirds its length. The wings are fastened to the top and bottom of the rowlocks. Mast hole, 2½ inches; 2 in. from combing. Drop of sides from top of deck, 5½ inches, dead rise, 8 inches. Over cock-pit a hatch is placed. Everything connected with the boat is placed inside, gunners often leaving their guns, etc., locking the hatch fast. The boats sail well, and covered with sedge are used to shoot from. With the hatch on, a person can be protected from rain, and with blankets, can be accommodated with a night's lodging. Boards for boats, white cedar, ⅛ inch thick; deck, narrow strips tongued and grooved.

a a—Apron. 1 1 1 shows where it is nailed to deck.
b b—Cock-pit.
c—Trunk.
d d d—Stool rack.
c e—Rowlocks.
Fig. 4 shows rowlocks.

THE AMATEUR QUESTION.

BERGEN POINT, N. J., February 23d, 1876.

EDITOR FOREST AND STREAM:—

The allusions contained in the letter of your correspondent "Hagestolz," published in your paper of the 17th inst., are so pointed that our club cannot affect not to know who is meant, and what is aimed at; but his reckless assertions are so entirely based upon his own opinion merely (as he himself admits) that our members naturally feel surprised at the appearance of his communication in print.

To avoid newspaper notoriety, our club has made it a rule never to reply to the various attacks made upon us from time to time through the "press," believing them to be mainly prompted by envy and jealousy. To our numerous friends throughout the country no denial of his insinuations of your correspondent are necessary, and to our enemies, whoever they may be, we can only say they will have ample opportunity to prove any charges they may desire to make by writing to, or appearing before the Qualification Committee of any of the various regattas in which we may enter the coming season. Our only reason for breaking through our established rule is the fact that our crew are all absent from home, and unable to answer for themselves.

E. W. HUMPHREY, President,
E. R. CRAFT, Treasurer,
Argonauta Rowing Association.

The fact that the letter which we published last week, although mentioning no names, was known at once to be directed at the club which has noticed it, shows conclusively that the subject was a matter of common gossip in boating circles. We published the letter in hopes that it would draw forth just such a dignified denial as the one above, and that the matter being once ventilated, a stop could be put to gossip and hidden inuendo. An open accusation can be fairly met, and if an unjust one, can be combatted and forever put at rest, while secret malice can sting unseen, and its fruits expand until silence is accepted as a proof of guilt. For our own part, we are satisfied that the members of the Argonauta Club are keeping strictly within the letter of the law relating to amateur boat racing, and the definition of the term as adopted recently. As regards our opinion of that definition, we shall have something to say on another occasion. The Argonautas have as much right to send a crew to Florida to train, and pay their expenses from the club funds, too, if necessary, as they have to send one to Saratoga, or Troy, or Seneca Lake to row a race. And a man who chooses at his own personal loss or risk to take a certain time from his business, in order to uphold the honor of his club, or, as it is in this case, his country, is entitled to credit instead of contumely. For this is the Centennial year, and oarsmen from far and near are coming to contest. If Oxford, Cambridge, and Dublin Universities send their crews; if the crack men of the London Rowing Clubs come over, they will take a deal of heating, and we have the old Harvard and Atalanta defeats to wipe out. It is with this in view that these members of the Argonauta Club (a portion of whom, we understand, do so every year) are spending their winter in Florida, hardening their muscles with camp life and enough rowing to keep in form. From the accounts we hear of their camp and of the elegant shooting and fishing they are having, we wish we were with them. As to whether they have forfeited their right to be considered amateurs, there is a body with jurisdiction who will decide the question at the proper time.—ED.

—*Bell's Life* of February 26th, says that Robert Watson Boyd has completed negotiations for a four-oared crew to go to America during the ensuing regatta season. The crew will be composed as follows: Robert Bagnall, bow; W. Nicholson, Robert Chambers, and Boyd himself as stroke. Boyd has challenged any crew in England to row over the championship course, on the Thames or Tyne. If this challenge is not accepted, he will assume the title of champion. The four will then proceed to America as the representative English crew.

—A *Herald* correspondent writes from Pittsburg that a four-oared crew will be made up in that place to row in the Centennial matches, of which Morris will pull stroke with Luther, Scharff and Kaye, or Siebert behind him. The crew will commence practice as soon as the river is clear of ice. In the scullers' race Morris will enter against all comers, and expresses a wish that the best of England's rowers may be induced to contend for the prizes. In this race, also, Pittsburg will have another representative in Henry Coulter, whose defeats last year were such game ones as to raise his qualifications as a sculler in the estimation of boating men.

In the amateur event the Duquesnes, the bunch of little fellows who did nobly at Saratoga, last season, will participate. It is likely, however, there will be some changes in the crew, heavier material being substituted, while the unity of action in rowing, characteristic of this organization, will be retained.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.*
Drum (two species.) Family *Sciænidæ.*
Kingfish, *Menticirrus nebulosus.*
Sea Bass, *Sclænops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Snapper, *Lutjanus cœsus.*
Grouper, *Epinephelus nigritus.*
Trout (black bass,) *Centropristis atrarius.*
Striped Bass or Rockfish, *Roccus lineatus.*
Tautaug, *Tautaga onitis.*
Pomatomus saltatrix.
Black bass, *Micropterus salmoides;* *M. nigricans.*

[*Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.*]

FISH IN MARKET.—Owing to severe storms along the coast during the past week, fishing has been almost suspended, so that the Lenten season opens with a scant supply and prices advanced from 15 to 30 per cent. We quote:—Striped bass, 20 to 25 cents per pound; smelts, 18 cents blue-fish, 15 cents; salmon (frozen), 50 cents; mackerel, 25 cents each; shad, Savannah, 50 cents each; North Carolinas, $1, extras; white perch, 18 cents pound; Spanish mackerel, 50 cents; green turtle, 20 cents, terrapin, $12 per dozen; halibut, 18 cents per pound; haddock, 8 cents per pound; cod-fish, 8 to 10 cents; black fish, 15 cents; herring, 6 cents; flounders, 10 to 15 cents; sea bass from Charleston, S. C., 15 cents; eels, 15 to 18 cents; lobsters, 12 cents per pound; sheepshead, 30 cents; turbot, 25 cents; scollops, $1 per gallon; soft clams, 30 to 60 cents per hundred; white-fish, 18 cents; pickerel, 18 cents; sunfish, 10 cents; yellow perch, 10 cents; salmon trout, 20 cents; ciscoes, 12 cents; hard shell crabs, $1 per hundred; pompano, $1.

—We saw at Blackford's, on Saturday last, three specimens of salmon trout that were received by the steamer Russia, consigned to the U. S. Fish Commission, from the Free Public Museum of Liverpool.

MASSACHUSETTS ANGLER'S ASSOCIATION.—There was a large and enthusiastic meeting of the above association on Wednesday evening, Feb. 23d, held at their rooms in Boston. After the transaction of important business, on motion of Col. Needham, the Advisory Board were requested to consider the expediency of making the Fish Commissioners of the different States honorary members, to report at the annual meeting in April.

—Codfish roe is used for bait in the sardine fisheries of France, but the supply is inadequate to meet the demand. It has been found, however, that grasshoppers, when pounded up, imitate it so exactly as to answer the purpose admirably. Should the West be inflicted with another visitation of grasshoppers, they could be turned into some account by being converted into fish bait and exported to France. The French Government are importing large quantities of these insects from Algeria, in order to try the experiment on a scale of some magnitude

NEEDLE POINTS.—Seth Green writes to Thad. Norris, from Rochester, under date of February 23d: "You make as good a trout rod as any man in this or any other country, and have more cunning than most fishermen, but I do not think you need your usual cunning as you would if you had been fishing in a wild stream. If you had, you would not have made more than one cast in our friend Comfort's pond, where the trout were as thick as your fingers, before you would have taken off two of the flies and had been satisfied with taking one at a time. You would have landed every trout you hooked, and would have had better sport than you would if you had landed three at a time. Thad., it will not take one long to convert you when we meet."

—Fishermen this winter in the Delaware Bay are said to be doing a small business. The constant disturbance of the fish in coves and other places where they usually pass the cold weather, being constantly disturbed by seiners on account of the absence of ice, have disappeared from their customary resorts, and the catches are small and unprofitable.

—A letter from Cape May to the *Evening Star* says that a large shoal of porpoises, followed by great flocks of "cod-fish gulls," both very unusual winter sights, passed that place the other day close ashore, giving assurance that codfish were coming along on which these were preying—the former on the fish, and the gulls on the fragments and blood left by the devourers. As codfish are unlooked for less than six miles off shore, no one wet a line for them. A fine specimen washed ashore, chased in by a porpoise, it is supposed. A steamer put out from the breakwater recently and caught 900 pounds in a few hours. They are caught while at anchor or hove to, and clams are used for bait.

NOTES FROM THE RESTIGOUCHE.

DEE SIDE, Metapedia, February 15th, 1876.

EDITOR FOREST AND STREAM:—

So you're off to Florida, Charlie. Well I do wish you a good time, and hope we will hear from you. I think you want it, for your sanctum is rather confined for my taste. No doubt you'll wet a line while there, but won't hook a forty pound salmon. I am not aware of anything bigger than thirty-six being killed (with fly) here last year, although I knew a lady, who I am sure never hooked a salmon before, to hook, kill, and land (without gaffing) two twenty-two pound fish in less than forty minutes. This was done early in July at the Devil's Half-acre Pool (which you should remember) on the Main Restigouche.

The total angling score in my division, last season, was something like 500 fish, averaging about 17 pounds; largest days' take, 10 red, 2 fish; best ever done on Restigouche, 21. This may hereafter be exceeded—water, atmosphere, a prime unfished pool, an experienced angler, and something stronger than a single cast combined. Speaking of time in killing, I knew Samuel Wilmot to bring a 36-pound fish to gaff in seven minutes, fair play, single cast. He had a quick gaffman, as the fish was not exhausted. In my little experience, if you handle your fish properly, and he is fairly hooked, you stand a good chance of bringing him into reach in from five to seven minutes, supposing your gaffer knows his business. Mostly every fish will come into quite shoal water before he is played out. Probably he wants to see what is at the other end of the line. The exceeding clearness of our water, together with the fact, that the principal pools where the salmon congregate in large numbers are some fifty miles above tide water, for which reason I don't think ever any very large numbers of fish in a day, such as you lately told as of, will ever be caught here. All rivers are not so where the fish run out of salt water and school at once, particularly if fresh fish are running in constantly, no doubt big scores can be made. Still I would prefer clear water, and missing a fish now and then just to keep up the excitement. Suppose you hooked a fish every cast, how soon would it pale? it would not be sport. But when you see the fish rising just out of reach, as the case may be, you knowing there are hundreds in the pool. At last a fellow makes a dash and misses, you giving him time to get back to his lay spot. Changing your fly, which I think you should do; again, when you reach him, making another charge at you, hooking slightly, and breaking away on his first leap. At last you are rewarded by getting a good hold, and then comes the tug of war. I remember Walter McFarlane, of Montreal, (who afterwards got drowned on Labrador coast), taking his first salmon at Crosspoint on the Restigouche. This fish made sixteen clear handsome leaps, fairly hooked, and he took four and one-quarter hours to land, weighing 32 pounds. Had he got "butt" enough he could have been landed in twenty-five minutes. Again, his next fish never showed; only sulked and hung to bottom, and when he did start took him down river for a mile without a stop. Mr. McFarlane, at that time, did not know anything about salmon fishing.

I don't believe salmon are sensible to pain, such as a wound. I was fishing a bit of rough water, two years ago, late in the season; fish rose freely for a while, but always slightly hooked. After getting two fish, concluding to quit, and on leaving the pool, (I had been fishing at the head), made a few casts at lower end, when I hooked and landed a male fish 17 pounds. On disengaging the hook, which was well down, I saw fresh scars, or tears, in his mouth, and, on close examination, found I had hooked him five times, each time the hold giving way. As for rising fish, my experience here is, not one fish in twenty will rise to fly. Some days they will not rise at all, whatever may be the reason; other days you can fish all day, and they will sometimes rise best when the sun is hottest. If not trespassing on your space, I will send you my experience and ideas on kelts, as I see a good deal of disagreement on the subject in the *Field*, as well as in your paper. My breeding establishment is now successful, although owing to heavy freshets last fall disappearance. As the name was new to me, I asked for a description of the fish, judging that ice fish was a local name. Being informed that they were only taken through the ice during February and March, and that they were unknown until within a few years previous. I sent the description, as given to me to Seth Green, but from my meagre statement he was unable to give the fish its proper name. I pushed my inquiries, and found that they were veritable smelts. And here again comes in the question of range. They are caught little, if any, south of Port Henry; are more numerous about West Port; are taken at or near Burlington, Vt., and are unknown in Plattsburg, or thereabouts, at least by the fishermen I questioned while there this winter, and I could not learn that they were caught at other than the places I have named. Of course, these come in from the St. Lawrence, but are they caught to any extent in that river?

A. N. CHENEY.

—Dr. Haughton has proved that the strength of the lion is only two-thirds that of the tiger.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. A. S., Smithtown, L. I., CHUMBS, Terre Haute, and T. W. C., Boston.—See answer to Rex.

G. M., Halifax, N. S.—How can cotton canvas be made waterproof, and still be soft? Ans. See answer to N., Columbus, Ohio, also issue of FOREST AND STREAM Feb. 17th, 1876.

G. D. L., Harrisburgh, Vt.—Can you inform me through your paper where I can procure a pair of fine English greyhounds? Ans. We can purchase for you a pair of fine thoroughbred greyhounds about one year old; price, $65.

H. L., N. Y.—Where can I procure a copy of the translation of Pliny into English. Is there such a work? Ans. Bohn, of London, has published a translation, and we fear you will have to import it through some one here.

HEALTH, Philadelphia.—Can you give a description of the health lift; also where they can be obtained, and the price? Ans. By addressing the Health Lift Co., No. 46 East Fourteenth street, this city, you can obtain descriptive pamphlets.

B. F. R., Pittsburg.—Please inform me where the health lift, referred to recently in your valuable and regularly-read paper, can be had, and also price. Ans. From the Health Lift Co., No. 46 East Fourteenth street, this city; price complete, $100.

D., Hardisville, Mich.—1. Can you supply back numbers of FOREST AND STREAM for about two years back? 2. Whose make of rifles did the Scottish team use in the Wimbledon matches of 1875? Ans. 1. Yes. 2. Some used the Milford, and some the Rigby.

RUFFED GROUSE, N. Y.—I have five volumes of FOREST AND STREAM, and I would like to exchange them for a double-barrel shot gun of any bore. Ans. We know of no one desiring to make such an exchange. The cost of five new volumes bound would be only $20.

H. T. St. Louis.—What season is best for fishing, and what baits are best for catfish and buffalo. When is the best time for hunting ducks? Ans. In the spring; for bait, minnows, or a piece of meat. Ducks are shot both in spring and fall, but principally in the latter.

F. B. R., Newark.—Please answer in next week's paper the best way to transport young trout, say about three or four inches long. They have to be taken about 50 miles? Ans. In milk cans, thoroughly clean; allowing plenty of water, keeping it cold with ice, and not changing it.

H. A. F., Delavan, Ill.—I have a single barrel shot gun, splendid barrel, lock, &c., 8 bore, drop of stock about 3½ inches. Where can I have it altered to a breech loader, and what will be the cost? Ans. The expense for altering your single barreled gun would be equal to the cost of a new one.

TEAL, Salem.—A Boston gun dealer says that Hart's shells are no good. What do you think? He says the covers are too soft and will batter down easily. Ans. It is certainly a mistake in the Boston gun dealer. Hart's shells are used very extensively, and are highly approved of by skillful sportsmen.

W. H. L., Decatur, Ill.—Why are blue Belton setters so called, and what are their peculiar characteristics? Ans. The name "Blue Belton," we think, originated in a locality in England; and we presume they are a cross of the black and tan Gordon's with dogs of other colors. They have no peculiarity except in color.

CHIP-A-WAY, Burlington.—Please inform me, in your paper, of some one who manufactures composition poker checks, or chips. I wish to get some of the material of which they are composed, or a formula for making it. Ans. Wm. S. Welling & Co., No. 207 Centre street, this city. The material is a patent composition.

TALBOT, N. Y.—I would like to know the proper load for a twelve-bore Webley. I had it will kick with over three drachms of powder; would like to know Mr. Webley's directions. Ans. You are probably using too much shot; reduce the charge to one ounce, and try coarser powder. We do not know Mr. Webley's address.

W. B., Oxford.—Being an amateur in mounting birds I can improve them much by copying from pictures of a book of that kind. Please advise me. Ans. If you want an illustrated work on taxidermy we can send you the Taxidermist's Manual; price, 50 cents; but if you want illustrations of birds only, any work on natural history would answer.

J. L. C., Brooklyn.—Is there any game law respecting the fish of New York bay. I am accustomed to fish in the Narrows, and every year notice the decrease of fish, especially the weak fish, one of the best game fish in the bay? Ans. Only as regards the size of mesh to be used in nets. Pound and drag nets are fast ruining our best fishing grounds.

SHOT CARTRIDGES, Newark.—You will please decide this bet. A is trying his gun at a twenty-inch circle, and bets B a box of cigars that he he will put in 250 pellets. He puts in 198, and bet again, and puts in 240; then he bets again, and puts in 175. In a few days he sends 100 cigars in two boxes of 50 each; does this satisfy the terms of the bet? Ans. A lost three boxes of cigars, 100 each.

N., Columbus, Ohio.—1. Please state where I can get water-proof canvas. 2. If it can be bought, how can I make it, and how often must the process be renewed to keep it water-proof? 3. Also the kind of canvas used for tobacco sacks. Ans. 1. We do not know where it can be procured. 2. Pass the canvas through a solution of parraline; no necessity to renew. 3. Duck is the best and strongest.

J. B. P., Gainesville, Texas.—In what month, and in what part of the Western or Atlantic States, or Canada, can I get the best duck and snipe shooting in the spring for a few week, with or without decoys, and a guide or boat is not needed? Ans. Go to the shooting quarters of Ira Bingham on Lake Koshkonong, Wis., or to Minnesota Junction, Dodge Co., Wis., and enquire for Mr. Miskey, a shoothei.

G. F. O., Bennington.—1. Where can I obtain the Curt Dittmar powder, and in what size canisters, and what will it cost me per pound? 2. Where can I obtain a thoroughbred spaniel pup about four months old? 3. What is the price of the Hart shell per dozen? Ans. 1. Of Carl Dittmar, Neponset, Mass., in any quantity. 2. Cocker spaniels from J. S. Bostor, Hartford, Conn. 3. $2.50 or $3.

W. B. S., Harrisburg.—I have a light muzzle-loader, 14 bore, 6 pounds, which recoils too much at any charge. How large a charge would you advise me to use to prevent too much recoil? Ans. A gun of that size shoots 2¼ drachms powder to a scant ounce of shot. In case you find too much recoil from that charge, 2 drachms powder to ¾ oz. shot, and be sure to hold in the right direction when you shoot.

IDEX, Indianapolis.—Will not Mr. Bishop have his Barnegat "sneak-boat" photographed, and, allow you to illustrate it for the benefit of Inland boatmen, with some instructions about building the same? There are probably hundreds of your readers who would be very much interested in knowing something about it. Ans. We reproduce in this issue from No. II, vol. 2, a description of the Barnegat "sneak-boat."

L. B. B., Hubbardstown.—In a match, conditions "no magnifying sights allowed," should a competitor shooting a gun with telescope sights, globe and peep attached, be allowed to use the telescope in sighting shots, or should the gun be debarred? Ans. Sighting shots may be taken in any position, or from a rest. If the telescope was not used in the scoring shots we see no reason why the gun should be debarred.

C., Norfolk, Va.—Please inform me if the State of Kansas has made a law whereby the killing of every kind of bird at any season of the year is a misdemeanor. I understand such a law has already passed the house. Ans. We have heard of no such law being before the Legislature, nor is there likly to be one. Not that the Kansas game laws do not deserve amending, for at present the killing of quail and grouse is permitted up to March 1st.

G. W. P., Gloucester.—1. Can shot concentrators be used in a muzzle-loader? How should a muzzle-loader be charged with them? 2. Are Bengle hounds good for raising foxes? Ans. 1. The only concentrators that can well be used in a muzzle-loader are Kay's, which come prepared with shot. Load as you would with Ely's wire cartridges, using no wad on shot. 2. Beagles are used principally for hares and rabbits, and hounds and harriers for foxes.

W. F. I., Binghampton.—Kindly inform me at what time of the year is it best to go to Florida in order to experience the least inconvenience in becoming acclimated? Do you consider that there is danger attending health by arriving in Florida in March or April? Ans. Of course it is better to go to Florida in the fall, but there is no danger of sickness whatever in arriving there in March or April, or indeed at any season, if unhealthy sections, such as swamps, are avoided, and there is not too much exposure to night air.

F. S., Westfield.—1. Will you please inform me the year in which a book entitled "A Complete Manuel for the Young Sportsmen," by Frank Forester, was published? 2. Is there any better book on the dog than the one by Frank Forester? 3. I have a muzzle-loading gun marked it Boges. What reputation has he as a gun-maker? Ans. 1. We do not know. 2. Yes—"Dinks, Hutchinson, and Mayhew, and "The American Kennel and Sporting Field, by Arnold Burges. 3. We know nothing of R. Huges as a gun-maker.

T. W. G., N. J.—Can you inform me whether the long promised map of the Adirondack Region, compiled by Verplanck Colvin, has ever been published, and if not, when will it be. Also if there is any other map better than Dr. Eley's? What is the best book as yet published, giving routes, taverns, and general information regarding the Northeast Wilderness? Ans.—Wallace's "Guide to the Adirondacks" is the latest book. It is very thorough and contains a large map. You can get it from the Waverly Publishing Co., Syracuse, or from this office. Price $3.

X., New York.—In the New York *Times* is a statement of rifle shooting, at a Court street, Brooklyn, rifle gallery, in which some one makes an unprecedented score with an Allen breech-loading rifle, the near sight being described as a "circular sight." Will you kindly inform me through the FOREST AND STREAM if the Allen rifle is a new gun, and has claims to more accuracy in shooting than other well known makers, (Sharps or Remington's), and what is meant by rear "circular sight"? Ans. The Allen is not a new rifle. The sights were the ordinary peep and globe sights.

CONSTANT READER, New Brighton, Pa.—A and B make a bet on the gauge of A's gun, it being a breach-loader, and shoots a No. 12 shell, but stamped on the under part of the barrel 13. B claims it is 13-gauge on account of it being stamped. A claims it is a No. 12 gauge because No. 12 shell fits it exactly and is the only size that can be used. Please decide through the columns of your paper? Ans. A wins; the stamp "13" on the barrels is the inspection proof stamp. The subsequent finishing of the barrels brings them out to 12 gauge. You will find this on all English guns from an accredited maker.

G. L. D., New York.—1. In your last paper I saw an account of a place called Hoy's Wilderness. Will you be kind enough to tell me where I can get reliable information about the place; how to get there; where good guides can be obtained, etc. 2. Is a Winchester repeating rifle better than a Ballard for sporting purposes? Ans. 1. You will find all the information you want regarding Hoy's Wilderness in our present issue. 2. Probably there is no difference as far as shooting qualities are concerned. It is only a question as whether a magazine rifle would be better adapted for the kind of shooting you wished it for.

E. L. S., Troy, N. Y.—1. Does ice sink—that is to say, in lakes and ponds? What becomes of ice, apparently solid, when it suddenly disappears? 2. Will you please give me the address of the party who advertised some time since in your paper "Lamps for use in spearing fish;" also, are they as good as bundles of rags saturated with kerosene? Ans. 1. Ice is lighter than water, as it contains more or less air. Common sense teaches us that it does not sink. The lower part of a cake of ice melting away, the upper part becomes heavier, turns over, and disappears for a few minutes. 2. Eaton & Co., No. 17 Ann street, can supply the camp.

J. W. R., Hannibal.—1. I have a rifle 50 calibre rimfire and have been saving the expinded shell. Is there any way that I can reload them myself? 2 What is the proper charge for a muzzle loading shot gun, 12-bore, 8 pounds, 28 inch barrel, for upland shooting, also for ducks and geese? 3. Am talking of getting a Remington breech-loading shot gun, 30-inch barrel. Which would be the best for this section 10 or 12 bore? 4. Also is the $45 Remington gun a good one for this region? Ans. 1. It would not not pay you to reload them. 2 For upland, 3¼ drs. powder 1¼ oz. shot; for ducks, 4 drs. powder, 2¼ oz. shot. 3. For your district 10 bore. 4. Yes, excellent for the price.

SUBSCRIBER, Webster.—1. Do you think my gun shoots too close for quail and woodcock shooting? I shot it 30 yards at target 18 inches in diameter, 1 oz. No. 8 shot, and put 255 pellets in a circle. If that is too close, what would you think would be a good pattern? 2. Would you think my gun was choke-bored? 3. Which makes the best penetration, choke bored, or straight? Ans. 1. A gun which shoots as close as you say your's does, shoots too close for upland shooting. 175 pellets of No. 8 shot, at 30 yards, 18-inch target, is quite close enough. 2. Your gun no doubt is choke bored. 3. It is a mooted question which makes best penetration; the adherents of each claim superiority.

L. N. P., Boston.—Will you please answer the following question: Is it possible to cultivate trout artificially in a small stream that freezes in winter, and if so, what is necessary to so do, the water freezing solid? Ans. Trout can not be raised in a stream that freezes. Mr. Seth Green says on the subject: "If the creek froze solid the fish would freeze solid, and I do not believe when a fish is frozen solid he will ever come to life again. If they are partly frozen they will come too so that they will swim about, but will die soon after. But there is another reason: any body of water that freezes very hard in winter will get very warm in summer, and they would die when the temperature of the water went higher than 70°. To put a trout in water at 80° fahrenheit he would not live one-half as long as he would out of the water on a rainy or lowry day."

A CONSTANT READER, Baltimore.—1. I have a very fine pointer bitch who has a very bad habit of sucking eggs, and, as I live in the country near here, I often have an anticipated breakfast spoiled by her. I therefore write to ask if you can suggest any means to cure her of the habit other than the old recipe of cutting her tail off close up to the ears. 2. I have a dog that, while he eats very heartily, from some unknown cause cannot retain anything (he eats) on his stomach. Can you suggest cause and remedy. Ans. 1. There are three remedies to break your dog of her bad habit. One is a muzzle so contracted that she cannot eat, the next best is to provide yourself with a four-foot raw-hide, watch her and catch her in the act, and give her a baker's dozen well laid on. But if she is not a valuable one for field or breeding purposes, you had better try the remedy you alluded to, as it has never been known to fail. 2. Have mailed to you some medicine, with directions for its use.

B. L., Long Branch, N. J.—Please decide the following dispute:—1. B claims that the only shots that can be called line shots are those which are either above or below the bull's-eye, while C claims that the shots on the right or left of the bull's-eye are equally to be considered line shots, and that in rifle shooting the side shots are considered as good as those that are above or below the bull's-eye. All aiming supposed to be the same distance from the centre of the target? 2. Was not Creedmoor originally intended for the practice of the National Guard of New York State, and long range shooting considered only of a secondary consideration? Ans. 1. In old times in gallery shooting where the target was supposed to represent a man, line shoots were considered better on account of being more likely to have taken effect. B therefore is right, but we think with C that the merit of the shot should be decided by its distance from the bull's-eye. 2. Yes

SMELTS.

GLENS FALLS, February 22d, 1876.

EDITOR FOREST AND STREAM:—

In your last issue you mention the range of smelt, and I do not think it is generally known that they are caught in Lake Champlain. About a year ago, while at Port Henry, I was told by the landlord of the hotel where I was staying that it was about time for "ice fish" to make their appearance. As the name was new to me, I asked for a description of the fish, judging that ice fish was a local name. Being informed that they were only taken through the ice during February and March, and that they were unknown until within a few years previous. I sent the description, as given to me to Seth Green, but from my meagre statement he was unable to give the fish its proper name. I pushed my inquiries, and found that they were veritable smelts. And here again comes in the question of range. They are caught little, if any, south of Port Henry; are more numerous about West Port; are taken at or near Burlington, Vt., and are unknown in Plattsburg, or thereabouts, at least by the fishermen I questioned while there this winter, and I could not learn that they were caught at other than the places I have named. Of course, these come in from the St. Lawrence, but are they caught to any extent in that river?

A. N. CHENEY.

FOREST AND STREAM.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
123 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double columns 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, MARCH 2, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

OUR CALL TO NATURALISTS.

THAT the naturalists and thoughtful observers of the United States are beginning to appreciate their splendid opportunities, is evident from the readiness and even eagerness with which our "invitation" to put on record the chronicles of animal life has been accepted. The responses which we printed last week, the letters which the reader will find in our Natural History columns to day, and others which await their turn, prove that we have struck a sympathetic chord in the hearts or our readers. We are encouraged to expect bounteous returns of information.

The idea has also attracted much attention among the scientific journals of the country. Even the New York *Daily Tribune* steps aside from politics to take up the subject in a complimentary and encouraging manner. Its extended and graceful allusion (Feb. 26th) to the good work of FOREST AND STREAM as a journal of field natural history, and in particular of the present attempt to collect information upon the movements and social life of animals, and the causes and motives which influence them, ends with the following sentence: "The importance of collecting such dates is evident; when a sufficient amount of them is accumulated, students will have the material for new advances in biology."

FOREST AND STREAM AT THE CENTENNIAL.—Contributors to the "Sportsman's Outfit" Department at the Centennial will please ship such articles as are now ready for exhibition to this office. Packages should be legibly marked "Centennial Exhibition," care FOREST AND STREAM Publishing Co., 17 Chatham street, New York. We urge upon contributors the necessity of immediate shipment, as the time is limited, and the labor of properly adjusting the details of the department under our charge very great.

OBITUARY.—A paragraph in the *Fancier's Gazette* announces the death of the Prince de Vismes, better known as "Old Calabar," a famous writer on sporting topics, a breeder of fine dogs, and a great authority on canine matters.

THOMPSON & SON, 838 Broadway, use no sugar of lead in waterproofing their suits. Sugar of lead will not stand washing, and amongst old sportsmen is considered detrimental to health, making them liable to rheumatic attacks. Thompson's suits are guaranteed to be thoroughly waterproof, even after being washed, and are as good and cheaper than any other suits in the market.—*Advertisement.*

POLO.

MANY of our readers may not understand the game of polo, or be familiar with the mode of playing it. Polo may be briefly described as "hockey on horseback." The players, mounted of course, are provided with sticks having curved ends, and being divided into two sides, endeavor, the one to force a ball through the enemy's ranks over a line or goal, and the other to defend their line and drive the ball through that of their adversary. Thanks to Mr. James Gordon Bennett and other gentlemen, who are doing so much to introduce into this country a taste for refined pastimes, there is some prospect that polo may find a foothold on American soil. The requisites on the part of the player are nerve, a quick eye, the most perfect horsemanship, and an indifference to bruises and hard knocks. But it is upon the horse, or rather pony, that much of the success of the game depends. In India, where the game originated, and from whence it was transplanted to England by the cavalry, the Arab ponies, which seldom exceed fourteen hands in height, are employed. But we should imagine that they were almost too light for the work, and that they would soon become knocked up. Our own mustangs would answer capitally, and the manner in which they are broken by the *vaqueros* of California and Texas, adapt them especially for the requirements of polo. Trained to obey the slightest pressure of the rein upon the neck, or that of the knee upon the side; accustomed to stop suddenly at the least movement of the bit, and to wheel in their tracks to avoid the charge of an infuriated cow or steer, they possess the very qualifications which are brought into play in the game of polo. A modification of the Spanish bit we should think might also be adopted—something which, while not as severe as the instrument of torture used by the *vaquero*, would yet be sufficient to suddenly check the horse without either choking him, or requiring too much muscular pressure.

There is a breed of ponies, however, which, if they could be brought into this country, and given the same training as that received by the mustangs, would be even superior to the latter for polo. We allude to the Tartar ponies that are bred on the wild steppes and brought in droves to mount the Tartar cavalry scattered throughout the Chinese Empire. And, indeed, with the exception of such as are purchased by foreigners for racing purposes, or for driving before basket wagons, this is about the only service they are ever called upon to perform after leaving their nomad masters. Small in statue, seldom exceeding thirteen hands, but very muscular, they show in their uniformity of colors, in the fine head and sharp, small ear, the traces of their Arab origin, which have not been extinguished even after centuries of breeding in a cold climate. The transplanting seems, while it has somewhat stunted them, to have made them hardier. And yet, when in racing condition, they show all the gracefulness of limb of the Arab. The Tartars have a peculiar way of slitting the nostrils of some of their ponies, particularly those used by the couriers in winter, when the frozen streams prevent communication in any other way, the object apparently being to enable the pony to inhale the greatest amount of air his lungs are capable of receiving.

There is a breed of ponies still smaller found on the islands in the Straits of Malacca, some of which make good saddle animals, but are much less sturdy than the Tartar's. It is a little singular that the horses found in the Phillipine Islands, and known usually as Manilla ponies, should be so totally different from those of the neighboring continent. They are, if anything, taller, but much lighter, and without either the stamina or speed of the others. They somewhat resemble weedy mustangs, and probably were introduced from Mexico or South America by the Spaniards. The Japanese horses resemble them very much, and probably originated from the same stock. Although fiery and nimble, there is no trace of resemblance between them and the Chinese, to whom they are so inferior that they receive weight in races open to both.

So much for the ponies adapted for use in playing the game of polo. Mustangs will probably come into use here, and we hope soon to be called upon to record the first game at this healthful and exciting sport.

—A fine opportunity for out-door study is afforded by the Summer School of Science and Physical Culture, which will spend six weeks next summer between the Mammoth Cave and Lookout Mountain. The instruction will be given by the following naturalists: Prof. D. S. Jordan—birds, reptiles, and fishes; Prof. H. E. Copeland—botany; Mr. Ernest Copeland—insects and taxidermy. The aim of the School is to give that instruction in field work which cannot be had in connection with laboratories, combined with the active work of collecting and preserving specimens. The cost to each pupil will be $200, which includes everything. Further information can be had by addressing Herbert E. Copeland, M. S., 320 Arch street, Indianapolis, Ind.

—Mr. Fred Mather, the popular pisciculturist, will have charge of the Aquarium at the Centennial Exhibition at Philadelphia. The only thing now wanted to complete the display is a collection of curiosities in the shape of fish, reptiles, or crustaces from the more southern limits of the country. Cannot some of our Florida friends forward us a few alligators, lizzards, or anything that will live in water? We will forward them to Philadelphia with pleasure.

—Bound copies of Volume V of FOREST AND STREAM are now ready. We can also supply the series complete.

THE TROTTING TURF.

A DISINTERESTED observer who might have wandered into the Everett House during the recent convention of the National Association for Promoting the Interests of the American Trotting Turf, would scarcely have imagined himself in the society of horsemen—that is, if he was something of a fossil himself, and still clung to ancient traditions, in which, to trot a horse on a track, was an act of abomination, placing the culprit beyond the pale of "our best society." Instead, he would have found himself in company with gentlemen, many of whom are lights in the learned professions, whose arguments and discussions on the matter in hand, and which were intended to still further purge the trotting turf from obloquy, were conducted with as strict a sense of decorum as would be met with in the deliberations of any legislative body.

Racing has always been what we might call a "polite" amusement, imported into the country from abroad and patronized, more particularly at the South, by all classes of the people, from Presidents of the Republic, down; but trotting is peculiarly a National sport—almost the only one we have, in fact, and in competition with the more aristocratic amusement, it was for a long time pushed to the wall. Of late years, however, an entirely different class of men have become identified with trotting interests, and the result has been to raise the sport to its present position, and to place it upon an equality for "respectability" with racing. Something of an idea of the present magnitude of the interests involved in trotting can be obtained from the opening address of Hon. Chas. W. Hutchinson, Mayor of Utica, and First Vice President of the Associatiou, who, in the absence of President Sprague, presided over the convention. From this it appears that 163 members of the National Association were represented in the convention that during the year 1875 there were 3,304 trotting and pacing racers upon the tracks of this country; 5,400 horses have contested for purses amounting to the immense sum of $1,418,971, and that the whole amount of capital represented by the trottiug interests is not over-estimated at the sum of $50,000,000. This amount, large as it is, however, does not embrace any of the collateral interests, such as breeding studs, etc. It is safe to say that no national sport in the world has such an amount as this invested in its maintenance; and the time has arrived when we should not only take a national pride in the success of our trotting turf, but by encouragement and countenance aid those who are, and have been, working so strenuously for its reform and elevation.

WESTON IN ENGLAND.

IT is pleasant to record the graceful manner in which English sporting journals have withdrawn and apologized for their very outspoken expressions of disbelief in the truth of American records of long distance pedestrianism, and we trust that the result of the lesson will be more faith hereafter in the possibility of some feats being accomplished outside of the "right little, tight little island," that have not yet been performed within it. A brief summary of the recent match at Agricultural Hall, London shows that Edward Payson Weston, and William Perkins the English champion walker, agreed to walk for twenty-four hours, for a cup or specie of the value of fifty guineas. Perkins walked 65 miles in 14 hours, 5 minutes and 5 seconds, and then gave out. Weston walked the same distance in 13 hours, 3 minutes and 41 seconds, and continuing his journey walked 109 miles and 832 yards in 24 hours. He had fixed his distance at 115 miles, and would have accomplished it had he not been compelled to leave the track for three quarters of an hour on account of sickness. This is admitted by the English journals to be the greatest pedestrian feat ever performed in that country. It settles the question as to Weston's record here, which has been so strenuously disputed, and also as to his style of walking, which we have heard asserted by leading lights in the athletic world, would not be permitted in England. On the contrary, the Englishmen while saying that his mode is ungraceful and contrary to all their ideas of style, is yet perfectly fair walking.

The announcement of the match was almost as good as the event itself, and must have been the joint production of Weston and a lineal descendant of the great George Robbins "of auction renown." We recognize the hand of the former in his old dodge of inviting members of the medical profession to be present, while the rest is only equalled by the grandiloquent advertisements of "residential estates," which are sometimes to be found in the *Field*. "Both men will be dressed in chaste and gentlemanly apparel," it reads; "no drinks will be sold at the hall stronger than coffee, smoking is positively forbidden in the building, and hundreds of ladies belonging to England's proudest nobility have promised to be present." We can fancy Weston waving his hand to "England's proudest nobility" in his old Hippodrome style. However, he has done credit to his country. We recognize the fact, and trust that upon his return he will be presented with some fitting testimonial.

—Dr. N. Rowe, the "Mohawk" of the *Turf, Field and Farm*, and more recently of the *Rod and Gun*, has assumed editorial management of the Chicago *Field*. He has our best wishes for his success in his new West home, and his great experience with dog and gun can not fail to be of value to the constituents of his paper.

GAME PROTECTION.

The West Jersey Game Protection Society has prepared a bill for the consideration of the Legislature of that State, the operation of which, if it is passed, will be watched with interest. It provides for the appointment of Game Wardens, to receive their authority from the State, but to be appointed and paid by the Society. The appointments not being political, and as men will not serve in or near their own homes, there is a strong probability of their services being of some value. We have for some time urged the adoption of a system similar to this, in the cause of game protection. The knowledge that there is some one with authority, and whose business it is to prevent infractions of the law, will prevent many a sneaking poacher from settiog his snares and traps, who otherwise would have snapped his fingers at the law aud boasted to his fellows of his successful evasions.

MAINE.—The law mentioned io our last as beiog before the Maine Legislatnre, and which provides for an annual close time for certain fish, has been passed.

A law was also passed allowing the killing of woodcock and ruffed grouse and English snipe between September 1 and December 1. The sending out of the State any of this kind of game is prohibited under a penalty. The killing of quail or pinnated grouse between Jan. 1st and Sept. 1st is prohibited.

The law was amended so that between Feb. 1 and Oct. 1 no venison shall be sent out of the State.

The law relating to the killing of deer and caribou was amended so that if any person has in his possession not only the carcass but the hide, or any part of the hide or carcass of such animals, between Jan. 1 and Oct 1, he shall be held liable. Authority is also given the warden, or his deputies, to make complaint and iostitute search for the evidence of guilt.

A general law was passed in relation to the erection of wharves and fish weirs in tide waters which requires application for the same to be made to municipal officers, provides for a hearing, and the granting of licenses to applicants. No wharves or fish weirs are to be erected in any river or tide water lying between towns without the consent of the municipal officers of both towns, and in no case is aoy wharf to be extended beyoud legally established wharf lines.

—The Pennsylvania State Association for the Protection of Game and Fish, has prepared a law calculated to correct many errors in the act as it now exists, and which we trust will have the attention of the Legislatnre of that State. It provides for a close season for deer between December 1st and September 1st; for squirrels between January 1st aod August 1st; for rabbits between January 1st and November 1st; for wild turkeys between January 1st and October 1st; for plover between January 1st and August 15th. It extends the close season for trout until May 1st instead of April 1st, as now enforced, and for black bass or pickerel notil July 1st. The provisions referring to woodcock, quail and gronse, remain as now in force.

WISCONSIN.—At the adjourned annual meeting of the Wisconsin State Association for the Protection of Fish and Game, at Madison, Feb. 9th and 10th, 1876, communications were received and read from Fred Pond, of Montello, in relation to the memorial fund of Henry W. Herbert; the sportsmen of Foo du Lac in relation to fishways io Fox River, between Lake Winnebago and Green Bay, aud as to some changes in the game and fish laws; the sportsmen of Oconomowoc, through their secretary, Dr. J. A. Heushall, in relation to some changes in the game laws, etc.

Resolutions adopted—By Mr. Welch:—

That the secretary be directed to call the attention of clubs and individual members of the association to the Forester Memorial Fund.

That the Legislature be requested to prohibit the killing of quail for the period of three years.

By Mr. Palmer·

That the Legislature be requested to memorialize Congress for the establishment of fishways in Fox River, between Lake Winnebago and Green Bay.

The committee appointed to codify the game and fish laws of the State, local aod general, reported two bills, one for the protectiou of game, and oue for the protection of fish. The game laws were amended as follows: 1st. Classing woodcock with gronse, shooting to commence the 15th of August, except in the Mississippi river bottoms and islaods, to commence July 4th; sharp tail grouse aud spruce partridge inserted in the law. 2d. Prohibit the huntiog of deer with houods or dogs at aoy time, and make the close season from Dec. 15th to Oct. 1st. 3d. Song and insect-eatiug birds included for protection. 4th. That the law be published once annually in each county in a weekly paper. 5th. Mallard, teal, and wood duck shooting to commence on the 15th of August.

The subject of prohibiting all shooting iu the spring was discussed at some length hy Messrs. Hoy, Merrill, Palmer, Williams, Burdick, Woodard, Welch, and the Secretary, but no definite action taken thereon.

The fish bill was referred to the Fish Commissioners, with the request that they would make such chaoges as deemed proper, and report the bill to the Legislature.

The following were elected officers for the ensuing year: President, Dr. P. R. Hoy, Racine; 1st Vice President, Hon. John P. McGregor, Milwaukee; 2d Vice President, Hon. J. F. Williams, Prairie du Cheio; Recording Secretary, M. T. Bailey, Madisoo; Corresponding Secretary, Hon. M. W. Corning, Portage; Treasurer, S. S. Woodard, Watertown. Stauding Committee not yet appointed.

JANESVILLE, Wis., February 20th, 1876.

EDITOR FOREST AND STREAM:—

Our Legislature has just passed a bill appropriating ten thousand dollars for building a State hatching house. Several excellent clauses have also been added to our game laws, among which is one to prevent the hunting of deer with hounds, and one prohibiting the hunting of duck and other wild fowl by the use of sneak boats and batteries. The latter bill was pushed through by the Black Hawk Club of Lake Koshkonong, and is one that has been needed for many years. Last season not less than a dozon of these murderous contrivances were kept constantly at work after the canvas-back, on Lake Koshkonong, and when you consider that the lake is only seven miles long and from one to two wide, you will see that the birds were given but little time to feed. The result was they left the lake fully a month earlier than usual. The Black Hawk Club has a snug little house on the lake. The number of members is limited to thirty-six, and embraces gentlemen of means and culture, from Marquette, Mich., Milwaukee, Janesville, Whitewater, Wis., Chicago, Cincinnati, St. Louis, and Philadelphia. The officers are: L. A. Winchester, Whitewater, President; G. W. Esterly, Whitewater, Vice President; Richard Valentine, Janesville, Secretary; C. S. Jackman, Janesville, Treasurer. Among its prominent members are Col. L. A. Harris, Thomas A. Logan, Col. C. W. Woolley, Benj. Robinson, and Chas. W. Short, of Cincinnati, Chas. B. Wade, St. Louis, J. J. S. Seltzinger, Philadelphia, D. H. Merritt, L. P. Ely, W. S. Dalliba, and H. R. Mather, of Marquette, Mich., E Townsend Mix, and O. W. Robertson, of Milwaukee.

The sportsmen of Janesville have just organized a club for the protection of game and fish under the name of The Forrester Club. The officers are: H. D. McKinney, President; Horace McElroy, Vice President; J. B. Doe, Jr., Secretary, and J. G. Rexford, Treasurer. Thirty-seven joined at the first meeting. It is proposed to enlist the former sportsmen in the movement by inviting them to become members without the payment of dues. I cut the following from the Green Bay, Wis. *Advocate*, of Feb. 17th:—

A FISH STORY.—About sixty-five miles by road up the Wolf River, north of Shawano, and six miles from the Wolf River, is Rolling Stone Lake, a sheet of water about five miles long and two miles wide, that is said to be densely filled with salmon-trout and white-fish. Mr. John Evans, of Shawano, has this winter put in a mile and a half of gill nets, and when we saw him last week had been fishing some three weeks. He tells us that the fishing is a mere experiment, but that they have caught several hundred fish. A sleigh-load of them was expected down when we were at Shawano. He says that there are two kinds of trout, the same as in Green Bay and Lake Michigan—the salmon-trout being the larkest, and best of the two. They propose to continue fishing there next summer and to take up packages and salt the fish on the spot. Other parties confirm this story, and we know that the nets were purchased of M. P. Kalmbach, Fort Howard. The curious part of the matter is how these fish should come there, for they do not exist in any of the neighboring streams and there is no outlet or inlet to the lake connected with any body of water containing these fish. We wish that some of our Shawano friends would send us samples of the fish."

It would be a good idea for the Green Bay Sportsmen's Club to look into this matter and see that the fish laws of the State are better observed in their vicinity. The editor of the *Advocate* is a sportsman, but the fact that fishing with nets in Rolling Stone Lake is a violation of law seems to have escaped his notice. "FORRESTER."

DANSVILLE, Livingston Co., N. Y.,

EDITOR FOREST AND STREAM:—

The proposed amendment to the game laws, will, I think, meet with the unqualified approval of gentlemen sportsmen, with one exception, they are perfect. It strike me that there is one clause that is two sweeping in its import to be entirely sanctioned. When a law is made forbidding the shooting of wild duck between the hours of sunset and sunrise, it is virtually decreed that we in the country shall shoot no duck, for this reason. On our little lakes nestling between the hills in western New York, our only chance for a bag is between the hours of dawn and sunrise, and sunset and dusk, then the birds are in motion to and from their feeding grounds During the day they lie in those tantalizing rafts, just out of reach.

Mr. Editor, did you never steal out in the gray morning, leaving the rest of the camp asleep, and taking your favorite stand, bag ten brace before the rising of the sun cleared away the mists and stopped the shooting for the day, leaving you to kill time with "Vanity Fair," until the sun had set, when stealing out in the gloaming you double your morning's bag?

Now I am no pot-hunter and am bitterly opposed to jack lights and dusking, but I do protest against my twilight shooting being wrested from me. I say the night is made for rest for man and beast, but when we take our annual shoot we don't want to be sent to bed at sunset. It seems that the object of the proposed amendment is to protect the ducks on the southern shore of Long Island from the nocturnal encroachments of market shooters who under cover of the night, slaughter indiscriminately, and in their haste and greed, drive the birds from their feeding grounds and spoil the sport of those who shoot as gentlemen should. This being the case, and the *disease* being local, let the *cure* also be local, and the amendment be amended to cover only that locality. Only give us those precious hours "when nature wakes and sinks to sleep again." Being a law-abiding citizen and humble member of a sportsmens club, I shall adhere strictly to the game laws, whatever they may be, but I am sure a modification of the clause in question would be hailed with delight by all true sportsmen. D.

The Long Island counties already have so many provisions and exceptions in the general game laws that this amendment might easily be made to apply to them alone. There is certainly reason in what our correspondent states, that a great deal of duck shooting is done before sunrise and by twilight.

THE CENTENNIAL BENCH SHOW.—Some weeks since we advised our readers that Mr. Burnet Landreth, Chief of the Bureau of Agriculture, would meet sportsmen at the Newark Bench Show to confer with them as to the exhibition of dogs to be held at the Ceotecoial. The Newark affair having proved a fizzle, we would suggest to Mr. Landreth to visit Springfield on the 26th and 27th of April next, where he will meet a large assemblage of representative sportsmen and owners and breeders of fine dogs.

—"Camp Life in Florida," the best descriptive guide to that State yet published, has afforded pleasure not only to visitors, but to thousands who would have been visitors if they could. It can be had at this office.

—The yachting season has been inaugurated at St. Augustine, Florida, as will be seen from the interesting report of the recent regattas at that port, which we publish in another column.

—A London correspondent says the Maharajah Dhuleep Sing, whose "place" near Sandriugham rivals the splendid country seat of the Prince of Wales, is said to have offered to take £100,000 to £5,000 that within three years he will kill 1,000 brace of partridges to his own gun, on his own estate, in a single day. The Indian prince is one of the keenest of "British" sportsmen, and a capital shot, yet his offer is said to have taken rather freely.

—It is said that at the elephant hunt of the Prince of Wales in Ceylon, no reporters were permitted to be present; but one enterprising "special" shaved his head, painted his body black, put a string around his waist, and joined the beaters. He wasn't to be beaten.

The Rifle.

—We are indebted to the Secretaries of many Rifle Clubs for the names of their organizations, but the list is still far from complete, and will feel obliged if those who have not yet forwarded their addresses will do so. A postal card will be preferred.

THE CENTENNIAL MATCHES.—The Executive Committee of the National Rifle Association held a meeting on Saturday, and fixed the conditions for the principal matches at the Centennial shooting tournament, which will be held at the Creedmoor Range, beginning Tuesday, September 12th, and continuing so long as may be necessary.

The first competition will be a short-range match at 200 yards; position, standing; open to all-comers; rifle not to exceed 10 pounds in weight, with a minimum trigger-pull of 3 pounds. Ten scoring and no sighting shots. Entrance fee, $3. Prizes to be hereafter announced.

The mid-range match will also be all comers. Military rifles of 50 calibre or over will shoot at 500 yards; other rifles at 600 yards. Position, aoy without artificial rest. Rifles of the respective classes to be within the Creedmoor rules. Ten scoring, but no sighting shots. Competitors may enter and shoot at both distances with the two classes of rifles. Entrance fee, $3. Prizes to be hereafter announced.

The long-range match will be the grand competition for the championship of the world, open to riflemen of all countries, distaoce, 800, 900 and 1,000 yards. Each team shall consist of eight men. Members of the various teams must be native-born citizens and residents of the countries they represent, except in case of teams representing a provincial territory, in which case a residence in the province will be sufficient, provided the member is a native-born subject. Rifles, oot exceeding 10 pounds in weight; minimum pull of trigger, 3 pounds; breech-loading rifles to be loaded from the breech only. Thirty shots at each range by each competitor. No sighting shots. Match to last two days. Competitors to fire fifteo shots at each distance on each day. Opening at 800 yards. Position, any without artificial rest or support. Teams will be allowed the use of the range for one week previous to these matches, but on the days of the long range match no person will be allowed to shoot at the prescribed ranges, except as a competitor. Captains of the competing teams shall select two referees and the referees shall choose an umpire, whose decision in all cases shall be final. Prize—The American Centennial Trophy. The trophy will be shot for annually on the same terms in the country of the team holding it, at such time and place as the team, or a majority of it, shall prescribe. In this match there will be no entrance fee.

The fourth annual prize-meeting of the National Rifle Association will be held immediately after the conclusion of the international series of matches.

The Joint Committee of the National Rifle Association and Amateur Rifle Club, met at the rooms of the former on Tuesday. The Committee on Permanent Organization, Gen. McMahon, Judge Gildersleeve, and R. Johnson, Esq., reported as permanent officers Gen. Woodward, President, Major Holland, Secretary, aod Gen. Knox, Treasurer, Gen. Woodward declining the honor. Gen. McMahon was appointed President. The Committee on Rules (to govern the Joint Committee) consists of Gen. McMahon, and G. C. Schemerhorn, Esq.; on Finance, H. P. Stanton, R. Johnson, Gen. Knox, Geo. Crouch, and Gen. E. L. Molyneaux; on Scheme for Selecting American Team, Judge H. A. Gildersleeve, G. W. Wingate, H. S. Jewell, W. B. Farwell and E. H. Sanford.

CONLIN'S GALLERY.—The *Turf, Field and Farm* cup competition was shot February 17th, aod Mr. L. O. Soue won the first cup for the second time, with a score of 43 out of possible 50. Mr. C. G. Peters won the second cup, and H. P. Wartou woo the third cup. The coolest was very interesting, and the shooting was excellent. The FOREST AND STREAM badges were competed for February 24th, and Mr. Joseph Woodward won the first badge with the splendid score of 46 out of a possible 50. Mr. C. G. Peters won the second badge, and Mr. J. O. Wright the third. The next *Turf, Field and Farm* cup competition will be shot March 2d, open to all-comers.

CREEDMOOR, JR.—The decidlog match between teams of six of gentlemeo of the Home and Continental Insurance Companies took place at Creedmoor, Jr., yesterday afternoon. Two matches have been shot between these teams, each winning one. This match was won by the Continentals by a score of 213 to 209, as follows:—

CONTINENTAL.			
J. W. K. Oakley	40	Lloyd Roberts	36
W. Ellsworth, Jr.	39	C. E. Tinslow	33
G. H. Hope	38		
C. A. Schermerhorn	37		
Total			213
HOME.			
W. R. Hobart	41	W. B. Wilson	31
J. H. Hitchcock	38	F. M. Griswold	38
H. J. Ferris	36		
F. B. Southwick	34		
Total			209

It is reported that the members of the Rifle Club of Columbia College will shoot a match at this range with the Continental team on Saturday next.

CREEDMOOR, JR.—The following scores have been made in the competitions for the two remaining prizes of the Union Metallic badge competition: D. F. Stephens, 41, 41; J. W. Todd, 42, 40, 35; A. L. Embury, 37, 37, 38; J. McGlensey, 37, 40; F. Whittaker, 31, 35, 37; G. O. Starr, 33, 29, 38; J. C. Barron, 37, 38; H. N. Smith, 40; J. Woodward, 41, 43; F. N. DeWitt, 38, 39. For the new all-comer's gold badge, D. V. Davids, 39, 40; F. H. Holton, 41; W. H. Sabio, 39, 41; J. McGlensey, 44. Tuesday, February 29th, regular subscription day. Winners, J. McGleosey, 45; D. Davids, 39; F. N. DeWitt, 33. Subscriptioo matches every Tuesday at this range, open to all comers

HELLWIG'S GALLERY.—The thirteenth weekly competition shoot in lying position, took place at Hellwig's new gallery, No. 271 and 273 Eighth avenue, under Grand Opera House, on Wedoesday last. The winners of prizes were as follows: Frederick Kessler, first prize, 45; F. N. De Witt, second prize, 40; R. C. Wheeler, third prize, 30. This makes the third time that Mr. Wheeler has won the third prize, and it is now his personal property. These competitioos will take place on every Wednesday until all prizes are won.

MILEY'S GALLERY, BROOKLYN.—Shooting in lying down position, made at this gallery last week, distance 100 feet. This shooting was done in the match Wednesday, and continues until the 7th and 8th of April, 1876.

D. Y. McQuillan	49	Joseph Leavy	46
Robt. Simpson	49	L. McGoldrick	46
M. Sheppard	48	G. W. Smith	46
W. J. Oliver	48	J. W. Willis	46
Col. B. F. Valentine	46	A. H. Anderson	45
John Kinkaid	45		

GLEN DRAKE.—The match for the Association Cup, between members of the American Rifle Association, took place on Saturday, February 26th. Distance, 500 yards, ten scoring shots, position any. The best scores were as follows:—

Name.	Score.	Total.
H. Fisher	5 4 5 5 5 4 5 4 4 5	46
D. F. Davids	5 4 3 2 4 5 5 5 5 4	41
R. Rathbone	5 5 4 3 5 3 4 5 5 3	39

A subscription match at the same distance, 5 scoring shots followed. Military rifles, 50 calibre, allowed 5 points.—

Name.	Score.	Total.
H. Fisher	5 5 4 5 5	24
R. Rathbone	4 5 5 5 4	23
D. F. Davids	5 4 5 5 4	23
M. H. Madden	4 3 2 2 5	16

Next Saturday, March 4th, Holden Rifle and Remington Sewing Machine matches.

MASSACHUSETTS RIFLE ASSOCIATION.—The directors of the Massachusetts Rifle Association, at a meeting held February 21st, chose John L. Stevenson, Colonel William V. Hutchings and James T. Eldridge, a Committee on Finance; C. E. Sanborn, W. H. Jackson and John B. Osborn, Committee on Range; Gen. H. B. Sargent, J. R. Osborn, I. H. Hazleton and W. H. Jackson, Executive Committee. It was voted to affiliate with the National Rifle Association; that the directors inspect the proposed range, located in Winchester and Woburn, on Monday next; that the President be invited to prepare a circular to the commanders of military organizations, inviting their co-operation in advancing the objects of the association. Governor A. H. Rice, Major General B. F. Butler, Major General H. W. Benham, U. S. A., Admirals H. K. Thatcher and Charles Steadman, U. S. N., and Mayor Samuel C. Cobb, have been elected honorary directors. The first prize contest was held at the Spy Pond Range, on Washington's birthday. The first prize, a gold medal, was won by J. H. Frost, score 64. The second prize, a silver badge, was won by E. T. Osgood, score 65. The sixth best score, 63, made by J. F. Wheeler, took a revolver. The tenth score, 62, made by J. Foster, receiving the same. The fifth prize, a powder flask, went to C. Dittmar, 58; fifteenth highest score, $3 each, was given to the twenty-fifth best score by D. Kellogg, 57, highest possible out of 75.

NORTH CAROLINA.—The Wilmington Rifle Club had a match between teams on Thursday last, the conditions being 5 shots each, at 100 and 200 yards. The following are the scores:—

TEAM NUMBER ONE.

Name.	100 yds.	T'l.	200 yds.	T'l.	G'd t'l.
L. F. S. Brown	4 5 4 4 4	21	4 4 4 3 4	19	40
D. B. Cultar	4 4 4 4 4	20	3 5 4 3 2	17	37
W. H. Bernard	4 4 4 4 3	19	3 4 4 3 4	18	37
W. L. DeRosset	4 5 4 5 4	22	0 3 4 4 4	15	37
J. T. Rankin	4 5 4 4 4	21	0 3 4 3 3	13	34
A. M. Barry	4 4 4 4 5	21	3 3 0 2 4	12	33
Totals		124		94	218

Average of totals, 36,333.

TEAM NUMBER TWO.

Name.	100 yds.	T'l.	200 yds.	T'l.	G'd t'l.
J. E. Crow	5 4 5 4 4	22	4 4 4 4 4	20	42
Jun. Davis	4 4 5 5 4	22	3 5 4 3 4	19	41
J. D. Woody	4 4 4 5 4	21	4 3 4 4 4	19	40
W. F. Hargrave	4 4 4 5 4	21	3 4 4 4 3	18	39
W. R. Kenan	4 4 4 4 3	19	4 3 3 4 4	18	37
E. Lilly	4 4 2 4 4	18	4 3 3 4 3	17	35
N. Giles	4 4 5 4 4	21	4 4 3 0 3	14	35
N. B. Rankin	4 4 4 5 4	19	3 3 3 4 4	16	35
Wm. Fyfe	4 5 4 4 4	21	0 3 3 4 3	13	34
L. S. Belden	4 3 3 4 4	18	4 0 3 4 4	15	33
H. G. Smallbones	3 2 5 3 2	15	3 4 3 3 3	16	31
Totals		217		185	402

Average of totals, 36,545.

Mr. L. S. F. Brown used a Remington rifle, Mr. W. H. Bernard a Sharp's rifle, Col. W. L. DeRosset an Evan's rifle, and Mr. N. Giles an Evans' rifle. The remainder of the contestants used the Winchester rifle.

—A rifle match was contested at Port Henry, N. Y., by teams of eight representing the Port Henry Rifle Association and the Plattsburg Rifle Club, of Pittsburg, at 200 and 500 yards distance, resulting in a victory for the former by one point. The victorious team was subsequently entertained at a banquet.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl.

GAME IN MARKET.—A limited supply of ducks is all that is to be seen in the market in the way of game. The Canvasback gunners are returning home, and preparing for the spring flight on Shinnecock and the Great South Bay. Prices are the same as those quoted last week.

—Deer are unusually plenty in the wilds of Hamilton county, N. Y., and are in a very fine condition, owing to the great abundance of beech-nuts in the forest there. But the close season commences with December, thus giving the animals time to increase for next year, when the sport will doubtless be much enhanced by the numbers.

—It is reported that ducks are unaccountably scarce on both the Delaware and Chesapeake bays. They have vacated their old and favorite feeding grounds and gone no one knows whither. Perhaps the unusual mildness of the winter has caused them to visit localities farther north, where food is abundant and gunners not so numerous.

PIGEON MATCHES.

—A match, or rather matches, will be shot on the 6th inst between Ira A. Paine and Dr. Talbot, the conditions of one of which are somewhat rare. The match is at 20 single birds each, 21 yards rise from ground traps, 1¼ oz. shot. Birds will be found by each, and all are to be trapped out of one hamper. Each shooter's gun is to be laid upon a table and not to be touched until the bird is fairly on the wing, and either party touching his gun before the bird is so on the wing will be scored as having missed. The second match possesses equal interest almost with the first. It is for each man to shoot at 15 pairs of pigeons, Long Island rules to govern, excepting that plunge traps are to be used, Paine to stand at 21 yards rise, and Dr. Talbot at 18 yards. Shooting will commence at 2 P. M., sharp, and each event is for $200.

—A sociable match was shot on Saturday last, at Flatbush, L. I., on the grounds of John Lefferts, Esq., between Messrs. Vanderbilt, Scott and Lefferts. The conditions of the game were: 8 birds each, 21 yards rise, 1¼ounce shot. The scores were as follows:—

Name.	Score.	Total.
Lefferts Vanderbilt	1 1 1 0 1 1 1 1	7
W. A. Scott	1 1 1 1 0 0 1 1	6
Robt. Lefferts	1 1 0 0 1 0 1 1	5

The birds were fresh, strong flyers. Mr. Vanderbilt shot with a new Scott gun, that proved a very strong hitter.

—The Deerfoot Shooting Club, of Brooklyn, L. I., shot their first shoot of the season at Bay Ridge, L. I., on February 22d, 1876, each member shooting at ten birds, 21 yards rise, 80 yards boundary, and 1¼ ounce shot. The following is the score:—

Name.	Score.	Total.
Geo. S. Brown	1 0 0 0 1 1 0 1 0 1	5
W. J. Bickerton, Jr.	0 0 1 0 0 0 1 : 0 0	3
Jos. E. Fisher	0 0 0 0 1 1 1 0 1 0	4

MOHICAN.

PARIS, Ky., February 23d, 1876.

EDITOR FOREST AND STREAM:—

The following score was made here on the 22d, at a return match between the Riley Club, of Lexington, and Stoner Club, of Paris, resulting again in favor of the latter club:—

STONER CLUB.

Tom Lewis	4	J. E. Hedges	3
A. K. Lewis	4	Joe Redman	5
Howard Lewis	7	Geo. Redman	6
Geo. Alexander	7	Dod Talbott	8
H. H. Spears	7	Cal Goodman	7
J. E. Spears	6		—
J. E. Clay	9		
Total			73

RILEY CLUB.

G. W. Wooley	6	R. Gilmore	5
G. A. Delong	6	S. McChesney	8
I. S. Martin	4	Jno. Gilbert	2
C. M. Johnson	6	W. C. Bradley	2
J. S. Smith	8	J. H. Davidson	4
Wm. Lyon	6		—
Wm. Kemp	8		
Total			64

The Executive Committee of the State Association also met here the same day, and appointed the 22d of May for the next meeting at Lexington, and Bench Show of setters, pointers, and fox hounds. Also a four days' shooting tournament. This will be the same week of the running races, which will make it all the more popular. KY.

MILWAUKEE, February 24th, 1876.

EDITOR FOREST AND STREAM.—

One of the most enjoyable pigeon shoots that you can well imagine came off on the 22d inst., on the extensive grounds of Joseph Williams, Esq., just outside the city limits. The party invited met promptly at the appointed hour, and started for the shooting ground, distant about 400 yards from the house. The trap was set in a position that gave us the shelter of a thick piece of woods, for the day was rather cold, with a strong wind blowing from the northwest. The party was divided into two sides, five on a side, with Col. J. N. Gillett as umpire, and W. B. Skelch (an old one) to trap. Milwaukee Club rules to govern; 21 yards rise, and 80 yards boundary. The following are the scores:—

Name.	Score.										Total.
S. J. Williams	0	1	1	*0	1	0	1	*0	1	1	9
T. J. Brown	1	0	0	1	1	*0	1	1	1	1	12
J. C. Stebbins	1	1	1	0	0	1	0	1	*0	*0	7
D. D. French	0	1	0	1	1	1	0	1	0	1	8
C. A. Williams	0	1	0	0	1	1	*0	1	1	0	9
Grand total											45

Name.	Score.										Total.
J. C. Wells	*0	1	1	1	0	1	0	1	1	1	9
O. W. Robertson	1	1	1	0	1	0	1	1	0	1	10
E. Fielding	0	1	0	1	1	0	0	1	1	*0	9

Stewart Murray	1	1	0	0	1	0	1	0	1	1	8
Grand Total											46

*Dead out of bounds.

This score does not look very well. The birds were very strong and lively, and went out of the trap like a shot, quite a number falling dead out of bounds. The umpire was very strict, calling out lost bird to frequent challenges. WAU WAU.

THE NEW ORLEANS TOURNAMENT.—The result of the great pigeon shooting tournament at New Orleans, which commenced on the 26th ulto., as far as received by telegraph up to the time of our going to press, is as follows: The shooting opened with the tournament purse of $1,000, entrance $20, fifty to fill or *pro rata;* 10 birds each, 21 yards rise; class prizes; $500 to the first, $300 to the second, and $200 to the third. H. N. Sherman and J. H. Acklin killed all their birds, and in shooting off the tie they retired first to 26 yards, when each cutting down their three pigeons they went back to 31 yards. At this distance Sherman cleverly stopped three additional birds, and Acklin killing but two, the former was declared the winner of the $500. E. T. Manning secured the second prize, and Charles Spear third money.

The second event was for a purse of $500, entrance $10, $50 to fill or *pro rata;* 10 birds each, class prizes; $250 to the first, $150 to second, and $100 to the third. The first money was won by J. H. Acklin, the second by Charles Kennon, and the third was divided among seven who tied on eight birds. Purse No. 3 of the tournament, twenty entries, was won by H. N. Jones, of Iowa; the fourth purse, twenty entries, was won by Frank Leslie, of Tennessee. The sweepstakes, thirty-one yards rise, in which Capt. Bogardus and eight others were entered, resulted in a tie between Wheal and Shaw on nine birds, and the stakes were divided between them.

The shooting on the third day commenced with a purse of $1,000, open to the world, entrance $10, one hundred to fill or pro rata: class prizes; seven single birds; twenty-one yards rise; H and T traps; with twenty-three entries, the first money was won by J. H. Acklin, the second by Ike Partington, and the third divided between ties of five. R. McGrow, of Covington, Ky., in shooting off ties of seven had killed 3 birds at twenty-six yards, and six at thirty-one, leading the score by 1, when he was declared the winner. This decision was afterward reversed on challenge, it being shown that McGrow was two inches inside of the line at the last shot. The bird was therefore scored as lost, leaving McGrow a tie with Bogardus and Acklin, the latter finally winning the prize. The second event was for a purse of $500, same conditions as the first event; twenty-six entries. L. C. Lebreton won the first money, A. H. Bogardus the second, and E. T. Manning—who killed eighteen birds out of nineteen—the third.

CHAMBERING AND BORING GUNS.

GREEN BAY, Wisconsin, January 31st, 1876.

EDITOR FOREST AND STREAM:—

Last summer I ordered a fine English breech-loading shot gun in New York. When I received it I found the chambering regulated for paper shells, but as I wanted to use metallic shells I also procured a new Sturtevant and a new Hart's brass shell. I had ten paper shells loaded, got penetrating pads, 30 inch targets, powder flask and shot, and started, determined to make a full test of the merits of the different shells. The brass shells I loaded exactly the same as the paper shells, excepting, as the Sturtevant shell is very thin, and little larger caliber than Hart's, I gave the former the benefit of a wad one size larger than for the latter. I recorded kind of shell and penetration on each target, and, after having fired eight shots, found pattern and penetration one-fourth better with Hart's shells than with the Sturtevant, and one-fourth better pattern and little better penetration with the paper shell than with the Hart shell. Upon examining the shells I found three places where the Sturtevant shell was split from one-fourth to one-half inch in length, and at the ninth shot with the Sturtevant shell it was out of order entirely, as the anvil bent up and could not be moved. The Hart shell looked, after the same number of shots, as if it would never give out.

The results of these experiments justifies your correspondent "Engineer's" remarks, viz.: "The nearer you can come to a true cylinder the better will he your shooting." I also think your correspondent "Herbert" is right when he says a beveled shoulder is not worth taking in consideration.

The inside of the paper shell came the nearest in size to the bore of the gun, hence the better shooting. In my opinion all guns should be chambered with a square shoulder, and the shell should be of the same caliber as the bore of the gun. If you, or any of your numerous enlightened correspondents have had guns altered in this manner, I should be much pleased to see the results stated in your valuable paper, also the probable cost of the job, and where and by whom it can be done. I want my gun changed from leveled shoulder to square, and get shells to fit, and also my gun choke-bored. My gun is 12 A. J. H.

DITTMAR POWDER, ETC.

PHILADELPHIA, January 27th, 1876.

EDITOR FOREST AND STREAM:—

In your issue of to-day I noticed several articles relative to the Dittmar powder, and would like to inquire of Mr. Hinkle, or "O. A. C." if they have noticed its tendency to hang fire, as this is the only objection we have to it, and one we cannot overcome. Our experiments have been made with a number 12 gun having the rebounding lock, and the Scott, or solid strikers, that never fail or hang fire with black powder. We recently called Mr. Dittmar's attention to the objections named, and received samples with which we succeeded no better, but aside from this consider it fully equal to best black. It is to be hoped that Mr. Dittmar will finally perfect its manufacture, and be certainly deserves credit for persistent efforts to do so. There is an old adage that a third attempt is sure to succeed, and as he has succeeded in the second one to give it the same density as the black, we shall see in the near future perhaps the final and only needed improvement to make it a guide, and to be under any and all circumstances as safe. It may require time yet, but Dittmar is steadily and surely progressing toward a "consummation devoutly to be wished for," and should have the friendly criticism and forbearance of sportsmen yet longer, and while on the subject of American made powder would like to add that we have been using the Bridesport paper shells, and have no trouble at all with misfires, nor do we believe there would be any in properly constructed guns. To our minds, however, there are some radical defects in the chambering of guns. First, as a rule, they admit the shell too easily. Secondly, there is no particular length of chamber for certain bores and weight, and the countersinking is done in many instances apparently at a blind asylum. Of what use is it to chamber a light 10-bore to admit the 2¼ case, or still worse, as we have seen, the 3¼, when a 2¾ would hold all that is necessary, and not leave an excess of shell to be crimped down or cut off. The latter destructive to pattern, and discarded generally. Sportsmen leave these things to the gunmaker, and in return the gunmaker leaves them with the sportsman, and between the two there is a first-class mistake to be owned by somebody.

Did you, Messrs. Editors, ever use a 2¼ or 2¾ shell in a gun chambered for a 2¾; if not, then do so, and be convinced of the magnificence of the arrangement. An instance of it came under our observation recently, the owner declaring that she kicked like h —l, and made a miserable target compared with his brass shells that had been fitted to the chamber, but it never occurred to him that the difference in length would make any difference in the shooting, as the paper cases when crimped down would go in, though precisely how they would straighten out when exploded was not considered. Still another case of the kind occurred while we were on a visit to the Virginia shore in May last, as we met a gentleman having a superb English gun that was regarded as a very indifferent shooter compared to his muzzle gun, and being of a rather inquisitive turn of mind we ventured to try her at a target with some of our own shells. No. 12 2¾, and certainly never saw shot distributed more evenly, or driven harder. We called his attention to it, which resulted in a comparison of shells, when we discovered that those he had been using were one quarter of an inch longer than the chamber. It was surprising to see how she went up in value in his estimation, and how the muzzle loader came down. We have seen several guns with no perceptible shoulder at all, a bit being run through removing it entirely. In these guns almost any length of shell can be used, but we have to see the first one yet that has not been decidedly injured by the so-called improvement. One advantage claimed for it is, that more powder can be used, when the truth is that it *must* be used, and considerable more to produce as good results as are to be obtained by allowing a slight shoulder to remain, say about half the thickness of the shell, if paper. We are trespassing on your valuable space, however, and have written much more than we intended, but gun talk, as you are aware, is the hardest possible talk to stop. H.

THE "CHOKE-BORE" ON GROUSE.

By the kindness of the proprietor of the Rhiwlas Moors, we have been enabled to compare the new system with the old on game; and, fortunately for the experiment, the stock of grouse there is this year above the average of the northern moors. Immediately our April trial had decided which was the best system of choke-boring, Mr. Price ordered a gun from the winner of the cup, and as soon as the birds began to be a little wild, (that is, after three or four days' shooting at them), he began to use it. On the 16th five guns were out (by Perdey, Westley Richards, Grant, Buss), in addition to Mr. Price's "Greener;" but the day was so persistently wet that the birds would not lie at all, and only a very small bag was made. The "Greener" did well as far as it was tried, killing five out of six shots, one or two at very long distances. Of its long-range powers we had no doubt, from our target experience of it; but

what we wanted chiefly to ascertain was how it would act at twenty-five and thirty yards when loaded in the ordinary way. Of the six shots only two were within thirty yards, and at this distance it certainly cut up the birds very much, but not so as to spoil them for the table—nor, indeed, more than a good gun of the ordinary kind. The 17th was devoted to a trial with in at snipe; but here it certainly failed, and undoubtedly its limited killing circle is too small for this twisting bird. If the "bog-trotter," therefore, has no other gun to use, he should adopt the plan recommended in the report of the trial committee, by which his circle will be increased sufficiently to embrace "Master Jack."

The 18th saw us on the moors again, with the weather as if made on purpose for both dogs and guns. Old Drake and his son Beau (from the celebrated Belle) were put together, and we had such a treat as we fear we are scarcely likely to see again. The old dog is not quite such a flyer as in his Shrewsbury days, but still a long way above the average pace even of trial dogs, while his nose and cleverness were demonstrated to be A 1. The two dogs quartered their ground in splendid style, and neither of them made a mistake up to luncheon, when they were taken up, though without showing the slightest signs of tiring. After luncheon Mallard and Eos (brothers to Beau, but the latter only twelve months old) took their places, and the puppy pleased us nearly as much as his father, his nose being marvelously good. So much for this digression on dogs. As to guns, we had only the "Greener" and "Purdey" out. Some rare vellontly long shots were made by the "Greener," and one or two nearly equally long by the "Purdey." But as to this point it would take a whole season to settle their pretentions in the field, and we are not anxions on that score, as we before remarked, the target test being so much more simple. The killing power at short ranges of the "Greener" was, however, demonstrated to be quite up to the average, and the "blowing to pieces" predicted by so many of our readers did not come off. The choke-bore certainly is not suited to a bad shot; but in the hands of an average shot (which Mr. Price's modesty only allows him to be) it seems to be quite open enough to command anything between 25 and 35 yards, while beyond that distance it has a great advantage.

On the whole, therefore, our report of the new gun is highly favorable for use with grouse and partridge after the first week of their respective seasons; and in that opinion we are confirmed by Mr. Price and by the gentleman who shot with him on the 18th, whose opinion was so strong as to cause him to order a "Greener" for himself, though at old enstomer of Mr. Purdey. Those who have only one barrel "choke-bored," es. pecially if they are not first-class shots. Mr. Price is of opinion that the "choke-bore" heats more rapidly than the old plan, and thinks in a "hot corner" this will be a drawback; but, as far as our experience goes, we have found no difference in this respect.—*Field*.

HALIFAX, N. S., February 15, 1876.

EDITOR FOREST AND STREAM:—

I have read with much interest the various correspondence that has for some time past appeared in your columns in reference to the new principle of boring, and I find that the general opinion is against choke-bores, on account of their shooting too closely at short ranges, and therefore rendering them useless for stopping a bird in thick cover, that may be flushed by your spaniel within a few yards of you, and where you have no chance of letting it get at some distance from you before firing. The belief is, I take it, that, in such cases, you have either to let the bird escape altogether, to blow it to pieces, or render it unfit to put in your bag, through being terribly mangled. Now I have in my possession a (modified, not an extreme) choke-bore by Messrs. J. & W. Tolley, Pioneer Works, Birmingham, a most excellent weapon, No. 12-bore, weighing 7¼ pounds; its certificate from the makers showing at 19 yards a pattern of 180, penetration 33, with 3 drs. of Curtis & Harvey's No. 6 powder, and 1¼ oz. of chilled shot, No. 6. I found it a most powerful gun at *long* ranges, throwing the shot evenly and well. Thoroughly satisfied with this, I next determined to try it at *short* ones, but with different ammunition, so I filled my cartridge cases with Curtis & Harvey's *finest grain*, 2¼ drms., and ¾ oz. of No. 8 shot, using an ordinary wad between, and placing in a row, against a fence, 4 sheets of paper 12 inches square, I fired at 15, 20, 25, and 30 yards distance, and in each case made a splendid pattern, the pellets being well distributed all over the paper, and on removing each target, I found the shot embedded out of sight in the hemlock boards behind. I have had as yet no opportunity here in Nova Scotia of trying a close shot at game, my gun not having arrived from England until the woodcock and snipe had left us; but I am satisfied that I could kill woodcock, &c., dead without mangling at all, at close distances, by using a reduced charge of fine powder.

Will any of my sporting brethren who have modified choke-bores try the experiment and see if I am not right. At present I am convinced that not only is it an error to suppose that these guns are useless, except for trap shooting; but that it only requires a properly regulated charge according to the kind of work they may be called upon to do, to establish the fact that they are the most useful guns of any at present made, and next season I am more than sanguine, that I shall be able to prove my gun as capable of killing a cock clean without mangling at 15 or 20 yards, as it is now of blowing over a duck at 80. F. H. D. V.

THE DISMAL SWAMP.

WAPPINGERS FALLS, Dutchess Co., N. Y., Jan. 18th, 1876.

EDITOR FOREST AND STREAM:—

Seeing an article in your valuable paper entitled The Dismal Swamp, which I did not think very explicit or general, although very good as far as the writer of it goes, please allow your humble servant to give his own experience in the Dismal.

In 1864 the writer was a member of the Third N. Y. V. Cavalry, stationed in the Swamp at a place called "Bunch of Walnuts," for seven months—from December until the following June. In that time he saw a great part of that land of shadows and mystery, stories of which would look like tough camp yarns to a person outside of the limits of the great swamp. First, let me say that your correspondent is quite out of his bearings in some places. The distance from Portsmouth is fourteen miles to the Little Lake Drummond Canal, and only six miles from Suffolk. The lake is nine by seven miles, and one and one-half miles from the great canal. The most direct and cheapest route for a party of hunters or sportsmen to take is to Norfolk direct; thence up the Elizabeth river to Deep Creek, until you strike the canal at its entrance into the creek, through the canal, fourteen miles to Balakack; or go to old man Duke's on the Lake Drummond Canal, and then, if any man can come home and say he is sorry for the time spent, he deserves to be chewed up by those yellow flies—the swamp angels.

Game of all kinds are there, waiting for some one to come and take a shot; and there are some that do not wait for you to begin the play, as I found out by a rough experience, for on turning out one nasty night I saw a pair of ugly balls of fire in the swamp, and heard the peculiar wail of a woman in distress, that made the cold chills creep over me. But the ball from a Sharp's breech-loader put out the fire and stopped the crying, and in the morning we measured 6 feet 9 inches of panther. I would advise all going there for sport to look first and shoot where they look, for 9 bears, 46 coons, 13 otter, 1 panther, and 5 deer are scored on my record, by following the advice given by Mr. Prentiss Duke, of the lake.

The great canal will float any small propeller; but woe to him who tries to get up to the lake with anything larger than a canoe or dug out. But you may run down the North River Canal out into the river; thence to Albemarle Sound, or down the great canal to South Mills and Elizabeth City, with six feet of water, and, by-the-way, this same sound is a sportsman's paradise for ducks, geese, swans, and fish of all kinds. I have caught catfish in Lake Drummond that weighed thirty-two pounds.

RANGER.

—The parlor skating rinks, now so fashionable in London, were introduced there by Mr. Plympton, of this city. The skates and the rinks are American institutions, as also the sport itself.

Billiards.

THE FOUR-BALL CHAMPIONSHIP.—The "diamond cue," emblematic of the four-ball championship, and which had nearly passed out of recollection, is now the subject of much speculation and gossip. The history, in brief, of this emblem is as follows:—

It was originally won by John Deery, in the tournament of 1869, at Irving Hall, this city, against Rhines, Snyder, Rudolphe, Daniels, Goldthwait, and Foster. The present holder of the cue is Cyrille Dion, who won it from Frank Parker April 26th, 1871, at Chicago, and he last defended it May 16th, 1873, when Maurice Daly beat him. Garoier subsequently won it, and forfeited to Cyrille Dion on Oct. 7th, 1863. From that time until Feb. 5th, this year, no challenger has come forward. This knight is no other than the irrepressible Rudolphe, whose *defi* was sent in, accompanied by $250 as forfeit, to H. W. Colleuder, the preliminary stakeholder. On Feb. 18th Cyrille covered the money, and the game will probably be played April 6th or 7th. If Cyrille should win the contest, the "diamond cue" is then his personal property, he having held it the required time of two years and a half.

ACADEMY OF MUSIC, *Chicago, Ill., Feb. 19th*, 1876. Match for the championship of the Northwest and Southwest and $1,000; 500 points up, three-ball caroms, on a 5x10 J. M. Brunswick & Balke Co.'s table, with H. W. Collender's cushions, between William Burleigh and Louis Shaw. Score—Shaw, 500; Burleigh, 485. Averages—Shaw, 8 36-58; Burleigh, 8 21-58. Highest runs—Shaw, 38, 63, 47, 67, 57, 35; Burleigh, 58, 87, 37, 75. Referee, Henry Rhines. Marker, Charles Matthews.

AT SEA.—After hearty hand-shakings and wishes of success, William Sexton bid good bye on Saturday to the many friends and admirers who had gathered together to give him *bon voyage*. It had been expected that four or five press representatives would accompany him, but the number dwindled down to one, Mr. John D. O'Connor, of the Union Square Rooms, this city. Should the passage over be favorable, they will reach Paris on or about March 10th, and as Sexton will require at least a week to shake off his sea legs, and two weeks for practice, the contest will not take place until April 1st. There is considerable stir in billiard circles in regard to the match. Vignaut being the favorite, but little guessing will be done until after Sexton's arrival in France. We trust Sexton may return not only benefited in health, but the possessor of the "Collender Cup," which is emblematic of the three-ball championship of the world.

National Pastimes.

—The erection of the extensive club building and racket courts on Twenty-sixth street and Sixth avenue, for the New York Racket Club, seems to have given quite an impetus to this recreative in-door exercise, and we now hear of more racket matches in the metropolis than have occurred for some years past. For the information of those of our readers not familiar with the game of racket we give below the English rules of the game:—

RACKET RULES.

1. Gentlemen wishing to play will enter their names on the slate (*bona fide*) in their own handwriting, and shall be entitled to the court, according to their numbers, *à tour de rôle*.

2. Exchanging members will be allowed only to equalize a match, and with the approbation of those next entitled to the court.

3. The regular game will consist of a rubber of fifteen aces, for a single or double match.

4. On commencing a game in a double match, whether odds are given or not, the side winning the toss shall have but one hand; but in a single match, the party receiving the odds, shall be entitled to them from the beginning.

5. Ruled out.

6. The out-hand shall have the privilege of asking the service for the last ace of each game in either court; and in a double match, of placing either partner in that court, but must remain there until the end of the game.

7. The server must stand with at least one foot in the ring, and serve the ball first over the line on the front wall and within the right of the left court, otherwise the ball will be foul. Serving two foul balls, missing the ball or failing to strike the front wall, puts the hand out. No line ball is fair.

8. All balls served or played in the galleries or out of the court, although they may return to the floor, will count against the striker.

9. In serving or returning a ball, if it strikes the tell-tale, it is a hand out, or an ace.

10. When the ball is served fair, the player alone in that court is entitled to return it; if the ball be foul, either partner may return it.

11. A ball stopped by the striker or his partner, before either of the adversaries, loses him either a hand or an ace.

12. If a ball going from the racket strikes one of the opposite party above the knee, it is a let, and must be played over unless the ball reached the front wall before touching the floor; if below, or on the knee, the striker loses, unless the ball reaches the front wall as before. Should the ball strike his partner, it counts against the striker, though the ball should go up.

13. A ball must be taken either before or on the first bound, and not touch the floor before reaching the front wall.

14. No ball will be dead until on or after its second hop. Using two hands to the racket, "foul."

15. A ball returning from the front wall and striking a beam or any part of the roof, or above the lower gallery, is foul.

16. As players must sometime involuntarily be in each other's way, the maker will decide (when a "hinder" is claimed) if they are entitled to it (there can be no hinder allowed when a ball has been struck at).

17. One rubber only can be played by the same party; but, should any of those going out be wanted to make up the next batch, they must draw lots.

18. Only one set allowed.

19. On commencing the game, parties must toss for the first service, in making which they must cry "Play," or time must be called in other cases. "Time," can only be called before the server has struck.

20. A double match always to take precedence over a single match.

21. The marker's decision must be final and without further appeal, in all cases, when judgment is asked.

22. The out-player alone can call for a new ball, except it be torn.

23. Any person striking the ball unnecessarily on or after the second hop, shall be liable to a fine.

24. No one will be allowed to play in the court with nails in his shoes. The racket shoe should have an extra sole of buff leather.

ONE THOUSAND MILES IN ONE THOUSAND HOURS.—Peter Goulding and John DeWitt started on January 15th, at 7 o'clock P. M., to walk 1,000 miles in 1,000 consecutive hours, in Brooklyn. The time expired at 10 o'clock on Saturday morning, but they continued walking until afternoon, when neither being inclined to give up, they agreed to divide the purse of $500. It is claimed that the feat was fairly performed by both men.

—The Athletics will have a reserve corps of seven professionals this season, which team will have the use of the Athletic's ground at Twenty-fifth and Jefferson streets; will be provided also, free of cost, with a handsome uniform, and have a certain share of the gate money, subject, however, in all respects to the rules and regulations adopted by the Athletics for the government of their professional players. All of our first-class amateurs wishing to enroll themselves as members of this nine should send immediately written applications, with references and addresses, to Alfred H. Wright, *Sunday Mercury* office, so that an organization can be speedily perfected.

—The following clubs will be represented at the National Association's convention at New Haven, next Wednesday afternoon: Philadelphia and Centennial, of Philadelphia; New Haven and Star, of New Haven; Red Sox, of St. Louis; Atlantic, of Brooklyn; Baltimore, of Baltimore; Covington, of Covington, Ky.; Alleghany, of Pittsburgh; Expert, of Harrisburg; Active, of Reading; Quickstep, of Wilmington, and the Active and Cregar, of Camden, N. J. It is also probable that representatives will be present from the Neshannocks, of New Castle; Chelseas and Fly Aways, of New York; Live Oak, Taunton, and Lowell clubs, of Massachusetts; Trenton club, together with some others who have not yet made known their intention of so doing.

—The National Amateur Association, says the Secretary, in the appended circular, will meet in Philadelphia on March 8th:—

THE NATIONAL ASSOCIATION AMATEUR B. B. PLAYERS,
New York, February 21th, 1876.

DEAR SIR:—You are hereby respectfully notified that the annual meeting of this association will be held at the hall of the Assembly Buildings, corner of Tenth and Chestnut streets, Philadelphia, Penn., on Wednesday, March 8th, 1876, at ten o'clock A. M., precisely.

This being the most important meeting since the formation of the Association, it is earnestly hoped that your club will be represented.

Very respectfully yours,

C. W. BLODGET, Secretary,
No. 238 Fourth Avenue.

N. B.—To avoid any question as to eligibility, delegates must be provided with credentials signed by the President and secretary of the club they represent.

—The Frontier club, of Brooklyn, will open play at Prospect Park on Saturday, March 4th.

New Publications.

MAGAZINES.

The Galaxy for March opens with an instalment of Mr. Wm. Black's story, "Madcap Violet," which increases in interest as it progresses. We notice in the table of contents the names of many of the regular contributors to this magazine. Mr. Joaquin Miller is represented, as is also Mr. Justin McCarthy, who furnishes an article on the British Premier, under the title of "Vivian Gray Grown Old." General Custer again comes to the front with "War Memories," and Mr. Albert Rhodes discourses of "A Pugilist of the Press." On the whole the contents of the *Galaxy* are well selected and readable, and we consider the issue for the current month even beyond the average.

We are inclined to give the place of honor in *Scribner's* this month to Mr. Eggleston's very able article descriptive of the kindergarten, which is contributed under the title of "Child-Garden." There is something remarkably sensible and attractive in this mode of instructing young children by objects, forms, and colors, in preference to the old mode of "hook learning" and tiresome rules and exercises, that, popular as it has become, we only wonder that it is not more generally adopted. If Mr. Eggleston is correct, there are but few qualified instructors of the system, and but four schools whereat diplomas are issued. The contribution to the series of articles on American Colleges is from the pen of Wm Chilborne Brocklesby, who describes Trinity College, Hartford. Mr. Bret Harte's story, "Gabriel Conroy," is of course continued, and we have another instalment—the last but one—of Jules Verne's "Mysterious Island." The majority of the articles in *Scribner's* are illustrated.

St. Nicholas for March does credit to its deservedly high reputation. Miss Alcott commences a series entitled "Talks with Girls," and, as usual, writes sensibly and attractively. Mr. Noah Brooks' "Boy Emigrants" are still plodding their weary way across the plains, their journey varied with "stalking" in streams and buffalo hunts, and their characters appearing as they do only when at sea or on the trail. Bayard Taylor's story of the Icelandic boy is very interesting. The illustrations in this number are very good, notably Mr. Alfred Fredericks daintly sketch of "The Rare Old King and His Daughters Three," which illustrates the poem with that title. Some of our greatest literary lights, such as John Greenleaf Whittier, Mary N. Prescott, and Marion Harland, in addition to those before named, contribute to *St. Nicholas* and provide of their best thoughts for the delectation of its readers.

Lippincott's Magazine for March contains for its illustrated articles one entitled "The Century—its Fruits and its Festival," in which are given engravings of the various exposition buildings that have done service in the past, from that of London, in 1851, down to the recent one in Vienna; the other, "Sketches of India," which, in the present number, is descriptive of Baroda and the nautch dancers. Mr. Robert Wilson contributes a very pleasant sketch of the "Batavia Flag," and some stirring Revolutionary incidents, and Mrs. Davis an article on "Life-Saving Stations," wherein the system, as practiced on our coast, is fully explained. The table of contents is unusually varied and interesting.

The Eclectic, edited by Mr. W. H. Bidwell, has, in the current number, for a frontispiece, a likeness of President Barnard, of Columbia College. The table of contents comprises the usual capital selection of the best articles from contemporary magazines.

The Aquatic Monthly. Mr. Peverelly keeps up the high tone of his magazine, and the animated discussions in its columns between members of the yachting fraternity are instructive as well as interesting. We can commend the *Aquatic* to our nautical readers.

GRAND

Bench Show of Dogs.

THE ROD AND GUN CLUB,

OF

SPRINGFIELD, MASS.,

Will hold their Second Annual Bench Show

April 26 and 27, 1876.

AT CITY HALL, SPRINGFIELD, MASS.

In addition to the regular Club Prizes, a large number of valuable

SPECIAL PRIZES

Will be offered.

Premium Lists and Entry Blanks may be had by addressing ROBERT O. MORRIS,
mch2 9t Secretary.

FOR SALE, OR TO LET.

The elegant country residence, WILLOW LAKE, at Locust Valley, near Glen Cove, Long Island.

Suitable for Summer Boarding-House.

The house is 2½ stories, frame, 40 feet front and 32 feet deep, with wide piazza front, rear, and on south end. On first floor are parlors, sitting room, and dining-room; wide hall through the centre. Up stairs are 9 bed-rooms, all large and airy; kitchen well-arranged and convenient; cellar large and dry.

On the premises, and at a convenient distance from the house, are a stable and carriage house, chicken-house, shed, coal, tool, and ice houses. The grounds are well laid out and tastefully planted with ornamental trees and shrubbery. The avenue leading from the road to the house skirts a beautiful lake, on the border of which the house stands. A Paper Mill at the north end of the lake will be sold with the above, subject to a lease. The lake and land embrace about 27 acres. As a place of residence it is elegant and healthy; for manufacturers it is convenient; for the propagation of trout, for pleasure or profit, there is no better place in the State. Apply to

R. FRANCIS,
mch2 6m 47 Broad street, New York.

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobocco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers love it.

From A. B. Lamborton, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial no not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article and a great comfort to discriminating smokers.

THE

PAPER STEM PIPE.

Just the Thing for Home and Camp Use.

Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

HURST'S

Stereoscopic Studies

OF

Natural History

FOR OBJECT TEACHING IN SCHOOLS

And

PARLOR ENTERTAINMENT.

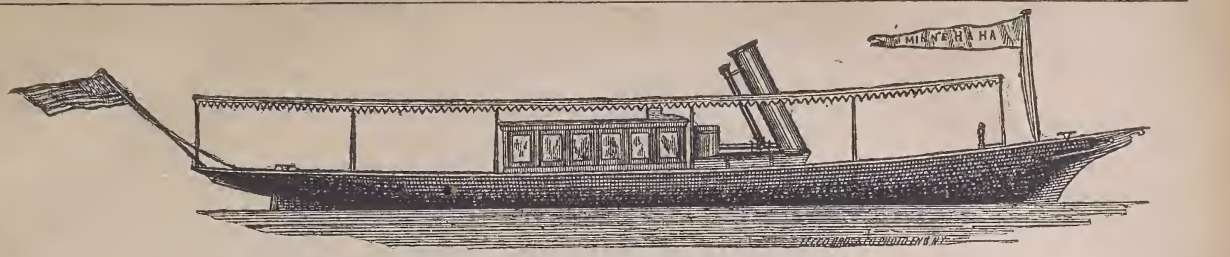
We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various animals and birds in grotesque attitudes, never, however, violating their natural instincts.

We offer these views, not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to have a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen, with its appropriate rocks, woods, or water, and coloring from the originals.



CORNELL UNIVERSITY,
ITHACA, March 14th, 1870.

I must congratulate you upon your great success in this new educational enterprise. If we can arrange our amusements so as to make them impart instruction to the mind, it will be a step in advance in education. EZRA CORNELL.

Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.
THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.
These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fast like moveable anvil made of steel. The nickle cone also prevents misfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3¼ inches.
Shells and Loaders, and descriptive Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.
From Captain Bogardus, Champion Wing Shot of America.
MESSRS. GEORGE E. HART & CO.,
Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,
A. H. BOGARDUS.

W. W. GREENER'S
DOUBLE CLOSE SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field trial in '75, beating 83 competitors with 8 guns, also winning in all the other classes for the improved system of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address

Nov. 15—tf.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,
The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,
For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,
The best for rifles and for all ordinary purposes. Sizes F, FF, FFF, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.
All of the above give high velocities and less resinous than any other brands made.
BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.
SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,
21 Park Row, N. Y.
Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

DITTMAR POWDER
MANUFACTURING CO.
MY NEW IMPROVED POWDER can now be loaded from an ordinary flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire, except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR,
Neponset, Mass.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder.

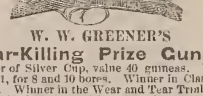
Hazard's "Electric" Powder.
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."
Nos. 1 (fine) to 8 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.
GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.



The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.
88 Wall Street, New York.

CHAMPION GUNS OF ENGLAND
PAPE'S
Unrivalled Sporting Guns.
Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.
1875. 12-Gauge, Choke Boring.
Maker of Gun. Exhibitor.
1st—Greener.....Greener.
2d—Pape.....Davidson.
3d—Pape.....Pape.
Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by some gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the cost six guns.
1875. 12-Gauge, Old Sporting Bore.
Maker of Gun. Exhibitor.
1st—Papé.....Davidson.
2d—Pape.....Davidson.
1875. Long Range, 60 yards, Choke Bores.
1st—Pape.....Davidson
60 yards, Long Range, Sporting Boring.
1st—Pape.....Davidson
These champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1½ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.
1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address
NORTH OF ENGLAND GUN WORKS,
Newcastle on Tyne, England
Dec2 NO AGENTS.

H. C. Squires, No. 1, Courtlandt st. New York.
THE GREAT
London Gun Trial,
1875.

W. W. GREENER'S
Far-Killing Prize Guns.
Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.
W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.
I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price, viz: $85, sold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.
Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.
Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,
Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.
The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold gripes now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.
Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.
Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

MANUFACTORY, PIONEER WORKS,
Birmingham, England.

Notice.
During the Centennial Exhibition (at which we shall be present to exhibit our guns) our New York Branch Office will be temporarily closed.
As new sample guns are now being made for the Exhibition, we will therefore dispose of our present sample Breech Loading Guns at a discount of twenty per cent. Particulars of Guns on sale forwarded on application.
J. & W. TOLLEY,
jy1 29 Maiden Lane, New York.

J. D. DOUGALL'S
EXPRESS SHOT GUNS.
(Title registered.)
SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 26, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to
59 St. James's Street London.

Camp Life in Florida.

By CHARLES HALLOCK,
AUTHOR OF THE FISHING TOURIST.

This is a most seasonable book for Sportsmen, Tourists, Invalids, and Settlers, and has been long needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

318 pp., 12mo. Price, $1 50.

CONTENTS:

Introductory Chapter.
Birds-eye Glance at Florida.
Outfit for Sportsmen.
Hints for Southern Hunting.

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 32, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. *The Wyoming does not carry passengers.* The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.
Families *en route* for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.
For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

Overland Notes.

NUMBER ONE

WE are striking into no new or untrodden path that we presume to render interesting notes of Western ramblings. For many years there have been from many pens, accounts of what was the "Far West," now less *far* from the rapid strides of steam; yet "the half has not been told," nor will it be for many a long year, for the immense space that on maps not long since accepted as accurate, was designated as "unexplored, desert," etc., is found to contain an endless variety of treasures of all kinds, and enchantments for all tastes, from the seeker of wealth, to the artist, the scientist, and the wanderer who in new scenes and under new skies, seeks amusement, recreation, and rest.

This Territory, the Centeunial State to be, the land of "color," fitly crowns the tide of progress that has swept in from the two oceans. Here the rapid immigration from the East, meets the reflex amount of miners and bold spirits that have followed from the Pacific the lurings of hidden mines and concealed treasures; and in this new State will be found all the remarkable characteristics that have been developed in the men whose energy and restless courage have borne forward the star of Empire until it has become a meteor. In our own finished Eastern States, we have been filled with satisfaction and pride at contemplating how in the lifetime of one hale generation, the wild half known lands have been changed from their rude condition to a culture and finish that compare favorably with those of ancient European countries; but here progress overruns itself, and impatient American enterprise builds villas in haste before the wigwam has moved on; the locomotive hardly halts for the buffalo to turn tail and flee, and villages occupy the plain so rapidly that the prairie dog can hardly move fast enough to keep in the suburbs, and he is seeky if his wise eyes are not opened some fine morning to a stone schoolhouse, or a massive church where the bunch grass lately grew, and the antelope fed.

And how do we come into this new land? As Father Hennepin went to Lake Superior with a bag of parched corn, and armed with a rosary, or with the slow mule train, jumping on the plain, and trusting to the avails of the rifle for food? Not a bit of it, we came as we enter New York, in a snug train, armed with greenbacks alone, and find at the station of Colorado Springs such a row of runners and porters as would have driven brave Father Hennepin, who feared no Indian warhoop, away, hopeless of any influence for religion; and would have frightened a mule train into a stampede.

Grace a Dieu, there was one quiet man, he drove the Manitou stage, and gladly escaping the din, a pleasant drive of five miles amid wonderful scenery, under the huge shadow of Pike's Peak, brought us here, where imagine us in a most comfortable hotel, the Manitou House, while we go in retrospect over the journey here.

And here let us premise that we "look no gift horse in the mouth" in our comments on routes, rates, and accommodations. A little simple truth is of great value to those who are seeking information about travel, and with all due deference to those whose writings we pored over in advance of our journey, we find reason at times to think that special attentions, and perhaps exemption from regular rates and expenses, may have shed a *couleur de rose* over their path that the ordinary tourist may miss in following. From New York to Chicago there is little to desire in improvement of travel. Our route *via*. the four track New York Central, and the highly finished Lake Shore Road combined every comfort and attribute of speed and safety, with many beautiful and interesting views, and the other routes offer the same with new scenes for the return trip. At Chicago no one should pass without lingering, there is so much to study and admire in the new city where miles of new buildings exhibit all the resources of modern architecture, and no old or low structures impair the effect. The fire has been like Louis Napoleon's sweeping edicts, and no inferior buildings remain to break the sky line of block after block of commercial structures that are modeled like palaces. For the stranger no city offers finer hotels. A choice is embarrasing, ours was for the Grand Pacific, and we found it remarkably perfect in every detail. The large office hall, and the reading room are exceedingly handsome, and are decorated with frescoes and fine paintings of different cities that are worthy of long study. If some ingenious person can invent a practical smoke consuming arraugment for soft coal, it will be of inestimable value to such cities as Chicago and Cincinnati, for it hangs like a gloom over them, and falls with disfiguring effect upon their beautiful buildings.

The pumping engines of the Lake Water Works are well worth seeing as mechanical wonders of power. They are in a very expensive building of stone, more ornate and grotesque than appropriate, which fails to indicate in its fanciful form the character of permanence and strength that the architect should have given expression to.

The next step, Westward ho, is to Omaha, and several routes are open, all good, and all offering special advantages, some of which, like hotel cars, are mainly found on the neat little advertisements that *lie* about on all sides like leaves in autumn.

Our choice was the Rock Island Road, and we found excellent cars. Of this route there is not much to be said. A good book will here be duly valued, and little will tempt one to turn from its pages, unless to drive away with "shoo fly" gesture the infernal peddling boys who in relays infest this route. Ah, Father Hennepin, alas cold wet mule driver, the hardships are not all yours, you have had in your time dangers, weariness, exposure, and despair, but you had not the train peddler, you know not his persistence, his mosquito like perternacity, his nasal twang, his thrusts of dime novels, prize packages, and peanuts. The cars may be snug, the cushions soft, the corners all padded, but what is there of repose, contemplation, conversation, or gentle reverie with a dirty hand under one's nose every five minutes holding something one hates?

In daily life, if a purchase is made, one seeks a shop and it is done; it is reserved for our weary journey to be haunted by a succession of peanut stands, corner groceries, and news rooms, and to sleep amid a nightmare of wandering hucksters. Tar and oil will keep off black flies, a little Persian powder will enable us to sleep undisturbed, strychnine will keep howling wolves from camp, but what will deter the train boy? Here, oh American genius, is a chance! Supply something that will maim, kill, demolish, or dismay the train boy, and a fortune awaits you. He is kith and kin to him who paints the rocks, disfigures fences, and sees in natural scenery only a sign board for his disgusting remedies and quack wares. How long will the American public suffer their inheritance of superb undefiled natural scenes to be thus rendered offensive?

Council Bluffs is reached in twenty-four hours from Chicago. A long fine bridge connects it with Omaha, but from some hungle, creditable to no one as far as understood, the trains from the East cannot cross; all the passengers are bundled out on a platform bag and baggage, there to wait it may be an hour, and then to go as we did, in a dirty overcrowded emigrant car to the Union Pacific depot in Omaha.

Invalids here must suffer, and for a route claiming as much as does this of comfort, this break, and the way travelers are left about are far from creditable.

Wishing to avoid continuous travel we passed a day at Omaha, and found the Grand Central Hotel very nice and pleasant.

From time to time East of Council Bluffs we saw many bevies of prairie hens, and all about in Omaha were evidences that we were in a fine game country. Huge elk horns of many points were common decorations on houses and barns, and in the markets were specimens of black tail deer and various game. For information about game, etc., we called on Mr. Thos. L. Kimball, General Passenger Agent of the Union Pacific Railroad. He was exceedingly kind, and evidently an excellent sportsman, his love of the field leading him to camp excursions, shared by his family, some of the ladies of it being able to kill birds on the wing. How much of robust health, and steady nerve would be gained by our eastern belles could they too go a field in such a spirited manner. From him we learned that out on the Pacific Road about Grand Island the sporting is excellent, covering a variety of game, such as prairie hens, ducks, geese, etc. With Mr. Kimball we had a pleasant conversation about California as a resort for pleasure seekers, invalids, and sportsmen, and comparing it with Florida. The rigor of our long northern winter, the strain it exerts upon health, and the growing taste for open air life, all are exerting a powerful influence upon travel, as evidenced in the crowds that visit the South and Florida, and the increasing numbers going to California. With regard to the latter we urged that more encouragement should be given. Now the trip is very expensive; costing more than a trip to Europe, and there are some annoyances that tourists should be spared. A ticket from New York to San Francisco costs $136, sleeping car berth, $22, and meals and sundries the balance up to $200; and this amount will admit of very little delay by the way. This is four times the cost of going to Florida. Then baggage is weighed, and all over 100 pounds charged for at 15 cents per pound, making in many cases an onerous amount, for people cannot leave home for the winter, and go through a cold country demanding warm clothing, to a warm climate requiring light dress, with only 100 pounds of baggage. The sleeping cars are needlessly ponderous, and over costly; and make the weight of the train, many of them weighing 23 tons, a ton to each passenger. We think most tourists would willingly have their cars fitted plainly with an absence of heavy woods and metal work, and be permitted to carry a fair amount of baggage free from constant weighing and extra charges. This coming on a high rate of fare, is quite an annoyance. Another unfair feature of the ticket rate is the discrimination against passengers by the Kansas Pacific Route. It would be to many interesting to go or come this way, but if they go by it, say from Chicago, it will cost to Denver about $47. Denver to Cheyenne, $10, and from Cheyenne to San Francisco, the same as from Omaha, or $100, no allowance being made for the 516 miles not traveled between Omaha and Cheyenne. This makes $157 *via*. Kansas Pacific. This is because the Union Pacific from Cheyenne West is the only line, and being in combination with the Pacific Mail Line, a monopoly. Let us hope the Texas and Pacific Road may afford us a communication with Southern California direct before long. The claim that the road was very costly and demands high fares, would be more just had not the Government so immensely aided it, and we cannot but feel that more favorable rates would fully recompense the company if they resulted in building up something like the travel that seeks Europe and Florida. A class of light cars, not over 12 tons, plainly fitted, with canvas divisions instead of heavy panels, that small parties could charter for the trip would be very tempting. They need not cost over five thousand dollars, and a fair price would pay for their use. These could remain over at good hunting points, or amid fine scenery, and would greatly enhance the value of this long journey. Let us hope some road will adopt some such car system, and manage it, instead of hauling the ponderous Pullman cars, and then complaining about the weight of a trunk. What tourists want is a secured seat, space, and neatness. We do not think many care for the extravagant cars now used, or are anxious to pay for their cost, or drawing expenses. Your correspondent was spared a great deal of care by the kindness of Mr. Kimball, which is pleasantly remembered, and, snugly fixed in a car, rolled out of Omaha over the plains. Of the route from Omaha to Manitou in our next. Before closing we will add, that here (Manitou) this day, Thanksgiving, the sky is clear, air mild, roads fine and dry, and everything tempting for outdoor life. Although 6,200 feet above sea level, there is no snow except on the mountains, and when any falls, the

first bright day, (and fair days are the rule), carries it off immediately.

We are soon to be summoned to a grand Thanksgiving dinner, and evening frolic at our pleasant hotel, but as we look out of the window there is little to remind us of November. Letters from home speak of a dreary autumn, and we fear it is there what is tersely given in Hood's *November*:—

"No sun, no moon,
No moon, no noon,
No proper time of day."

L. W. L.

Manitou, Colorado, November 25th, 1875.

For Forest and Stream.

FIRST VISIT TO THE RAQUETTE.

THIS was an excursion of high expectation and equal reality. It had been a cherished day-dream, the coming event having long cast its shadow before. I was one of four this time, the least experienced of all in North Woods travel, and was happy to penetrate the wilderness in the company of three well-known and respected fellow-citizens. Of these, George and Pickwick have appeared before. I now introduce the name of Boz, a man who was quite at home in Brown's Tract, and well understood the management of such an expedition, and an enthusiastic hunter and sportsman. By his kind advice and assistance I became well accoutered for the journey. A pair of black canvas bags was provided, one of which was to hold my bed, and the other miscellaneous articles. These were strapped together so that they could be conveniently shouldered in crossing portages. My bed was of Pickwickian suggestion, viz., a deep blanket bag, adapted to surround a six foot corporation. By the advice of Boz, I also provided a curious head and neck cover, or havelock bag, to protect me from insects. It had goggle eyes, and breathing places for month and nose, but otherwise there was "no admittance." A fair hand embroidered over the goggles piscatorial eyebrows, a pair of large hooks, *a la* moustache, on the upper lip, black flies for the nose, and an imperial mosquito. Thus equipped, I was prepared to frighten all enemies away. Indeed, the mere presence of such an article in the woods seemed to answer every desirable purpose.

We started on August 2d, 1858. Whenever I have taken the route to Arnold's the plan has been to take the evening train at Utica, pass the night in Boonville, and leave there early in the morning. At Boonville we reconnoitered Hulbert's famous garden, and caught sight there of a running stream. We packed rods and guns together in one careful bundle, and made every possible arrangement for comfortable transportation on the morrow. A wagon was engaged to carry all our effects, including tent and commissary. The tent, by the way, was not required, and I think it was a mistake to carry it. It was very heavy, especially after being wet by the rain, took up a great deal of room in the boat, and after all was only raised once, as we found convenient shanties all the way. I remember how glad the guides were to be rid of it, expressing the hope that they would never see it in the woods again. This is for whom it may concern. In the morning we were early in the wagon, intending to breakfast at Lyon's Falls, all but Boz, who loitered till "thunder and lightning" calling him broke from the lips of the impatient Pickwick. After breakfast we made up our minds that we were to have a rainy day of it. The rain was coming, and in the spirit of Patrick Henry we said, "Let it come; it is vain to extenuate the matter," etc. It did not disappoint us; all day long we had the pleasure of its company, such as it was, but it could not drown out our good humor or prospects of felicity. At evening, comfortably sheltered and surrounding a supper table, prepared by Arnold's daughters, Ed. Arnold, who came with us, said, "If I had been coming out to-day I wouldn't have come." But why not? All's well that ends well, said a greater than Ed., and there we were at our destination, with good appetites, and none the worse, and, between you and me, we here took leave of rain, seeing or feeling nothing more of it for the remainder of the excursion.

In the morning we were soon at the forge, where I noticed the grave of Lol the poor Indian, alias Drid, respecting whose taking off I had read an erroneous account in Headley, the facts in the case being written in "Babes in the Woods," chapter v. Just below the dam I threw in, and immediately threw out. I took half-a-dozen good sized trout then and there, a feat which I have never since, at that particular spot, been able to renew; need I add that I never expect there to do as well again. Our guides from this point were Alonzo and Bill Wood. There was a third man, but I do not now recall his name. Alonzo married one of Arnold's daughters, and lives, I believe, at Long Lake. Bill, noted for his great strength and endurance, laid down his life at Fredericksburg during the war. They were both as good and capable guides as the North Woods contained.

Once more upon the waters, yet once more,
And the waves bound beneath us as a steed
That knows his rider. Welcome to—the oar;
Swift be its guidance wherso'er it lead.

We moved forward, onward and upward, till we struck the shore of Third Lake, where we shanticd over night. During the night Boz went after venison, and came home with it, so that we did not lack for fresh supply. At some point during the excursion George shot two deer. They were not a source of pride to him, however, but only of regret and compunction, for they were not needed. There they lay, dead on the shore, the glory with their life departed. Instead of adorning the lakes, and enjoying them with their natural beauty and graceful movements, their lives were thrown away, and the responsibility was on his hands. I relate it to his credit that he condemned himself, would have paid largely to return them to life, and even felt like going home. In these days of wanton and remorseless slaughter of these vexed, persecuted, and harmless animals, it is refreshing to know that there are some relentings. The sacrifice of them has always been too bloody a work for me. Though I partake of venison, I never yet fancied the occupation of a butcher.

We passed up the Fourth Lake in sunshine. I recollect the quick eye with which Bill Wood detected in the distance a recumbent deer. He taught me that it was nearly useless to troll for the lake trout in August, and that they would not bite again "till next spring," a lesson of information which served an excellent purpose for me when next spring came, on that very lake. And yet, with his assistance, I took four of these lakers, being in this respect more successful than my fellows. Having passed the next night on this lake, in the morning Pickwick asked George if he did not hear a panther during the night. Now Pickwick had tromboned with his nasal organs very much to the discomfort of George. He said he had not, owing to other sounds, but added, "If you blow the trumpet again, as you did last night, you'll hear a panther."

Now for portages. I enjoyed them for variety. There is a pleasure in the pathless woods, and even a greater in woods which have a path to them, and where Woods are leaders. I remember the stalwart strength with which Bill walked off with his boat and laid it down again, ready for farther action. We will not tarry long on Fifth and Sixth lakes, for there is no length to them—that is the long and short of it; but Seventh is the gem. How serenely, grandly it opened to the view, after being hemmed in on all sides of the narrow outlet, though even there our sight was bounded by a profusion of wild roses. Oh, what a palace of nature is this Seventh Lake, in sunshine or in clouds, with the mists of the morning overhanging its mountain heights, or the breezes of evening rippling its quiet waters. A pair of antlers, set for the purpose, directed us to camp, where we found ample accommodations for our sojourn and for fascinated observation of the charms before us. On a wooded elevation our table was prepared, where, with thankful hearts, we feasted our eyes as well as our palates, and praised God from whom all blessings flow.

Boz had frequently affirmed, in the course of the journey, that "the cat is a remarkable animal." Why or wherefore did not appear, as no notice had been taken thus far of his asseveration. Hearing the statement again, we began to look into the matter, and asked him to account for it. He was at a loss himself to solve his proposition. I tried to help him out, affirming that the cat is a remarkable animal as possessed of three tails. How is that? Why, no cat has two tails. I suppose you are all ready to admit this. Well, every cat has one more tail than no cat, certainly. Yes. Every cat, therefore, must have three tails. Q. E. D. Everybody felt relieved, and we heard no more of the matter. You will call this nonsense if you are a man of sense; but I must plead for it as the celebrated Robert Hall, of England, plead for it in similar circumstances. Indulging in levity in the woods, in company of a young and conceited minister, who undertook to reprove him, Hall replied, "Oh, the difference between us in this respect is not so great after all. It is simply this: I let off all my nonsense in the woods, while you keep yours for the pulpit."

We found the portage between Seventh and Eighth lakes very entertaining, by reason of the luxurious raspberries which abounded there. They were in the prime of excellence, and all enjoyed them. These constitute one of several agreeable attendants peculiar to a late or summer excursion almost anywhere in the North Woods. Bathing is another, which we did not fail to improve. On Eighth Lake, near the landing, we caught a young loon, and returned it to the water. His anxious mother knew he was out, and kept up maternal screams, but at safe distance, not presuming too nearly to claim her own. Gliding over this lake without stopping, and crossing the final portage after numerous twists and turns on the inlet, we at length reached the fair, delightful waters of our ultimate destination, the enrapturing Raquette, where we aimed for Constable Point, and set up for the first time our tabernacle. This point was more favorable then for encampment than it is at present, as its trees have been cut down; but a good spring is there, and the prospect is commanding. Thence we sorted in all directions, as was necessary if we would see the lake, which stands peerless in its irregularities, and for expansiveness and the wild picturesque, next to Lake George, the queen of our inland waters.

We visited what is now Murray Island, and the adjacent native home of our trusty guides, the Woods, where we saw their father, one of the early settlers, with his pipe. There was still another Wood, whom we met in his boat; a man who, being naturally short, was much shorter by reason of amputation at both knees. Still he appeared to enjoy himself, and he had reason to amid such surroundings, as he was healthy from his knees upward, and could fish in his boat better without legs than with them. We visited also the venerable Mr. Beach, quite a patriarchal looking man, who received us kindly, and showed us the caudal remnant of a great fish he had recently caught, and the large hook he used. The remnant was of mammoth proportions, being itself larger than ordinary fish, and represented, I should say, thirty pounds. Mere curiosity would like to know what ever induced such a man to settle for life all alone in those parts; but concerning tastes there must be no dispute. *Sint nominis umbra.* We visited also Forked Lake, where we found Helms in his mansion, since destroyed by fire, where, in the language of the Psalmist, slightly altered, not the barren, but the bearin', woman kept house, and was the joyful mother of children.

On one occasion, with my guide, I was separated from my companions, when, stopping for a few moments at the public house kept on the lake, I was presented with New York papers by a gentleman who arrived the preceding evening, and received information that the Atlantic cable was successfully laid. I started immediately in pursuit of my party, whom I soon met in the midst of the lake, and to whom I communicated the glad intelligence. Victoria was well, and had just been heard from by submarine telegraph. The wilderness and solitary place immediately rejoiced. Waving our hats and kerchiefs, we all shouted out our jubilation in full concert there with the millions of both hemispheres. It was even so, and ere another week was passed we enjoyed the illuminations of Utica in celebration of the grand event.

Bill went ashore about this time with his rifle, and brought down a great hawk from the topmost branch of a lofty tree. The hawk seemed reluctant to leave his perch, or dilatory in yielding to the force of gravitation, but at length he reached terra firma sure enough. I clipped his wings, and they flew home with me. But the report of a rifle in this region, as in others, is not "only this and nothing more." You hear it again and again, echoed and re-echoed, cracking away across the lake, and breaking out anew on the other side. I have observed this effect on Tupper's Lake and elsewhere with great admiration. I can almost apply to it, with accommodation, Scott's lines to his Harp of the North.—

"'Tis now a seraph bold with touch of fire;
'Tis now the brush of fairy's frolic wing.
Receding now the dying numbers ring
Fainter and fainter down the rugged dell,
And now the mountain breezes scarcely bring
A wandering witch-note of the distant spell,
And now 'tis silent all, enchantress fare thee well."

But where am I? I was going to tell you something about—well, I will, and hasten to a conclusion. We went up the Marion River, some farther than the rest. Returning, we found Mr. Pickwick at a spring-hole, discomfited, and wanting to go home. He had just lost an enormous trout, which he described as being of the dimensions of an oar paddle! Hugh! I saw him catch a fish, and it was after this fashion. He threw out as far as possible from the boat, indeed, but where it was sure to catch the lily pads. He was snagged, but disengaging the line a trout took the bait and ran back into the pads. Pickwick determined to break or bring him in. So he broke away the second time, the trout still clinging to his hook. At last he fetched him in, kerflummux right against the boat, when the trout flapped his tail and vamoosed to parts unknown. I saw him shoot a loon in a similar manner. The gun we will suppose was faithfully loaded and discharged, but when the shot took effect on the water the loon was somewhere else. He disappeared, it is true, for a moment, but that he was not hurt he soon signified by rising.

I will not weary with the production of further incidents connected with this eventful trip, but desire to allude briefly to my last evening at Arnold's. Desiring to carry home with me fresh trout, as well as to prolong while I could the pleasure of taking them, with Alonzo I descended the Mooso River a mile to fish in two spring-holes there. The slant rays of the sun were gilding the trees which bordered and shadowed the water, the trout were eager to be caught, and for an hour and a half I enjoyed one of the most pleasurable fishings of the trip, catching about seventy, which were in Utica, and part served on table, before they had been twenty-four hours out of the water. We left Arnold's in the morning at daybreak on horseback, and by nine o'clock were out of the woods, having trotted sixteen miles. We reached Boonville in time for the afternoon train, so that before evening we were safely at home, having accomplished in less than a fortnight an excursion of unalloyed health and enjoyment, for which I will not cease to be thankful while memory endures.

Utica, January 26th, 1876. AMATEUR.

ADVENTURE WITH A PANTHER.—The *Saratogian* gives the following description of a remarkable encounter with a panther, which occurred recently in that county:

"A man by the name of George Hinckley was, on Friday night, February 25th, driving from Corinth to Conklingville somewhat belated. There was no moon and the road was uncertain, owing to the rough weather which had prevailed in that section for two weeks or so past. He was in a light cutter, well protected from the cold by robes and blankets, and was driving a spirited horse. It was about 11 o'clock, and he was nearly at his journey's end. The road lay through some undergrowth of woods. While the horse was jogging along at a moderate trot, suddenly he stopped, threw his ears forward, gave a furious snort, and refused to go further. The driver urged him to go, and finally struck him with a halter, the strap end of which was tied to the cutter in order to prevent its dropping out and becoming lost. The horse jumped forward in a frightened manner, but before he had taken three steps a huge panther sprang from behind a low evergreen close by the track and leaped into the cutter. As it struck the cutter its fore-paws came with great force against Hinckley's breast, and with one blow with its powerful nails the man's clothing was stripped clean from his skin. Hinckley had the halter with which he had just struck the horse still in his hand, and instinctively he laid it with all his might over the head of his assailant. By one of the blows the headstall passed over the panther's head. It being a slipping noose, the next effort to strike drew the noose tight about the panther's neck. Then a desperate, hand-to-hand, as it were, fight ensued. The man struggled to throw off the beast, but succeeded only so far as to prevent it from fastening its powerful jaws upon his now bare neck. The panther grabbed the man's left arm, which it bit through and through, the blood which flowed only seeming to make it more furious. With his strong right arm Hinckley tightened the slipping noose about the animals throat. So tight was it drawn by that strength which comes of desperation that the panther was choked so that it let go its hold on the man's arm and gasped, at the same time stripping its victim's clothing and lacerating his skin with its sharp claws. With the first spring of the panther, accompanied as it was with a wild, fierce growl, the horse took fright and ran at full speed, every leap fairly lifting the cutter from the track. Thus, while Hinckley was struggling for life in the cutter, the horse was running away. But the running away of the horse proved to be the salvation of the driver; for in making a short turn in the road the cutter was overturned, dumping driver and panther out upon the frozen snow. The moment they struck earth, however, they parted company. One end of the halter being fastened to the cutter and the other end tight about the wild animal's neck, the latter was dragged after the flying steed, its body jumping and bounding along the road. The running away of the horse saved Mr. Hinckley's life. He was left by the roadside, whence he in course of time found his way to a habitation. The horse ran till he got loose from the cutter, and then he went to Conklingville. The cutter, badly shattered, was found half a mile from the spot where the panther leaped from behind the bush. The animal was dead, choked to death, and badly bruised. The substance of the correspondent's story is as given above, and we forbear from casting any doubts on so tragic a tale.

CROWS AS MATHEMATICIANS.—The crows of Germany are able to count. The gamekeepers protecting young pheasants wage constant warfare against them, but the wary birds keep out of shot. Says the *Scientific American*:—

"It is found that the keepers must go to the cover in parties of six or more, then depart one by one until six have left, leaving one or more behind to take vengeance on the crows. Should a less number than six visit the shelter, and all but one leave it, the crows perform the subtraction correctly, and know that there is yet no safety for them. Beyond six, their mathematical faculty fails—or did some years ago; perhaps they have learned to count more by this time."

A Maine farmer tried the same strategem to protect his corn, but found that our American crows can only count as high as three. Four or more persons entered the shelter, and after three had left, the crows came out to their breakfast. The experiment was tried repeatedly, but the crows invariably lost their reckoning when the number exceeded three.

THE HOY WILDERNESS AGAIN.

WINCHESTER, Va., Feb. 29th, 1876.

EDITOR FOREST AND STREAM:—

In the last number of your interesting paper save one, inquiry is made concerning Hoy's Wilderness, and the easiest channel of access thereto. Now, if by "Hoy's Wilderness" is meant the scope of country on the Back-Bone Mountain, one of the ridges of the Alleghanies, constituting the water shed of the Ohio and Potomac Rivers, I think I have it in my power to furnish the required information. This region is (or was) commonly called "Canaan," and is mainly situated in Tucker county, West Virginia. Some years since, the late Mr. Ned Towers, a brother of a former Mayor of Washington City, kept a summer resort on the verge of this wilderness, where I was accustomed to pass many delightful summer vacations, and inasmuch as a gentleman named Hoy (with whom, by-the-bye, I have frequently hunted) was a near neighbor of Mr. T.'s, I think it probable that he has given his name to the locality in question. The Towers House is now, as I am informed, kept by a gentleman named Deakius, and is the objective point I would recommend tourists to seek whilst *en route* to the wilderness. It is about fifteen miles from Oakland Station, on the Baltimore and Ohio Railroad, where suitable conveyances can at all times be procured. About nineteen miles southwest of the Deakin's place is the Dobbins House, kept by a Mr. Kitzmiller, where, I am told, good accommodations may be had during the summer. This latter place is but a few miles from the celebrated falls of the Blackwater, (a branch of Cheat River), rendered famous by be pen and pencil of "Porte Crayon." From this point the tourist who thinks himself "equal to the occasion" may penetrate the great Canaan Wilderness, a region of country many thousands of acres in extent, comprising both hill and dale, and overgrown with primeval forests which yet remain in their pristine savagery. As regards the falls of the Blackwater, I would beg leave to refer your readers for a description thereof to a far abler pen than mine—that of "Porte Crayon," who has given an admirably graphic account of this locality in his "Blackwater Chronicle." Vast areas of low-lying, moist grounds in this region are overgrown by dense thickets of bock laurel, which have probably never been penetrated by the foot of man—whether autochthonous or exotic. These impenetrable fastnesses constitute the lairs and breeding-places of great numbers of the *feræ naturæ*, which here find an unmolested abode. There is probably no scope of country of the same area on this side of the Mississippi or perhaps of the Rocky Mountains, which contains a greater number or variety of game than the one under discussion. Bear, deer, panthers, catamounts, wolves, etc., yet roam these wilds in primitive freedom, and but a few years have elapsed since the last elk was slain, and this, perhaps, was the last of its species dwelling east of the Mississippi. Here also may be found an abundance of feathered game, such as turkeys, ruffed grouse, and woodcock as will give full employment to him who handles deftly the "choke-bore." The streams also—of which there are many—are literally crammed with the fish that constitute the "gentle angler's" chief delight—the spotted beauty, the far-famed *Salmo fontinalis*.

Some years have elapsed since I last visited this locality, during which interval I have traversed some of the wildest and most unfrequented sections of the United States, having wandered from the snow-clad land of the Assiniboin to the emerald home of the Seminole, but for wild and picturesque scenery, and those other attributes which attract the sportsman and naturalist, I know of no country that surpasses in these respects the land of "Canaan."

By-the-bye, permit me to remark (inasmuch as I am not a land speculator) that there are some fifteen or twenty thousand acres of land situated in the region in question, and lying in one body, which belong to parties residing in this vicinity, and which can, I am told, now be bought for a "mere song," owing to the great depreciation of land values at present. What a chance for some of your wealthy Nimrods to secure a park that would throw far-famed Blooming Grove in the shade, and would doubtless surpass anything of the kind on this continent. Besides its suitability for a hunting park, this land is of inestimable intrinsic value, lying as it does within the confines of the great Appalachian coal basin. Near the Dnbbins House above referred to the coal may be seen cropping out in seams many feet in thickness. I have merely mentioned this circumstance to give assurance to any parties that might purchase this land their present outlay would probably one day be returned many hundred fold. During the coming summer I intend revisiting the locality in question, accompanied by one friend, and would have no objection to accept the companionship of one or two gentlemen of your section, provided they be of that sort who prefer a bed of hemlock boughs in the pure untainted air of our mountains, to one of elder down amid the noise, envy, and frivolity of our fashionable resorte. A. W.

RED FOXES AND GRAY.

COLUMBIA CO., GA., Feb. 11th, 1876.

EDITOR FOREST AND STREAM:—

Your correspondent "Lex" is correct in his statement as to red foxes and grays not crossing. As far as my experience goes—and I do not think it limited, as I have caught numbers of each since the cessation of hostilities; in fact, as my neighbors assert, I make a business of fox hunting and sport of cotton planting—I certainly find cotton planting the more costly, although keeping a pack of dogs is no small expense. With "Lex," the old fox hunters in my vicinity assert that only a few years previous to the war, the first red fox was caught a couple of miles from where I live, and it was shown as a curiosity, until a planter, an old Virginian, assured them he had caught many such red foxes in the Old Dominion. There is a legend amongst us of the first red foxes—five in number—having been brought in a wagon by some fox hunters from an upper county, all the way from Virginia, in order to get some of that celebrated brand to improve our gray stock. We have plenty of both at "these presents," but none of the mixture. "What I know about cotton planting" is not worth imparting; but as the subject of fox hunting is becoming of some slight interest, I think I am *au fait* on that subject. As to red foxes driving out the gray—as the Norwegian rat has the native—only last night I had proof positive of the contrary, as I was running, as I thought, a red, but after a six hours and fifteen minutes' race caught a gray, over nearly the same ground that four days before I had run a red. An old fox hunter would naturally ask if I did not know from the way he ran, his doubles, etc., that it was a gray? To him I should say, the length of the race deceived me, as we usually catch a gray inside of an hour. I have more than once caught red foxes and gray in the same fields and on the same day. I have been after a gray, seen the fox several times, and, the fox having crossed a red fox's trail, which smells much stronger, have known my dog to quit a run after a gray to trail a red. One chase I shall mention: Having caught a gray fox after a thirty-minute race, and starting for home, another jumped up almost among the dogs. Expecting to catch every moment, we followed our dogs into the upper portion of the county. My friend and self concluded, as our horses were "gone up," to quit the drive, and when we found a house ascertained that we were only twenty-two miles from where we had jumped the fox. A few days afterward I heard that the fox, (a large red), had gone by where another fox hunter was plowing, who, like old Putnam, left his plow in the furrow, mounted his mule, crowded the dogs, and sent me the tail. The reds certainly have not run out the grays with us, for I often go for grays and get after reds, or *vice versa*. I hunt foxes at any time of year that the weather is suitable, both for amusement, and to get rid of a very destructive pest to our poultry, pigs, and lambs. To show the estimate that fox hounds are held in, a couple of weeks ago, being in the city, a neighbor came twenty-two miles through the rain to borrow my pack, as a family, so he termed it, of gray foxes had settled on him, and ate seven lambs in one night. Rather strange that a sheep raiser should offer to feed a pack of fox hounds to protect his sheep, is it not? I hunt either night or day. At night we don't have to ride so much, as the "sweet melody of the hounds" can be heard for miles; but it is harder on dogs, as the fox is then fresh and usually empty. A description of "Old Grouse" in one of your papers is very nearly identical with a fine young double-nosed pup of mine—Dan, a black tan and white Gordon, and sire, a New York, (said to be imported stock), black and white setter, the pup larger than either by two inches: sixteen months old, liver and tan spots on white ground; both of his parents single nose. He was afraid of a gun, but after killing a couple of quail so that they fell nearly in his mouth, he became as fond of the gun as his old mother, who has retrieved her hundreds. JOREE.

ADIRONDACK NOTES.

THE ADIRONDACKS, March 1st, 1876.

EDITOR FOREST AND STREAM:—

The Adirondacks are not frozen out, though perhaps chilled. The winter has not been severe, but we are satisfied, and as March has arrived we can see our way through to the welcome and genial breezes of spring, which will gladden our hearts, and the grasp of the hand be extended to all with real pleasure. I write you about the Saranac and St. Regis regions. Here we have had winter visitors, who, coming for their health, have, I understand, derived much benefit from their winter sojourn—and why not as healthy here as at St. Paul, Minn.? The cold is intense, and a dry atmosphere extending throughout the entire cold term. Woods items from these parts may not be very interesting to all, but to some they are. The FOREST AND STREAM we always rejoice to see and read, for we know we can depend on it. The utterances of a true sportsman never deceive. The game laws are commanding attention. We ask only fair play. The present laws are good ones; enforce them by authority and we are satisfied. At present they are a dead letter. Too much tinkering will spoil them entirely.

Paul Smith has been adding ninety rooms to his well-known house, and every room will of course be taken. The Prospect House, at the head of the Upper Saranac, report says, has changed proprietors, but I cannot vouch for the truth of it. We hope it will be as well kept as last year. The Sweeny Carry has been purchased by the Hon. James Pierce, and we hope will be kept up in an honorable way, which will be highly creditable. It would be a prize place for meals on the Saranac and to the weary sportsman coming from Tupper Lake, while waiting for the boats. Bartlett's well-known and never-forgotten Sportsman's Home cannot be overlooked or passed by—a home truly in every sense of the word. Martin's needs no recommendation either. The hotels of the North Woods all, are all that can be wished for by the sportsman.

Raquette River at present affords pleasure to those who delight in taking pickerel—and forever extermination of them—never. I understand that Mr. Arnold and Dr. Remeyn, of Keesville, N. Y.; Dr. Ayers, of Brooklyn; Messrs. Hart and Currier, of Newark, N. J., have already engaged guides for their spring trip. To all we extend a true sportsman's welcome and cordial greeting. The opening of the new railroad on the west side of Lake Champlain is of great interest to sportsmen. At present you can leave New York at six P. M. and reach Plattsburgh at six A. M., and Martin's at five P. M. I will send you a spring time-table as soon as published. D. L.

Natural History.

[This Department is now under the charge of a competent Naturalist, incorred by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.]

BIRDS OF SOUTHERN PENNSYLVANIA.

The following extracts from my note book may be of interest as showing some peculiarities of the bird fauna of Chester county, Pennsylvania, particularly about Kennet Square, where most of the notes were made. The fact that they are four or five years old, will not, I hope, detract from their value.

January 1st, 1872.—A goshawk (*Astur atricapillus*), which is very rare in this vicinity, was shot at Kennet. It was in its second year's plumage.

February 1st, 1873.—Saw two short-eared owls (*Brachyotus palustris*). Were seen at Kennet, where they are rare.

April 30th, 1868.—Nest of a hairy woodpecker (*Picus villosus*) in an apple tree. Eggs, white; in size, between those of the downy and the red-headed woodpecker.

April 24th, 1869.—Two eggs of the sparrow hawk (*Tinnunculus sparverius*) about the size of a pigeon's; ground color, reddish-white, thickly speckled with reddish-brown. April 26th, 1870, another nest and four eggs was found in the same old chestnut tree. These hawks are very plenty.

April 26th, 1869.—Nest and two eggs of the red-tailed hawk (*Buteo borealis*) near Avondale, Penn. Eggs nearly hatched. Ground color of one, dirty white, with light chocolate blotches; the other with a few dark brown spots thinly sprinkled over the whole egg.

May 1st-8th.—Great blue heron's (*Ardea herodias*) eggs are all hatched the first week of May. There used to be a roost near Chester, which is now broken up.

June 5th, 1871.—Four young, just hatched, of blue-winged yellow warbler (*Helminthophaga pinus*).

June 10th, 1869.—Nest and seven eggs of the black-capped titmouse (*Parus atricapillus*); probably the second brood. Eggs, white, thickly covered with reddish spots. The bird rarely breeds here.

June 18th, 1871.—Four fresh eggs of the redstart (*Setophaga ruticilla* found near Wilmington, Del. Eggs, white, thinly covered with reddish spots.

June, 1868.—Two nests of the yellow-winged sparrow, (*Coturniculus passerinus*), one containing four eggs nearly hatched, and another three fresh eggs were found during the month; also two nests of the scarlet tanager, (*Pyranga rubra*), a third nest being found with fresh eggs in the middle of July.

July 4th, 1871.—Found a nest in a hedge near Avondale, Penn., of the black-throated bunting (*Euspiza Americana*). The eggs were nearly hatched.

Oct. 6th, 1871.—The warblers have nearly all passed south. I noticed the following during their stay:—

Maryland yellow-throat (*Geothlypis trichas.*)
Black-throated blue-warbler (*Dendroeca cærulescens*). Numerous.
Yellow-rumped warbler (*Dendroeca coronata*). Numerous.
Black-throated green warbler (*Dendroeca virens*).
Canada warbler (*Myiodioctes canadensis*).
Golden-crested kinglet (*Regulus satrapa*). Oct. 3d.
Red-bellied woodpecker (*Centurus carolinus*). The first I have seen.
Spotted sandpiper (*Tringoides macularius*).
Bartram's sandpiper (*Actiurus Bartramius*).
Killdeer plover (*Ægialitis vociferus*).
Night heron (*Nycticardea grisea*. var. *nævia*). Occasional.
Great blue heron (*Ardea herodias*). Occasional. C. F. P.

A NEW LOCAL LIST.—We shall begin next week, the publication of a series of articles by H. B. Covert, an assistant at the Museum of the University of Michigan, at Ann Harbor, constituting an annotated list of the birds of Southern Michigan. This is one of the good fruits of our "Invitation."

SUMMER SCHOOLS OF NATURAL HISTORY.—Prof. N. S. Shaler will continue the coming summer his Harvard School of Geology at Cumberland Gap, Kentucky. This locality is among the mountains, and offers peculiar advantages for the study of field geology, and the modifications of the surface that may result from changes in the crust of the earth. Messrs. D. S. Jordan, H. E. Copeland, and Ernest Copeland, of Indianapolis, propose holding a field and collecting meeting for six weeks between the Mammoth Cave and Lookout Mountain. A party tramping through those mountains ought to bring out valuable collections. California also proposes to have a school of science during the warm weather, but we are not informed as to the particulars. At Cornell University, Ithaca, N. Y., Prof. Burt Wilder and his assistants will hold a summer session for labratory work in zoology. It is announced that Dr. Elliott Coues will lecture on ornithology. The students who live on the Western Reserve will have an opportunity of pursuing similar vacation studies at Cleveland, Ohio, under the supervision of Mr. W. K. Brooks, of the Cambridge Museum, who last year began such a school at Cleveland. The United States Fish Commission will assemble again at Wood's Hole, and pursue their usual valuable scientific and ecomomic work. The last announced summer school of biology will be located in Salem, Mass., in connection with the Peabody Academy of Science to begin July 6th, and continue six weeks. Its special advantages are its close proximity to the sea, and the abundaut dry and alcoholic specimens contained in the museum, illustrating Marine Zoology. The number of students will be limited to fifteen. The teachers will be Dr. A. S. Packard, Jr., assisted by Messrs. J. S. Kingley, and S. E. Cassino, in zoology; Mr. John Robinson, and Mr. Chas. H. Higbee, in botany; the Rev. E. C. Bolles, in microscopy; and Mr. C. Cooke in charge of the dredging parties. Occasional lectures will be given by Prof. E. S. Morse and others. All of these gentlemen are peculiarly well-fitted for their parts, and this little station will no doubt prove itself a true and worthy, though small, reproduction of Penikese.

A QUESTION ANSWERED.—A query which was received three weeks ago, but by mischance has escaped notice until now, is as follows: "Would a man already intoxicated, if bitten by a rattlesnake, be affected by the bite?" The writer refers to the fact that whisky is a remedy for the bite; he also mentions the case of a man in the habit of handling live rattlesnakes without harm, who was always under the influence of liquor, and suggests that the alcohol in the charmer's body was sufficient to counteract the effects of the bite. This seems to us a wrong impression. The effect of the poison of a snake's bite is to make the blood thin and watery, which soon causes stoppage of the heart, when death ensues. The utility of the whisky or brandy is, that it stimulates the blood and organs to such increased and energetic action as to overcome that fatal decomposition of the blood. If a man were habituated to liquor, additional drinks would not quickly and highly stimulate him, and there is every probability that he would die. If a man is going among rattlesnakes, it is best for him to keep sober, in order to be able to get drunk "with neatness and dispatch."

RECENT PAMPHLETS.—Dr. Elliott Coues, U. S. A., has just published as a part of the Bulletin of the United States Geological Survey, (Dr. Hayden's) an account of the various publications relating to the travels of Captains Lewis and Clarke, with a commentary on the zoological results of their expedition. These explorers traveled to the sources of the Missouri, thence across the Rocky Mountains, and down the Columbia River to the Pacific, and returned, during the years 1804–5–6. After carefully tracing the origin and history of every one of the many spurious and authentic narratives of their "Travels," the author proceeds to the zoological results of the expedition, as far as concerns mammals and birds. Lewis and Clarke were the real discoverers, and actually the original describers of many animals with which their names are seldom associated now, in our acquired familiarity with the same species under names subsequently bestowed by others. The writer who imposed most of the names based on the descriptions of Lewis and Clarke, was George Ord, in the zoological portion of Guthrie's Geography, published in 1815. They enumerated thirty-six species of mammals, and forty-four species of birds, most of which stand the test of experience as to their validity. Dr. Coues, however, found it necessary to exercise considerable ingenuity as well as study to get at the true identification of many of them, under the queer names used, and in not a few cases, no surmise as to the animal meant was possible.

Dr. Coues has lately published two other papers in the Bulletin's of Hayden's Survey, one giving an exhaustive history, of great interest, of the breeding, habits, nests, and eggs of the white-tailed ptarmigan (*Lagopus leucurus*); and the other an account, "critical, descriptive and historical, of *Lapus hudsonius*," which is the common jumping, or kangaroo mouse of our fields, usually known in the books as *Zapus hudsonius*. Dr. Coues finds that none of the generic names this mouse has hitherto received are according to the rules of nomenclature, and quotes a page and a half of solid synonomy including forty-four names and twice as many references from Zimmermann in 1780 to Allen in 1874, against all of which he brings valid objections. He therefore creets the new genus of *Zapus* (family *Zapodidæ*) for this form, and minutely indicates the generic characters which ally it to the house mice rather than to the aryicoline field mice;

ZOOLOGICAL ITEMS.—Pelicans (*P. fuscus*) are unusually numerous in San Francisco Bay this season. Recently, during a dense fog, a white pelican (*P. erythrorhyncus*) measuring ten feet from tip to tip of wings flew into the arms of a man in San Francisco....Niae cinnamon bears were recently caught with steel traps on a ranch on the coast near Bodega Corners, Sonoma County, California; and William Bonness, a settler on the Little Chico, in Butte county, killed last month a family of California lions, consisting of the parent pair and two cubs. Robert Ford also killed three in Oregon last month, and one was recently killed near Seattle, W. T., which measured nine feet four inches in length....Deer are plentiful in San Bernardino county, and robins and larks are unusually abundant in the orchards of Santa Cruz, California....A certain tree-frog (*Polypedates*) from tropical Western Africa, deposits its eggs, as is usual among batrachians, in a mass of albuminous jelly; but instead of placing this in the water, it attaches it to the leaves of trees which border the shore and overhang a water-hole or pond. Here the albumen speedily dries, forming a horny or glazed coating of the leaf, inclosing the unimpregnated eggs in a strong envelope. Upon the advent of the rainy season, the albumen is softened, and with the eggs is washed into the pool below, now filled by water. Here the male frog finds the masses, and occupies himself with their impregnation....Some years ago Professor Cope described the snake-eating habits of the *Oxyrrhopus plumbeus* Wied, a rather large species of snake which is abundant in the intertropical parts of America. A specimen of it from Martinique was observed to have swallowed the greater part of a large *fer-de-lance*, the largest venomous snake in the West Indies. More recently a specimen was brought by Mr. Gabb from Costa Rica, almost five feet in length, which had swallowed nearly three feet of a snake about six feet in length. The head was partially digested, while three feet projected from the mouth of the *Oxyrrhopus* in a sound condition. *Oxyrrhopus* is entirely harmless, although spirited and pugnacious in its manners. Professor Cope suggests that its introduction into regions infested with venomous snakes, like the island of Martinique, would be followed by beneficial results.—*Naturalist.*

NOTES FROM OUR CORRESPONDENTS.—A goodly number of blue-birds have already arrived, the first one having been seen February 26th. I may be able to send you some notes soon upon the game birds, which will soon be with us (George F. Chafee, Middletown, Conn.)....Dr. C. C. Abbott (Trenton, N. J.), promises us a transcript of his field notes for February. Dr. Abbott is peculiarly favorably situated for observing animal life, and few facts interesting to the naturalist escape his notice.

COLLECTIONS FOR SALE.—We have received from C. E. Aiken, of Colorado Springs, Col., a circular and catalogue, in which he announces the opening of an establishment for the sale of the skins, nests and eggs of birds, and the skins and mounted preparations of animals of the Rocky Mountain region and taxidermists supplies. We are glad to hear of this. A perfectly trustworthy naturalist, like Mr. Aiken, is not often found in connection with business, and we heartily commend him to the patronage of all who wish to increase their collections.

NIGHT HERONS.—On Feb. 12, Mr. James Russell Lowell wrote from Cambridge, Mass., to the Boston *Advertiser* as follows: "Among the phenomena of this remarkably mild winter there is one which seems well worth recording, since it is, so far as my own observation goes, without a precedent. A number of night-herons have not yet migrated to the southward. According to Nuttall, a very careful observer, these birds generally leave us about the middle or toward the end of October. This accords with my own experience, though I have once seen them so late as the 15th of November. What makes the fact of their stay more surprising, is that the coldest weather of the winter came in November, and that Charles River (their feeding ground) has been twice, and in our neighborhood, four times, wholly closed with ice. It should seem from this that these birds are not without some skill in meteorological prognostication. I have seen them every evening up to the 12th February. The largest number I have counted is eight, though there are no doubt more."

—In his "Field and Forest Rambles," Mr. A. Leith Adams, discusses at some length the influences of climate upon animals and plants, and avails himself of the experience of Mr. George A. Boardman in reference to the birds of Eastern Maine. Mr. Boardman quoted as follows:—

"I remember during the cold season of 1858-9 that crossbills and pine finches were very numerous, and I procured a large number in February, to see how far the eggs had advanced, and found them nearly as large as buckshot. Two days afterwards we had a warm shower, then a sudden change to extreme cold, which killed every small native bird in the woods. Not one bird was seen again during the season, and the ruffed grouse were exceedingly scarce from the circumstance that the entrances of their burrows in the snow were frozen over and the birds were starved to death, and in the spring their bodies were found here and there all over the forest."

The same thing Mr. Adams says occurs in England, and many of the small birds sometimes perish with cold, but the destruction is never so complete.

ANOTHER SINGING MOUSE.—A gentleman in Hartford, says the *Courant*, caught a mouse possessed of musical powers, imitating the voice of the canary bird, but softer. He constructed a cage, with revolving wheel and retiring house, and has often during the eight months the mouse has been in his possession, exhibited its vocal powers to his neighbors. In appearance it does not differ from the ordinary mouse.

Scribner's Monthly for March contains a biographical sketch of Wilson, the ornithologist, with a portrait and other illustrations.

RECENT ARRIVALS AT THE CENTRAL PARK MENAGERIE.—Two Meadow Larks (*Sturnella magna*), presented by Samuel W. Francis, M. D., Newport. One Crab-eating Raccoon (*Procyon cancrivorus*), bab. South America. One Capybara, (*Hydrochœrus capabara*). Two Spider Monkeys, (*Ateles belzebuth*). One Green Monkey, (*Chlorosebus sabæus*).
W. A. CONKLIN, Director.

PHILADELPHIA ZOOLOGICAL GARDENS.—During the week the Garden has received one turkey buzzard (*Cathartes aura*), presented by J. M. Wilson, Washington, D. C.; two opossums (*Didelphys virginianus*), presented by S. P. and G. D. Wetherill, Philadelphia; one St. Bernard's dog (*Canis familiaris*), presented by J. P. Mingle, Philadelphia; three skunks (*Mephitis mepitica*), presented by Joseph A. Cunningham, Virginia, Ill.
HUON.

Fish Culture.

THE NATURAL AND ECONOMIC HISTORY OF THE SALMONIDÆ GEOGRAPHICAL DISTRIBUTION AND ARTIFICIAL CULTURE.

NO. THREE.

BY PHILO ICHTHYOS.

IF the salmon has hitherto maintained but a nominal sovereignty over the great ichthyic kingdom of food fishes, artificial culture is fast hastening a real supremacy. All along the ages the salmon has been the most esteemed of all the finny tribes. Writers have extolled the delicacy and deliciousness of its flesh for centuries. Poesy has sung its praises and celebrated in song its game qualities, its agility, and sylph-like movements in its native element. Anglers have expatiated upon its coyness and sagacity which it exhibits in eluding capture; its wariness in avoiding dislodgment from its crystalline home. While much useful knowledge was very early gained in the Department of Natural History—little was gleaned regarding food fishes beyond that many varieties existed which have an economic value to-day. The salmon is unmistakably alluded to by Pliny, a Roman writer of the first century, and Ausonius, a Roman poet of the fourth century. It is a notable fact, that the Provinces of Rome acquired in the zenith of her glory in northern Europe, contained in the richest salmon streams of the Globe; and as Pliny wrote much upon rural affairs, and took note of every thing of economic value or national interest—so distinguished a food fish could hardily have escaped his attention. For a long period of time the salmon has been considered *par excellence* the "angler's fish." Old Isaac Walton called it the "royal fish," and his accounts of his fishing excursions to his favorite streams, are full of interest even at this distance of time, and his "Complete Angler" is still read as authority on angling, and with unfailing interest. Sir Walter Scott, in "Guy Mannering," and in "Red Gauntlett," delineates the sport and excitement attendant upon salmon fishing in the fruitful rivers of Scotland—the "land of the mountain and the flood," where angling is cherished as the most agreeable of all pastimes. Sir Walter was a worthy, as well as skillful disciple of the rod. Prof. Wilson, who is better known as "Christopher North," was passionately fond of angling, and his daughter, Mrs. Gordon, in her Memoirs of her Father, has collected many anecdotes illustrative of his well-known skill with the rod. The Prof. not only, but many of his cotemporaries, were eminently skilled in this "the contemplative man's pastime." Nearly all the members of that celebrated "Literary Club," whose sittings are so graphically described by Mr. McKenzie in his volumes, entitled "Ambrosial Night."

We might mention the names of a brigade of American anglers, who will rank with those of any country, in making successful casts; and the number is increasing, who believe in rational pastimes—to relieve an over-worked body, and an over-tasked brain. The salmon the world over, is sought by anglers. Angling, were the world deprived of this regal inhabitant of the crystal streams would become a lost art; and the fraternity would all become retired, melancholic, and morose dyspeptics—unless some new fish could take the place of the salmon, or some new and equally enchanting recreation could be invented. The eminent and laborious naturalist, Linnæus, first described this fish, and bestowed the stocking, but true and natural cognomen, *Salmo salar*, upon it. The term *salmo* is its generic name, and is applied to all of the species so far described, while *salar*, is its descriptive title, and is derived from the Latin verb *salar*, to leap, which is so significant of its propensity to ascend the swiftest streams, and even leap mill-dams of moderate height. Cuvier, subsequently, though endorsing a portion of the Linnæan system, gave the world a classification of fishes and a nomenclature so rich, so expressive and true to nature, (the latter feature should constitute the basis of all classifications in natural history,) that it must absolutely stand as the dictum of the scientific world for ages to come. Bonaparte, the eminent and indefatigable French naturalist, farther enriched the nomenclature of natural history, by unfixing to the generic terms the *patronymic idea*, which when appended to salmon gives us *salmonidæ*, or to *Cervus* the stag, *cervidæ*. This feature of grouping has wonderfully abridged the labor of descriptions in the study of the most interesting field of natural science—Ichthyology. The salmon, the burden of our thoughts, and it is a theme worthy of abler pens—is the most distinguished of all the beautiful denizens of the immense water area of the globe. Of all the grand combination of fish clicks, the salmon stands at the head, and may be considered the *elete* of the great body social, of the ocean. Its migratory habits, the instinctive trait that impels it to return annually to the fresh water shingly beds, to perform the functions of reproduction, gives it a high value for artificial culture, and great economic and commercial significance as a food fish. This species has such marked family traits, such uniform characteristics, and in comparison with other species, such plain distinctions of bodily form, as to be easily recognized by persons having even a superficial knowledge of ichthyology. Its natural life from infancy to adulthood, has been scrupulously divided by naturalist into parr-life, smolt-life, grilse-life, and the adult salmon. If any revision were applicable, it is suggested then one more division is necessary if not natural with all. From the time the wee fish merges from the shell it is encumbered for forty days with the yolk sack, and conscious of its impediment, and that it is but half hatched, it should be called a *hatching* until complete absorption takes place, of the yolk sack, then the parr until the scales are developed, then the smalt, then the application of grilse to the vergin fish-eater.

In further describing this species, in the *spawnens* or females, the ovaries are formed of closed sacs without overducts; the eggs upon leaving the ovaries fall directly into the abdominal cavity, (a septem dividing this portion of the abdomen from the abdomen proper,) from which they find an exit through the post-anal opertuse, provided for their egress. In the same manner the *milters*, or males, are provided with melt receptacles, which is, by a wise provision, only ripe when the spawn is sufficiently ripe for emission. It is well known even to those who have but a slight knowledge of natural history, that the impregnation of fish-ova is purely an extraneous act. The spawning nests are laboriously scooped out with the snouts, and the ova are exhuded into those nests, while the male emits upon them the melt; after spawning is over the nest are covered, and the eggs hatch out in from ninety to one hundred and twenty days. According to repeated calculations of pisciculturist the female salmon will produce one thousand eggs for every pound in weight. Thus a twenty-five pound salmon will produce twenty-five thousand eggs. As a rule fish are oviparous. There is a fish called the blenny, (*blennius occellarius*), Baird, which is viviparous; the young of which are so perfect at birth as to be able to swim about with great ease. The skate fishes, (*Crain chagrinæ*), are all viviparous. The *Ditrema argentea*, of South America, is also known to bring forth its young alive. The ancients had a singular notion regarding the fruitifying of fish eggs. Herodotus, good authority in some matters, but very doubtful in many of his attempts to account for natural phenomena, says, in reference to fishes of the Nile. "When the desire of engendering comes upon them they swim out in shoals to the sea; the males lead the way, scattering the sperm, and the females following swallow it and are thus impregnated." The learned Greek (?) only stated a myth as he generally did. In this connection it is proper to consider the question of the food of the salmon, and where it is obtained.

Long ago a hypothesis was originated that migratory salmon visited the North Pole; but their speedy return—their very short duration in the salt water, completely upset this theory of feeding and fallowing in the Polar Seas. Hundreds of salmon have been dissected in order to ascertain what they feed upon; but only in extremely rare instances could any traces of food be found in their maws. What then do salmon subsist upon? Every person versed in the habits of the salmon, knows that during its infantile life, as a hatchling, parr, or smelt, its food is that which is provided by nature and which fresh water yields to fresh water fishes of all kinds. But when the migratory life begins, the sea and the sea only, furnishes food for this species, as far as research has yet determined. The sea yields some kinds of food, for which they have a peculiar fondness, for they become ten and fifteen pound fish in an incredible short space of time, and after their return to fresh water they begin to loose their flesh, and fall off in condition. Reasoning from a physiological stand point, the rapid growth of the fish argues a powerful and an exceedingly rapid digestion, or the food obtained is very easily assimulated. It has been asserted that as soon as salmon are caught they instantly cast up their food. If this feature is as common in connection with the salmon as claimed, the fact would have long since have been established, and the subject ceased to be agitated. This is untrue. Dr. A. C. Hamlin, a gentleman even with the age in pisciculture knowledge, has examined hundreds of salmon in the Bangor fish-market, and his careful efforts revealed no traces of food, except in a single instance, in which two small fishes were discovered. Thousands of salmon have been dissected with a view of discovering what kind of food they fed upon, with like results. During 1874, the Packing Company of J. W. & Vincent Cook, on the Columbia River, examined eighty thousand salmon, and only three had anything in their stomachs, and they had the appearance of having just left salt water. Does not this experiment set this question at rest forever?

There is every evidence that salmon feed and fallow in the sea, while there is no assurance whatever that they feed in fresh water. The rapidity with which they fatten, the ease which they acquire an excessive amount of adipose matter argues that the sea and the sea only is their great magazine of food; and that the fresh water is exhausting and debilitating to them; and even though they fulfill the law of their instincts by ascending fresh water to deposit their spawn, it is unnatural and detrimental to them. So much so, that many never reach the sea again, aside from their spent and debilitated condition consequent upon spawning and molting. It is a physiological law in connection with many animals, and probably the salmon may be included, that when and where food is abundant and excellent they become excessively fat; laying up a store against a natural contingency, that they may draw from those adipose deposits to maintain the vital functions, while food is impossible of attainment, or circumstances preclude the use of it. We might mention instances highly opposite, but any further discussion of this question is unnecessary. It is the complaint of old fishermen that salmon do not attain the great weight now they did twenty years ago; that they used to be found upon market tables weighing forty to sixty pounds, while those weighing only twelve to fifteen pounds are now caught and exposed for sale. The only solution needed in this case is, that the waters they inhabit are so thoroughly and persistently fished that none escape to attain the goodly size of olden time. In connection with the fisheries of Scotland, England, and Ireland, the same regrets are expressed, and the same causes are in operation; but artificial culture is now adding largely to their rentals, for their products are annually, and very perceptibly increasing. Some of the English pisciculturists aver that salmon, as migrants, make two voyages to the sea each year. The Rev. Dugald Williamson has written a pamphlet in support of this theory, in which he entertains no doubt of a double journey. He says: "Salmon migrate twice in the course of each year, and the instinct which drives them from the sea in summer impels them to the sea in spring. Let the vernal direction of the propensity be opposed, let

a salmon be seized as it descends, and be confined in a fresh water pond or lake, and what is its fate? Before preparing to quit the river it had suffered severely in strength, bulk, and general health, and, imprisoned in an atmosphere which had become unwholesome, it soon begins to languish, and in the course of the season expires. The experiment has been tried and the result is well known. This being an ascertained and unquestionable fact, is it a violent or unfair inference that a similar result obtains in the case of those salmon that are forced back, from whatever cause, to the sea, that the salt water element is as fatal to the gravid fish of the autumn as the fresh water element is to the spent fish in spring?" If there is any truth in the assertions of this advocate of double journeys to the sea, they suggest the strongest possible reasons for the removal of all obstructions of rivers that the salmon may have free course in the fulfillment of its powerful and uncontrolable instincts.

The *Salmonidæ* are not exempt from troublesome parasites, diseases, or sweeping epidemics. Indeed, such is the common lot of all animated nature from monad to man. Besides minute creatures, quite microscopic in character, which make a lodgment in their viscera, various parasites fix themselves beneath their scales, in the mouth, in the intestinal canal, and upon the gills. Salmon and trout, as well as other fresh water fish, are preyed upon by different species of *pediculi*, and as some of these parasites cannot live in salt water, it has been supposed that to rid themselves of these annoying pests, impel salmon to migrate to the sea as a means of relief, more especially from the annoyance of the *learnæ salmonea*, which always locates upon the branchia, or gills. The trout louse, *learnæ trutte*, is also not unknown to trout fishes. The abrasion of the scales to any extent usually ends fatally, hence, great caution should be had in handling spawners and milters during the breeding season. All fishes are *avaccrous*, or egg devourers, and hence, naturally hinder with thousands of other enemies their multiplication. Aquatic fowls, ducks and geese, delight in the roe of fishes, and their repeated divings in shallow places, or marshes, indicate too plainly the industrious application of their instincts in feeding upon the newly deposited ova of different kinds of fishes. The so-called "water lizard," (*menobranchus lateralis*, Say), is a great devourer of trout and whitefish spawn.

It is estimated, on good authority, that these lizards consume the entire spawn of a fish in a day or two; and as an evidence of their numbers, and their destructive work, hundreds during the spawning of the whitefish are caught, full to repletion of newly deposited ova. The whitefish has other destructive enemies, a *Lecma*, and an annelid, the *Ichthyobdella punctata*. The former is armed with a well-shaped sucker, which it hurries in the epedermal sheath of the scales. The latter is a leech, three-fourths of an inch long, of a grayish white color, with tessclated markings. These leeches, during the month of April, cover the fishes of all species, and the uets; they were found gorged with blood attached to the gills of fish, as well as their bodies; the latter region would seem difficult to bleed, but their power of suction seemed adequate to fill them full of blood. In further consideration of the *Salmonidæ*, in connection with their natural history, they belong to the order of *Abdominal malacopteri*, soft-rayed fishes, in which the vertical fins are attached to the parietes or walls of the abdemeu. In this species, the upper arcade of the mouth (upper jaw) is formed anteriorly by the pre-maxillar (inter maxillarids) and laterally by the maxillaries, the number and arraugement of the teeth vary according to the genera. The head is covered with a scaleless integument, while the body is always covered with scales. There is always present a rudimentary, or an adpose fin, between the dorsal and caudal fins, which constitutes a diagnostic mark of every species, down the scale of consanguinity to the remotest of the blood relation. These are present in all pseudo-brachia, or accessory gills. The intestinal canal is short, with numerous cæcal appendages, running all the way from forty to seventy, a strange disparagement which has some significance in relation to ingesta, of a developed form. The air-bladder is large and simple in its anatomical construction. In the following descriptions, only the typical species will be taken into account, viz., the *Salmo salar* and *Salmo quinnat* of the Atlantic and Pacific Slopes; the *Salmo namaycush* of the Great Northern Lakes; the *Salmo fontinalis* of the mountain streams; the thymalli of North America and Europe, and the corregoni of our country and the Dominion.

HYBRID SALMONIDÆ.—On February 22d I took a run down to Caledonia, to see what my old friend Monroe Green was about, and found many changes since my visit of last year. The troughs and interior arrangements have all been turned around, the filter box put out doors, which gives much more room. A settling reservoir has been huit in the creek above the dam where only what water is needed for the house flows through. I saw those hybrids that Seth spoke of at the meeting of the Fish Culturists' Association, only four were hatched and the remaining eggs looked well. What appeared singular, was the shape of the sac. Every one that has hatched salmon and trout can tell the difference between them by the appearance of the umbilicus, and for the benefit of those interested who have not had the pleasure of observing this, I will say, the sac of the trout approaches the globular form more nearly than that of the salmon. The former might be described as ovate-oblong, and the latter as ovate-cylindraceous, or to make it clearer, the sac of the salmon has a projection on the end, perhaps one-third its length. Now, these hybrids are from the eggs of brook trout impregnated by milt from the quinnat salmon, and as the yolk of the egg forms the sac it strikes one as very remarkable that these fish have a salmon sac. As there were but four hatched out of many thousand eggs, it is possible that when the whole lot come out there may be differences in this respect. Mr. Green will probably watch the growth of these fish with interest, and when mature we will all want to take a look at them to observe the exact size and location of the *bar sinister*, which, if we cannot find, we will appeal to Prof. Gill.

The work at this house increases every year, and if the filters had not been put out doors there would not be nearly room enough. They have from one million to twelve hundred thousand brook trout, and three million lake trout, many of the latter have been put in shad boxes in the stream for want of room. Of white-fish, they have hatched about 100,000 at the house and sent 100,000 to Geneva Lake, and 140,000 to Seneca Lake. I have been in many fancier and better looking hatching-houses, but for good work, and plenty of it, the New York house is ahead.

FRED. MATHER.

THE CULTURE OF CARP.

It is known to many of our readers that the United States Fish Commission has commenced measures on a large scale for the introduction of carp into appropriate waters, and that over a hundred of these fish, in good condition are now in charge of the Maryland Fish Commission at Druid Hill Park in Baltimore. We have reason to hope that this experiment will be a success, and that before many years the carp will occupy the same position as a domesticated fish in the United States that it now does in Germany and elsewhere in Europe. To give an illustration of the success of an experiment made in 1872 in this same direction by Mr. Poppe, we print a circular recently issued by that gentleman:—

SONOMA, Cal., Feb. 12th, 1876.

DEAR SIR:—

I would respectfully call your attention to a possible, but, as yet, undeveloped source of profit to farmers in the United States, *viz:* carp raising. In Germany thousands of pounds of this favorite fish are raised and sold every year. The farmers there who are engaged in pisciculture have from five to seven ponds. The smallest is the breeding pond, from which the others are stocked. The contents of one pond are sold every year. Numbers of the fish are floated down the rivers and canals in large boxes pierced with holes, through which the water passes in and out, thus delivering the carp to the consumer alive and fresh. They are a fish that need but little attention, are hardy, prolific, and do excellently well on this continent. Their food may consist of wheat, barley, corn, peas, bran, blood, sour milk, or in fact almost anything. When well fed they will grow one inch per week for the first two or three months, after which they will grow slower in length, but increase rapidly in weight. It will not do to breed them in ponds where any game fish are kept, as they will eat the young carp.

In speaking of the growth and increase of these fish, I probably can not do better than to give my individual experience. I arrived here direct from Reinfeldt, Holstein, in August, 1872, with five small carp, six inches long. The fish were in a very precarious condition, one dying as I placed it in the water. In the following May the original carp had grown to sixteen inches in length, and the young fish numbered over three thousand. Every fish that I can possibly send to market here sells readily at one dollar per pound. Farmers who have natural facilities on their places for making ponds, and who have access to canals or rivers communicating with large cities, can greatly increase their income with but small trouble and expense. There ought to be one person in every county who would raise choice carp as stock fish to sell to others to fatten for their own tables. It would be a cheap but sumptuous food, and at the same time very convenient, as they are ready to be eaten at all times of the year.

Being desirous of thoroughly acclimatizing the carp to this country, and thereby adding a new channel of gain to farmers, I will stock the ponds of any person who has a suitable place for raising and selling these fish, on shares. Or, if enough are ordered to pay the expenses of chartering a fish-car, I will deliver the carp along the line of the railroad from San Francisco to New York. My price in California is five dollars per fish to pisciculturists, and one dollar per pound to consumers.

J. A. POPPE,
Sonoma, Sonoma county, Cal.

SETH GREEN ON TROUT RAISING.

ROCHESTER, N. Y., Feb. 28th, 1876.

EDITOR FOREST AND STREAM:—

Many articles have been written on trout culture. They tell you that all that is necessary to raise trout is to have plenty of pure water. That is true, if you do not wish to raise but a few fish—just as many as there is natural food for in your pond. But if you have many breeding trout it is necessary to get the food very near the pond and cheap. They are great feeders, and no man can make a success in raising many trout, unless he has their food near at hand, and can get it nearly free of cost. Many people have written me on the subject, who live several miles from villages and railroads, and many that live many miles in the wilderness. My answer has always been to them that they would fail if they undertook it. Several States have State hatching-houses, and many more will be built, and some of the commissioners ask my advice, and the answer I give them is, to locate their house where they can get pure water, and at the nearest point to get the breeding fish, and where they can get plenty of cheap food for the fish.

SETH GREEN.

Woodland, Farm and Garden.

TRANSPORTING GRAPES.—The experiment of transporting grapes from California by a refrigerated can, on the Union Pacific Railroad, was completely successful. A fan-blower attached to the wheels forces a current of air through a mass of broken ice reducing the temperature to 35° to 45°, preserving the fruit perfectly. We have seen grapes preserved in this way in a fruit preserving house in this city *for an entire year*, and apples *three* years, but peaches could not be preserved.

ORANGES.—The orange has been found to be a tonic and remedy for many diseases, rheumatism, dyspepsia, complaints of the liver, and hundreds of other disorders, it vies with all the mineral waters and famous springs frequented in different parts of the world.

THE EUCALYPTUS GLOBULUS.—The experiment of planting this tree in the unhealthy Cumpagna of Rome with the object of destroying the influence of the miasmatic exhalations from the ground has been tried for several years, particularly in the locality of the Monastery of St. Paul Trois Fontaines, where a priest named Gildas has had the plants under cultivation. In some communications addressed to the Société d'Acclimatation de Paris, M. Gildas states that the trees have thriven; and that he believes they have given indications of their power in arresting disease, though as yet they are not sufficiently numerous to produce much effect. The most important statement made by him, however, is that a decoction made from the leaves of the tree possesses valuable properties in cases of fever, and that many persons have been cured of that disease by drinking the "elixir," which is also a preventive of fever. The value of the tree has not been unknown in England, as several medical men have for some years used preparations of Eucalyptys in various forms.—*The Colonies*

SPECIAL PRIZES AT THE CENTENNIAL.—The only prizes offered by the Centennial authorities consist of medals and diplomas. In a recent letter to the President of the Pennsylvania Agricultural Society, Mr. Landreth, Chief of the Agricultural Bureau, makes some excellent suggestions as to the offering a series of special prizes by agricultural societies, poultry associations, etc., whereby a more active competition could be stimulated. The following, we learn, have been already offered:—

"The Jersey Cattle Club will pay to the exhibitor of the best herd of cattle of that breed, one thousand dollars.

The Produce Exchange, of Philadelphia, will pay to the exhibitor of the best cheese, one hundred and fifty dollars.

Messrs. B. K. Bliss & Sons will pay two hundred dollars for the best display of potatoes in peeks.

Messrs. D. Landreth & Sons will pay one hundred dollars for the best display of vegetables at a stated period.

Messrs. Henderson & Sons will pay one hundred dollars for the best display of tomatoes at a stated period, also fifty dollars for the best essay on the cultivation of the cauliflower.

Mr. Landreth will pay seventy-five dollars for the best essay on the subject of "Forestry."

The Pennsylvania Agricultural Society proposes to distribute one thousand dollars in special prizes."

—It has become quite well established that sunflowers are disinfectants, and that they are a preventive of miasmatic fevers. A gentleman living on the banks of the Scheldt has cultivated the sunflower extensively on his property adjoining the river, and there has not been a single case of miasmatic fever among his tenants for years, although the disease prevails to a large extent in the neighborhood. The sunflower in its growth absorbs a large quantity of impure gases, feeding principally by its leaves. It absorbs nitrogen more rapidly than any other plant, and evaporates as much as a quart of water a day.

—The following gentlemen have been elected officers of the Queens County Agricultural Society for the present year: President, Horatio S. Parke, Bay Side, L. I.; Vice-President, Oliver L. Jones, Cold Spring Harbor; Secretary, Samuel Willets, Little Neck; Treasurer, Roswell Eldridge, Hempstead; Directors, Chas. D. Leverich, Newtown; Richard Ingraham, Hempstead; Samuel M. Titus, Glen Cove, George P. Titus, Old Westbury, Samuel Sayman, Jamaica, David L. Van Nostrand, Little Neck. The society has now entered its thirty-fifth year, and entirely free from any indebtedness. Expenditures during the last year exceeded fifteen thousand dollars.

TRUFFLE CULTURE.—Large tracts of land in the south of France, not hitherto planted, are being cultivated with the kind of oak trees beneath which truffles are generally found, and it is expected that each acre of this land, lately sold as low as £5, will yield a crop of truffles worth £20 a year. The experiment has been tried in the department of the Vaucluse, and in the course of the last twenty years 150,000 acres, were absolutely unproductive, have been planted and are yielding a rich return. The cost of plantation, which is borne by the commune, does not exceed 17s. per acre on hilly ground, and though rather greater in the lowlands the crops are proportionately heavier. Acorns only are planted on the hilly ground, but saplings of five or six year's growth, placed in rows about forty feet apart, are found to answer best in the lowlands. The ground between the rows is planted with vines, which, after five or six years, repay the cost of plantation and its culture.—*The Garden.*

THE SEA LIONS.—Seth Green thus expresses himself in his own quaint way, in a letter to a friend regarding the proposed slaughter of the sea-lions now infesting the vicinity of San Francisco harbor: "I see by the papers that your legislators have or are about to pass an act for the destruction of all the sea lions that inhabit the rocks at the mouth of San Francisco Bay. My opinion is, it would be a shame to kill them. The whole of them do not destroy as many fish as one Chinaman, and if they are all killed you will never see any more on those rocks. If there are too many employ some honest citizen to kill a certain number; but do not destroy the whole of that interesting family of sea-lions. If you do you will never be sorry but once, and that will be the remainder of your lives."

WASHING FLANNELS AND LINENS.—To whiten flannel, made yellow by age, dissolve one and a half pounds white soap in fifty pounds soft water, and also two-third ounces spirits ammonia. Immerse the flannel, stir well around for a short time, and wash in pure water. When black or navy blue linens are washed, soap should not be used. Take instead two potatoes grated into tepid soft water (after having them washed and peeled), into which a teaspoonful of ammonia has been put. Wash the linens with this, and rinse them in cold blue water. They will need no starch, and should be dried and ironed on the wrong side. An infusion of hay will keep the natural color in buff linens, and an infusion of bran will do the same for brown linens and prints.—*Scientific American.*

CATTLE KILLED BY RIFLE BULLETS.—A singular case of lead poisoning has occurred on a field in Scotland, which adjoins a rifle range. Four cows which pastured in the field died, and on searching for the cause a quantity of spent bullets from the rifle range were found in their stomachs. As rifle shooting is now becoming popular and frequent in this country, those farmers whose cattle graze upon or near the ranges should exercise caution.—*Ed.*

—A new industry—that of drying eggs—has been set on foot at Passau, on the Danube, and the Prussian military authorities are about to give the product a trial for soldiers' rations. The London *News* says several German chemists are very sanguine as to the success of the experiment, and they pronounce dried eggs to have lost none of their valuable properties by the gradual evaporation of the water contained by them in the original state.

—A Flat Rock milkman found a pickerel in his milk can the other morning. His only wonder is that the cow that swallowed it did not choke to death.

The Kennel.

THE KENNEL REGISTER.

List of dogs registered in the Kennel Register for week ending March 8th, 1876:

SETTERS.

Mr. Saltus' Dash, Bess, Lill III. Mr. H. N. Munn's Duke, Coant, Dinks, Scot. Mr. Von Lengerke's Jersey Boy. Mr. Delano's Doll, Adonis, Diana, Blanch, Charm. Dr. Ellzey's Flora, (late Queen Mab). Mr. J. N. Francis' Norah. Mr. Lawrence's Flip and Kate.

PEDIGREE BLANKS.—We have now ready for distribution a quantity of pedigree blanks, or forms, so arranged that it is only necessary to write in the names of the dogs to have the pedigree ready for the printer. This will save us all an immense amount of labor in preparing the "Register" for the press, and we shall feel obliged if gentlemen, who propose to register their dogs, and who have not printed pedigrees, will use them. They can be obtained from this office without charge, more than a stamp for return postage.

—Visitors to the Springfield Bench Show, to be held by the Rod and Gun Club on April 26th and 27th, will have an opportunity of seeing Dr. Goldsmith's fine red Irish dogs Plunkett, Carrie, and Nell, the bitches both with litters of puppies by Plunkett. They will be entered for exhibition only, however, and not for competition. It will be worth the trip to Springfield to see this family alone.

—Dr. M. G. Ellzey has renamed his puppy by Pride of the Border, out of Kirby, formerly known as Queen Mab, "Flora," a name which descends to her from the deceased mother of the dog with which the Doctor proposes to mate her. Flora is blue, black, and tan.

—Mr. L. H. Smith has sold his puppy Gloucester by Leicester out of Dart, also a bitch puppy by Leicester out of Victress. They go to California where sportsmen have heard of the celebrated Field Trial Setters, and are going to try them on the Pacific coast.

—Mr. Jessie Sherwood, of Edina, Mo., writes us that his setter bitch Beauty, out of Waddell's Fannie, and the Colburn dog Dash (mentioned in FOREST AND STREAM of — February, 1876,) is now visiting Mr. C. H. Turner's red Irish dog Elcho, at St. Louis, Mo. He was first winner at Chicago show.

BOSTON KENNEL GOSSIP.—Mr. George Linder's fine bitch May, recently purchased from A. C. Waddell, has visited Mr. Luther Adam's Rock. In the way of Gordons, "pure and undefiled," our friend Mr. A. F. Copeland, having purchased Mr. Jerome's Shot, is likely to establish a kennel without a rival here, and not surpassed in England. Shot is too well and favorably known to require notice, but Norah, Mr. Copeland's splendid brood bitch, having already a grand reputation in England, both as a bench and field winner, and as the dam of many noted dogs, made her debut at Chicago, carrying off first prize in her class, scoring ninety-seven points out of a possible 100. The nearest approach to perfection attained in the entire exhibition. She has moreover a first class pedigree. Of this stock Mr. Copeland has with good reason "great expectations." UNDER GRIP.

COURSING.—The Waterloo Cup, the great coursing meeting of Great Britain was decided at Altcar, near Liverpool, the usual ground, on the 16th, 17th, and 18th February. There were sixty-four subscribers at £25 each, the favorite, Honeymoon, was badly beaten in the fourth run by her kennel companion Donald, a fourth season dog by Master Burleigh, out of Phœnix, the property of Mr. R. M. Douglas, of Dervock, Ireland.

On the night of the annual Waterloo dinner at Liverpool, and just before the sixty-four contestants were drawn for the first round, a Mr. W. H. Clark, the famous Yorkshire breeder, bought Honeymoon, (the favorite), for 500 guineas, and two puppies out of every litter she may have. He also bought the English-bred bitch Weathergall, which was beaten in the second round by Surprise, for 150 guineas. Mr. Clark was not much alarmed by the defeat of Honeymoon, for immediately after he bet 200 against 4,000 that she won next year's cup (1877), and 500 even that she started a better favorite than she did this year.

THE DACHSHUND.

We some time since printed a cut of a dachshund, which we received from Fr von Invernois, editor of our German contemporary, *Der Waidmann*. Many of our readers were of the opinion that the dog whose portrait we presented was not that of a dachshund at all. And certainly the picture did not resemble the nimble little hounds in miniature such as were imported by Dr. Twaddell, of Philadelphia, from the kennels of the Duke of Baden, and also by other gentlemen. But as Fr von Invernois explains in his letter below, there are two breeds called dachshunds, the long and the short coated.

LEIPZIG, Prussia, Feb. 3d, 1876.

EDITOR FOREST AND STREAM:—

In your issue of Dec. 23d, 1875, I find a letter from your correspondent from Bavaria, in which he says that the picture of a dachshund which you got from us does not represent what they call in Bavaria a "real dachshund." Although I date my letter from Leipzig, where my paper is printed, I live myself in Bavaria, and can assure you that the horrid curs which they call "dachshunds" here are nothing less than pretty and useful. As a breeder of dachshunds since many years, I know very well what a dachshund is, and you can be assured that I would not have taken a picture of such a dog in *The Waidmann* without knowing him to be pure breed, true, and genuine.

We have two kinds of dachshunds—one with long hairs and bushy tails; these are very rare, but by far the best; the other with short hairs. Of these there are only two. First, the regular black with spots over the eyes and on the legs, of a brown color, resembling the rust of iron, (white throat). Second, the quite brown ones. Other colors are not correct. Of both dachshunds—with long, and those with short hair—there are again some with straight and some with bended legs. The dogs with straight legs are said to be better. I prefer the other ones. The dog of Lieutenant von A., of the First Regiment of the Guards, of which you brought out a picture, is one of the best dachshunds that ever existed. He belongs to the dogs with long hair, brown color, and straight legs, and your Bavarian correspondent must not have seen many dachshunds if he says he is not genuine.

What they call in Bavaria "dachshonds" are the most *disgusting dogs* I know of. Since the 1st of January I have killed two and wounded three, and I pay to every one of my game keepers who shoots one, two thalers for the tail, which he must bring as a token that he shot him.

Every peasant here has one or two of these abominable curs, which follow them when plowing and driving, and which, as soon as they get on the track of a roebuck, deer, or hare, chase him, making "pif paf! pif paf!" all through the wood, and so disturbing the game. These beasts (the noble name dog is too good for them) spoil the shooting grounds so much that I, for instance, have on my five different *reviers* (shooting grounds) not more than about seven or eight coveys of partridges, and altogether I have the hunting on over 46,000 Prussian *morgen*—deer, roebucks, and chamois are abundant, nevertheless. What they call here dachshunds are as far distant from a good dachshund as a donkey from a Gladiateur, Leolinus, Blue-Gown, or any pretty good thoroughbred horse. They are too large and high, show marks from all kinds of dogs, butcher-dogs, poodles, rat-catchers, etc., with which their mothers have been in love; do not go in the burrow of a fox (the only thing for which one ought to use a dachshund), have no obedience, and are only fit for disturbing the game, and making "pif paf!" behind a poor roebuck, and to hunt him until he is almost dead. For these cars the best thing is a good portion of shot. If your correspondent finds them good, it is his taste, and *de gustibus non est disputandum*.

FR. VON IVERNOIS,
Redacteur des *Waidmann*.

COLORS OF THE IRISH SETTER.

NEW YORK, February 28th, 1871.

EDITOR FOREST AND STREAM:—

In your issue of Feb. 24th I noticed an article on the "Colors of the Irish Setter" by your correspondent "Nimrod," in which he states (if I understand his article correctly) that the Irish setter must be blood red or red and white, and gives Idstone and Stonehenge as authorities, and also adds that no recognized authorities can be found giving colors other than the above, in which I beg to differ with him, as I will presently show. Stonehenge distinctly states, in addition to the blood red and red and white, that there are good Irish setters nearly white, black-tan, or intimately crossed with black-tan, in the latter case showing the distinctive marks of the cross in the "black tipping of the coat, which Irish judges consider a very great fault in colior; but this last sentence only applies to the last mentioned"—Stonehenge's "Dogs of the British Islands," vol ii. Another authority says: "They are not esteemed (which means, substantially, that they are not so much admired) unless their color is a deep chestnut and white, or all red," but it does not say that they are not pure if they are other than the above colors.—Thornhill, 1804. Another authority says: "The Irish setter is usually of a dun or yellow color, and a very superior breed of these dogs were owned by Sir John Blundin, Bart, of Castle Blundin, County Kilkenny"—Richardson, 1845. Youatt, at page 91, says that "they may also be lemon color, or red patched with deep chestnut."—Youatt, 1841. And still another says that "they may be of two shades of red, one a kind of chestnut, and the other one nearly black," which is, to my thinking, not blood red nor mahogany.—Mcyrick, 1861. I will add one more authority from an old work: "The Irish insist their's are the true English spaniels the Welch contend their's are the aborigines. But whatever mixtures have been made since, there were, fifty years ago, two distinct tribes the black-and-tanned and the orange, or the lemon and white."—Symond's Suffolk Sportsman, 1739.

Your correspondent also states "that because they are born in Ireland it does not make them Irish setters," and I would add because they are blood red or red white, born in and imported from Ireland, it does not follow that they are the pure article; and in proof of which I will mention a case: A short time since a gentleman imported a blood red Irish setter from a celebrated kennel in Ireland. Upon his arrival in this country he was pronounced the finest specimen of the above mentioned breed that had, up to that time, been imported, the only objection being that he was rather under sized. The owner of that dog is not aware, I suppose, that not many years since a black dog from Scotland was introduced into the above mentioned kennel. Now, such being the case, according to your correspondent's theory, the red pups of the litter would be the pure article and the black ones would be entirely ignored. Now, in regard to the English dog shows, dogs are entered in a class where they have no claim. We will take the Irish setter class, for instance. Dr. Goldsmith's red setter bitch Carrie took first prize at Crystal Palace, 1872 and second prize at Birmingham same year; pedigree, by Prince, a pure Laverack, out of Cora; she by Bob, out of Lily. Another case: Ben II by Ben I (pedigree unknown, but of a supposed pure strain) out of Beauty (which is a black and tan) took fourth prize, Glasgow, 1871. I could mention others, but I think the above sufficient to show that, because a dog is blood red, and entered, and takes a prize in the Irish class, he is far from being an Irish setter. I have no doubt but what the Irish setter as pure as any one would wish can be found; but I doubt if they can be purchased, being held by old families, who will not allow the breed to go out of their hands.

I have a letter before me as I write, from an Irish gentleman, who, in speaking of the Irish setters, uses the following language: "I have the Irish setter in its purity, having been in my family for over one hundred years, but they are not for sale, and are not allowed to go out of my family."

In conclusion, Messrs. Editors, allow me to say that very many of the red setters imported to this country, and called the pure Irish setter, if traced back, some other than Irish blood would be discovered. I do not wish to be understood as condemning the breed, as they have always been my favorites, and the blood red my favorite color; still, I cannot but believe but what they are of other colors than blood red, and red and white. Trusting you will pardon me for taking up so much of your valuable space, I remain, WARWICK.

SALT FOR DISTEMPER.

BAYFIELD, Wis., Feb. 21st, 1876.

EDITOR FOREST AND STREAM:—

I have seen many remedies suggested in your paper for the cure of distemper in dogs, but I have never seen that common fine table salt has ever been tried. My first experiment with salt was tried upon a fine blooded setter pup, less than a year old. That peculiar straightening out of the head and neck, and sneezing many times in succession, plainly indicated to me that the dog was in the first stages of distemper. Having lost an old dog with the same disease a few years before, made me very anxious about this one, and after much thought and many inquiries to find a remedy I had not tried, some friend suggested that salt might be good to make him vomit, and that vomiting might give relief to the dog. Knowing that salt could do no harm, if it did no good, I administered the salt to the dog by holding his head up and mouth open, and dropping a small handful as far down his throat as possible, then holding his mouth shut for two or three seconds to make him swallow all he could of the salt. In a few minutes the dog commenced to vomit a white, stringy, membraneous substance, and in three days the dog was perfectly well. I have tried the remedy on three dogs, and each time with success. The last dog treated I gave a second dose at an interval of two days. I believe that salt will prove efficacious only in the first stages of the disease. I have never seen it tried after the dog began to run at the nose and eyes. K.

A GOOD POINT.

PITTSBURGH, Pa., Feb. 28th, 1876.

EDITOR FOREST AND STREAM:—

Having read in your columns lately of the exploits of pointers and setters, I cannot refrain from relating one which came under my own observation:—

Last season, while hunting in Butler county, this State, I sent my bitch (Dell) into a stubble-field, where, after making the circuit and ranging for a short time, she winded the birds, and commenced steadily drawing on them, when suddenly she came to a fine staunch point. On going up to her and beating the ground, I could raise nothing, but noticing that she held her head very high, with nose well up, and pointing in the air, I glanced in the same direction, when, on a crab tree some thirty or forty yards distant, I discovered three quail sitting on a limb, twenty feet from the ground. No other birds were near, and these had evidently been suddenly flushed by some animal and taken to the tree, as they often do.

I think this feat worthy of record, and in justice to the bitch hope you will give it a place in your interesting paper. Dell is the property of Mr. Kramer, and is one of the finest dogs in the country, and had not her early education been neglected, she would ere this have made her mark in the various bench shows. She is an Irish setter, possessed of all the points of that magnificent breed, even to "Nimrod's" standard of color—red. W. G. H.

KENNEL PRODUCE.—The fine red Irish bitch Nell, by Scott Rodman's Dash, owned by A. J. Huyler, Esq., of Tenafly, N. J., gave birth on the 29th ult., to ten puppies, six dogs and four gyps, by Mr. A. Bliven' Jack.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Mar. 15	2	30	11	48	11	3

—The Yacht Vesta, which sailed recently from New Bedford with her owner, Mr. S. M. Mills and a party of friends on board, has arrived at Queenstown after a passage of seventeen days, *en route* for the Mediterranean.

ICE BOAT REGATTA.—A regatta for ice boats took place on the Toronto bay on Saturday fortnight, under the auspices of the Toronto Rowing Club. The prize offered was a cup. There were six entries. The course was laid out in the shape of a triangle, the starting point being opposite the foot of Scott street, and the boats had to traverse the ice outside of flags four times, the distance being about twenty-five miles. The Snowdrop, Capt. Lundy, arrived at the winning flag first, Meteor, Capt. Ellis, second, there being about one hundred yards distance between them. Winning time, 37m. 37sec.—*Canadian Gentleman's Journal.*

HARLEM REGATTA ASSOCIATION.—This association held its annual meeting on Monday evening, at the Knickerbocker Cottage, Mr. Meeker, the President, in the chair. After receiving the Treasurers report an election of officers was held, resulting as follows: Executive Board, F. G. Brown, of the Nassau Club; G. L. Reves, of the New York; C. G. Peters, of the Stock Exchange; M. Freeborn, of the Dauntless; H. G. Meeker, of the Athletic; Richard Neville, of the Nautilus; H. M. Knapp, of the Harlem. President, F. G. Brown, of the Nassau; Vice-President, H. M. Knapp, of the Harlem; Secretary and Treasurer, C. G. Peters, of the Stock Exchange. The question of extending financial aid to the Centennial Regatta was brought up by Mr. Meeker, and, upon motion, delegates were requested to present the matter to their several clubs. It being represented that the New York Athletic Club, winners of the last four-oared regatta, had not received the emblematic flags, by reason of a deficiency in the treasury, it was voted that the clubs be requested to pay up their assessments, and that as soon as their is money enough in the treasury the flags shall be purchased.

COLUMBIA BOAT CLUB.—The fifth annual meeting of the Columbia Boat Club occurred at their rooms Saturday evening. There was a large attendance of members, and the election of officers was spirited. The following ticket was carried: President, Wm. Chapman; Vice-President, Herber Seymour; Secretary, J. S. Stokes; Treasurer, H. H. Leland; Captain, Fred L. Deavens; Lieutenant, Wm. Bruff. The several reports of the officers showed a gratifying improvement in the condition of the Club, both financially and as a rowing organization. The Committee on Repairs were authorized to make needed alterations in the Club property, and a Committee was appointed to take into consideration the leasing of a more advantageous water front. A communication from the Schuylkill Navy was read inviting the Club to participate in the Centennial Regatta. Declined with thanks.

—Two of the leading professional clubs of Boston—the City Point and the Boston—are anxious to have the honor of representing the State at the Centennial Regatta, and in order to settle the question of superiority have agreed to test their relative merits in two races—the first, in gunwale-rigged fours, to be pulled on the 17th of May; the second, in shells, fours, on the 24th of June.

The City Point crew are a powerful set of hard workers, invariably victorious when pulling in gunwale-rigged boats. The four will be the same which has represented the club for several seasons, and no change will be made in their positions. They are seated as follows:—Bow, Scanlin; 2, Wiggle; 3, Landry; stroke, W. J. Higgins (Captain). The Boston crew is the well-known Faulkner-Reagan four, which beat the Biglin-Eliot crew last summer, and has won the Fourth of July shell race for the last three years. This is their make up:—Bow, George Faulkner (Captain); 2, McGahey; 3, Mahoney; stroke, P. Reagan.

THE ENGLISH UNIVERSITY RACE.—The *Pall Mall Gazette* says: The four requisites for excellence in a university eight on the day of the boat race are, strength, style, condition, and uniformity. As to the composition of the two crews: Oxford have six of their old oars in the boat. All of these have naturally thickened and filled out a little since last season, and may be expected to average a few pounds heavier per man than they did last Easter. Cambridge, on the other hand, have only one old oar rowing, namely, W. Close. This in itself need not be a bad sign. When Oxford won last year they had only two old oars, and in 1861 they had only one veteran. The crews as at present arranged stand as follows:—

OXFORD.		CAMBRIDGE.	
No. Name.	Pounds.	No. Name.	Pounds.
1. W. H. Burno, Kehle.....	154	1. P. W. Brancker, Jesus.....	161
2. P. R. Mercer, Corpus Christie.	160	2. A. C. Decker, Lady Margaret.	170

8. F. Edwardes-Moss, Brasenose.	175	8. C. D. Shafto, Jesus.....	167
Craven, Worcester, coxswain.	104	C. L. Davis, Clare, coxswain..	96

A MODEL ADIRONDACK BOAT.—There is on exhibition at the store of Messrs. Bradford & Anthony, 374 Washington street, Boston, a model boat for use of sportsmen on inland waters, which, for lightness and durability, appears unequalled. It is 15 feet long, 3 feet 6 inches wide, and weighs not over 80 pounds, its extreme lightness enabling a person to carry it by means of a yoke with which it is fitted, long distances, without fatigue. The builder, Mr. Frederick D. Graves, of Boston, has also provided it with his improved noiseless rowlock, which insures the proper inclination of the blade of the oar, and prevents the liability of its catching the water when gathering in recovering, as well as to insure the proper position of the blade of the oar when making a stroke, and to enable the outer end of the oar to be raised when it is being feathered, in order to prevent its contact with the water in rough weather, and the rowers "catching a crab." The boat is well adapted for fowling purposes, the patent rowlock enabling the most inexperienced rower of either six to propel the boat with ease and safety, without any possible chance of losing the oars. It is destined for the Centennial exhibition.

—Mr. Colvin's portable canvass boat is now being manufactured by Mr. W. A. Scott, of Albany. The merit of this boat consists in the ease with which it is transported, and the fact that the only frame it requires can be cut in the woods at a moments notice. A fine description has already appeared in our columns.

New Publications.

ANGOLA AND THE RIVER CONGO. By J. J. Monteiro: Macmillan & Co., N. Y.

While the travels of Burton, Baker, Speke, and Grant and others are making us as familiar with the interior of Equatorial Africa, its tribes, moulls, and tributaries as we are with our own continent, and more so than we are with Asia, Mr. Monteiro has given us a graceful volume descriptive of that portion of the coast line of the African continent which is embraced within the sixth and sixteenth degrees of south latitude. To us Americans in particular this portion of Africa should possess unusual interest. It was from here that the negroes were enslaved and shipped, who were subsequently to be the innocent cause of our civil war. And we should imagine, from the description of Mr. Monteiro, that slavery on the coast was by no means the horrible thing it is painted. The "middle passage," to be sure, made a difference. Angola was first settled by the Portuguese in 1560, eighty four years after Bartolomeo Diaz had discovered the greater part of the west coast and the Cape of Good Hope. From this time down almost to the present day the history of their occupation is a most romantic one; a series of petty wars with the natives, varied with an occasional one with the Dutch and English, or among themselves. The book before us not only contains an abstract of these earlier events, but a most minute description of the various tribes of natives, their various customs, costumes and implements, domestic and warlike; and also of the flora and fauna of this most interesting region. To those who delight in intelligent works of travel, Mr. Monteiro's book will prove a mine of pleasure and information.

NEBRASKA—Its advantages. By Edwin A. Curley, Special Commissioner from the London *Field* to the immigrant fields of North America. For sale by the American News Company, and the Orange Judd Company. Price, $4.

For a long time the American publishers of this important work were unable to supply the active demand, but we understand that several new data have been received from England, and arrangements made by the American News Company, and Orange Judd Company to satisfy the wants of the trade, and all comers. Our favorable opinion of this book is of course, well known from the reviews we have given it, and we trust that many thousands with friends or interests in the West, or pressing to settle there, will be benefited by itsinstructive pages. It is copiously illustrated with engravings and illuminated sectional maps, and every way a most useful book for emigrants and intending settlers.

We have received the "Laws of Trap Shooting," by Barry Blot, revised edition for 1876, which contains the National Rules for Tournaments and Experts, as adopted by all the principal Southern and Southwestern Sportsman's Clubs. Published by James Buckley, New Orleans.

The New York *Herald Almanac* is not only a calendar, but a complete Financial, Commercial, and Political Register. It probably contains more varied information between two covers than can be bought in any other form for twenty-five cents. Among the mass we find a yachtsman's manual, with a list of yacht clubs and the private signals of the vessels of the N. Y. Y. C.; also an account of and diagrams showing the targets made at Dollymount during the recent International match.

The American Naturalist for March is a capital number. It opens with an account of the butterflies of Mt. Washington, which are Arctic species that were driven down by the ice-sheet of the glacial period, and became colonized upon the top of the mountain after the melting of the glacier. Dr. Wm. Wood contributes another one to his series on the game falcons of New England, the Goshawk being the subject of this essay. Dr. Hagen's exceedingly interesting and valuable history of the growth of museums—begun last month—is concluded. It abounds in incidents of the great men of science, and their laboratories. Whback's observations on bees and ants (second series), published at length in the transactions of the Linnean Society, is condensed into 13 pages. Very curious facts of the degree of intelligence possessed by these insects are brought out. A sketch of Dr. Hayden's Explorations in Colorado in 1875 finishes the contributed articles. A long illustrated article is given of Prof. Wyman's "Fresh Water Shell-Mounds of the St. John's River, Florida," which is printed as a memoir of the Peabody Academy at Salem, Mass., and all of the departments are as full and entertaining as usual.

—Bail play will begin at Prospect Park on March 11th, which time the field will be in condition.

C. W. M., Cleveland.—Please inform me which is and where I can get the most reliable map of Florida, and oblige? Ans. Drowe; to be had of C. Drew, Jacksonville, Fla.

E. G. T., Petrolia, Pa.—Please give me the name of some one of whom I can purchase a pair of ferrets? Ans. Wm. Barnes, No. 9 and 11 Hester street, this city, has ferrats for sale.

SUBSCRIBER, Philadelphia.—Will you please let me know in what volume and number the pedigree of the Gildersleeve setters is in, I am looking up that strain. Ans. On page 325, vol iii.

PAWN, New York.—Will you please inform me where the rooms of the Down Town Chess Club are? What are the terms of membership? Ans. Cafe Cosmopolitan, No. 14 Second avenue. 2. We do not know.

TEAL, Salem.—Do you know of any work giving instruction in gymnastic, calisthenics, or such exercises. Ans. D. Van Nostrund, No. 23 Murray street, has several works on these subjects; address him for titles.

S. C., Yorkville, S. C.—Can you inform me what will remove the stains of rust from the inside of a gun barrel? Ans. Kerosene oil will remove rust stains, but if the rust has any depth, the gun should be rebored.

F. L., San Antonia.—We are about to start a shooting club in this city, and you would very much oblige me by sending by return mail a copy of the rules and regulations of the New York Shooting Club. Ans. Have sent such books as you want.

H. L., N. S.—Since replying to your query we find that the Bohn edition of the translation of Pliny's works can be had from Messrs. Scribner, Armstrong & Co., No. 743 Broadway. It comprises only the natural history, however, is in 6 volumes, 12mo, and costs $2 per volume.

C., Brooklyn.—Is South Oyster Bay a good place to go for a day's trout fishing and could we go and return in the same day? How far would we have to go from the station before we could fish? Ans. Yes; but you would have to obtain permission, as the waters are all private and preserved.

Q., Sing Sing, N. Y.—What work on the dog would you advise me to get, having especial reference to the raising and breaking of setters and pointers? Ans. "Dluke, Hutchinson & Mayhew;" price, $3; or "American Kennel and Sporting Field," by Arnold Burges; price, $4. Can send you either.

L. H., Philadelphia.—Can any of you inform me if Cordiug's (English) waterproof goods are fur sale in New York, and if so, who has them? I wish to get a pair of wading trowsers for snipe shooting this spring? Ans. As far as we can ascertain, Cording's goods cannot be purchased in this city, but wading trowsers can.

G. W. B., North Elba.—Will you inform me as to the color of the salmon trout, and how they differ from the common brook trout of the Adirondacks? Ans. The salmon trout and lake trout are identical, and differ in every respect from the brook trout, having no spots, grayish back, changing to silver on the sides and belly.

H. P. P., Claremont, Minn.—What is the southern limit of edible oysters (not cove oysters) on the west coast of Florida? Ans. The oysters all along the west coast of Florida are celebrated for their quality. At Cedar Keys they are so abundant that it is proposed to put up canning factories. Key West might be named as the southern limit.

SUBSCRIBER, York, Pa.—Between the years 1865 and 1870 was there a boarding-house or hotel on Courtlandt street, in New York City, called "French's?" It is agreed to leave the matter to you. Can you answer it? Ans. There was such a hotel opened in Courtlandt street, but it was subsequent to 1870. We think the house was opened in 1872.

BIRCH BARK, Buffalo, N. Y.—The coloring on one of my fly-rods will not stick. Have had it dressed over three or four times, but after use it all peels off. Please tell me what to use and how to apply it; color, dark reddish-brown. What varnish is best? Ans. If you varnish your rod with a varnish made by dissolving shellac in alcohol, the color will stick.

PATTERSON, New York.—I heard that shad were caught in the Connecticut River last season. Will you please inform me if that is true, and if so, what kind of a fly was used, and what color? Ans. Shad are caught in the rapids of the Connecticut River, especially at the Holyoke Dam. Colors for flies are usually combinations of white, brown, dun, and black, with sometimes red or green for the bodies.

W. B. E., Rochester, N. Y.—1. Where shall I send to get a large map of the Ottawa River, or Canada? 2. In a canoe voyage to the headwaters of the Ottawa what large game would I be likely to meet? 3. What kind of a hound would be the best to take on such a voyage? Ans. Beers & Co., corner Fulton and New Church, streets, this city. 2. All large game, such as moose, caribou, deer, and bear. 3. A deerhound.

A. Y. G., Pittsburgh, Pa.—1. Can you give me any information as to the cost, weight, etc., of the "health lift," or send me the address of the parties who sell them? 2. Would it be practicable to have a small compass set in the stock of a gun? Would the iron trimmings affect it any? Ans. 1. By addressing the Health Lift Co., No. 46 East Fourteenth street, this city. 2. We doubt if a compass so arranged could be relied upon.

M. M. J., Valley.—I see a notice in your book entitled "Camp Life in Florida," of a "Pocket Guide to Florida" called Whitney's "Pathfinder." How can I get it, and at what cost, as the notice does not state? Would like to get a good, authentic, late map of Florida. Can you tell me where it can be procured? Ans. The "Pathfinder" is distributed gratuitously from the "Pathfinder" office, No. 66 John street, this city. The best map of Florida is Drews'; to be had of C. Drew, Jacksonville, Fla.

A. H., New York.—What part of Canada or Michigan would you recommend for good black bass fishing in summer, and good fall shooting of all kinds, viz: deer, ducks, partridge; prefer mountainous country, not a place where I could take my wife? Ans. Make headquarters at Peterboro, Ontario, or if you wish to be in the woods, go to Burleigh, which is in the centre of a lake and hill country, giving excellent sport. There is a comfortable and very neat tavern at Burleigh Falls. For address of proprietor, write to Hon. John Bertam, Peterboro.

F. B. G., Montreal.—I am negotiating for the possession of a red Irish setter pup, and am only deterred from completing said negotiation because the pup has a white streak down his face. Do you consider such a mark a blemish? 2. In your issue of January 20th you have a portrait of a red Irish setter—Dick. I notice he is feathered to the heels, both fore and aft. Is it not unusual to find feathering on the hind legs carried below the hock? Ans. 1. No; we prefer it. 2. There are very few dogs so heavily feathered as Mr. Jarvis' Dick.

COLLEGIAN, Orange, N. J.—Under the new regulation respecting amateurs in rowing, adopted by the N. R. A., suppose A, an amateur belonging to no club, challenges B, another amateur, also belonging to no club, to row a race for a badge, would that come under the head of a "stake," and if the men row together for the badge would they afterward be debarred from competing in amateur races? Ans. We should say that if the race was simply for a badge, and no stake was up, that neither oarsmun would forfeit his claim to be termed an amateur.

R. E. S., Newark.—I have a setter dog one year old; was troubled with the distemper last summer, and has not entirely recovered. He has a clear, slimy saliva running from his mouth; has not enough strength to carry his tail out straight; back is also weak. Can anything be done for him, or will he always be weak? 2. Do you consider 235 No. 7, 40 yards, 30 inch diameter, a good target? 3. Do you know anything about Cogwell & Harrison, of London, as gunmakers? Ans. 1. Time and good care may bring him around all right. 2. Yes. 3. They are good reliable gunmakers.

A. G. P. A., New Haven.—I will thank you very much for answers to the following questions in your paper: 1. Where can I go for a two weeks' excursion from the 1st of April, to get some good duck shooting? To whom to write in regard to arrangements? 2. Could I get, instead, snipe shooting at that season; when? 3. Is there any use for a bird dog in the Adirondack lake region in the early part of June? Ans. 1. Good Ground, L. I. Write to Wm. Lane, at that place. 2. Snipe shooting is so uncertain and fitful that we could not recommend you to a place in this vicinity, where you would be sure of finding it. 3. No.

F. N. B., Newton Centre, Mass.—Wingate, in his Manual of Rifle Practice, speaks of a sub calibre rifle, to be inserted in a barrel of a larger calibre, so that the gun can be used in an armory. Now, I want to find out who makes them and what they cost. The rifle I want them for is a Peabody military, cal. .433. I think the sub-calibre rifle could be made to insert in the muzzle, then pushed down the barrel to where it belongs, and a flange screwed on at the breech. Wingate speaks of its being adapted to any rifle that permits its entry from the breech; in the Peabody you can't do it. Ans. See answer to E. W. S.

H. W. S., New York.—1. I want to go for two or three weak's hunt, but I don't want to go over one hundred miles from New York. Is there any place along the Erie Railway where I could go; for quail or snipe grounds only? 2. Where can I buy some areca nut? I want about a pound to send to California. 3. I have a pup dog out of Hamilton Thompson's dog, Duke, an imported black and tan named Bess, which weighed 34 pounds when three months old, and now, at nine months old, weighs 78 pounds. How is that for a young dog? Ans. 1. You may find snipe near Englewood and Tenafly, N. J.; out of season for quail. 2. At this office. 3. Entirely too much dog.

T. E. M., Hamden.—A friend and myself were hunting woodcock in the latter part of August in the year 1870. We had found no birds in the coverts, but the ground was full of holes where they had drilled. We left the covert and started through a piece of corn, and one of the dogs came to a point, and eight woodcock flushed at once; further on, we started one more bird. We shot eight out of the nine. Now, I would like to know whether they were preparing to migrate, or had concealed themselves in the cornfield to moult? Ans. The birds had gone there to moult and should not have been killed. After woodcock have commenced moulting they should not be shot until they entirely recover their plumage.

E. W. S., Albany.—Don't you kind o' stretch it on the distance my rifle would shoot accurately? Messrs. Remington do not make the .22 sub-cal rifle. A letter from their factory a month ago says so. I believe they are made in New York by two parties, but don't know name or address. Can you give both and the cost as well? Also name and address of the manufacturer of the new self-registering target, as well as price. Ans. It was a misprint. You can get a sub-calibre rifle by addressing Lieut.-Col. B. E. Valentine, Brooklyn, N. Y. We do not know the cost. The self-registering target is the invention of a German, whose name we have not got. Mr. Homer Fisher has one for sale for $75, the original price being $125.

HOLLY-WOOD.—Two prizes, $50 and $30 are offered in a pigeon match; eight shooters; Long Island rules. Three men make a clean score and shoot off the tie, one man is beaten, the other two agree to divide first and second money. The referee disputed as to their right, and makes them shoot off again for first money only. He then allows three oth er shooters who have each lost a bird to shoot for second money. Is he right? Ans. The three shooters killing all their birds should be awarded the prizes, and they can shoot off or divide. Any rule to allow a shooter who was beaten to take a prize is absurd. Yet sometimes such rules are made, and a man who has killed perhaps but one bird may be placed as a better shot than he who has killed a dozen.

O. P. J., St. Joseph, Mo.—1. Recently, in a match for the champion badge, the following question arose: The shooter went to the trap, called the signal for pulling, and on the rise of the bird found his gun was not cocked. The bird being a young one, flew a short distance, and alighted on the ground. After a little delay he shot it with first barrel. The referee decided it a lost bird. Was he right according to our rules, which we inclose to you? 2. Can the match be declared off because the challenging party did not furnish sufficient birds to shoot off the tie on that day? Ans. 1. According to your rules, a bird shot on the ground by the first barrel is "no bird." 2. The match should not have been declared off, but another time fixed for shooting off the tie.

J. H. D., New York.—1. I possess a black, white and tan Gordon setter dog about eight years old; also a red Irish setter bitch one year and two months old. Considering the difference in age and color, would a cross between them be judicious? Both are from excellent stock, the dog well broken, and remarkably handsome. 2. At what age is a dog considered too old for stock purposes? 3. Are the first pups as good as those of subsequent litters? Ans. 1. Such a cross would be judicious. 2. Some dogs are serviceable until they are twelve years of age; some become superannated at nine or ten years of age, and should not be used for stock purposes. 3 If the bitch is full sized, and well developed, the first pups may be good, but we do not recommend breeding to one quite so young as yours.

M. J. E., Franklin, Wis.—1. I see the Kay shot concentrating cartridge advertised in your columns. What are its merits, and is it expensive? 2. Is the Dittmar powder in any wise superior to any other good article of the old kinds? Is it equally safe, and what is its cost? 3. What would be the duty on a first-class gun ordered in England and imported here, and would the package containing it be opened by the Customs authorities on its arrival in New York? 4. Which do you approve for general use—paper or metallic shells? Ans. 1. $3.50 per 100. Those who have used them speak highly of them. 2. The Dittmar powder we do not regard *superior* to the black; we believe it to be as safe, if properly handled; price $1 per canister. 3. 35 per cent. on the cost; the package would be opened. 4. Paper.

A. H., Washington, D. C.—A friend of mine at Jackson, Miss., has a fish pond 200x100 feet, supplied by springs, and a small brooklet, clear water, it is from three to four feet deep, sandy bottom, inclining to mud, the soil having a clay ingredient; he wishes to stock it with fish. What kind would you advise, and where is the nearest place he can procure them? By giving the above information you would greatly oblige. Ans. Jackson, Miss., is rather far South for trout or grayling; if you want a fish for sport or table, try the one that is improperly called "trout" in the Southern States, and "Southern chub" in Virginia. This is the "Oswego bass" of the North, and lives on muddy bottoms, and spawns among weeds. They may be found in many of your ponds and streams, perhaps in Pearl River. Or you might stock with some of the perch found there. Should you try the first named fish, put in also some of the little soft finned minnows for them to feed on.

W. R., New York.—In your issue of February 24th, under the column of Answers to Correspondents, I saw that some person who signs himself "Subscriber," Easthampton, wished to know where and at what price quail could be bought in New York. I have just received six dozen quail from J. R. Hughes, Greensboro, N. C., in very good condition, the price was $2 75 per dozen, which I think very moderate. The freight charge was $2. Hughes ships quail until the 1st of April, at which time the law of North Carolina prohibits the shooting or trapping of quail. I not sure that any one purchasing quail from Hughes will be well satisfied with them. Will you please say at what time quail imported from North Carolina would be likely to breed in New York, and whether the middle of March is too soon to put them out in the fields? Ans. With such a season as the present the middle of March would not be too soon to turn them out, but all depends upon the weather. We should risk it. They ought to mate and breed in May or June.

THOMPSON & SON, 338 Broadway, use no sugar of lead in waterproofing their suits. Sugar of lead will not stand washing, and amongst old sportsmen is considered detrimental to health, making them liable to rheumatic attacks. Thompson's suits are guaranteed to be thoroughly waterproof, even after being washed, and are as good and cheaper than any other suits in the market.—*Advertisement.*

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
123 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, MARCH 9, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

—The Society for the Prevention of Cruelty to Animals proposes to be represented at the Centennial in such manner as Mr. Bergh may determine upon. The society's last report shows that during 1875 the society prosecuted 363 cases of cruelty. The officers during the same period ordered out of harness and sent home to their stables, or to the veterinary surgeons, 1,272 horses and mules, the drivers were not arrested, but cautioned. Many contemplated dog and cock fights were interrupted, and a number of birds and bull dogs seized, and the proprietors of cow stables and slaughter-houses in this city and Brooklyn warned to keep them in better condition.

—Those of our readers who have been accustomed to visit Rangely Lake, will be interested to know that the Maine Legislature has enacted a law forbidding for five years the taking of trout in Rangely Stream between the dam near the outlet of the Rangely Lake and the mouth of Kennebago Stream, from July 1st to March 1st. This law, therefore, practically prevents angling in Rangely Stream except during the month of June. It will be very beneficial in its results, as the most extensive spawning grounds of the famous Rangely trout are fully protected. The increase in their number and size will be very great.

SPORT IN CANADA.—A friend sends the following lines in a private note from Chatham, New Brunswick. To us in this warmer and snowless clime they sound like the the jingle of an ice-pitcher in a warm day:—

"We have fine times now snow-shoeing and tobagganing—nice select party—five taboggins, ten ladies, and five gentlemen generally; same party in the Snowshoe Club, with tramps of two, three, and five miles; moonlight nights, and dancing quadrilles on snowshoes."

—A correspondent wishes us to suggest to the Centennial authorities that they devote a part of their grounds to an Indian show, with wigwams, scalps, and ponies. If we mistake not some such exhibition is contemplated. Some of those Sioux who are now raiding on the frontier might be brought in and a little real scalping be performed for the benefit of our visitors.

—Several prominent sportsmen of New York and New Jersey, have formed themselves into a club of which Jas. R. Thompson, Esq., is President, for the purpose of stocking and protecting the celebrated Preston Ponds of the Adirondack region. It will be known as the Preston Pond Club.

THE AMATEUR QUESTION.

NOTWITHSTANDING the attention given to the subject by the recent Convention of American Oarsmen, and the promulgation of a definition by which they are to be governed in future rowing contests, we question whether the matter has been finally settled. In fact, a correspondence which has recently passed through the columns of this paper would indicate that trouble is likely to arise before the very first events of the season are decided. The question as to what shall constitute a just claim to the title of amateur oarsmen is one more difficult even of determination in this country than in England. There, the sharply drawn lines of society decide the question at once, and, if we remember rightly, it is not long since that a member of one of the London Rowing Clubs was objected to, on the ground that he was a tradesman, and therefore could not be a gentleman amateur. On this side of the Atlantic no such distinction could be drawn, and a butcher, a baker, or a candlestick maker, could claim a place beside the son of a millionaire banker, the latter occupation being accepted among us as the highest standard of respectability. Indeed, we are not quite sure but that a pretty good argument could be drawn from the fact that, looking at it from this standpoint, the butcher or baker who takes such time as can be spared from his business to perfect himself in rowing, has more claim to the title of amateur, than the millionaire's son, who, having no other occupation, makes a business of rowing. For after all, why is it that this distinction is drawn between amateur and professional? Is it simply an admission that the brawn of the one is not capable of the same development as that of the other; or is it a class distinction as in England? Is it not rather that the amateur who rows for pleasure and at such times as other occupations will permit, could not justly be called upon to contend with the professional waterman, to whom the oar is as much the implement of his calling as the pen is of the bank clerk or hook-keeper? It would be just as proper to ask the waterman to contend for a prize in penmanship with the others. It is unfortunate that there should be so much jealousy and misunderstanding among boating men, but while they will keep so near the line which divides them from the professional class, it is unavoidable. We are alluding to no particular club or man, but are judging solely from what we read in other papers; of recriminations and insinuations as to this man having rowed for money, or of that one having sold a race. It is no wonder that some of the boating clubs, and those which hold the highest claims to respectability are so particular as to whom they admit to membership. If this kind of thing continues, to be one of a "crack" crew will be by no means the distinction and honor it should be.

DOG AND HUMAN NATURE COMPARED.

THE mental characteristics and disposition of the canine race resemble that of men. This may be attributed in part to the intimacy existing between the dog and his master, and partly to the extraordinary development of his brain. In this animal the passions are exhibited precisely the same as in man, jealousy, anger, covetousness, joy, love, and hatred, are as strongly marked in the dog as in the human species. Kindness will promote and develop his virtues and good points while the opposite course of treatment will often cause an exhibition of his baser nature. Each dog has an individual character, and his disposition is capable of being moulded by training. He is susceptible of the bitterest hatred, and his jealousy in the presence of a favored rival sometimes knows no bounds. His covetousness leads him to eat what he does not want, lest another animal should get it, and is illustrated by the fable of "the dog in the manger." His honesty sometimes succumbs to gluttony, though it cannot be said that he is given to drunkenness. Rev. Thos. Jackson, in "Our Dumb Companions," relates the case of a dog once having been so drunk with malt liquor that he was unable to walk, and ever afterwards he would not taste it, and growled and snarled at the sight of a pewter pot from which he had become intoxicated. Landseer's picture of "Expectation," illustrates hope in the dog watching for his master's coming. That dogs are susceptible of pride cannot be doubted. It may be witnessed after a successful chase, and even felt in the quickened heart beats when praised. The downcast look and crouching attitude when scolded, shows plainly their mortification. Dogs even understand the meaning of words spoken in ordinary conversation. A Scotch terrier, once owned by the writer, when praised in an ordinary tone of voice would come bounding with joy to be caressed, but if the same manner of tone were preserved, and words of disapprobation used, she would droop at once and leave his presence. She always disliked cats. On one occasion when about to seize a neighbor's pet who had trespassed within her precincts, the simple words "don't bite," caused her to return to me as quietly as if she really had no thoughts to do Tabby bodily harm.

The New Orleans *Republican* is responsible for the following story: "The master quietly, without gesture of any kind, told his dog to walk across the street, find a little wagon and get into it. Doggy obeyed, though reluctantly, as the wagon was a cart, but he finally complied. He was then told to hunt up a fire plug and mount it. His keen eyes searched a moment, and on the instant poor Tray pleased his owner. He was then commanded to hunt a lamp post and put his fore-feet on it. This done he was told to go into the Pelican Saloon, find a chair and get into it; then to look up a beer-barrel and stand on it; then to lie down and act like a poisoned dog. These orders were given in the most common place tone of voice, and most of the time the dog could not see his master, yet he obeyed quite as readily as a willing servant, apparently understanding the English language very well."

Deceit and cunning are sometimes the ruling passions of dogs as well as of the human mind. Watch was a farm dog, with immaculate coat, although well fed and cared for, he contracted bad habits, staid out late at night, and finally became a confirmed sheep-killing dog. His general character being so good, for a time, he escaped suspicion, but finally he was caught in the act and followed to his door. In leaving the scene of carnage he was observed to take a circuitous route which crossed a stream of water, undoubtedly for the purpose of cleansing himself. When his informer appeared he lay apparently unconcerned on the hearth, but a nervous squint with one eye plainly told his guilt, and that he was endeavoring to throw off suspicion, but the evidence was so strong that without judge or jury his life paid the penalty for his misdeeds.

Magnanimity and chivalry are exhibited in the many stories which are related of "big dogs" walking proudly along while small dogs are snapping at their heels. Some where I have read of a dog deliberately picking up another and dropping him in deep water by way of punishment for impudence. After watching the struggles of his helpless victim, the large dog jumped in the water and secured the helpless cur.

Forgiveness in no animal is so completely illustrated as in the dog. He often, with true magnanimity, takes chastisement from the hand from which he has accepted praise and favors. Idstone relates a frightful story of a fox hound whom its brutal master flogged so savagely for "babbling" as to cut out an eye with the lash. Notwithstanding this the animal continued to hunt with the pack till the end of the chase, whereupon the *human brute* took out his scissors and severed the skin by which the dog's eye had hung pendant during the entire run.

Fear and courage are exhibited in dogs as in the human race. Some breeds and individuals are very timorous while others are models of courage and fortitude. A greyhound has been known after breaking his thigh to run on till the course was concluded. Nearly all of the emotions attributes are to be noted in dogs, and on the whole there is much to admire and love in this sagacious and devoted companion.

LIVE FISH AT THE CENTENNIAL.

THE work in this department is progressing, and there is every prospect of the best display in this line ever made in America. Mr. Thad. Norris is giving his services to the commission as a member of Mr. Landreth's staff; is in fact, his piscatorial advisor, and Mr. Fred Mather has been appointed Superintendent. This makes a strong working team, and we are informed that work has been begun in earnest. The fresh water is to be taken from the works on the Schuylkill and filtered in four tanks seven and a half feet deep and seven feet in diameter, that clear water will be the rule and not the exception. The salt water will be filtered and used over again by being elevated into tanks by a hot air engine and afterward falling through a perforated bottom into another tank will be perfectly aerated. Two large transporting tanks have been built to bring fishes and salt water from New London, Noank, and other fishing stations on Long Island Sound. One of these will soon be sent to Bermuda by request of the British Commission for rare fish, marine plants, coral, brain-stones, etc.

We hope that our Fish Commissioners and Fish Culturists will not neglect this opportunity to send on their best and choicest specimens so that it will be a National display of our fishes as well as other industries. The following extract from a letter written by Mr. Mather to several persons interested, will show what the programme is.—

"We want to make an exhibition for Europeans. We want to show them what we have in the way of fish and fish culture. They have as a general thing little idea of the wealth of our waters. They have but one species of *esox*, (pike or pickerel) and only one perch, and one cat fish. They are so hard up for fish that they eat all the rags, (skates, tobacco-boxes, &c.,) and in the markets of France I have seen cyprinoids not three inches long, such minnows as we use for bait. We want them to see that we have better fish, and more of them than they have; and better fish culturists *and more of them.* So let us all put in and contribute to make up a good exhibition."

The invitation to unite on this we hope will meet with a hearty response by all. Fish culturists can send the fish or eggs to Mr. Mather with the assurance that they will be well cared for. He is now out of the trout season, and is working for the general good of the cause, and besides is not in the slightest degree tinctured with professional jealousy.

All donations we understand are to be labelled and catalogued, which will thus be a standing advertisement of parties in business, or an acknowledgement of favors to others. This system is thought best in order to show the extent of fish culture, and the number of persons engaged in it, and so will be adopted. Of course, those who have charge of it can go to the fishermen with their tanks to get what they may require, but donations would be preferred.

—The bill permitting the shooting of wild fowl from sink boats in Talbot county, Maryland, has passed the Senate.

GAME PROTECTION.

—There was an error in the proposed amendments to the game laws of this State, as printed in our issue of 3rd ulto., which occurred in the engrossing and which it is important should be corrected, as it alters the sense of the whole clause. In section No. 2, referring to the killing of ducks, it should have read "between sunset and daylight," instead of sunset and sunrise as now printed.

—A conviction was obtained against parties in Newbern, North Carolina, last week, for violating the fish laws as applying to the waters of Neuse River. What made the case more complicated, was that two parties claimed and exercised the right to fish in the same spot on the same day, and as both had violated the section of the law, which forbids any person or persons from using more than one seine in the same seine hole, all were liable to conviction.

POUND NETS.—An effort is being made to secure the passage of a law which shall at least regulate the size of mesh used in the pound nets. It is said that tons of small fish are taken in the spring of the year, too small to be marketable and only fit to be thrown on the ground for manure. The mesh used in these nets is unquestionably too small, and while the law is being passed why not fix the date, say at June 15th, when it shall be lawful to set them. This will let the spawners escape. There are nets used, however, which do a thousandfold more damage than the pounds, and yet we hear nothing said about them. We allude to the fly-nets or run-arounds.

YONKERS SPORTSMEN'S CLUB.—This Club held its first annual meeting at their commodious club rooms, and elected the following officers for the ensuing year: President, Hon. Joseph Masten; Vice-President, Peter N. Fowler; Secretary, G. Rayner; Treasurer, H. A. Sims; Executive Committee, Messrs. E. L. Thomas, Joseph O'Brien, and Chas. W. Austin. The Club shows a record of 74 active members during the past year, and has successfully sustained four suits for violation of the game and fishing laws with very beneficial results.

Game Laws of Kansas

LAWRENCE, Kan., February 28th, 1876.

EDITOR FOREST AND STREAM:—

For the informa tion of all concerned I beg to inclose you the within game law, just passed by the Kansas Legislatnre. Would that it bad the brevity and conciseness of the Japanese law given in your issue of 24th Feb. This law is the result of a fierce struggle between the intelligent sportsmen and the unintelligent granger, which has been going on for several years; the latter having the idea that he had a right of property in all game found on bis land, and that he could net and trap and sell to any extent, or at any time, and that no one else should have the right to kill "bis birds" at any time, while the former would, if possible, stop the wholesale trapping and netting for shipment which has been exterminating our game. (I know of one station on the L. L. & G. R. R., where over *two tons* of pinnated grouse were shipped by express, caught entirely by farmers in 1874). As you will see, this law is something of a compromise, though the granger has the advantage, as we have a law making it a misdemeanor, instead of a trespass, to hunt on the inclosed grounds of another without permission. However, as it stops netting and trapping for market, we are satisfied. W. A. H.

The first section of the new act referring to close seasons is as follows:—

It shall be unlawful for any person or persons to hunt or pursne, kill or trap, net or ensnare, destroy, or attempt to kill, trap, net, ensnare, or otherwise destroy any wild bock, doe or fawn, wild turkey, prairie hen or chicken, ruffed grouse (commonly called part tidge nr pheasant) between the 1st day of January and the 15th day of August, in each and every year; or any quail between the 1st day of January and the 1st day of November; or any woodcock between January 1st and July 1st; provided, however, that it shall not be lawful for any person at any time to kill any quail other than upon the parties own premises, unless permission first be bad.

This stops the sale during a portion of our now close season of quail and grouse in our market.

—The Trustees of the Oquossoc Angling Association met at the office of the President, Mr. Geo. Shepard Page, 10 Warren street, on Friday last. The profits of the season of 1875, as shown by the Treasurer's report, amounted to ten per cent. on the business transacted; a very gratifying exhibit. The headquarters of the O. A. A. are at Camp Kennebago, the junction of Rangely and Kennebago streams, Franklin county, Maine. The record for the season's catch shows that over a hundred speckled trout were taken exceeding three pounds weight. The largest weighed nine and a half pounds.

—The trout season opened in New Jersey on the 1st inst., but until the snow water is out of the streams there is not much fishing done. The law expires in this State on the 15th. There will be the usual rush to the preserved waters, on the South Side of Long Island, and fishermen will be more fortunate, in the condition of the water at least, than they were last year. Then, it will be remembered most of the streams and ponds were frozen over and the catches remarkably small.

SPLIT BAMBOO RODS.—We have on hand a valuable article on the Manufacture of Split Bamboo Rods, recently returned to us from Florida where it has accompanied our Editor-in-Chief for the past six weeks. It will appear in our issue of March 16th without fail.

—Mr. Fred. Mather, who has been placed in charge of the live fish department at the Centennial, offers for sale his entire establishment at Honeoye Falls, this State. The advertisement giving particulars will be found in another column.

—A herd of buffalo, extending over a stretch of county forty miles wide, appeared near the Cheyenne agency recently, and the Indians are making great havoc among them. This is the first buffalo herd seen so far east for twelve years. The bill to prevent the extermination of buffalo passed Congress last week. We trust it will be rigidly enforced.

The Rifle.

THE INTERNATIONAL MATCH.

THE muddle over the international match, or at least that portion of it referring to the English team, still continues. The question "to be or not to be," yet agitates the minds of English riflemen, and as far as the latest light has been thrown on the matter by correspondence and telegrams, it seems almost certain that no Imperial British, or purely English team, would participate in the greatest match of the year. In fact, Sir Henry Halford's last letter was very much to the point, and stated most positively that should an Irish or Scotch team be allowed to participate, his team, or rather what might better be termed the team of the N. R. A. of England would not. A letter was to have been sent this week, however, from our side, the purport of which was to offer Sir Henry a match for his own team, independent of the other organizations.

It occurs to us, however, that the officers of the National Rifle Association of England had no right to consider the circular which was sent to them in common with all other nations in the light of a "challenge." It was simply a resolution reading as follows:—

Resolved, That the President and Secretary of the National Rifle Association be authorized and requested to notify, in the name of this association, riflemen of England, Ireland, Scotland, France, Germany, etc. and all other countries having rifle associations or clubs, of the opportunity presented to them to participa e in the competitions instituted.

And besides, we hold the title of champions, and challeuges are generally issued to, and do not emanate from champions. Whatever invitation may have been given to the English riflemen by Col. Gildersleeve when at Wimbledon could neither be regarded as official or as excluding the riflemen of Scotland and Ireland from the competition. The Irishmen, it seems, are determined to send a team to try their luck for the third time. The cable tells us that under date of March 4th, the Secretary of the Irish Rifle Association has addressed a letter to Sir Henry Halford in which he says that "the original rules of the N. R. A. (by which we presume he means the rules applying to the selection of a team to visit this country) caused the withdrawal of the Scottish Club from the contest in America; unless these rules are withdrawn, the Irish Association will also be obliged to follow the example of the Scottish riflemen and enter an independent team. The original were limited and some of the most eminent Irish shots were not invited. Unless the principle of local preliminary competitions, and an equal representation in the final competition is conceded, it is hopeless to expect that Ireland or Scotland will consent to waive their right to enter independent teams."

The substance of this communicatiou we take to be that the Irish riflemen consider that the rules for the selection of the team as promulgated would shut out some of their best shots, and that the clause requiring them to go to England for the final competition was too irksome. It appears probable that we shall have au Irish and a Scotch team over, but that the long anticipated pleasure of greeting England's greatest rifle shot, in the person of Sir Henry Halford, will be denied us.

THE CENTENNIAL MATCH.—The Joint Committee of the N. R. A. and Amateur Rifle Club met on Monday afternoon and received the report of the committee recently appointed to prepare the scheme upon which the next international team shall be chosen. The plan is substantially as follows:—

Eight men shall constitute a team, who with four others, to be known as reserves, shall be selected for their merits, to be determined by competition at Creedmoor. The first competition shall be open to all native born citizens, to take place on May 31st and June 1st, 1876; 50 shots each day by each competitor; 15 at 800 yards, 15 at 900 yards, and 20 at 1,000 yards. The second competition shall take place at Creedmoor on June 6th and 7th, 1876, open to sixteen men making the highest aggregate scores in the first competition. They shall have the same number of shots, and at the same distances, as in the first competition. The twelve making the best records shall constitute the team and reserve.

The third competition shall be open to the team and reserve only, to take place June 1st and 14th, 1876, same number of shots and distances as in the first competition. The scores in this competition shall determine the places of the team, the highest taking first place in the team; the best eight making the team; and others ranking according to scores, in the reserve. Regulations of the National Rifle Association of America to be followed closely.

Weapons, any rifles within said regulations. No sighting shots in any of the foregoing competitions, and no practice by competitors on the days of said competitions. If a competitor who has entered for the foregoing competitions shall for any reasons satisfactory to the committee charged with the conduct of said competitions, be unable to finish his score or compete on any day above named, then said committee shall in their discretion fix another day or days for such competitor to finish his score, or shoot such part of the competitions as he may have missed. The said committee shall have the power to say when, if at all, a competition or any part thereof shall be postponed on account of stormy weather, and name the day or days when the same shall be resumed or completed.

As soon as practicable after the completion of the second competition the team and reserve shall, by a majority vote of the twelve, elect a captain, not of their number. The captain, when elected, shall have the management of the team, and prescribe the rules for its government and practice. Each person entering for the competition shall subscribe to the following:—"I desire to competc for a place in the American Rifle Team to represent the United States in the international long range rifle match for the championship of the world, and hereby agree to conform to the conditions prescribed for the selection of said team. If I am a successful competitor I agree to perform such practice and submit to such discipline and government as the captain of said team shall direct."

Entries for the competition may be made at any time up to ten o'clock A. M. of May 31st, 1876. Persons desiring to enter are requested to so inform the Secretary of the Joint Committee by letter at as early a day as possible.

Messrs. James Gordon Bennett, Gen. John B. Woodward, and E. H. Sanford, were appointed a committee to select a Centennial trophy for the International Rifle Match for the championship of the world. H. A. Gildersleeve, G. W. Wingate, and George Crouch, were appointed a committee to superintend the shooting at Creedmoor, which is to determine the formation of the American Centennial Rifle Team.

—Capt. M. P. Pierce, formerly a commander of sharp shooters and a long range rifleman twenty-five years ago, writes to us of the Centennial matches as follows:—

WENONAH, Gloucester Co., N. J., March 6th, 1876.

EDITOR FOREST AND STREAM:—

Myself and others interested in rifle shooting, and residing in the vicinity of Philadelphia, are much surprised to learn that the Executive Committee of the National Rifle Association can find no suitable grounds near Philadelphia on which to shoot the Centennial matches, and therefore fix upon a point a hundred miles away from the Centennial grounds, which will debar nearly all the visitors who would desire to enjoy the matches from witnessing the same.

We have right here close to Philadelphia, on the West Jersey Branch of the Pennsylvania Railroad, as good sites for rifle ranges as can be found anywhere, and so convenient to the Exhibition grounds, that all visitors desiring to do so could witness the matches. The ranges and all necessary paraphernalia would no doubt be prepared by parties interested here. MILTON B. PIERCE.

—The military matches during the Creedmoor Spring Meeting promises to be very interesting as teams from the 48th and 51st Regiment N. G. and others located in the Central and Western parts of the State will compete.

CONLIN'S GALLERY.—A rifle tournament is to be held at this gallery, 930 Broadway, from March 8th to April 29th, inclusive, the proceeds of which are to be given to defray the expenses of one of the excursions for sick children of the "St. John's Guild Floating Hospital." A medal, to be called the "St. John's Guild Medal," will be awarded to the best score, in addition to which there will be several prizes for other scores made in this competition. The number of competing targets will be limited to three hundred. Competitors, by renewing their entrance fee each time, will be allowed to shoot as many targets as they wish, until the limit has been reached. Further particulars may be obtained at the gallery.

The tenth and final competition for the *Turf, Field and Farm* Challenge Cups was shot March 2nd, at this gallery. L. V. Sone won the first cup for the third time after a very close competition with Chas. A. Cheever and L. C. Bruce, who have won it twice each. Mr. Sone, finally carries off the first cup from the best gallery shots in the city. H. B. Beydenburgh won the second cup, finally, after a close contest with J. O. Wright. Frank H. Lord, the "crack" pistol shot of the gallery, also finally won the third cup. The following is the summary of the ten competitions for the cup:—

1st cup, best score.	2d cup, score nearest 35.	3d cup, nearest 25.
1—Robert Faber....41	..M. J. Duffy.....	J. Burns.
2—P. C. Noone....46	H. D. Blydenburg.....	W. H. Richards.
3—L. C. Bruce....44	F. A. Seyhell.....	C. Coddington.
4—W. B. Farwell..46	J. O. Wright.....	Frank H. Lord.
5—Chas. A. Cheever40	J. O. Wright.....	J. Woodward.
6—L. V. Sone.....42	J. Woodward.....	T. C. Banks.
7—Chas. A Cheever.43	Frank Houghton.....	H. Smith.
8—L. C. Bruce....43	H. D. Blydenburgh.....	W. M. Tileston.
9—L. V. Sone.....43	C. G. Peters.....	Geo. P. Watson.
10—L. V. Sone....	44 H. D. Blydenburgh	Frank H. Lord.

Winners—L. V. Sone, H. D. Blydenburgh, Frank H. Lord.

CREEDMOOR, JR.—The teams attached to the Citizens and Home Insurance Companies, shot a very exciting match on Saturday last, the former winning by one point, although there was no remarkably fine shooting done on either side. The scores were as follows:—

CITIZENS.

Name.	Score.	Total.
G. W. Jones	3 5 4 4 4 4 4 4 4	40
R. Chapman	4 3 4 4 4 4 3 4 4 3	37
J. W. Edwards	2 3 4 3 3 4 5 5 3 3	35
J. Donaldson	3 3 3 4 3 3 4 3 4 2	31
F. M. Parker	2 4 4 3 2 2 3 4 3 4	31
Total		176

HOME.

Name.	Score.	Total.
W. R Hobart.	1 2 4 4 4 3 4 5 5 3	35
J. W. Hitchcock	3 3 4 5 3 3 4 4 3 4	37
W. H. Macey	4 5 5 4 3 2 2 4 4 4	37
W. J. Ferris	3 2 4 4 4 5 3 4 3 4	36
F. B. Southwick	2 3 4 3 3 3 2 2 2 3	27
Total		175

HELLWIG'S GALLERY.—The fourteenth weekly competition in lying position took place at this gallery, 271 and 273 Eighth avenue, Wednesday, March 1st. Scores: B. Ginger won first prize second time, 47; J. McGlonsey won second prize the third time by hard work, making it his own property.

SCHUTZEN PARK, UNION HILL, N. J., *February 22d*, 1876.—The fine weather which prevailed brought a large attendance of riflemen to their grounds, their being a continuous firing at the targets from 9 A. M. till 5½ P. M., this time being fixed by the programme. There was pool shooting as well as shooting at the ring target. The rings were twenty-five, of one-half inch. These targets were open to all comers. Tickets good for three shots were sold for $1 each. Number of tickets for each shooter unlimited. Sixteen prizes in all value $250. Mr. Wm. Klein, of New York, made 65 rings, but having finished after 5½ o'clock P. M., the time fixed by programme to stop firing, he was not entitled to the first prize, which was awarded to Mr. George Baier. The prize consisted of a fine target rifle, value $80. Messrs. Wm. Klein, J. Mort, J. Tobler, A. Ermisch, J. Dittmar, J. Miller, G. A. Kimdahl, etc., were the most successful shooters following, some of them making less than 54 rings in three shots, which is similar to three consecutive bulls eyes in Creedmoor style. Mr. Baier made a score of 62 rings, those measuring only 7 inches together.

Practice shooting will take place on the above mentioned grounds, every first and third Wednesday in March and April, to which all riflemen are cordially invited.

March 3d, Practice Day.—Mr. Geo. Baier took the first prize with a score of 161 rings in ten shots. Mr. Wm. Klein, second prize, with 152 rings in ten shots. If your space allows me to do so, I will give you the full scores in future.

GLEN DRAKE.—Saturday, March 4th, the matches of the American Rifle Association at this range, drew together quite a large attendance of marksmen and spectators. Several ladies were also present. In the subscription match at 200 yards, the highest scores were as follows:—

Name.	Total.	Name	Total.
D. F. Davids	21	J. W. Todd	18
J. A. Gee	20	G. H. Thompson	17
H. Fisher	19	Alfred B. Fry	15

At the Subscription Match, 500 yards, best scores were:—

Name.	Total.	Name.	Total.
H. Fisher	24	A. W. Peck	18
D. F. Davids	21		

The three highest scores in the Remington Sewing Machine Match were:

Name	200 yds.	500 yds.	Totals.
D. F. Davids	4 3 4 4 4 ... 19	5 5 5 4 4 ... 23	42
G. H. Thompson	4 4 2 3 4 ... 17	5 3 4 5 5 ... 22	39
J. W. Todd	5 4 5 4 4 ... 22	0 0 3 3 5 ... 11	33

Saturday, March 11th, the match for the Association Cup will take place.

—We see by our contemporary, the *Montreal Gazette*, that the Whitney Arms Co., of Whitneyville, Conn., have just furnished the Montreal police with Whitney carbines, through the well known and popular caterer to the wants of sportsmen in that city, Mr. R. H. Kilby.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.* Gronper, *Epinephelus nigritus.*
Drum (two species.) Family *Sciænidæ.* Trout (black bass,) *Centrarchus aterrimus.*
Kingfish, *Menticirrus nebulosus.* Striped Bass or Rockfish, *Roccus lineatus.*
Sea Bass, *Sclenops ocellatus.*
Sheepshead, *Archosargus probatocephalus.* Tailorfish, *Pomatomus saltatrix.*
Black bass, *Micropterus salmoides;* *M. nigricans.*
Snapper, *Lutjanus cœrus.*

[*Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.*]

FISH IN MARKET.—The increased demand owing to the Lenten season has stimulated the fishermen to great exertions, and with the mild weather prevailing, the benches have made a fine display during the week. We quote: Bass, striped, 25 cents; smelts, 15 to 20 cents; blue-fish, 18 cents; salmon, frozen, 50 cents; mackerel, 25 cents; shad, Southern, 50 cts., North Carolina, $1; weak-fish, from North Carolina, 15 cents; white-perch, 18 cents; Spanish mackerel, 50 cents; green turtle, 20; terrapin, $12 per dozen; frost-fish, 8 cents; halibut, 15 cents; haddock, 8 cents; king-fish, from Key West, 20 cents; cod-fish, 8 to 10 cents; black-fish, 12 to 16 cents; flounders, 8 to 12 cents; sea-bass, from South Carolina, 15 cents; eels, 15 to 18 cents; lobsters, live, 10 cents, boiled, 12 cents; sheepshead, 30 cents; turbot, 25 cents; scollops, $1 per gallon; soft clams, 30 to 60 cents per 100; white-fish, 18 cents; pickerel, 18 cents; sun-fish 10 cents; perch, yellow, 10 cents; salmon trout, 20 cents; oysters, 10 cents; hard crabs, $4 per 100; pompano, $1 per pound.

—If any one wishes to fish in the Connecticut river he must apply before March 15th to the Fish Commissioner for blanks, on which he must record each day's catch, and return them to the Commissioner at the end of the season.—*Germantown Telegraph.*

We presume our contemporary refers to net and not rod fishermen. As we understand the law seiners and other netters are required to keep this record, but not the rod fishermen.

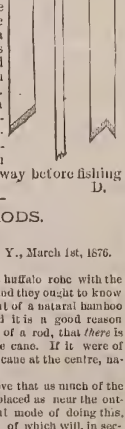
ADIRONDACK FISHING.—Pickerel are being taken out of the Raquette waters this wluter by the ton. They are said to be far superior to the ordinary pickerel, possessing more of the flavor of the muscalonge. This is doubtless owing to the fact that their principal article of diet is trout, and also that these waters are far purer and colder than those which usually furnish the breeding grounds of this fish. These are the only waters in the Adirondack regions where pickerel can be found. The guides report good prospects for plenty of trout this spring. About 40,000 salmon trout were put into the Fulton chain of lakes in the North woods, recently. Some of the backwoods landlords expect to receive 100,000 salmon and 25,000 speckled trout from Seth Green, for stocking the lakes and streams of the North woods.—*Rutland Herald.*

MOVEMENTS OF THE FISHING FLEET.—The Georgesmen are returning from their first trips of the season with light fares, having encountered very heavy weather, which interfered with fishing. During the week there have been 72 arrivals of the fishing fleet, 60 from Georges, 7 from the Banks, and 5 with frozen herring. The receipts of fish are 1,518,000 pounds of codfish, 487,000 pounds of halibut, and 2,000 barrels of herring. The fleet will soon be under weigh again, and we hope their second trip may retrieve the first.

Schooner Pioneer, Capt. Osier, from Georges on Monday, weighed off 65,000 pounds of halibut, stocking $2,960.12, which is the largest trip of halibut ever landed from Georges. On her former trip she landed 30,000 pounds, stocking $1,107, making an aggregate of $4,067.12 for the two trips. These halibut were caught on hand lines, in what is known as the deep water Georges fishing, which is from 100 to 150 fathoms in depth, and this is the first season in which this kind of fishing has been pursued with any marked success. The cook's share was $167, high line, $181. Time absent, three weeks. The vessel got within twenty miles of Eastern Point, on the 15th ult., and was driven back by the storm and again came to anchor on Georges.—*Cape Ann Advertiser, March 3d.*

—If any of our Maine friends have a couple of brook trout weighing about ten pounds each, we should like to have them for exhibition at the Centennial.

TROLLING FOR SALMON TROUT.



Seth Green has written the following letter on the above subject to the Hon. E. M. Smith, Fish Commissioner. As it conveys some valuable information regarding this mode of fishing, we print it in full:

SIR: Every year since 1872 we have been distributing salmon trout fry in many of our inland lakes. Those deposited in 1872-3 will be large enough to catch the next coming season, and there are but few people who know how to take them. I will give some hints on the different ways they are taken. They are taken with silver and brass spoon hooks, by leading the line so that the spoon runs near the bottom. But they are taken sometimes at the top of the water and sometimes half way down from the surface, and by trolling with three lines at one time—one at the surface, one half way down and one near the bottom. Another way is to anchor a buoy out in deep water and cut fish in pieces, varying in size from a hickory-nut to a butternut, and scattering the pieces around the buoy for some days; then anchor your boat to the buoy, using a piece of the same kind of bait on your hook that you had been in the habit of scattering around your buoy; fish near the bottom and give it a little motion by giving your line short jerks. The buoy should not be baited the day you go fishing.

Another way is to have a rod and reel and four or five hundred feet of fine strong line, and if the water is deep put a lead sinker weighing three-quarters of a pound on the end of your line, and tie a single gut leader twelve feet long, on the main line twelve feet above your sinker. For hooks, you should use nine number 6 Limerick hooks, tied three together, back to back, so that they look like a three-pronged grappel. Tie them on a single gut leader, about two and one-half inches apart, and you have a gang of hooks five inches long. Put two very small brass swivels on your leader. Use the kind of small fish for bait that the trout are used to eating in your lake. Hook one of the upper hooks through the under and upper jaw so that his mouth will be closed. Then hook one of the lower hooks through the back near the tail in such a manner that it will give the fish a curve and will turn around like a trolling-spoon when it is drawn through the water. The most successful fishermen use three of this same kind of rigs in one boat, they fish one rig near the top with a light sinker, say four ounces, and one about half way down with an eight ounce sinker and the twelve ounce sinker near the bottom. This is the most successful rig I have ever used. The boat should be rowed very slow, so that you can feel the bottom with the heavy sinker nearly every time you raise it up and let it down. The bait should be raised up and down by a gentle motion, set the other two lines, one on each side of the boat, and they will take care of themselves. Live fish should be used for bait. Some do not use but eight hooks, one hook for the upper to hook in the minnow's mouth and one to hook through the back near the tail, and two sets of three each between the two single hooks tied about one and a half inches apart. Be careful and keep your minnow looking as natural as possible. Do not rub any more scales off than you can help. When you let your line out your boat should be in motion to keep your bait from twisting around the main line. SETH GREEN.

Rochester, February 21st, 1876.

ICE CHISELS.—The most common article in use among fishermen for cutting holes for setting in lines, is the chisel, with edges rounding and ground like an axe. I have used such an one to my *dis*-satisfaction. To cut a line of from thirty to fifty holes through ice twenty-eight to thirty-four inches in thickness, requires a great deal of churning. I have improved upon that article, and have never seen one except the one I had made. I give you the description for information of the many adult fishers who are not content with fishing in open water only. Mine was five inches in breadth, and twelve to fourteen inches in blade, with edge bevelling on one side only, like a chisel, the ice with this will chip off in little pieces, instead of being all churned up with snow as by the axe chisel. The heavier the chisel the easier the work. No. 1 of the diagram is the pattern. I have an idea since the little hand chisel for refrigerators have come into use, that a chisel formed like No. 2 might be an improvement on No. 1. It remains to be proved, however. Patents not applied for. I suggest that a safeguard six inches long put on the extreme end of handle will be of some importance to prevent the chisel from slipping through one's hand when the bottom falls out. I have seen two chisels pass away before fishing commenced. D.

SPLIT BAMBOO RODS.

ITHACA, N. Y., March 1st, 1876.

EDITOR FOREST AND STREAM:—

The old Indian gave as a reason for wearing his buffalo robe with the hair outside that buffaloes always wore them so, and they ought to know the best way. The toughest and most elastic part of a natural bamboo cane is a thin casing next under the enamel. And it is a good reason for placing that on the outside in the construction of a rod, that *there* is where nature placed it in the construction of the cane. If it were of any use to have the strongest part of the natural cane at the centre, nature would not have left it hollow there.

But it needs no argument or illustration to prove that as much of the strongest part of the cane as possible should be placed as near the outside of the rods as possible. The most successful mode of doing this, that I have seen, is to work out six strips, each of which will, in sections, show a perfect isosceles triangle, and side-faced with the enamel. Glue these together with the enamel faces out, and you have a six-sided, or hexagonal stiick, the same shape in which those wise little creatures—the bees—make their cells for strength and storage. A touch of sand paper will smooth the corners without cutting away the breadth of a hair, if the fitting is well done, and you can have all the rich and varied shades of the natural "all over" the surface. Mount your rod with ferrules and collars to fit the form, and you have the prettiest rod you ever saw, and most assuredly the straightest and most elastic that can be made of the material.

The objections to the Krider rod, described in your paper of the 2d inst., are:

First—You must file off the enamel on each strip down to the fibre, so as to make the glue hold. Second—In filing the sticks in a round you must cut away a very considerable part of the strongest fibre underlying the enamel. Third—You expose to the elements the porous part of the cane, while you close in that part which, if nay, is waterproof. Fourth—In use of the rod, the greatest strain being upon the outside, is put upon the weakest part of the material.

I do not by any great stress upon any man's opinion as to the best way to make a rod, unless he can support it by good reasons. If mere opinion availed much, I might perhaps be entitled to express mine, independently of the reasons given above. For I have been a diligent fly-fisher for about a quarter of a century, and have handled a great many rods, and I do not hesitate to say that, in my belief, this hexagonal bamboo is the best rod extant. Your city readers and sojourner-, I am informed, can see specimens of these rods at Conroy, Bissot & Malleson's, 65 Fulton street. I don't intend to advertise anybody; but, as how to make the best rod is an important question to all devotees of the "gentle craft, I thought it not improper that I should contribute my mite to the discussion of it. H.

Mr. J. B. Crook, of 50 Fulton street, has a method of putting split bamboo rods together which strikes us as being particularly good; it is as follows:—

"The but and second joints are put together in six strips with the enamel on the outside. The bamboo must be of the same stiffness so that it will not be any stiffer on one side than the other. To make sure, when they are put together and you roll them around it they are not the same they will jump. That we do not want, and it must be thrown away. When you get a joint and but that is perfect in all parts, then you get a good rod. On the tips I put the enamel on the inside in sections of fifteen inches long, of four pieces of bamboo, no two enamels go together. Put the enamel and the soft part together so that the enamel crosses the tip, then work down from the outside, and as you come to the extreme point you get nothing but enamel. The part you take from the outside is soft, but the nearer you get to the centre the more enamel you get, which is the strength of bamboo, and then you get tips that will wear out any tip made with the enamel on the outside; will keep straighter and will be stiffer. They cost more to make my way but will pay in the end."

ADIRONDACK BOATS.

GREENWICH, N. Y., Feb. 20th, 1875.

EDITOR FOREST AND STREAM:—

I see an inquiry in your correspondence as to who makes Adirondack lake boats, and your reply is, "Newcomb, Essex & Co., N. Y." Now, where are they, and who are they? I never heard of them. One of the best makers of the Adirondack guide boat I know of is a man by the name of Chase, who lives at Newcomb, Essex county, N. Y. He has the reputation among the Long Lake and Brown's Tract guides of putting together a boat in the very best manner. There are other excellent workmen at Long Lake, *viz;* Reuben Cary and Henry Stanton. I have one of Reuben Cary's make, which I have used several years, and it is about as good as new. My impression is that the Saranac men do not excel in modeling or making these boats, and I know the Saranac guides order boats from Chase, at Newcomb, and from Cary and Stanton, at Long Lake. Reuben Cary is making me another boat this year, and either of the three men above mentioned can be relied on for thoroughly good work. Cary's and Stanton's models differ from Chase's in being higher in the stern and somewhat sqnarer, while his are not so sheer and nlike at both ends. There is, perhaps, a little more style to the Long Lake boats, while Chase's are somewhat stiffer. D. W. MAXDELL.

[The answer to our correspondent was a mis-print. It should have read C. J. Chase, Newcomb, Essex Co., New York.—ED.]

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl.

GAME IN MARKET.—A few varieties of ducks and geese are all in the way of game to be found in the markets. Canvass-backs still continue to be received from the Chesapeake and sell for $2 75 to $3 25 per pair; red-heads are worth $1 25 to $1 50; mallards, $1 to $1 25; black ducks, 87 cents to $1; broad-hills, 50 to 75 cents; geese, $1 to $1 25 each. The latter, together with the commoner varieties of ducks come from the South Side of Long Island. Wild pigeons are scarce at $3 75 to $5 per dozen.

—The Luzerne County (Pa). sportsmen's club have ordered 1,000 quail from North Carolina, which they will distribute through the county for propagation.

CONCENTRATORS.—A correspondent writes:—

"Has it never occurred to the choke-bore advocates, or those in doubt, that by using concentrators, the simplest and cheapest being a bag of very thin woolen inclosing the shot, a gun may be a 'choke-bored' at pleasure. I tried some of Kay's concentrating cartridges a day or two since with a Stephen Grant C. F., the effect was 'prodigious,' as the ducks will soon learn."

NEW JERSEY, *Tuesday, March 6th*, 1876.—Woodcock made their first appearance with us Thursday, the 2d inst. The ground is frozen very hard, and until yesterday has been covered with snow. They can find feed in the spring holes, and will probably stay unless we have another cold snap. This is the earliest date in about seven years of their coming; they generally arrive about the last of March, or the first week of April. Three birds were seen at Tappan, N. J., which is seven miles north of this place, the 18th of February. Wilson snipe made their first appearance on the 20th of February. We have fair snipe grounds, but the best lie farther north. I shot two black-ducks on the 1st inst., the first I have seen. The creeks are open, with plenty of feed, so we shall have good sport. AL. HUYLER.

NEW JERSEY.—*Kinsey's Ashley House, February 27th.*—Barnegat Bay is alive with geese and brant, thousands are seen feeding on the clam island plots every day. Joel Ridgway, with the crew of the Life Saving Station, bagged, on Friday, 41 brant, 6 geese, and 21 ducks. Mr. Kinsey killed 5 geese; wind westward. B.

MASSACHUSETTS.—*Salem, February 28.*—Gunning is dry of late, and will be until snipe arrive. Weather at present gray, raw, and cold. No sea fowl, as our harbor is frozen up. Goldfinches numerous near Danvers lately. Snow-buntings on Lynn marshes are plenty. Shore birds have

been scarce all winter. An occasional meadow lark is seen. Grosbeaks and cross bills are about. I lately had a bird handed me, which proved to be a cow bunting, and much out of her latitude at this season. Most time to look for early spring visitors. TEAL.

MARYLAND.—Quail have not only been plentiful during the past season, but there are plenty left for breeding. The editor of the *Snow Hill Messenger* says that on Monday last he found ten bevies within an hour's walk of that town. He adds: "During the whole season we have heard of no case of arrest of hunters for trespassing upon the lands of farmers. Our farmers generally are disposed to be very liberal in this respect, and when our home people desire to gun upon their lands, they have little difficulty, in most instances, in obtaining permission. To such as, during the past season, have kindly extended to us this privilege, we take this occasion to extend our heartfelt thanks."

PIGEON MATCHES.

—The matches arranged between Ira A. Paine and Dr. B. Talbot were shot on Monday at Deerfoot Park. The first was a "table" match, at 20 birds each, 21 yards rise, for $50 a side, the gun to be laid upon the table until the bird was on the wing. This match resulted in a tie, but was won by Paine in shooting off. The following is the score:—

Paine—0 1 0 0 1, 0 1 1 1 1, 1 0 1 1 1, 0 1 1 0 1. Total, 20; killed, 13; missed, 7.
Talbot—1 1 0 0 0, 1 1 0 1 1, 1 1 1 1 0, 1 0 1 0 1. Total, 20; killed, 13; missed, 7.

THE TIE.

Paine—1 0 1—2
Talbot—1 0 0—1.
Time of the shoot, 53 minutes.

The second match was at 15 pairs of birds each, 100 yards boundary, Dr. Talbot standing at 18 yards and Paine at 21 yards. This was won by Dr. Talbot by the following score;—

Eighteen yards—Talbot—1 1, 1 1, 1 0, 1 1, 1 1, 1 0, 1 1, 1 1, 1 1, 1 1, 1 1, 1 0, 1 1, 1 1, 1 1. Total, 30; killed, 27; missed, 3.
Twenty one yards—Paine—1 1, 1 1, 1 1, 0 1, 1, 1 0, 1 1, 1 0, 0 1, 1, 0 1, 0 0, 0 1, 0 0, 1 1. Total, 30; killed, 20; missed, 10.
Time of the shoot, 50 minutes.

—A match was shot Saturday, March 4th, at Newark, from ground traps, under the rules of the New York Sportsman's Club, a barrel of flour being the stakes. The birds were all strong and good flyers, Harris, with a Parker gun, killing as follows: 1 1 1 0 0 0 1 0 0 1—5; McDougall, with a Scott gun, thus: 0 1 1 0* 1 1 1 1 0 0—6; *dead out of bounds. SCALPER.

—The Onondaga Co. Sportsman's Club will hold a tournament, at the Syracuse Driving Park, on Tuesday, March 14th, open to all members of organized clubs, except professionals. Entrance fee, $5. Liberal prizes are to be offered.

ST. LOUIS, MO., February 23d, 1876.

EDITOR FOREST AND STREAM:—

Shooting matters, especially those relating to traps and pigeons, have been very quiet in this city since last fall, owing more to a scarcity of birds than to any drooping of spirits on the part of the considerable number of lovers of the sport that St. Louis claims as citizens of sterling worth. A reorganization of the Gun Club was had on Feb. 1st, at the office of Mr. John D. Johnson, Chairman of the Law Committee of the National Association, by the election of Mr. E. C. Sterling, President; Charles H. Turner, Vice President; and Wm. A. Albright, Secretary and Treasurer. These gentlemen are all well-known patrons of the dog and gun, and the success attending the exhibition of the splendid kennel of Irish setters at Chicago, owned by Messrs. Turner and Sterling, is a matter of sincere congratulation to their friends here.

In order to inaugurate the new administration, the club decided to celebrate the birthday of honest George with a grand pigeon shoot, on their grounds, at Rinkle's Six-Mile House. With a view towards increasing the interest in the day's sport, Mr. H. C. Pierce, who, since August last, has held the club's champion medal, extended an invitation to Mr. W. B. Hanworth, champion of the Quincy, Ill., Shooting Club, to be present and meet him in a friendly match. Early in the day quite a large party had gathered to witness the sport. The terms of the contest between Messrs. Pierce and Hanworth were, fifty single birds each, at twenty-one yards rise, without boundary, substituting therefor three minutes in which to return the bird to referee

The shooting of both gentlemen was certainly of a high standard, considering that a gale of wind was blowing during the time of the match. Mr. Hanworth showed great nerve and with his well-known staying qualities, proved himself a hard man to beat. Mr. Pierce had not the benefit of the least practice since the Memphis Tournament, in October last, his arm at that time having received considerable injury from the recoil of his very light gun. The following score shows a very handsome run to his credit of 33 straight, and his friends think, had it not been that, after killing the 37th bird, a shell became fastened in his gun, thereby compelling him to change for a much heavier one, his string would have been a clean one from fourth to the fiftieth.

H. C. Pierce—1 1 0 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 0 1 0 0 0 0 1 1—42.

W. B. Hanworth—1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 0 1 1 1—47.

Immediately following the Pierce-Hanworth match, the medal shoot was had, a heavy wind assisting to cause a very poor score. On the tie at 26 yards Mr. Pierce undoubtedly lost the medal, by going to the score without cocking the hammer of his gun, thereby scoring a lost bird. The following is the score:—

Name.	Total	Name.	Total.
H. C. Pierce	9	H. P. Wilson	5
C. Jeff Clark	9	F. Thomas	6
W. A. Albright	9	George Rinkle	5
John D Johnson	8	Joseph P. Card	5
Chas. H. Turner	8	W. C. Christy	6
Chas. M. Williams	7	G. S. Choteau	4
Jeff C. Clark	7	D. Rankin	3
James. H. Lucas	6	Dr. Nubey	3
J. B. C. Lucas	5		

Ties at 26 yards.

Name.	Score.	Name.	Score.
H. C. Pierce	1 0 1—2	W. A. Albright	1 0 1—2
C. Jeff Clark	0 1 1—2		

Tie at 31 yards.

Name.	Score.	Name	Score.
H. C. Pierce	0 1—1	W. A. Albright	0 0—0
C. Jeff. Clark	1 1—2		

Following above was a match at five birds, 31 yards rise, between Mr. Hanworth, of Illinois, Pierce, of Missouri; and Frank Harrison, of New York, which was won by Mr. Hanworth, Mr. Pierce beating Mr. Harrison in shooting off their ties.

Now that the ball is set fairly rolling, we trust it may move on, accumulating strength and needed vitality, until this city may boast a large and well-organized sportsmen's club, of which its dog and gun-loving citizens may esteem it an honor to be members. We are off to-night to enjoy the boundless hospitalities of our sporting friends of the Crescent City during their approaching "Mardi Gras" festivities and tournament. We promise—if our realizations equal our "great expectations"—to advise you of our impressions there received. ST. LOUIS.

Another correspondent, to whom we are indebted for an account of the above match, writes us as follows regarding the positions which it seems are now considered essential in shooting matches:

"It was a very interesting exhibition of marksmanship, but owing to the care and deliberation with which the gentlemen braced and settled themselves for the shot, it destroyed the effect of the otherwise excellent display. In this connection, is it desirable to practice in such artificial attitudes? Every field sportsman knows how utterly impossible it is to prepare oneself for the rise of a bird. Why, then, drift into the bad habit of striking an attitude better befitting a prize-fighter than a gentleman marksman?"

ST. AUGUSTINE, Fla., 26th, 1876.

Handicap sweepstakes, 80 yards boundary, six birds

Name.	Yards.	Score.	Total.
B. B. Morrison	28 yards	1 1 1 0 1 1	5

Brice	24 yards	1 0 1 0	2
Betton	28 yards	0 1 1 1	3
N. Edgar	28 yards	1 1 1 1	4
Dr. Symington	22 yards	1 0 1	2

This is pretty fair business for a new club, composed principally of novices; and although many of the birds were laggards yet game pigeons of any kind, and especially good flyers, are hard to obtain for use here. The club grounds are on the North Beach, on a sandy plateau with circumvallant sand-hills. There is a very neat pavilion belonging to the club, with all necessary apparatus. Lunch can always be obtained from Whitney's refreshment room, known as the Lunch Basket, which stands an eighth of a mile distant. The features of the North Beach are similar to those of Fire Island on the Long Island coast. Next winter more satisfactory arrangements will be made for obtaining pigeons. Mr. Morrison, whose score we have given, is one of the staunchest trap-shooters we have ever met, although seldom at the score. HAL.

CHOKE-BORED GUNS.

SIR—In July last I received from Mr. W. W. Greener one of his best quality 12 choke-bore guns, and immediately proceeded to test it for pattern at a 30-inch circle at 40 yards, with No. 6 chilled shot. I only fired three shots with the right barrel, making what I considered the extraordinary scores of 247, 221, 217.

All August I frequently tested its killing powers at wood-pigeons, on one occasion killing seven in succession, sitting on a tree, the trunk of which was 65 yards from where I sat concealed. I have now just returned from a fortnight's shooting at partridges, hares, and rabbits, in Herefordshire, during which I had ample opportunities of testing both gun and chilled shot. Of the latter, I found that it killed cleanly at long and short ranges. Of the gun, I cannot speak in too high terms; at short ranges game was not too much cut up, whilst at distances over 35 yards the superiority over the old guns was immense.

As regards choke-bores being more difficult to shoot with, I can only say that I have shot with the old guns for the last seventeen years, fourteen of which were spent in India, where I was generally out shooting four days in the week, and very often the whole seven; and I do not think I ever shot better than I have lately done with my choke-bore, and I am convinced that the new system only requires a trial to be appreciated by all men who like to kill their game cleanly.

Ottershaw, Sept. 16. J. E. W. HOWEY, Capt. Bengal Army.

SIR—As you have kindly opened the columns of *The Field* to those of your readers who have used choke-bores this season, I beg respectfully to give you my experience.

In June last Mr. W. W. Greener built me one of his best quality No. 12 choke-bores, upon his improved principle, in the use of which I felt awkward for the first week or two, as I could not use it with the certainty of precision I could my old one. After a little practice this wore off and I found with 2¾ drachms of powder and 1 oz. of shot I could use it at rabbits in covert with deadly effect, with the same charge, up to 40 yards, which was quite sufficient for my purpose at that time.

I was most anxious to give it a fair trial in the open field, but as I am not the fortunate possessor of an extensive moor, I had no opportunity of testing it on grouse, consequently I had to content myself with waiting until September came in, which seemed to be a longer time in coming than usual. On the 21, myself and B. started out, but the day was wet—a constant, heavy, drizzling rain, which made shooting anything but comfortable. Birds were scarce, very strong on the wing, and difficult to get near. However, I managed to bag six brace out of seventeen shots, those I missed being cross shots too close to me. B., who is a fair average shot, used a good gun on the old system by a well-known maker, only answered for one brace. This gave me great confidence in choke-bores. Since that time I have tried it on various kinds of game with great success, and have found it to exceed my utmost expectations.

It does not, as predicted by some, mangle the game at short distances, while, on the other hand, I have frequently killed birds clean and well up to sixty yards, and occasionally between seventy and eighty yards. These long shots have not been confined to partridges alone, as the third time we were out a hare over 9½ pounds in weight succumbed to a charge of No. 6, distance by measurement exactly sixty-eight yards; while on the 12th inst., with 1⅛ oz. No. 4, I fetched down a rocketting pheasant dead, over sixty yards. These are merely instances which just occur to my memory, and are by no means solitary exceptions, and for the information of the "Father of Two Eyes," I beg to say I have killed more and wounded much less game than usual since I have used a choke-bore.

At present I have not tried it at woodcock or snipe, but I have no doubt, when the time arrives, its performance will be equally satisfactory.

While on this subject I may add that I have shot about 1,000 of Eley's cartridges this season, principally brown, and a few green, but up to the present I have not had a single miss-fire, nor one burst at the rim. These have been supplied by Mr. Greener, part loaded, and part I have had filled at home, but I find the former superior to my own.

I am sorry to trespass upon your valuable space so much, but in conclusion I venture to affirm, after considerable use, that the choke system is a great improvement on the old one, and has fulfilled every condition its original promoters promised; and I am sure, Mr. Editor, the thanks of the sporting community are due to you for the public spirit you manifested in bringing the matter so thoroughly before their notice.

Stone, Staffs. H. A. H.

SIR—I see that some of your correspondents are desirous of hearing how the "choke-bores" answer. I have one by Greener, which I have tried at grouse and partridge, and have found it all that could be desired. I have never found it spoil the birds, even at very short ranges. The fault, if any, lies in the temptation to try long shots. GROUSE.

—*From the London Field.*

—It appears now that "pure Havana segars" are made in Cuba with filings of brown straw paper saturated with a juice made from tobacco stems. Even the impress of the leaf is made by rolling the sheet of paper over machines.

—A fool in a high station is like a man on the top of a high mountain—everything appears small to him, and he appears small to everybody.

National Pastimes.

HARVARD ATHLETIC SPORTS.—The Harvard Athletic Association held its first winter meeting on Saturday last in the gymnasium. The winners in the various contests were as follows:—

1. Club Swinging—Prize awarded to Mr. Shillato, '79, for best style and greatest variety of movements.
2. Parallel Bars—Won by Mr. Bret, '77. Mr. Livermore pressed the winner very hard both doing the long dips (back and forward) and the half and full arm "grasshoppers" very skilfully.
3. Standing High Jump—Messrs. A. H. Latham, '77, and E. S. Martin, '77, tied at 4 feet 7¼ inches.
4. Horizontal Bar—The winner was Mr. Wiley of '77.
5. Light Weight Wrestling (below 140 lbs).—Messrs. Brett and Latham of '77. Catch holds; back falls; a draw.
6. Middle Weight Sparring (140 to 145 lbs)—Mr. Denton and Mr. Riggs each won a bout, and will spar together on Saturday, when the contests will comprise, in addition: 1. Putting up dumb-bells. 2. One-hand vaulting. 3. Vaulting with both hands. 4. Heavy weight wrestling (over 155 lbs.) 5. Middle-weight wrestling (140 to 145 lbs.), and the concluding rounds of the light weight wrestling and middle-weight sparring.

—Weston has again astonished the Britishers, by walking 180 miles in forty-eight hours. He began walking at 9:45 P. M. on Tuesday, the 15th ult., with Alexander Clark, of London, as an opponent. Clark was of but little account, and did not equal Perkins's efforts in Weston's first walk, retiring at the end of fifty-five miles. They are now trying to get him to walk a fifty-mile match, but Weston winks his left eye and "don't see it."

It is a very remarkable fact that the three best pedestrians at their respective distances, who have ever stripped in England should have come from the New World, that all are still alive, and that they all should have remained in their prime to a far greater age than the generality of our native runners and walkers. George Seaward, of New Haven, Conn., has never been equalled as a sprinter, nor has L. Bennett, the Canadian, better known as "Deerfoot," been surpassed as a distance runner from ten to twelve miles; whilst now we have before us E. P. Weston as a long distance walker.

—Mr. Meyers, of the Fly Aways, in a letter to this department, says:—"As an amateur, I trust your call 'to such of the semi professional clubs as are tired of hiding their true status under the guise of amateur clubs' to join the professional association may be acted upon. Our amateur association says, 'All players who play base ball for place, emolument, or money shall be regarded as professional players.' Clubs procuring places of business for players, paying salaries, dividing among players gate receipts, or, in other words, which are not organized simply to play for the exercise and sport, are not amateurs, and have no status in the amateur association. The association meets on the 8th of March at Philadelphia, and we shall endeavor to maintain our stand as amateurs, excluding such as are in any manner tainted with professionalism. An avowed professional commands respect, where a skulking one merits contempt."

—Captain McKenzie, the chess champion, will organize a chess players' nine this season, to play matches with the Press club muffins at Prospect Park. His team will be captained by himself, and will include Delmar, Mason, Peck, Theo. M. Brown, Clark, Dr. Barnett, De Con Richardson, and others. Belden of the Hartford *Times*, is getting up a chess team to knock spots out of McKenzie's party. They are fat men, like Belden himself.

—The only professional stock company team of the metropolis will be the Brooklyn Club—late Mutuals—under the management of Cammeyer. They will present as strong a team as any in the League, viz.: Hicks, Matthews, Start, Craver, Nichol, Hallman, Booth, Shandley, and Boyd.

—The New Haven Club will be kept out of the League under the rule prohibiting the entry of any club from a city of less than 75,000 inhabitants, and yet the League admitted the Hartford Club, which is from a city of 10,000 less inhabitants than New Haven.

—The players of the Philadelphia Club of 1875 have been distributed among the League Clubs as follows: Zettlin and Meyerle to the Athletics; Fisher to the Cincinnati; Craver to the Mutuals; McGeary to the St. Louis; Addy to the Chicago, and Murnan and Bordeu to the Boston. Who will have the remainder? What's bid for Malone, McMullin and Treacy?

—The Hartfords will play the New Havens on May 3d, at Hartford, the first of a series of ten games for a State championship pennant.

—The National Association Convention in New Haven, on March 1st, was but slimly attended, and an adjournment was had to April 3d, at Philadelphia.

—The local journals are mistakenly attributing the introduction of parlor skating rinks—now so fashionable in London—to the English. Parlor skating is an American institution, and Mr. Plympton, of this city, introduced the sport in London and Paris.

TOURNAMENT AT MONTREAL.—On March 16th, a tournament for the championship of British North America is to commence at Nordheimer's Hall, Montreal, Canada. The games are to be three-ball, 250 points up, governed by the rules of the three-ball championship of the world. The money prizes in the aggregate amount to $400, and the winner of the first prize, $125, will be the recipient of an elegant cue emblematic of the championship, a present from H. W. Collender, of this city. The probable entries are Jakes Brothers, of Coburg, Caperon, of Paris, Knox, of Brantford, Bennett, of Toronto, Phelan, of Hamilton, Russell, of Ottawa, Derome, Beauchamp, Goughier, and Donahue, of Montreal.

THE CENTENNIAL TOURNAMENT.—This affair is creating much stir, particularly in Philadelphia. The press of that city are giving it their united support, and contributions are pouring in from all over the country. The *Mercury* announces that the project will have the co-operation of the Reform, Union, Philadelphia, Chess, Neptune, Athletic, Union League, and "Ours" clubs, and others.

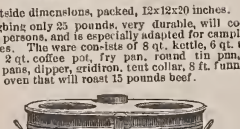
H. L. DUNCKLEE'S
PATENT
CAMPING and MINING



STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 12x12x20 inches.

Weighing only 25 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 2 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, gridiron, tent collar, 8 ft. funnel, and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen plates, knives, forks, spoons, and drinking cups. Price, complete, $15.

Sent to any part of the United States free of charge. 112 Fulton street, New York.

FOR SALE, OR TO LET.

The elegant country residence, WILLOW LAKE, at Locust Valley, near Glen Cove, Long Island.

Suitable for Summer Boarding-House.

The house is 2½ stories, frame, 40 feet front and 32 feet deep, with wide piazza front, rear, and on south end. On first floor are parlors, sitting-room, and dining-room; wide hall through the centre. Up stairs are 9 bed-rooms, all large and airy; kitchen well-arranged and convenient; cellar large and dry.

On the premises, and at a convenient distance from the house, are a stable and carriage house, chicken-house, shed, coal, tool, and ice houses. The grounds are well laid out and tastefully planted with ornamental trees and shrubbery. The avenue leading from the road to the house skirts a beautiful lake, on the border of which the house stands. A Paper Mill at the north end of the lake will be sold with the above, subject to a lease. The lake and land embrace about 27 acres. As a place of residence it is elegant and healthy; for manufacturers it is convenient; for the propagation of trout, for pleasure or profit, there is no better place in the State. Apply to

BUY IT Vanity Fair

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 4 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Frir. Best dealers have it.

From A. B. Lambertus, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not bite the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes

A cigarette is an interlude to the serious habit; graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

THE

PAPER STEM PIPE

Just the Thing for Home and Camp Use.

Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 10c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

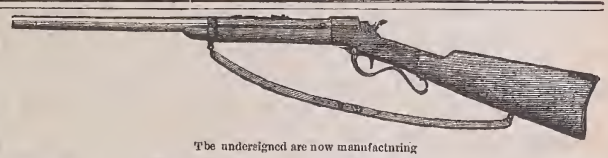
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.



These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker in any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or flinging away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It either rusts or corrodes fast like moveable anvil made of steel. The nickle cone also prevents misfire on cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells finely finished, and made any length ordered, from 2¼ to 3¼ inches.

Shells and Loaders, and description Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.

From Captain Bogardus, Champion Wing Shot of America.

MESSRS. GEORGE E. HART & CO.,

Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,
may13-1y A. H. BOGARDUS.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less realcum than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

DITTMAR POWDER

MANUFACTURING CO.

MY NEW IMPROVED POWDER can now be loaded from an ordinary powder flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR,

NEPONSET, MASS.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally services ble for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *quick.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

CHAMPION GUNS OF ENGLAND

PAPE'S

Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12 Gauge, Choke Boring.

Maker of Gun. Exhibitor.

1st—Greener.....Greener.

2d—Pape.....Davidson.

3d—Pape.....Pape.

Out of a class of 68 guns, 3 out of the 5 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun. Exhibitor.

1st—Pape.....Davidson.

2d—Pape.....Davidson.

1875. Long Range, 60 yards. Choke Bores.

1st—Pape.....Davidson

60 yards, Long Range, Sporting Boring.

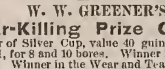
1st—Pape.....Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, at the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858. 1859, 1866. Address

NORTH OF ENGLAND GUN WORKS,

Newcastle on Tyne, England



dec2 tf NO AGENTS.

H. C. Squires, No. 1, Courtlandt st. New York.

THE GREAT

London Gun Trial,

1875.

W. W. GREENER'S

Far-Killing Prize Guns.

Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.

W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.

I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price, viz: $75, gold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.

Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.

Sole New York Agent for Holabird's Hunting and Fishing Suits. Made to order.

Send 25 cents for large Illustrated Catalogue of Guns, and including Game Laws for all the States, and summary of Great London Gun Trial. Ready March 1st. jan13 1y

Muzzle-Loading Guns Altered to Breech Loading.

AGENTS FOR HOLABIRD'S SHOOTING SUITS. Send for Circular.

Clark & Sneider.

214 W. Pratt st., Baltimore.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supersede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

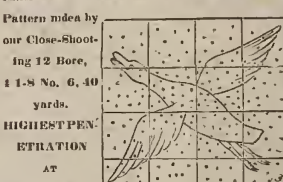
J. & W. TOLLEY,

jy1 29 Maiden Lane, New York.

J. D. DOUGALL'S

Express Guns and Rifles.



(Title registered.)

SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—that Circle, 30 inches; 200 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 189, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for illustrated Circulars to

Camp Life in Florida.

By CHARLES HALLOCK,

AUTHOR OF THE FISHING TOURIST.

This is a most seasonable book for Sportsmen, Tourists, Invalids, and Settlers, and has been long needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and each other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

348 pp., 12mo. Price, $1 50.

CONTENTS:

Introductory Chapter.
Birds-eye Glance at Florida.
Omith for Sportsmen.
Hints for Southern Hunting.
Quasi-se Routes of Travel.
Game Animals and Birds of Florida.
Game Fish of Florida.
Three Months in Florida for One Hundred Dollars.
Supplementary Hints for Cheap Recreation.
Up the St. John River.
Indian River.
Florida the Promised Land.
Fort Capron.
Fishing at St. Augustine.
Black Bass Fishing on Spruce Creek.
Hunting the Panther.
The Ruins of Tallahassee.
Private Dougherty and the Bass.

THE AMERICAN NEWS COMPANY, AGENTS.

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 22, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. *The Wyoming does not carry passengers.* The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families *en route* for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

BREECH LOADING GUNS
A SPECIALTY.

AGENTS:
for the following celebrated makers:
W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); J. P. CLABROUGH & BRO.; P. WEBLEY & SONS, and WESTLEY RICHARDS.

HOLABIRD'S Shooting SUITS,
DIXONS & HAWKSLEY'S SHOOTING TACKLE
STURTEVANT BRASS SHOT SHELLS,
BUSSEY'S PATENT GYRO PIGEON AND TRAP
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the *heads down* in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. In ordering send measurement around the chest.

PRICE $7.50.

AGENTS FOR THE
Union Metallic Cartridge Company's Ammunition,
WARRANTED THE BEST IN THE MARKET.
SEND FOR CIRCULAR.

WM. READ & SONS.,

Overland Notes.

NUMBER TWO.

FROM Omaha to Cheyenne there is not much calling for remark. As the train draws out, the passengers settle into their places, and aware that the car is to be their home for some time, arrange themselves as cosily as may be, disposing of maps, drawing out work, books and games, and opening the long time-tables that give distances, elevation, etc. The road, after a time, reaches the north bank of the Platte, and follows in the broad, low, bottom land of that wide, shallow, and sandy stream for many miles. A few houses are seen, some in natural groves of cotton wood, others surrounded by new plantations made for shelter. The winds here are evidently very severe, and many small buildings are propped up on the east side with timbers, to bear them against the western gales that come in unbroken sweep from the Rocky Mountains. The stations are not important—mere remains of the temporary towns that had successive life in turn, as each was the terminus of the road when being built, when, for a time, they were gay, busy, and riotous with the strange conglomeration of wild characters who were the ruling spirits of these canvas camps, where many of them met violent deaths, and society suffered no loss, nor were refinement and culture impeded in their progress.

Vast flocks of wild geese stretched their regular ranks in flight over the plains, passing from the sand-bars of the Platte, to remote feeding grounds, and many fat prairie hens flitted leisurely away from the track and dropped into the stubble. It was tantalizing to pass them without a shot, and revived our wish that cars could be more cheaply chartered, that halts could be made at points where there is abundant game, but no resting-places.

The road is here a constant up-grade, but it is unnoticeable, as the plains, although apparently level, are descending to the east, and the elevations given seem incredible, so imperceptible is the great slope from the foot hills of the mountains to the Missouri. The needle of our aneroid barometer fell constantly, and persons sensitive to light air often feel the discomforts attendant upon a rarified atmosphere.

The train speed is not high, and in this moderate motion, and in the freedom from noise and reverberation arise great absence from fatigue, and a day's travel results in less nervous wear and tear than is often felt in a few hours passed upon one of our fast Eastern trains. The Pullman cars—a great source of rest and comfort—are not yet all they are capable of becoming. They are so warmly lauded by all tourist writers, that a little critical spirit on the part of one may do no harm. To be frank, they need several changes for these very long routes, when people are really housed in them for days. Their heating and ventilation should be more regular. Some passenger in warm dress asks the porter for more air. Opening a window by the front heater- and two ventilators at the rear would make a current of *warmed* fresh air, and carry off the foul air; but the porter is uninformed, and simply opens every ventilator at once, pouring in gusts of cold air upon heated and perspiring heads. A protest results from the least patient sufferer, when *every* ventilator is shut, and soon the mercury marks ninety. So it goes, from heat to cold, cold to heat, and the person employed is totally incompetent to protect the invalid or weary traveler from the most serious consequences.

The toilet rooms for ladies are not at all well arranged, for the basins and mirrors are in the open car, affording no retirement for dressing; nor are the ends of the cars properly distinguished as ladies' ends and gentlemen's ends. Another point could be made, that single gentlemen be assigned cars other than those used by ladies, and parties with ladies, for those gentlemen accompanying ladies are far more guarded in manner than those who are alone. It is not pleasant to carry a critical spirit before your readers, but no reforms are commonly made in advance of public demand, and so long and weary a route as to California needs every arrangement possible for comfort and convenience. Usually travelers are good companions, kind and mutually obliging, and exceedingly considerate; but some are encountered that are so much the reverse, that at times they seem to forfeit their claims to go in first-class cars. Some of the latter need strong restraint from conductors in the free way in which they disregard the presence of ladies as they dress and undress themselves—a point where a good deal of limit is needed; and others who do not smoke should be sent to a cattle car, for chewing and spitting to such an extent as to disgust every one. A man's habits are his own, but when they become a positive annoyance to others, he should not complain if the restraint comes to him that others exert over themselves.

Our second morning found us in snow—a wide, white waste all about, with a gray sky that blended with the distance and hid the low horizon. We were behind time, and would not reach our breakfast point until near noon; but we were prepared for the emergency, as all should be, and soon had cups of Borden's excellent coffee steaming over a spirit lamp, and made a fair breakfast, rendered more agreeable by a pleasant interchange of coffee, fruits, etc., with our neighbors. By the second day all formality wears away, and parties mingle sociably, and many charming acquaintances are thus founded.

There was hardly a feature now to the landscape—snow and sky were all, no tree or bush, hill or valley, and no living thing to excite interest until, as we neared Cheyenne, we saw bands of antelope, beautiful creatures, which moved away without much haste, half-alarmed, but more curious. They often pay a death penalty for their inquisitive nature, being in the summer often killed within shot by a rag waved on a ramrod. Before reaching Cheyenne, some bluffs rise south of the track, and claim attention from the evidence they bear of having been exposed to the action of waves. No sea shore that is being worn away by the buffeting of waves could more perfectly evidence their action. What was the cause of this, and when it was in action, your correspondent cannot opine, but would gladly see the opinion of some of the eminent geologists who read these records so truly and so clearly.

At Cheyenne we stopped, intending a detour to Colorado. Here we were over six thousand feet above tide—fairly in the thin, pure air of the great upland of the continent. A clear idea of the outlook about Cheyenne is not easily conveyed; but all about us recalled the fanciful descriptions we read of the moon, where, astronomers assure us, there is no vegetation, no air, no shadows, and no life. Looking out from our hotel the horizon seemed below us at all points, except at the west, where a rugged range of mountains white as snow cut the twilight sky. All was snow clad—no object beyond the few houses of the village aided in estimating location; perspective, there was none over the white boundless plain, and distance did not seem to exist, so clear was the air. A speck might be a dog half a mile away, or a cow two miles distant, or a house still more remote—there was nothing to determine the difference, and one's eyes, wearied of seeking to compass the scene that was so devoid of optical certainties, come back to rest upon some immediate object, rather than seen a distance that seemed without beginning or end. The rarity of the air becomes noticeable here in pressure upon the ears, more or less severe in different persons, and sometimes a humming noise fills one's head. The porter brought up our small trunk, puffing like an engine on an up grade, and said it was the lightness of the air, not the weight of the baggage, and we found ourselves equally out of breath at the head of the stairs.

Cheyenne is favored with good hotels and a pleasant population, rendered agreeable by many army men; and good wishing a hunting point would find it here, and good companions for an antelope or buffalo hunt on the plains, an expedition to the Black Hills for elk and deer (scalps to be well guarded here), or for a camp south of the railroad, where, as a hunter, Mr. A. Miller told us game of all kinds abounds—noble game, too, elk, deer, mountain sheep, bison, etc., with now and then a cinnamon bear of large size. Pleasant souvenirs of the mountains are found in the form of agates—moss agates in particular—many of them being of great beauty, and they are set here with great taste in the native gold.

From Cheyenne to Denver the plains are less level, but no less monotonous. On the west, fine mountain views are constant, and as the sun sets the effects are beautiful of bold peaks and snow-clad ranges in clear outline against the sunset colors. The only point of note is Greeley, a town incorporated to prohibit all drinking places. A good system of irrigation does away with all excuse for unnatural thirst, and the place is pronounced successful. We reach Denver after dark, but by abundant gas lamps see fine streets and many substantial buildings. No snow was on the ground here, and the air mild and agreeable. The city is arranged with forethought, and its ambition is not, as yet, limited. A complete system of irrigation carries open streams on every street, bearing water to the roots of every shade tree, of which there are thousands, while hydrants are all about. Fine lots are reserved for schools and playgrounds, and the school buildings are more complete and permanent in character than in most Eastern cities. A new feature in the public schools—and a very excellent one—is daily military drill. Squads of boys may be seen marching, having their awkward ways drilled out of them, and good bearing made habitual. Fine mountain views are before the eyes all the time, changing hourly with cloud and sunshine, and often at all times varying with more or less snow. To mines among them run narrow gauge railways, some of them being wonderfully engineered and cut through cañons and ravines, and bearing the tourist to beautiful places.

The road to Central, *via* Clear Creek Cañon, is much admired, and, anxious to see it and the wild fastness it penetrates, we went to the station and asked for excursion tickets, which were widely advertised. We were informed that they were withdrawn on Oct. 15th, and further found that it would cost us (party of two) to run up and back, some thirty or forty miles, some eighteen or twenty dollars—a large price for a part of a day's experience—so we concluded to forego the trip. The rates of travel are very high in all the Territory, and there must be great reduction in them before any can travel here freely who do not own shares in the Big Bonanzas among the foot hills. A great many invalids are making a winter home here, and the result seems very encouraging; indeed, many active men in Denver are unable to live comfortably at the East, and enter into business, and choose it as a permanent home, of which they seem very fond.

The following table is from the Weather Report of Lieut. Fenton, U. S. Signal officer at Denver, for 1875. From it, it will be seen that the extremes of temperature are very great; but from some quality of the air, may be its dryness, or rarioness, they are by no means as severely felt as would be feared:—

	TEMPERATURE.			Rain and
	Highest.	Lowest.	Mean.	Melted Snow.
January	62	—17	30	.13
February	60	3	30	.24
March	75	11	40	.22
April	81	10	49	2.48
May	84	27	63	.15
June	99	43	72	2.24
July	99	42	71	2 00
August	96	50	71	1.41
September	90	28	60	.29
October	86	1	45	.73
November	71	— 1	41	.16
December	59	—5	32	.53
Mean for the year	99	—17	48	11.73

From Denver we go by a well managed, narrow-gauge line, the Denver and Rio Grande, to Colorado Springs and Manitou, as mentioned in our first letter. So much of interest clusters about us here that it must deserve a letter to describe it even partially.

L. W. L.

—There was skating on the Capitoline Lake on Friday and Saturday, March 3d and 4th, 1876. It was the last of the season.

For Forest and Stream.

THE HERMIT OF THE BUTANO AND PESCADERO CREEKS, NEAR PESCADERO, CALIFORNIA.

DURING one of my fishing trips with my nephew, a short time since, we made the acquaintance of a singular character, who lived the life of a recluse in a small cabin built of planks, at the junction of the above named creeks, within a mile of the Pacific Ocean. This strange and rather rough and uneducated personage made his living chiefly by hunting and fishing. Of course there was some history connected with his former life, but we did not like to make any attempt to penetrate into what he might most likely wish to keep secret or sacred. It was said of him by some of those who knew, perhaps, something concerning him, that, like some others, he had been unfortunate in life in some way, either by some disappointment in love, or in business. He had been in this part of the country, and in that very spot where we found him for some years, and had formerly been a plasterer by trade, and now and then, when hard up for a subsistence, he had, while dwelling in his lonely hut, worked a little in the same business. We often found him bait fishing, and we sometimes saw him take some nice young salmon or grilse, from one to three pounds weight. He had noticed that we took some good salmon with the artificial fly, and one morning after that we found him throwing a fly on the stream made by himself out of the hairs of an old black ing brush. He told us he had a large salmon rise to it, but failed to hook him. Taking compassion on him for this, his rude and primitive imitation of a fly, we gave him two or three good salmon flies and a gut leader. We also, having generally more lunch with us than we wanted to consume, prescnted it to him, or in order to do the thing with greater delicacy, deposited it in his cabin during his tempory absence. In return for this, our surplus provender, he supplied us with some mussels, which afforded the best bait there for still-fishing for salmon. His cabin was situated upon the side of a gentle hill, which sloped to the margin of the river, and was within view of the ocean breakers, the sound of which eternally rolling on the shore was distinctly audible; and his prospect was sufficiently open to command an extensive view of the two rivers.

> "Alone he lived between two hills,
> Famed Rosetock run between;
> At times wild animals appeared,
> And men were seldom seen."

He truly exclaimed with Thorean:

> "This is my domain, my cell, my
> Hermitage, my cabin, what you will—
> I love it better than a snail his house."

A short distance from the hut was a spring, which we often saw him visit with his pail. His fireplace was in the open front of his domicil, rudely made of rough stones, and was always half filled with ashes. The planks around and the rafters above were as black as jet; but to relieve this blackness he had pasted upon the sides some of those highly-colored and extravagant circus bills, one of which represented the agile and fine form of a female equestrian or aerobat. His sleeping place was at the extreme end of his den, and was like the bunk of a sailing craft. In one place stood a wooden chest and a half barrel of flour, and the only thing to sit upon was a three-legged stool. The crevices in the walls were stopped with rags, and from the rafters depended bundles of herbs, as mint, wild sage, etc. A rusty old gun occupied one corner, and over the roof outside were placed a home-made and a bamboo or cane fishing-rod. On every side in the interior, resting upon wooden pegs, were numerous shelves of every size and form, which were appropriated to a variety of uses. On one or two of them were the cooking utensils of our solitary friend; on another, one or two smoky books; and on others a little of everything, from a box of salt or paper of tea down to a spool of thread or a paper of needles. Two or three large gray cats watched our movements with suspicious eyes, prowled about the premises, or were seen engaged guawing portions of rabbits or ground squirrels, pieces of fish, etc. For twelve years, he told us, he had been the occupier of this rude and lonely dwelling, a drawing of which my nephew located in his sketch book.

We expressed an opinion that he must lead a very lonely and melancholy life in this remote situation. "Not at all, not at all," replied our friend. "I depend upon myself for happiness, and not upon the world, which I have been long sick and wearied of. I am very fond of taking these salmon here, either with nets or lines; also of shooting the numerous kinds of game which surround me. What I cannot eat myself I dispose of in Pescadero, carrying them to town in yonder punt." I see there some company for a little while, but I always soon return, contented with my life here."

Well, perhaps there may be a worse life than this for one who had no relatives or friends, and who has been tired of what, to him, has been a selfish and heartless world. But this inclination for retirement, or a hermit's life, is not a common feeling with uneducated men, but with those chiefly who belong to that class of persons who depend upon books, the works of nature, and themselves for happiness, and not upon a cold, ceremonious, and frivolous world. I can fancy the pleasures which such persons enjoy from the revolving seasons, and the innumerable objects of natural scenery around them. They are indeed manifold, and it is pleasant to remember that "nature never did betray the heart that loved her." Her scenes may be looked upon as familiar friends, not only when crowned with a wreath of snow, but when rejoicing in their summer bloom. And if, being a fisherman, a peaceful and heart-soothing stream is near at hand in the latter season, and abounds in the finest salmon, or trout, or bass, etc., and then it is less incomparable to those who take delight and are skillful in the gentle art. Woods and helds furnish game to the hunter, but not the least of their treasures are the ten thousand beautiful birds which make melody in their little hearts, and afford unalloyed pleasure for at least one-half the year. And then what exquisite pleasures can be enjoyed in watching the ever-varying changes of the year, so particularly remarkable in the East, though not so distiuct in California. First, when some of the spring flowers tell us that the rain and snow are over and gone, and there is refreshing sunshine to sow our seeds; secondly, when the glowing summer is in its prime, with its dewy mornings and lovely twilights; also in the sober autumn time, when we may thoughtfully count the leaves floating on the bosom of the streams; and then again when the cold winds of winter are howling around our dwellings, and we sit tranquilly before our cheerful fires and peer into the burning embers, building palaces in our imagination. It is good to be able to live happily without the necessity of worldly excitement, and to depend upon ourselves for companionship when it is desirable.

From the contented hermit of Butano and Pescadero Creeks I took some lessons which may be of some beuefit to me. One is, at any rate, not to depend too much on the outside world altogether for comfort and enjoyment, but rather to find most of my happiness within my own breast and in my own resources, in some innocent and favorite occupation of reading or literary correspondence, and above all, the leading recreations of my life as chosen pursuits—the gun, the rod, in forest and stream, mountain and plain.

E. J. HOOPER.

For Forest and Stream.

THE SUNDAY GUNNER.

THE anecdote of the Deacon's boy who fished on Sunday, published in a recent issue of your paper, "reminds me of a little story" of a Sunday gunner, and my story at least has the merit of being true, as old residents of Western Massachusetts can testify.

In the days of which I write there was but one church in the town of Cheshire, Berkshire county, and that a hardshell Baptist. It was provided over by the eccentric Elder Leland, whose name is still a household word in all that region of country. Elder Leland had a son John—a hard ticket, as minister's sons sometimes are. The Elder had strong reasons for believing that John occasionally indulged in gunning on Sunday, and so one day took him in hand, telling him that he frequently heard the report of arms in the neighboring forest during "sermon time" on Sunday, and had noticed that he was rarely to be seen in church on these occasions. John pleaded innocence, saying that he frequently sat in the gallery pews, and if at the back part of the pew could not be seen, even from the old-fashioned high pulpit, a feet too well known to the Elder, who frequently had to station a Deacon "up gallery" to watch the boys. John assured his father that if the next Sunday was pleasant he would be as likely as ever to hear guns, and he should sit where he could be seen. Now for the sequel. Stowed away in the garret of the Elder's residence was a dilapidated old family musket. During the week John loaded the musket in the following manner: First a heavy charge of powder, then a wad made of of tow, wound round a narrow strip of "spunk" in such a manner that the spunk would penetrate the powder and also project through the top of the wad. Upon this wad he placed another heavy charge of powder, then another wad, as before, alternating powder and wads till the musket was full. A majority of your readers probably know that the spunk referred to is a kind of dry, rotten wood, that will take fire from a spark and burn like a fuse, very slowly and so sure that it was formerly used as fuse. They will also see that by young Leland's device all the charges of powder in the old musket were connected by a strip of this natural fuse.

The old church stood upon a high point of land just out of the village. The ground sloped very rapidly to the rear, down into a meadow. In this meadow, some three or four hundred yards from the church, was a hollow so low that it could not be seen exeept from the upper part of the church; at least when the spot was visited by the writer thirty years ago the lower part of the church could not be seen from the hollow, and at the time of which I write it is said that intervening bushes hid the hollow entirely from the church. Young Leland had taken his time during the week to prepare the musket for Sunday service. On Saturday evening the sky betokened a pleasant day for the morrow, and John placed the musket in the hollow, which, by the way, was directly between the church and a neighboring forest. A pleasant Sabbath dawned upon that quiet, pent up valley. The "last bell" was the signal for the Elder and wife to start for church. This was before the days of matches or coal stoves. John had some hard wood fire-brands smoldering in the old-fashioned fire-place; he had prepared himself for church, but hid in the rear of the house. As soon as his parents had passed behind the neighboring houses, John seized a fire-braud and passed out at the rear, behind stone fences, hedge-rows, etc., and by a somewhat circuitous route to the resting place of the old musket, and tired the spunk in the muzzle wad which had been purposely left of good length. Retracing his steps he was at the church just as the Elder commenced his usual half hour morning prayer. The end lond of the musket exploded just as John arrived at the church, but it was too near the muzzle to make much noise, and was not heard inside the church. John took up a prominent position in the gallery directly in front of the pulpit, and in full view of his father. Two explosions occurred during the long prayer, the second one so loud as to be heard by the Elder, who involuntarily opened his eyes, and at once caught sight of John sitting directly in front of him as grave as a statue. All through the forenoon service frequent reports of guns were plainly heard by the entire congregation, and at each report the Elder would glance hastily at John who sat stiff as a deacon. Wherever John sat in church, there would his cronies congregate. Several of them were with him on this occasion, and to them he confided his successful arrangement. During the noon hour these boys took a circuitous route to the hollow in the meadow now all quiet. One of the youngest of those boys was thirty years ago an elderly and leading business man of Cheshire, and from him I obtained this narrative. He said that John guided them to the point where he had left the musket, but it was gone! Its track, however, was plainly visible. Each discharge had burned and blackened a divergent streak through the grass, and by following up these places they soon came upon the musket, as green as a window blind, to use my informant's words. "And," added he, "it had kicked all over a half acre." In kicking through the fresh grass it had literally painted itself green. At the supper table that afternoon, John triumphantly interviewed his father upon the subject of Sunday gunning. The Elder expressed himself much relieved to know that John was not a Sabbath-breaker!

WACAUTAH.

—A farmer in England, suspecting one of his dogs of sheep killing and worrying recently, gave him an emetic, the result of which was to bring up some flesh and and a sheep's ear corresponding to that of one of the sheep whose ear had been partly devoured. Should any farmer desire to test a suspected dog, he has only to give him a teaspoonful of salt and half the quantity of mustard, dissolved in warm water. For a permauent cure, amputate his tail just behind the ears.

HOY'S WILDERNESS AGAIN.

DEER PARK, Md., March 5th, 1876.

EDITOR FOREST AND STREAM:—

Noticing in last week's FOREST AND STREAM a letter from "Standard" on "Hoy's (properly Hoye's) Wilderness," I thought that a little further information on that region might be of service, especially as "Standard" has been misinformed upon one or two points.

Oakland, the station nearest the objective point, is 232 miles west of Baltimore, on the main stem of the Baltimore and Ohio R. R. Here you can get plenty of ammunition—several sizes of Ely's paper shells, &c., also everything necessary in the way of food. Let us suppose that you have written to Wm. Kitzmiller, (not "Lloyd" Kitzmiller) telling him you wish to spend a couple of weeks at his house or at the "Dobbin Hotel," (which is in the "Blackwater country," and *not* "Hoye's Wilderness). If you have come to fish for trout, the latter place (Dobbin's) should be your Mecca, if to hunt, the former.

Arriving at Oakland in the morning, you make your purchases of anything but provisions, for they will not be necessary unless you wish to camp out. In the meantime you have made the acquaintance of Mr. Kitzmiller, who tells you that he has a spring wagon ready for yourself and *impedimenta*, and in a few minutes you are spinning along over a good road—and really with the exception of a couple of miles it is not bad. You ask your polite and attentive driver how far it is to his place, and he replies, "thirteen miles," whereupon "Standard's" twenty-eight miles vanish and become "airy nothings." He also informs you that Lloyd Kitzmiller has nothing to do with the Dobbin House, and that he, (Wm.) keeps it open as a hotel during the summer, and also that instead of being a "short distance" from Lloyd's, it is eleven very long miles, and thirteen from his own home. By this time you think that "Wash Miller," the "old hunter," who gave "Standard" his information must have been partaking rather freely of the "extract of maize," when that conversation occurred, and if you should see the "falls" of the Blackwater and find them sixty-three instead of "eighty-five" feet high, your opinion would be strengthened. The "lordly mansion" is there, I admit, but the "comforts of the city" consist chiefly of cockroaches, enormous black ants and wood-ticks. I do not wish to speak slightingly of the house, when used as a hotel, for then it is as neat and clean, and can well be, but when no one has been in it for a month or two the "comforts" are amazingly conspicuous. But to return to our *muttons;* by the time you have spent a week at Kitzmiller's you are enchanted with the paradise into which you have fallen. You have found deer in abundance, turkeys ditto, and more ruffed grouse than you ever saw before. Perhaps you have had a bear hunt and captured a fine specimen whose skin will be made into a robe to remind you of the mountain hunting, or have killed a panther, though the latter is hardly probable. Speaking of panthers, I saw three in Oakland a short time since, or more properly, the skin of one and bodies of two. They were killed by George Wilson, one of the best hunters in the country. He had been tracking a deer for some time when he came upon the trail of four panthers which were also following it. He found, soon after the carcase of the deer which had been beaten in a fair race, and was partially eaten. Wilson at once went home, where he procured some strychnine which he placed in the carcase. The next morning, accompanied by several neighbors, Wilson returned and found the body of a large female panther, of which a portion had been eaten by her cubs. The body of one of the latter was found about a mile away, and soon after a second cub was discovered alive, treed, and shot, but another which was seen escaped. I think this all occurred in "Hoye's Wilderness," but am not sure.

All that is required by any one who wishes to visit this "Wilderness" *i. e.* "Hoye's," is to write to Wm. Kitzmiller, Oakland, Garrett county, Maryland.

ALLEGHANY.

EDITOR FOREST AND STREAM:—

I trust that your correspondent "Standard," will pardon the liberty I am about to take with the information furnished him on the above named topic, by his friend Mr. Millar. Nay more, I even dare to hope that he will feel secretly grateful to me for saving him from the unpleasant consequences likely to follow his indorsement of Mr. Miller's representation—consequences about which Rev. Mr. Murray, of Adirondack fame, can give him all necessary information.

The region in question is one with which I may fairly claim to be familiar, having spent nearly five months of 1873 and '74 in its inmost solitudes. Engaged during that time in taking trout for piscicultural purposes, I had the best possible opportunities of acquainting myself with the contents both of forest and stream, and as I personally attended to the transportation of not less than eight thousand trout from the river to Oakland, I became painfully intimate with the character of the roads, and equally well versed on the subject of distances. Let me begin my corrections with the last mentioned.

From Oakland to the top of "Back-bone" Mountain, as it is called, the distance is eight miles, and the road, during the dry season, fit for any kind of carriage. At this point the road to Hoy's Wilderness crosses the Northwestern Turnpike—which leads to Fort Pendleton—becoming rapidly rough, and unsuited to light conveyances, though I have frequently driven in a light buggy as far as Wm. Kitzmiller's, about seven miles from the turnpike. From Wm. Kitzmiller's to Lloyd's is about three miles. Here the road crosses the North Branch of the Potomac—a mere brook at this point—and winds its rough, devious, and almost constantly ascending way, about five miles further to the top of Hoy's Mountains. At this point there are two roads, one leading directly to the Blackwater—about five miles distant—and the other to the Dobbin House about equally distant. Mr. Miller's "short distance from Lloyd Fitzmiller's" I ken is about ten miles. But this is not the worst feature of the case. When the sportsman has reached the Dobbin House, he will find instead of "lordly mansion" or "palatial establishment," with "furniture and bedding," a log house with the barest necessaries for eating and sleeping. And worse again, than this, he will find himself still three to five miles distant from good fishing. One day's experience in tramping from Dobbin's to the river, wading in its dark and deceiving waters all day, bruising himself on its rough and slippery bed, and tramping back again at night wet, weary, and sore, will satisfy any one with that sort of thing. But for even this the pleasure-seeker must pay roundly. Whatever the house contains, has been furnished by Mr Kitzmiller, and he does not propose to lose anything by the operation. The nominal sum will be at least a reasonable compensation. In regard to the "extract of maize," I would observe that when Mr. Kitzmiller indulges in this worldly beverage he does it at the expense of his guests, for he has become a very pious man, and no longer puts the bottle to his neighbor's lips." But "Standard's" authority says that game of all kinds is to be found right at the door of this establishment. Let me caution your readers against this statement in particular. I have known good hunters to spend a whole week in that region, and never get a single shot at anything larger than a kingfisher. I have passed through the forest from Kitzmiller's, to camp not less than forty times, and been up and down the river more than a hundred, and in the two summer's spent there I saw but two deer and three grouse. So far as sport is concerned the Blackwater has but one redeeming feature. Its waters abound, or did two years ago, in beautiful and excellent flavored trout. They are very small, not averaging more than two to three ounces, but so numerous that I have caught with a single rod and flies over two hundred in half a day. All fishing must be done by wading, over a very treacherous bottom, so that the sport is perilous in an unusual degree; but this feature is of course a slight objection to the enterprising sports man. My advice to all who desire to visit the Wilderness would be, engage a guide and horses at Oakland, to take you directly to the river. Go prepared to camp, wherever most convenient. If you want a commissary, Mr. Kitzmiller will serve you well, and you can get him. When you reach the river, don't be disappointed if you should find the trout scarce near camp. All parties are obliged to strike the river at the same point; few ascend more than two miles, and still fewer descend more than one. Go up, from three to six miles, and if the river is in good

condition, you will have rare sport so far as numbers are concerned. When this becomes monotonous, go down to the falls—about a mile below the point, at which the road strikes the river. Here you will find something refreshing in the way of scenery, and—if you follow the stream a mile farther—something decidedly satisfying in the way of work. I have heard of large trout being caught in this part of the river but never caught any myself. The atmosphere from June to September is both balmy and bracing—not to be surpassed, I think, in its health giving properties, on any part of this continent. A confirmed dyspeptic, who accompanied me, in two weeks was able to dispose of strong coffee and fat pork to an extent astonishing even to the natives. For those whose main object is health, and who desire to banish utterly, for a few week, the cares of business, and the excitement of society, Hoy's Wilderness is just the place; but for those who want an abundance of game, and the excitement of taking pound, or half pound trout, no poorer place outside of civilization could be chosen. ALLX.

Natural History.

[*This Department is now under the charge of a competent Naturalist, indorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.*]

For Forest and Stream.

BERMUDA AND ITS FISH MARKETS.

[From advance sheets of "A Catalogue of the Fishes of the Bermudas, based chiefly on the collections in the National Museum. By G. Brown Goode, M. A., Assistant Curator U. S. National Museum." Bulletin of the U. S. National Museum, No. 5. Washington: Government Printing Office, 1876, pp. 82.]

A VISIT to the Bermudas during the months of February and March, 1872, afforded opportunities for collecting the notes and specimens upon which the present paper is based. The enumeration of species here attempted, although unnecessarily far from exhaustive, is believed to indicate, with some degree of accuracy, the character of the ichthyological fauna of the group, and it is hoped that the list, with its annotations, may not be without interest as a contribution to geographical zoology. Surprisingly little has been done by naturalists in the investigation of the marine life of this region, interesting as it is likely to prove on account of its isolated, mid-atlantic position, the peculiarities of its climate, and its proximity to the Gulf Stream, rendering so easy observations upon the influence of ocean-currents in the distribution of living forms. The ichthyologist finds here the best of opportunities for the study of pelagic and migratory species. A broad field lies before some resident naturalist who will do for the ichthyology of the Bermudas what Poey and Bleeker have done and are doing for that of the East and West Indies. Comparatively little could be done in two months, least of all in winter and early spring, when stormy weather rendered explorations of the reefs impracticable, and often prevented the fishermen from leaving their moorings in the harbors. At the time of my visit, only seven species of fishes had been recorded from this locality; and the only authentic information regarding the fish-fauna was contained in one chapter, which was unfortunately very short, of Mr. Jones' admirable little work, "The Naturalist in Bermuda."

TOPOGRAPHY OF THE ISLANDS.

The general topography of the Bermudas is so well known that no detailed account will be necessary. It may not be out of place, however, to refer to those features which bear more particularly upon the homes of the fishes. The sunken atoll, which is the foundation of the group, is shaped like an ellipse, its major axis twenty-five miles in length, its minor axis thirteen. The major axis runs in a northeast and southwest direction, the chain of main islands lying on the southeast edge of the ellipse, and forming a nearly continuous line twenty-six miles long, the lower or western end curving, nearly in the shape of a shepherd's crook or a fish-hook, to the southernmost focus of the supposed curve. The main islands, five in number, are separated by narrow channels, fifteen or twenty feet in depth, and their shores are deeply indented by shallow bays and lagoons. The reef, which approaches within a few hundred yards of the shore of the main islands on the south, is distant on the north and northwest from five to nine miles; the intervening space is crossed and recrossed by submerged reefs and ledges of coral limestone, and dotted in the neighborhood of the main islands by smaller islands and emerging ledges to the number of three hundred or more. The harbors are not particularly calm, but there are many broad bays whose surface the severest storms scarcely ripple. Within the encircling reef the depth of water rarely exceeds twelve and fourteen fathoms, while beyond this reef the bottom rapidly slopes to the level of the Atlantic bottom. Twenty miles to the southwest by west are two or three ledges, to which the fishermen resort for line-fishing in fine weather.

FISHERIES AND FISH-MARKETS.

The Bermudian fisheries have always been famous. A large number of the poorer islanders, particularly the negroes, are professional fishermen, and are bold and skillful sailors, though their ambition only suffices to keep them at work when purse and larder show signs of exhaustion. Every cottage has its little garden, where bananas and sweet potatoes grow for the trouble of planting, so that the fishermen are not entirely dependent upon their occupation for support, and the supply of fish often falls far short of the demand, and this is especially the case in the winter, when the landing of a boat is the signal for a general rush to the shore. The people of Bermuda, over twelve thousand in number, are dependent chiefly upon the fisheries for their animal food. Large shipments of cattle and sheep are received from the United States, but these are monopolized by the wealthier classes, and by the garrison, so that their flesh rarely finds its way to the tables of the negroes, who number over seven thousand, or of the poorer white colonists, who constitute more than one-half of the remaining population.

The fishing-boats are built in the English style, drawing five or six feet of water, deep-keeled, sloop or schooner rigged, and usually provided with a large well in the hold, in which the fish are brought in alive.

The only market is the water's edge. In the large towns, Hamilton and St. George's, the quay is lined nearly every morning at sunrise by a long row of fish-boats. The fish swim in the wells until customers are found for them; when one is selected, it is taken up in a landing-net, or by a gaff-hook, and quickly killed by thrusting a sharp awl into the base of the brain; it is then bled, skinned (rarely scaled), eviscerated, and delivered into the hands of the purchaser, a loop of palmetto fiber always being attached for convenience in carrying. At an early hour the fares are disposed of, and the boats are under weigh for the fishing grounds. At almost any time, however, row-boats filled with small seined fish may be found at the quay. Those who live in the country-parishes watch the return of their neighbors' boats at nightfall, and thus secure their supplies of fish. The price of fish is fixed by law at fourpence a pound, an advance of one penny having been made within a few years.

Fish from such a market cannot fail to be fresh, and the excellence of the Bermuda food fishes is due to this, and to the fact that they are never allowed to die of suffocation in the air, but are killed quickly and bled.

The angel-fish (*Holacanthus ciliaris*) is perhaps the most highly esteemed; this species is found, also, in the West Indies, at Bahia, and on the coasts of Mexico. It is partial to sheltered parts of the reef, where it may be seen lazily and gracefully swimming or floating a few feet below the surface. Its motions are very slow, and it frequently swims upon its side, or, sinking to the bottom, swims perpendicularly to the surface, where its bright colors flash for a moment as it floats broadside upward. I have frequently seen them grazing upon the alga-covered rocks. The angel-fish attains the weight of four pounds, and as far surpasses all the other fishes of the region in its delicious flavor as in its lovely hues. The largest I have seen measured fifteen inches from snout to extremity of soft dorsal.

The gray snapper (*Lutjanus caxis*) is next in rank; this is very common, and is distributed also throughout the Caribbean Sea and the Gulf of Mexico, and, according to Günther, who considers it identical with *Mesoprion goreensis*, Cuv. & Val., extending east to the African coast. It breeds abundantly, and hundreds of individuals from four feet to four inches in length may be seen in almost any sheltered nook. It is one of the most delicious of food-fish, its flavor not unlike that of the blue-fish (*Pomatomus saltatrix*). Its extreme cunning renders it very difficult to capture with either hook, pot, or grains, and has gained it the *soubriquet* of "sea lawyer." The market-name is "gray snapper."

The yelting, or glass-eyed snapper (*Lutjanus ayo*), the red snapper of the Florida Keys, is frequently seen in the markets. It probably breeds in these waters, as individuals of all ages occur; the largest weigh ten pounds or more, and are much esteemed as food. Its abrupt profile and large eyes give it a very sparoid appearance; to the latter feature it no doubt owes one of its popular names, a similar epithet being applied to the large-eyed *Stizostedium americanum*, the wall-eyed or glass-eyed pike of the great lakes and the Mississippi Valley. The name "yelting" is very puzzling.

The rock-fish (*Trisotropis undulosus*) attains the length of four or five feet, and is one of the choicest of table-fishes, though Catesby declares that his "rock-fish," which seems most probably the same, "has the worst character for its poisonous quality of any other among the Bahama Islands."

The grouper (*Epinephelus striatus*) is very common, and is found also throughout the Caribbean Sea and the Gulf of Mexico. It attains an enormous size; and, on account of its abundance and the ease of capturing, it is used as food more than any other species. Its flesh is rather inferior in flavor, and coarse of texture, especially that of large individuals. Great numbers are caught off the islands, and are brought in the wells of the smacks to the artificial ponds along the shore, where they are kept for the market, and are fed on fish and lobsters. The young fish are called bamlets; but, after reaching a length of eighteen or twenty inches, are known as groupers; the latter name is a corruption of the Portuguese *Garoupa*, which is applied to a similar fish found at Madeira. A great variation is apparent in the color of different individuals, which has not yet been satisfactorily explained, though it is no doubt due to the depth of the water or color of the bottom in the place where they are taken, as is suggested below under *Enneacentrus punctatus*. The fishermen claim that the color of individuals confined in the ponds changes from one extreme to the other within the period of a few weeks. I have myself seen very considerable variation in color in the course of a week in fishes confined in shallow fish-ponds. The young fish are always slate-color, and are also marked with six or seven broad, transverse bands of light brown and a large quadrangular black blotch across the back of the tail behind the dorsal.

The hind (*Epinephelus guttatus*) is readily sold in the market, where specimens two feet in length are sometimes seen. The name hind perhaps refers to the spotted markings as similar to those of the deer. The name is found in nearly all the English West Indian islands, applied to the spotted species of this family. The hind is subject to great variations of color, specimens from the "white water," where there is a bottom of white sand, being nearly white, while others have the ground-color, a dusky red-dish-brown.

The butter-fish is often seen, and is of much interest, although its small size and the softness of its flesh render it of little economic value. In this species, as in the preceding, the range of color is very great; some individuals are orange-yellow, with blue spots confined to the head and anterior part of the body; others are red, slightly dingy above, and thickly studded throughout with black dots, each of which has a blue centre. The specimens examined were not very fresh; and, from the rapidity with which the colors change, I can readily believe that in life they were as brilliant as is indicated in the description of Cuvier. The yellow form corresponds to the typical *Perca punctata* or *Serranus guatixere*, and is known as the butter-fish or yellow coney; the red form corresponds to *Serranus ocuatalibi*, and is known as the nigger fish. Prof. Poey suggests that the former inhabits shallow and the latter deep waters, and thus explains the variations of color. These would seem, however, to depend more upon the color of the bottom than upon the depth. On the coast of Maine the bright-red variety of cod (*Gadus morrhua*, Linné) is found only on bottoms covered with red algæ, such as *Pilota serrata*, *Delesseria sinuosa*, and *Rhodymenia palmata*. The names butter-fish and nigger-fish are in use also at Barbadoes, Saint Thomas, and the Bahamas, as applied to this and an allied species. The first refers to the color and soft, oily feeling of the yellow variety; the latter probably also to color.

The chub (*Sargus variegatus*) is very abundant, occurring in large schools in company with the following species, which it closely resembles in form and habits. It is strictly European, and is especially common in the Mediterranean, but has not been found west of Madeira and the Canaries. I have carefully compared Bermudian specimens with Mediterranean specimens in the Bonaparte collection labeled *Sargus Rondeletii*. The chub is seined in vast quantities in Hamilton Harbor and other secluded bays.

The bream (*Pimelepterus Boscii*) is always found in company with the preceding species, to which it is very like in size, shape, and habits, and is taken with it in large numbers and brought to market. It is easily distinguished from the chub, as far as it can be seen under water, by the large black spot just behind the dorsal. It is also recorded from Madeira, the Canaries, Jamaica, and Cuba. A single specimen was taken in the spring of 1873, at Staten Island, New York Harbor, by Mr. C. L. Copley, and sent by him to the Smithsonian Institution.

The goat's-head porgy (*Calamus megacephalus*) and the sheep's-head porgy (*Calamus arbitarius*) are taken with the hook in large quantity, and rank amongst the most salable kinds. They live in deep water; and, when brought to the surface, their bellies are greatly expanded from the removal of pressure, giving them a very comical appearance.

The squirrel (*Holocentrum sogo*) is common, its bright color and nervous darting motions rendering it one of the most conspicuous denizens of the rock pools. It is found throughout the West Indies and south to Brazil. Their voracity is very great, and the tyro in angling usually finds his first prize to be a "squirrel." They are not often eaten. They breed plentifully about the islands, and reach a length of fifteen inches; the lobes of the vertical fins becoming proportionally more and more produced with age. The local name is the same as that given by Catesby, and refers to a grunting noise uttered by them, which resembles the bark of a squirrel.

The Bermuda bonito (*Zonichthys fasciatus*) is recorded also from Cuba and South Carolina. A specimen was taken near New York in October, 1875, and is now in the National Museum. The bonito is an excellent table-fish, and reaches the length of two feet or more.

Large schools of the "mackerel" (*Orcynus alliteratus*) were observed in March. This large and powerful pelagic fish has been observed in the Mediterranean, on the east of Norway, in the East Indies, on the coasts of Brazil and Cuba, and was found in 1871 by Prof. Baird in large numbers at Wood's Hole, Mass., and several have since been taken on the shores of Southern New England. It is highly valued for bait, but is the only large fish which is not thought good to eat; though rather oily, I think it superior to many of the Bermuda food-fishes. It attains the length of two feet and a half.

The round robin (*Decapterus punctatus*) is very common. This species ranges along the coast from Brazil to Cape Cod, and has been seen at Cuba and Martinique. The round robin is seined in great numbers at Hamilton Harbor, in company with the various species of *Clupeidæ* and *Gerridæ*, and is sold from row-boats along the quay at the legal rate of fourpence a pound. The largest measure six inches. "Jigging robins" is a favorite amusement of the little negroes. A few bread-crumbs are thrown over the dock, and the little fish collect in such numbers that a line with a bare fish-hook jerked rapidly through the group seldom fails to impale one or more.

The goggler or goggle-eye (*Trachurops crumenophthalmus*), like the preceding, is found in the West Indies and on the coast of the United States to Southern Massachusetts; it is found also at Mauritius, in the Pacific and Indian oceans, the Red Sea, and on the coast of Guinea. The goggler reaches the weight of a pound, is found with the preceding, and is used for food. The local names refer to its great, staring eyes.

The jack, or buffalo jack (*Paratractus pisquetus*), is common, occurring also in the West Indies and on the coast of Brazil, and the United States as far north as Cape Cod. Its habits closely resemble those of the preceding species. My largest specimen is nine inches long; the fishermen claim that the species attains the weight of five or six pounds, but they probably confound this with some other species of the same family.

Two species known as the shad (*Ducinostomus gula*) and the long-boned shad (*Ducinostomus Lefroyi*) are seined in quantity in the harbors and sold from boats along the wharf.

The hog-fish (*Lachnotomus falcatus*) is very common here, as it is throughout the West Indies. Hog-fish Ledge, at the entrance to Hamilton Harbor, is marked by a pyramid of stone, called the "Hog-fish Beacon," which is surmounted by a huge iron image of a hog-fish. The long streamer-like appendages or continuations of the vertical fins give to the hog-fish as it swims a singularly graceful appearance. The beauty of those exposed in the market is frequently marred, however, by having had these ornaments bitten off by the craw-fish and lobsters confined with them in the wells of the boats. The hog-fish attains the weight of twenty pounds, and is among the choicest of table-fish; its hard, white, exquisitely-flavored flesh has never been found injurious here, though in some parts of the West Indies it is regarded with suspicion. The common name refers to the swine like profile and dentition.

The cow-fish (*Ostracium quadricorne*) is, I was told, much esteemed for food, and is frequently baked whole in its shell. The popular name, like the Cuban "toro" and the Jamaican "cuckold," refers to the two horn-like supra-orbital spines.

The barracuda (*Sphyræna spet*) is frequently found in the markets, and is eaten with impunity, as far as I could learn. My specimens measured nearly two feet, and it is said to attain a much greater size. This is not the barracuda of the West Indies, but the common species of the Mediterranean known by the Spanish as *Espeto* and by the Italians as *Spirena* and *Luzzo*. Its occurrence so far west has, I believe, never before been observed. Günther considers the *Sphyræna borealis* of DeKay, described from specimens eight inches long taken in New York Harbor, to be the same. This might be inferred from the somewhat loose language of the description; but the figure shows it to be closely allied to, if not identical with *Sphyræna picuda*. The origin of the first dorsal is shown by the artist to be situated almost directly above the extremity of the pectorals and far in front of the middle of the fish.

The sennet (*Sphyræna picuda*) is common, breeding plentifully. The young may be seen basking in the sun in the

shallows, where they are seined in large numbers. My largest specimens measured over two feet in length. Both this and the preceding species are eaten with impunity, though the former is regarded with suspicion on the Mediterrancan, and the latter has to answer for several well-attested cases of *ciguatera*, though in some of the West India islands it is eaten freely.

The mullet (*Mugil liza*) is very common, especially in Hamilton Harbor and other shallow bays, breeding. They are seined, and brought to market in large numbers.

Anchovies (*Sardinella anchovia*) occurred in great schools during the month of March, and were seined together with *Decapterus punctatus*, and sold in quantities along the quay. Their average length was about five inches.

Great quantities of pilchards (*Harengula macrophthalma*) were seined during the month of March, and sold from row-boats at the water's edge. Their average length was nine inches. The name is derived from England, where an allied species, *Clupea pilchardus*, Walbaum, is commonly known as "the pilchard."

Most of the blue-fishing is done among the outer reefs or on the outer banks, twenty miles distant. The favorite baits are the flesh of the "Bermuda lobster" (*Palinurus americanus*) and the "Spanish lobster" (*Scyllarus equinoxialis*), and, that of some of the larger fishes, such as the "mackerel" (*Orcynus alliteratus*), and the morays, (*Muræenidæ*), The pilchard (*Harengula macrophthalma*), shad (*Eucinostomus gula* and *E. Lefroyi*), and the robin (*Decapterus punctatus*), are used as "full baits," as are also the various kinds of "fry" (*Atherina* and *Engraulis* sp.). The "scuttle," a large *Octopus*, very common on the reefs, is also frequently used, its tonghness making it a very lasting bait. Many of the choicest and largest species, such as the *Pristipomatidæ*, *Serranidæ*, and *Scombridæ*, are taken exclusively with lines.

The *Sparidæ*, *Labridæ*, *Scaridæ*, the smaller *Serranidæ*, and many others, with great quantities of the large crustaceans so much in demand for bait, are captured in basket-work fish-pots constructed of split cane. These are built on the same priaciple with the lobster-pots in use on the New England coast, but are very peculiar in shape. A fair idea of one of them may be gained by imagining two crockery-crates placed together, with the ends at an angle so as to form a very thick capital letter **V**, with arms about four feet sqnare, the entrance being through a funnel-shaped aperture placed in the inner angle. Smaller and more portable pots, made after the same model, in annealed wire, are also in nse. Such pots are baited with fish or lobsters, and anchored in two or three fathoms of water.

Shallow seines, a hundred yards or so in length, are plied in the bays, and with them are taken vast numbers of the smaller school-fishes, such as *Sargus variegatus*, *Pomolepterus Bosci*, *Mugil liza*, *Eucinostomus gula*, *Eucinostomus Lefroyi*, *Hemirhamphus Picii*, *Decapterus punctatus*, etc. These seines are usually tanned with the bark of the mangrove-tree, *Rhizophora mangle*.

Circnlar casting-nets, ten feet in diameter, are used with much dexterity in capturiag small fish for bait.

The "grains," a heavy, two-proaged instrumeat, resembling an ordinary fish-spear or gig, is carried in every boat, and used in striking large fish. The skillful grainsman seldom misses his mark, and in these waters, clear as crystal, this instrument is effective at the depth of ten or twelve feet.

During the winter months, recourse is had to the fish-poads, which are stocked with the surplus of the summer's catch. These are of simple construction, usually natural pools in the rocks, or protected coves, inclosed by loosely-laid stone walls. Huadreds, sometimes thousaads, of large fishes are here stored up for seasons when the severity of the weather is such as to prevent the usual visits to the fishing-grounds. The largest of these, the "Devil's Hole," is a large natural pool near the center of the main island, and about one hundred feet from the south shore of Harrington Sound. Several hundred large Gronpers and Hamlets (*Epinephelus striatus*) are usually confined here, and the place is much visited by strangers. At feeding-time, when one looks into the clear waters of the pool, nothing can be seen but an array of great open moutns. Wheu the food is thrown in, a scene of indescribable commotion and splashing ensues. They are very fierce, and rush savagely at any thing which looks eatable. I have seen two large ones, each four feet in length, seize the opposite ends of a cuttle-fish arm tugging for several minutes at the tough morsel before the question of ownership could be decided.

THE RELATIONS OF THE BERMUDIAN FISH-FAUNA.

These islands, considered in reference to their marine fauna, lie on the extreme northern and eastern boundary of the West Indian "Region." All the more characteristic fishes of this "Region" are represeated in Bermudian waters, and the invertebrate fauna, as far as investigated, appears to have very similar relations. The reef-building polyps find here their furthest northern remove from the equator. That the subtropical character of the marine fauna and flora is determined to a great extent by the influence of the Gulf Stream is rendered very evident by comparing the life on the land with that of the surroundiag waters. The latter is much the more tropical and West Indian in character; while the former, although many West Indian species are represented in the flora, is a curious assemblage of forms brought together from various quarters by winds, ocean currents, and the agency of man. Drift-wood and seeds from the Antilles are cast up in great quantities with the flotsam and jetsam of the shore, and many of the commonest plants of the Bermudas are supposed to have found their way thither in this manner. Thus the transporting power of the Gulf Stream appears to have been quite as important in the introduction of tropical forms of life to this group as has been its thermal effect in rendering it a suitable home for them. Since the Bermuda atoll is comparatively recent in origin, it is not difficult to believe that it has thus been supplied with living forms. Many fishes of the West Indian fauna have been found in the waters of the Azores, Canaries, Madeira, the Cape Verde Islands, and other points in the Eastern Atlantic; it appears easy to account for their wanderings by an extension of the action of the same transporting agent.

The occurrence of several strictly European species is also to be noted. All of these appear to be powerful, rapid swimmers, with the exception, perhaps, of *Synodus lucerta*.

[Tables are here given showing the geographical distribution of all the species observed in the Bermudas.]

POPULAR NAMES.

The names in use among the fishermen afford some curious studies. Where practicable, hints in regard to their origin have been given.

I observe that of the thirty-three names given by Catesby as in use in the Bahamas at the time of his visit to those islands, one hundred and fifty years ago (1724–25), twenty-six are applied to common species in the Bermudas. Nearly all of these are applied to fishes of the same family or genus, and most of them to the same species. This may perhaps be explained by the common origin of the colonists of the two regions. It is an interesting instance of the persistency of common names. Many of these names are in use at the present time in the Southern Atlantic States, though usually applied to different species.

MOUNTAINS.—An "Appalachian Club" has been formed in Boston, of which Edward C. Pickering, Samuel H. Scudder, T. B Henck, Jr., F. Sterry Hunt, Charles H. Hitchcock, Charles E. Fay, and W. G. Nowell are promiaent members. They wish to include as members, not only persons who wish to make scientific investigations in this great and ancient range of mountains, but also those who desire to find pleasure in tramping about them, or in seeking out new hunting and angling fields. Its object is similar to that of the celebrated Alpine Clnb.

TYPES.—Whoever puts his confidence in types stands on treacherous ground. By one of those accidents which *will* happen in the best regulated printing offices, the exasperating little pieces of metal, last week, in the article "Recent Pamphlets," made us call *Zapus*, "La pus," and two lines further on "Zapus" appeared where we wrote *Jaculus!* These changes will put some meaniag into the sentence. The diphthongs æ and œ are particularly obstinate. No amount of care in proof readiag seems to save one from being printed where the other belongs.

—It is not easy to find an engraver who can properly cut natural history drawings. Having some fine work of that character to be done, we were therefore fortunate in being recommended to B. B. Chamberlin, of No. 34 Park Row, in this city, who gave the fullest satisfaction. Mr. Chamberlin is a skillful workman, and a gentleman of scientific tastes, to whom we commend our readers.

—The new Metropolitan Museum of Natural History at Central Park, in this city, is near completion, so far as the present place is concerned, and will be opened to the public next fall. The work of removing the old collections from their present place in the Arsenal. The cost of the new exhibition cases alone will be $62,800.

—Greene Smith, Esq., and a party of gentlemen are on the Gulf coast of Florida securing specimens of sea-fowl for preservation.

ORNITHOLOGICAL CALENDAR FOR MARCH.—In 1868 Mr. J. A. Allen contributed to Vol. I of the *American Naturalist* an ornithological callendar of the spring months for Massackusetts, from which we extract the following for the first half of March:—

First to tenth—Blue-birds, song sparrows, robins, purple grakles, red-winged black-birds, rusiy grakles, aad cow birds begin to arrive.

Tenth to twentieth—The preceding become more common, meadow larks, bridge pewees or Phœbes, snow-birds, and purple fiaches begin so arrive. The hawks, that in winter are represented by bnt a few individuals, as the marsh, red-tailed, etc., increase in numbers by arrivals from the south. The gos-hawk, snowy owl, and other northern birds of prey retire.

NOTES FROM OUR CORRESPONDENTS.—Mr. John Krider, the well-known sportsman, of Philadelphia, writes to us that he has just received six full-plumaged Bohemian waxwings (*Ampelis garrulus*) from Winnebago County, Iowa. They arrive there about December 1st, and remain until they devour all the wild rose buds, and a red berry resembling the holly...."Pero-Nixon" (Hamburg, Berks Co., Penn.) writes that the birds are arriving there very early. The blue-bird, which usually makes its first appearance in April, arrived in February. Sparrows and swallows have been heard. Englisb sparrows were numerous throughout the winter, and other species are becoming common.... Last October a female deer was killed at Bay Lake, N. Y., which was entirely white except a small spot on the top of its back which was the usual color. Four or five years ago one entirely white was killed near the settlement of Fiac, St. Lawrence Co., N. Y., and some fifteen years ago, near the same place, a spotted one, the groundwork being white, with large spots of the usual color....S. B. Buckley (Austia, Texas), says that Gambel's quail is occasionally seen near El Paso, Texas, in winter; and that the Messina quails visit plantations in Barnet County, and are common west of Pecos River, but that they are more shy than the Bob White.

—In the first Bulletin for the year 1875–76 of the American Geographical Society is a report of Mr. James T. Gardaer on the "Uses of a Topographical Survey of the State of New York," in which he urges the importance of such a sur vey.

—Wolves are killing sheep in great numbers in Clearfield County, Pa., in which these beasts have not been seen for fifteen years.

GREAT ENDURANCE OF A TURTLE.

PHILADELPHIA, March 6th, 1876.

EDITOR FOREST AND STREAM:—

Some years ago in New Jersey, I was present when the owner of a very old mill was having the pond drawn off for the purpose of making some repairs. Large quantities of fish were captured, and among them in one of the hauls made, was an immense snapping turtle (*Chelydra serpentina*). To secure this valuable prize it was proposed to cut off its head, and a small hatchet was secured for the purpose. But the snapper would not submit willingly to be decapitated, and although he could not, like the box tortoise (*Cestudo virginianus*), shut his head entirely within his house, he could draw it back far enough to make it very difficult to behead him. At last, however, an opportunity offered, but the hatchet fell just back of the eyes—which in this species of turtle are placed very far forward—and cutting clear through, left the poor reptile with about two-thirds of a head. It was thought, however, that the execution would suffice, and turning the turtle on its back upon the bank a considerable distance from the pond, its owner started for another haul of fish. That being made, to the sorprise of all, it was found that the turtle was missing. Great search was made, but in vain, and finally it was concluded that it had been stolen.

Two years afterward it became necessary to draw off the water again, and the customary fishing took place, when there was caught a snapping turtle minus its eyes and a third of its head. It was our old friend of two year's before, which, upon being weighed turned the scale at forty-two pounds. How did it get back into the pond without eyes? That is a hard question; perhaps by accident. How did it sustain life with only part of a head? Well, the snapping turtle is very tenacious of life, and this one doubtless sustained himself by sucking in the small fry abounding in mill ponds, and it seems not to have decreased in size during the two years it was a cripple. This may seem a hard story to believe, but it is true, and equalled by many well-known cases of tenacity of life. It requires many hours to drown a turtle in alcohol for example. The records of the Spanish Inquisition show how very long men, and even delicate women were able to survive its infernal tortures. Alexis St Martin lived for years and years, (and may he living yet,) with the hole of a bayonet-thrust in his stomach, through which could be seen, and hundreds did observe, the process of digestion. Among the lower orders of creation in many cases, if an animal is cut into two or more pieces, each part will take up the business of life, become an independent being, and go on reproducing its species. HUON.

SCARCITY OF BIRDS IN NEW JERSEY.

WENONAH, Gloucester Co., N. J., March 6th, 1876.

EDITOR FOREST AND STREAM:—

I regret that my brief residence at this point (three years) will not enable me to give you much information concerning birds. For some reason unknown to me, there has been an unusual scarcity of the usual winter birds during the past winter, with the exception of crows and hawks. Up to the middle of January, however, I noticed flocks of the common yellow-bird, the first I ever saw in winter. The robin, which has been common during the two previous winters, I have not seen this year. The scarlet tanager has also been common heretofore, but the first specimen appeared on Feb. 14th. The red-winged and crow black-birds came on the same day. The blue-bird has been with us at brief interveals all winter. The meadow lark has been abundant, as heretofore. I have only seen snow-birds two or three times during the past winter.

MILTON P. PIERCE.

RECENT ARRIVALS AT THE CENTRAL PARK MENAGERIE.—One Spotted Cavy (*Cœlogenys paca Hab*), South America, presented by Mr. Fidel G. Perrs. One Spotted Cavy (*Cœlogenys paca*), presented by Mr. E. Suzarte. One Horned Owl (*Bubo virginianus*), presented by Mr. Charles H. Cummings. W. A. CONKLIN, Director.

Fish Culture.

ABSTRACT OF THE SIXTH ANNUAL REPORT OF THE COMMISSIONERS OF FISHERIES OF THE STATE OF NEW JERSEY.

FOR convenience the State is divided into the Tidal or Southern, and the Non-Tidal department. The reports of the Fish Wardens of Burlington, Camden, Gloucester, Salem, and Cumberland counties, bordering on the Delaware bay and river indicate that the catch of shad is becoming greater in numbers, and that the fish are larger in size in each successive year. Fifteen drift or gill seines were used in Cumberland County, and 3,000 shad taken during the season, many of them weighing as high as seven pounds. On the Cohousey only about 6,000 were taken, owing probably to the muddy condition of the water.

The more intelligent fishermen, constituting the majority, ascribe the increased number and superior quality of the shad to the successful operation of the new fishing laws, and express themselves well pleased with them.

The sturgeon fishing has been poor. They appeared late and left early. Their numbers are decreasing yearly. This is evidently due to the sturgeon gill-nets. Before these nets were introduced the sturgeon were caught in large numbers at all the shore fisheries, and it becomes a question as to whether their destruction should be allowed to continue. They certainly constitute a valuable article of food, and a thriving business is done in the caviare made from their roe. In Gloucester County the catch averaged about 3,000 fish to the net, and the fishing laws have generally been respected, although there have been some violations, resulting in indictments and fines.

To enforce the laws which are common alike in Delaware and New Jersey a river police is necessary, and the Legislature of Pennsylvania authorized the Fish Commissioners of that State to appoint not less than three such officers for the Delaware, but no such appointments have been made, and the whole burden of enforcing the laws common to both States for their united benefit has fallen upon the New Jersey Wardens, notwithstanding the fact that the most troublesome violators hail from Philadelphia. The report describes in detail the effect of a large number of drift nets drifting for hours and over many miles of water, breaking up and scattering the schools of shad, and to which is due the almost extinction of our migratory fishes. The close seasons now observed, and enforced by the Fish Wardens of the nine counties fronting on the Delaware have resulted in a steady increase in the numbers and size of shad.

In the Non-Tidal department, comprising Warren, Hunterdon, Mercer, and Sussex counties, the Wardens report that the first fish (shad) were caught in Mercer, April 15th, and in Hunterdon April 9th. The catch was very large throughout the month of May, and up to the close of the fishing season the fishermen were well paid for their labor. The proportion of large shad was greater than at any time for twenty years past, and the gross receipts from the shore fisheries exceeded any returns made since the appointment of the commission. The drift nets also shared the advantages of the increase in the quantity and quality of the fish.

The catch of smelt from the Raritan was less than the average the past season. The cold weather continuing later than usual, and several northeast storms occurring about the time of their arrival at the mouth of the river, seemed to have the effect of driving them back to deep water. The appropriation of $1,000, made by the Legislature for the artificial propagation of shad in the Delaware River, was expended in operations at Lower Black's Eddy and Point Pleasant. The total number of fishes hatched at all the stations amounted to one million four hundred thousand, the expense was to be divided with Pennsylvania, and all the fish batched were turned into the Delaware, with the exception of one hundred thousand which, at the request of Prof. Baird, and in return for his advice and assistance were given to him, and forwarded by the United States Fish Commissioners to Jackson, Miss. The arrangements for prosecuting the work of the commission in the matter of shad hatching during the current year will be made in advance, and in suitable localities.

While the work was going on at Point Pleasant, Mr. Fred. Mather and an assistant, Mr. Bell, were sent by Prof. Baird to assist in the work, and also to endeavor to ascertain the best method for keeping the young fish alive in tanks while being transported for the purpose of stocking other waters. To this end they conducted a series of experiments with fish taken from their hatching boxes, carefully noting the temperature of the air and water, and found that under favorable conditions the young fish would live at least ten days. Mr. Mather used a tank of his own design, with arrangements to allow a current of water to pass over the fishes without crowding them against the outlet, and thus destroying them. The apparatus worked satisfactorily in that respect. The great difficulty in the way of keeping the young alive so long a time as is desired, is the fact that they begin to feed after three or four days, when in their natural condition, and no one has yet been able to find food suitable for such young fishes.

Of the salmon ova received from the Sacramento River, and alluded to in the last report, 165,000, were successfully hatched and distributed, 2,000 were placed in the tributaries of the Passaic above Paterson; 3,000 in the Raritan, and the remainder in various tributaries of the Delaware. In March 80,000 Penobscot salmon ova were received from Mr. Atkins' works at Bucksport, Maine. Of this large quantity only nine eggs were spoiled in the transhipment. Of the 79,000 and odd left for distribution, nearly all were deposited in the Musconetcong, Pohatcong, and Paulinskill rivers, and those not deposited there were placed in the south branch of the Raritan, and the Hackensack.

A number of young salmon have been caught at Watergap, and other points along the river, which proves that they are flourishing, and others have been taken in the Musconetcong that were growing finely and in perfect condition. The water of the Delaware is pure and cold enough to suit salmon, and only persistent effort is required to stock it successfully with this fish, and the supply of suitable food is inexhaustible. The 10,000 landlocked salmon left at Troutdale at the date of the last report were on November 28th placed in Lake Hopatcong, White Pond, Green Pond, and Mackopin Lake. They were of sufficient size to take care of themselves, and will be heard from in due course. Whether these peculiar characteristics required to develop these northern fishes exist in these waters, can only be determined by experiment.

The Commissioners purchased this year six thousand salmon trout ova, which were hatched at Troutdale, and placed in northern New Jersey by Mr. M. R. Dennis, of Newark, A. C. Canfield, of Morristown, and others. These fishes grow rapidly, and are of fine quality. They are abundant in northern New York, and are very attractive to anglers. If they flourish where placed a larger supply will be secured for another year to stock lakes and streams in the upper part of the State.

The demand for black bass has exceeded the supply. More than thirty different streams and lakes have been stocked, and upwards of three thousand fishes have been distributed. This work was done principally in the months of September and October. The fishes were all yearlings, or older, and will spawn next spring. Experience with this species shows that speedy returns may be expected. The West Jersey Game Protective Association has been very energetic, not only in selecting locations, but in defraying the expenses of transporting and depositing these fish, and the Commissioners give the society great credit for introducing and enforcing salutary laws for the protection of game birds and fishes.

The bass in the Delaware already furnish a large supply of valuable food, and in addition to this, many visitors from the cities have used the Belvidere Railroad to bring them to this, the most attractive fishing ground to be found anywhere near their homes. The amount of travel by this class alone was so great during the past summer as to attract the attention of the railroad officials. The same result will ensue in other parts of the State when it is known that the efforts to stock other streams and lakes have been successful. New Jersey is already known as one of the most progressive States in this regard. The establishment at Troutdale, used by the commission for breeding purposes, is recognized as one of the best in the country, and enjoys more than a national reputation among fish culturists. It may be of interest to know that orders have been received there this year from England and Scotland for nearly one million brook trout ova.

The report contains the reports of the Fish Wardens of Morris, Essex, and Passaic counties, appointed under the law passed last year, which gives each Warden full authority over the waters of his county, and also a right to prosecute for violations of the law discovered in either of the three counties. Under this act, the Governor appointed John C. Roe, of Paterson, Warden for Passaic County; Lambert Speer, of Caldwell, Warden for Essex County; and Charles Arrowsmith, of Morristown, Warden for Morris County. Each of these gentlemen accepted the position, and qualified for the office. They have all been zealous in the discharge of the duties imposed. In Essex, four persons have been prosecuted and fined for violations of the law.

In Passaic numerous gill-nets and set lines have been destroyed, and yet we (FOREST AND STREAM) learn that pounding and netting in Greenwood Lake has been carried on almost unblushingly, and that black bass taken in this way are peddled about the neighborhood. In Morris County there have been two arrests made for using giant powder in Lake Hopatcong.

The Commissioners have given much attention to the subject of fishways, as they are authorized to build fishways in all dams across the Raritan. The dam at Bound Brook is a complete barrier to the passage of anadromous fishes, and has entirely destroyed the shad fisheries formerly existing above the dam.

The way open in the dam at Scudder's Falls is a complete success, but that dam is less than four feet in height, while the dam at Bound Brook is seven feet high. It is believed that a rough stone structure, representing as nearly as possible the natural rocky rapids of a swiftly-descending stream, is the only practical way yet discovered. They are about to institute an experiment with a model recently received in which provision is intended to be made for rests, after each foot of rise. If this will give sufficient depth of water in the lower part of the way, or ladder, there seems to be no reason why it should not answer the purpose, if proper leaders are built out below. They recommend such a supplement to the law of 1874, referred to, as will enable them to do the work required, at the cost of the State, in the first instance, the money to be paid back by the dam owners when the work is completed.

Three hundred thousand ova of Sacramento salmon were received from Prof. Baird in October, and having been hatched at Troutdale, will be ready for distribution in a few weeks.

In conclusion, the Commissioners allude to the fact that the work of the commission is now so considerable that it is necessary that it should have authority and means to employ a superintendent to give his whole attention to the various details connected with the propagation, distribution, and protection of fishes throughout the State, under their direction and control. This would leave them free to devote more time to general oversight of the work; to examine more thoroughly the workings of the various laws and suggest amendments, and to learn, by personal inspection, the needs of different sections of the State. It is probable that the construction of fishways will require much of their attention during the ensuing year. In order to continue their efforts to stock the inland waters on a scale to produce the best results and secure the benefit of the work already done, an appropriation of ten thousand dollars will be needed. An appropriation of five hundred dollars will enable them to continue with Pennsylvania in the work of artificial propagation of shad. Her Commissioners have a balance of twenty-five hundred dollars in hand for this work, contingent upon the action of New Jersey.

STOCKING TROUT PONDS.

The following correspondence has been forwarded to us for publication. It answers at once a query which is constantly being put not only to us, but to Mr. Seth Green, and its insertion here will save him much time:—

SOUTH NORWALK, Conn., March 3rd, 1876.

MR. SETH GREEN—DEAR SIR:—

We have been putting water works into our place and have constructed a dam which overflows about thirty acres of land with an average depth of about fifteen feet. The pond is fed by a small stream made up from springs. Will you be kind enough to give me your opinion as to what kind of fish would be the best to stock it with, and where to procure them, and when the best time to put them in. A. SOLMANS.

ROCHESTER, N. Y., March 9th, 1876.

DEAR SIR:—

Put two or three hundred gold fish in your pond; put them in by June 1st, and put 50,000 young brook trout in the small spring streams that feed your pond. The gold fish will find food enough, and will breed, and the young will be food for the trout. When the trout are three years old they will come down in the pond, and you will have a trout pond. Do not put any other fish in the pond. There is no other fish you could put in a new pond that would find food enough. Put young brook trout in your streams every year for some years and you will have a result that you will be proud of. Put the brook trout in the stream in May. You can get the trout of any trout culturist. SETH GREEN.

SHAD IN LAND-LOCKED WATERS.

SYRACUSE, N. Y., March 6th, 1876.

EDITOR FOREST AND STREAM:—

Two or three years since, the query "will shad live land locked like salmon," seemed to excite general, as well as sporting interest. I have seen nothing in your columns recently having any definite bearing upon the subject. Here is my quota: Last summer (exact date indefinite), while standing on the bridge above Ramsey & Co.'s Works at Seneca Falls, N. Y., I noticed several small fish whirling down through the rapid water at that point. Some were dead and others were merely "giddy," as if they had been poisoned or lost their swimming volition. Picking one up, I was puzzled to classify the specimen anywhere in my known line of ichthyology, but took memoranda, number and position of fins, &c. A day or two afterwards, I saw dozens of fish, all of the same size and appearance, cast up on the shores of Cayuga Lake, at the outlet of the Seneca Falls Stream. Shad-spawn having been deposited a year or two previous in Geneva Lake, above Seneca Falls, by Seth Green, it appears to me that this must indicate a failure of the effort to propagate shad for permanence in fresh waters. Comparing my notes to-day with a fresh caught shad, it—barring size—is the same fish I saw last summer. My theory is, that young shad will flourish away from tide water until age or size necessitate the ocean. In above case there being no outlet to salt water, the fish inevitably dies.

Several streams in Central New York have recently been stocked from California, with brook and salmon-trout, and their better birthright to fresh water will undoubtedly ensure success. E. R. WILSON.

BUCKFIELD, Me., March 8th, 1876.

EDITOR FOREST AND STREAM:—

I saw in a late number of the FOREST AND STREAM a discussion as to whether trout would subsist on vegetable food or not. My experience in feeding trout has been considerable, and I have endeavored to experiment as much as possible for the purpose of informing myself as to what trout would eat best and would best thrive upon. I therefore took about two hundred and fifty trout from my pond and placed them in tanks into the basement of my house, supplying them with water from the pond near by conducted through a one and one half inch pipe. I at first fed with chopped liver, afterwards tried cuttlug up poorer classes of fishes obtained from the river near by, such as minnow, chub or shiner, so called. I afterwards tried curd made from sour milk, which I finally adopted as the cheapest and best food I could procure in the country. I tried bread crumbs, but the trout had to be very hungry before eating, and then not seeming to relish the food. I found after feeding for a long time upon curd, and then offering animal food, that the trout were apparently frightened and would refuse to eat, so far as I could see, not swallowing even a single mouthful, but would seize the pieces and immediately spit them out. G. O. HAYFORD.

Superintendent Rangely Trout Breeding Association.

All the information elicited by the discussion of this question only goes to verify the position taken editorially in our issue of January 20th, page 387, vol. v. Meat we find is chiefly used in breeding establishments in Europe.

The Kennel.

AMERICAN DOGS ILLUSTRATED.

WE are now having copies of all the portraits of celebrated dogs which have appeared in our paper handsomely engraved on card board, ready for framing and hanging in the sportsman's sanctum. The list embraces Mr. Raymond's pure Laveracks Pride of the Border and Fairy; Mr. Saltus' Dash and Bess; Mr. Jarvis' Dick; Dr. Strachn's "three celebrated dogs," Don, Peg, and George; Dr. Webb's Whisky; Mr. Dilly's Ranger, and Mr. Strong's Pete. Also the engraving of our Chicago Cup mounted to correspond. These pictures can be had at our office at a cost of twenty-five cents each, postage prepaid.

—From the number of applications for our blank forms for pedigrees, which can be had gratis at this office, the Kennel Register promises to assume proportions that will warrant us in publishing it in book form at an earlier date than we had anticipated.

—The imported red Irish setter Stella, belonging to Dr. W. E. Hudson, of North Manchester, Conn., visited Dr. Goldsmith's Plunkett on the 1st inst.

—A physician, who was in charge of the hospital at Ballarat, Australia, for twelve years, recommends as a cure for distemper, one grain of tartar emetic and three grains of calomel.

—The Laverack setter Guy was alluded to in a recent issue as belonging to Mr. Chas H. Raymond, whereas the ownership should have been credited to Mr. Dudley Olcott, of Albany, N. Y.

—Mr. Sherwood's bitch Beauty, which was lately sent to Mr. Turner's Elcho, was not served, having arrived too late.

—Mr. J. N. Francis, of Bridgeport, Conn., claims the name of Norah for his red setter bitch out of Hubbell's May, by Marshall's rock, whelped July 13th, 1875.

DISTEMPER OR PNEUMONIA.

The following letter from Dr. W. S. Webb will be found highly important, as throwing some light upon many cases of so-called distemper, besides suggesting a remedy:—

EDITOR FOREST AND STREAM:—

A few weeks ago I was called to Springfield, Mass., and on my arrival I was informed that two of my dogs were sick with distemper; so after lunch I drove out to Mr. Philips', who was keeping them, and found that mine were not the only ones sick, his large setter dog showing unmistakable signs of some sickness. The three dogs were a large black and white setter, two years old, which we will call No. 1; a black and white pointer, ten months old, No. 2; and a liver and white pointer bitch pup, three months, No. 3. I arrived at the kennel about four o'clock Friday, and visited it again Saturday at noon, and also on Sunday at noon.

Case No. 1—Dog dumpish, slight running from nose and eyes; eyes blood-shot; nose warm; slight cough; no vomiting; bowels constipated; feces hard and dark-colored; received no medicine. Saturday—Dog very much worse; will not recognize his master, and appetite poor; refuses to lie in his house, but lies out on cold ground; has snapped twice at his owner, who consequently refuses to go near him to administer medicine. Three compound cathartic pills were placed in a piece of meat, but he refused to eat anything; coughs violently and frequently, and is constantly attempting to vomit; is very weak, but refuses all nourishment except a little milk. Sunday—Very much worse, and has been delirious various times during the morning; cannot stand up; everybody afraid of him. As he is not a valuable dog, and his chain not very strong, his owner decides to shoot him. Post mortem reveals all the viscera in a normal condition, with the exception of the lungs; they show a clear case of double pneumonia.

Case No. 2.—Friday—Dog rather dull, running from nose and eyes profuse; eyes blood-shot; nose warm; a hard, short cough, and frequent attempts to vomit, only now and then successful, from which he has some relief; only a tablespoonful of matter, however, vomited at a time, appetite not very good; bowels constipated, and feces hard and dark-colored. Gave him three compound cathartic pills (U. S.) that I happened to have in my pocket. I should here mention that the compound cathartic pills were not the vegetable ones, but contained calomel. This dog had lost a great amount of flesh during the last two days, and from a fat, sleek-haired animal, was reduced to a skeleton, with his hair rough and dull. His urine was quite milky. Saturday—About the same as yesterday; his cough and attempts at vomiting perhaps a little more severe; bowels very loose from medicines of yesterday; appetite same; oats cooked meat and Indian meal and milk, but very little. Sunday—Dog much better; cough not so hard or severe; does not vomit as often; nose not so warm; eyes do not run so much; appetite same. Monday—Much improved; appetite a little better; received three grains of blue mass; cough less, and does not retch near as much. Tuesday—Continues to improve; received three grains blue mass in the morning, and two grains quinine in morning and two again in the afternoon. Wednesday—received four grains quinine; Thursday, four grains; Friday, four grains; Saturday, four grains. Sunday—Dog improving rapidly; in fact, is quite well, and is gaining flesh fast. His diet has been from the first—beef, once a day, milk, and oatmeal.

No. 3.—Received no medicines Friday, Saturday, or Sunday, as her symptoms were very slight, and bowels were not much confined. Monday, received three grains of blue mass and two grains quinine, one in morning and one at eve; Tuesday, received two grains of quinine; Wednesday, very weak and not expected to live, received two grains quinine and three grains blue mass; Thursday, better, received two grains quinine; Friday, much better, received two grains quinine; Saturday, continues to improve, received two grains quinine; Sunday, nearly well; diet has been from the beginning, of oatmeal, milk, and meat once a day. Monday, dog perfectly recovered.

Now, these three dogs were said to be sick with distemper, and no doubt by many would have received nothing but an emetic of salt. The vomiting appeared to me to be caused by the pneumonia sputa being swallowed, and then ejected from the stomach, dogs not being endowed with the faculty of spitting forth what they cough up from the lungs. The fits that dog No. 1 had I think was nothing more than the delirium which is often seen in severe cases of pneumonia. Before I made the autopsy on dog No. 1, I had told several persons that I believed the dogs were all sick with pneumonia, and I believe, moreover, that fully one-half the dogs that are sick and die with so-called distemper, are pure cases of pneumonia, and if properly treated in time could be saved. A warm house is, in the first place, highly essential

to their recovery; and second to it is the necessity of keeping up the dog's vital power by good feeding and medicinal tonics. I think if I have another case—as I most probably shall—I will increase the amount of quinine from four grains to six or nine grains, giving it in two or three grain pills three times a day, and if the dog cannot digest nicely cooked meat, good strong beef tea is the best substitute. We all know that in man there is hardly any disease that requires so much stimulation as pneumonia. The dogs at no time seemed to be in great pain; if they had been, orders were left that they should have one half grain of opium.

I have reported these cases in the hope that some one will be benefited by it, and should any of your readers deem it worthy of trial, I would be pleased to hear the results. W. S. W.

BLOOD WILL TELL.

SAVANNAH, Ga., March 4th, 1876.

EDITOR FOREST AND STREAM:—

Colonel M—, of this State, in his younger days, was a keen and enthusiastic sportsman, and was the owner of a very superior pack of hounds. So particular was he in regard to his kennel, that any pupa whelped in it that did not come up to his standard were condemned at once to the horse pond, and any pup that was allowed to live after his fiat had gone forth, and he found in the possession of any of his slaves, that possessor got the full measure of his allowance without delay. Now old Pompey, the driver, had long wanted to get a pup, but Massa L— prized his high breds so much that old Pomp was always in a state of disappointment. But at last the bitch Jumpot, had a fine litter of pups, and among them was a little runt whose eyes were not opened on the fifteenth day. So Pompey says, "Please Massa L. lemme hab dat pup, an' I try to raise um." "Raise h—l," says the Colonel, "You take that pup right down to the pond and drown it, or I'll raise your hair." All right, Massa L., I take um right off." So Pompey took the pup, but instead of doing as he was told, he took it along the road and meeting one of Mr. Martin's servants, he says, "You take dis pup to your house and raise um for me till he fo' months old an I gib you one gallon syrup." "I do it for snah," was the reply. The four months rolled around and he got his syrup and Pompey took his pup—alive, but a perfect skeleton—to the Colonel and says, "Please Massa L., may I keep um?" "Yes," says the Colonel, "until he dies, which will be before many days." Pomp thought different, and says to himself, "de hog's liver de best ting to make de dog hab good nose." So he used to beg hog's liver for the pup, and to the wonder of all he began to pick up and fill out amazingly, and his scent was wonderful. Some six months rolled by, and one day the Colonel seeing him, says to Pomp, "How looks almost good enough to run with my pack." "He run with um for true Massa L., you gib um a chance." Just then the pup, which was called Cotchum, gave one long howl and started off on a run. "The dog is mad, said the Colonel." "He no mad, Massa L., smell deer two miles off," and sure enough in about an hour the deer came in full view and the pup in full chase. The Colonel was now more than excited, and was soon in the saddle with his gun in full pursuit. The deer was brought to bay and killed, and on arriving at home, the Colonel sent for Pompey and said, "Pomp, that pup beats any dog I have in my pack, and I will give you a ten dollar gold piece for him." "Massa L., said Pompey, you say I could keep dat pup till he die, now I gwine keep you to your word." The Colonel blustered, roared, and stormed, but no use, old Pompey stood firm and only said, "Your word, Massa L.," and the Colonel regarding his word like his bond, old Pomp had him. Says old Pompey, "What de use Massa L. you hunt him, but he my pup." Finally the Colonel said, "Pompey, I will give you your freedom papers for him." "No Massa L., ole Pomp sick you feed um, hab de doctor an take care of um, Pomp no foot." Years rolled on and old Pompey in his last sickness sent for the Colonel, and on his coming to his bed-side says, "Massa L., forgib me, I hab been one berry good servant, but for all dat, I 'ceive you old Cotchum from your pack ob dogs," and then told him all the circumstances. Thank the Lord, says the Colonel, I can say Cotchum come from my stock, and I freely forgive you Pompey, and may the good Lord forgive you all your sins. In a short time old Pompey was no more, and his remains were followed to the grave by the Colonel, who sincerely mourned his loss.

Colonel M. is still living at his residence in McIntosh county, and any gentleman who may call on him will be received with the true and courteous hospitality which so characterizes the southern gentleman and sportsman, and may, perhaps, hear from him, some of the wonderful exploits of old Cotchum. GEORGIA.

TRANSPORTATION OF DOGS.

EDITOR FOREST AND STREAM:—

During the coming Dog Show at Springfield, Mass., many persons owning dogs and unable to leave them at the time, may be glad to know of a way by which their dogs may be sent and returned, and be well cared for during their journey. During the last two years Mr. Wm. Carnow, Baggage Master of the N. Y. & B. Express Line, has carried some twenty dogs for me hotween New York and Springfield. Being a sportsman himself he knows well how to care for a sportsman's dog. He leaves New York on the 10 A. M. express every Monday, Wednesday, and Friday, and returns to New York from Springfield at 1 o'clock P. M. every Tuesday, Thursday, and Saturday, arriving in New York at 5:14 P. M. W. S. WEBB, M. D.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.* Grouper, *Epinephelpus nigritus,*
Drum (two species.) Family *Scia-* Trout (black bass,) *Centrorpristis nidæ. atrarius.*
Kingfish, *Menticirrus nebulosus.* Striped Bass or Rockfish, *Roccus*
Sea Bass, *Sckenops ocellatus. lineatus.*
Sheepshead, *Archosargus probato-* Tailorfish, *Pomatomus saltatrix.*
cephalus. Black bass, *Micropterus salmoides;*
Snapper, *Lutjanus cœsus. M. nigricans.*

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—We have to quote a slight advance in the prices of all kinds of fish. The trout season opened yesterday and the display on the stands in market is unusually fine. Mr. Blackford's aquarium swarms with brook trout, all looking in fine condition. Dealers are very chary about making contracts for future delivery of trout. The general tendency is to economise and cut down in luxuries, and brook trout at a dollar or a dollar and a half a pound certainly come within the latter category. These remarks apply particularly to cultivated trout. We shall have immense quantities of Canada wild trout in market, and even now the price asked for them is only half that of the others. We quote: Striped bass from North Carolina, 20 cents per pound; smelts, from Maine, 15 cents; blue-fish (frozen), 15 cents; salmon (frozen), 50 cents; mackerel, 25 cents each; shad 50 cents to $1 each; white perch, 18 cents per pound; Spanish mackerel (frozen), 50 cents; green turtle, 20 cents; terrapin, $12 per dozen; frost-fish, 8 cents per pound; halibut, 15 cents; haddock, 8 cents; king fish, 18 cents; cod-fish 8 to 10 cents; black-fish, 15 cents; flounders, 12 cents, eels, 18 cents; lobsters, 10 cents; sheepshead, 30 cents; turbot, 25 cents; scollops, $1 per gallon; soft clams, 30 to 60 cents per hundred; white-fish, 18 cents; pickerel, 15 cents; sun-fish, 10 cents; perch (yellow), 10 cents; salmon trout, 20 cents; brook trout (Long Island), $1.25; Canada brook trout, 50 cents; live trout, $1.50 per pound; hard crabs, $4 per 100.

HOW SPLIT BAMBOO FISHING RODS ARE MADE.—There are possibly ten makers of fair split bamboo rods in this country, and not more. The bamboo rod maker, like the poet, is born with a natural gift for his trade, which can be acquired only in a degree. He can employ no assistants as competent as himself to execute the nice details of his delicate work. He is the artificer of his own handicraft, and consequently of his own reputation; we wish we could say, of his fortune also, but his power of production is limited to only about four dozen rods per year, and at $35 to $40 each, which is the price obtained for the best rods, it is easy to reach an approximate estimate of his income from this source. As a rule, his orders are ahead of their fulfillment. Those makers who have acquired the widest celebrity are H. L. Leonard, of Bangor, Maine, and Chas. F. Murphy, of Newark, New Jersey. Both are so skilled in their handicraft, and the rods they make are so nearly equal in their merits, that the one maker may be said to be the peer of the other. A rod manufactured by either is a prize to its possessor.

Different makers have different methods of manufacture, some of which are radically wrong in scientific principles. The object of this paper, however, is not to compare methods and processes, but to show how the manufacture is conducted by the best makers. We are indebted to Mr. Murphy for much of our information.

At the outset it is found difficult to obtain good stock in any quantity. Not one cane of a thousand brought to New York is fit for a fly rod. It was either old, dry and brittle when shipped, or it has got wet and heated during the voyage, which turns it to a dark color and destroys its vitality and elasticity. Frequently a whole invoice is thus spoiled. Again, twenty-five per cent. of those that are light colored and fresh are destroyed by a small black insect less than an eighth of an inch in length and about the thickness of a knitting needle which breeds in the cane and bores through it in every direction. Very often half a bundle is thus lost. A bundle comprises fifty canes, and importations come wrapped in a coarse gunny cloth. In many cases the ravages of this insect are not noticed until the cane is cut into.

There are two kinds of bamboo, known to dealers and rod makers as the male and female cane; the females are lighter and softer, with a thinner enamel than the males, and very few are hard and springy enough for a rod. Much of the male cane, on the contrary, is very hard and as elastic as whalebone. They are more difficult to work than the females, being much larger at the joints or knots where the leaves grow, and generally crooked in those places. Nevertheless, it is this material that has established the reputation of the split bamboo fly rod. A large portion of these males are ruined by some coloring process that burns through the enamel.

Of an eighteen or twenty feet cane selected for a rod, only some ten or eleven feet of the but or lower part are used. Cut these buts into two pieces of 5 to 5½ feet in length, smooth off the knots with a coarse file, and then split through the middle, taking care to avoid the buds or shoots, of which there is one at each joint. These grow on opposite sides alternately. From the edges of these pieces the strips are sawed, which when fitted and glued together will make the complete rod. Very frequently enough stuff for two or three rods has to be sawed out to obtain suitable material for one. The saws dull very easily, too, which adds to the difficulties, as frequent filing is necessitated.

The original four-split rod is far less difficult to make than the six-split rod, as but two pieces of wood have to be glued together at once, whereas in the six-split rod the six parts or sections must all be perfectly fitted, and all glued together at the same time; consequently great care must be taken to prepare each piece. Saw the sections for each joint of the same size, in order to ascertain where the weak spots are, which can be ascertained by bending. The cane very often has soft spots one or two inches long; the coloring also frequently makes it brittle on the outside. The greater number of these canes have so large a swelling or bulge at the joint that they cannot be filed off on the outside without cutting off so much from the surface as to weaken that part; therefore all these short crooks must be straightened by dry heat; they are then clamped up and left until they are cold, when they will remain straight enough to work the mitres. For the distance of an inch at the joints of the cane, the wood is one third harder and stiffer than between the joints. The section strips, however, being a foot and a half longer than the rod joint is intended to be, the allowance gives room to shift these hard spots past each other, to equalize the strength throughout the whole length of the pieces, which being done, the overwood at both ends is cut off, and the pieces are ready to mitre. These are cut with fine-toothed circular saws, the largest and stoutest saw for the first or but joint of the rod, the next size for second or middle joint, and the finest for the third or top joints. After the mitres are sawed, the pieces are put together and wound with strong cord; then examined and every imperfect or open place in the joints marked; then taken apart again and fitted until the joints are perfect as they can be made. This part is done with smoothing planes and files—a very difficult operation, as it requires much skill and practice in the use of these tools to take off the rough surface and make the parts fit close and solid from the outside to the centre. It is very difficult to discern a joint that is slightly open where the dark and light parts of the cane come opposite each other; and where it is not visible before the rod is finished, it can be seen distinctly afterwards, for a coat of flowing varnish brings out every shade and color and magnifies every imperfection.

Gluing comes next, a very nice and dexterous operation; for if the glue is too thick, the parts will not unite solidly, as it begins to harden as soon as it is applied to the wood; if too thin, enough will not remain in the joints to fill the pores of the wood and unite the fibre which is swelled out from both surfaces by the heat and moisture. Both edges of each piece must be first thoroughly covered with glue, which must also be rubbed into the faces with a stiff brush, and then put together, secured, and straightened before the glue sets. In cold weather this is very difficult. If the work is bungled, nothing remains but to throw it away and commence *de novo*, for the more one tries to mend, the worse the job becomes.

When the parts are dry and firm, round off the joints (knots) with a file, for the cane is so hard and fibrous that it will splinter if a plane be used. Next fit the ferrules, sockets, and but-mountings to their respective parts and mark them; but before they are fixed permanently put on the rattan for the hand grip at the but. The rod at this part is hollow, and more liable than the smaller parts to open at the joints. The part to be wound with rattan is first covered with hot glue. The rattan should be wound on as tight as possible. Ferrules are made of German silver. They are soldered with hard solder, which softens the metal; are then put on a steel mandrel of the exact size of the ferrule inside, and with drawbench and gearing attached to get power, are drawn through a hardened steel die of such size that it forces the metal to the mandrel, and reduces its thickness about one-fourth. This rehardens the metal, and leaves the ferrules perfectly true and straight when drawn off the mandrel. They are then finished, fitted, and cemented to the rod-joints, each in its proper place. The but-mountings are then put on; the recess is cut to receive the reel-plate, and the rod is ready to receive its silk lashings. These are put on for utility more than ornament. The silk is wound on as tight as it can be drawn without breaking, and then saturated with quick-drying varnish. As the varnish dries it is rubbed between the thumb and finger to harden and smooth the surface for the finishing varnish. Coach copal varnish is used for finishing, the surface of the rod being prepared so that it will flow and give a good surface. It is more durable and more elastic than lacquer varnish. The copal varnish requires three or four days' time to dry; then one-half days' exposure to the hot sun will make it sufficiently hard for use.

MOVEMENTS OF THE FISHING FLEET.—There have been 44 arrivals of the fleet the past week, 28 from Georges, 8 from Grand Banks, and 8 with frozen herring. The receipts have been 732,000 pounds of cod-fish, 433,600 pounds of halibut, and 2,400 barrels of herring. Round-fish are selling for $1.75 per hundred pounds. Halibut at 5½ and 3 cents per pound, white and grey. The shore fleet have been doing a fair business. Sales of cod-fish at $1.75 and haddock, $2.50 per hundred pounds. The latter have been scarce.—*Cape Ann Advertiser, March 10th.*

¶ NEEDLE POINTS AGAIN.—We have a number of articles on Seth Green's favorite subject of barbless hooks, but in view of the much that has already been printed in these columns, and the pressure upon our space, we believe that other matter will be more instructive, and therefore omit them, excepting the following article furnished several weeks ago by Mr. Shields, a well-known fly manufacturer of Boston:—

EDITOR FOREST AND STREAM:—

"Does Mr. Green really suppose that the anglers of this country are so verdant and so inexperienced in the make of fly hooks, that they know no better than to accept the kind of salmon or trout hooks he "recommends," in preference to the many kinds so long and familiarly known? If he does, I venture to say Mr. G. has reckoned in the dark, and I will endeavor to satisfactorily prove it. In the first place, the genuine needle point hook must not be confounded or linked with Mr. G.'s "youthful invention." They were made by the Hemmings, of Redditch, were remarkable for their fine delicate point, barb, and wire; were named in consequence 'The Needle-Point Hooks,' intended mainly for bait fishing. Very few of them that I saw were reduced (tapered).

To suppose for a moment that these hooks were made without a barb, would simply lie, to say the least of it, a great mistake. Hence the difficulty Mr. Green finds in procuring them, after his own notion, without a barb. Secondly, Mr. Green overlooks a very important fact in the make of fish hooks, which he ought to have in mind. This fact is always recognized by the fish-hook maker, as well as by the experienced angler, that the peculiarities of the fish give character to the hook; and in no instance in hook making is the character more closely observed than it is in a first quality salmon or trout hook. The reason for this is obvious. Salmon or trout invariably frequent rough bottoms, and in consequence the 'gentle art' is anything but gentle in the use of its fly hook. Throwing it from place to place, the point is liable at any moment to run foul of a rock or stone, very often breaking off completely, or becoming so dull that you are obliged to refile the point, or substitute for another hook. To obviate this trouble as much as possible, the hook is made strong of point, to endure the constant jars it is exposed to in trolling with the fly. There is still another reason—a pecuniary one—for making salmon or trout fly hooks durable. The cost of a good salmon or trout fly won't admit of having it prematurely laid in consequence of the point breaking or wearing off. Anglers, like other individuals, want a show for their money, or in other words, a fair share of durability in the fly-hook as they do in the rod and reel they purchase

But aside from this issue the needle-point fly-hook, with or without a beard, would not answer the purpose. The point would be too fine altogether to wear without breaking, which indeed often occurs to some of the best descriptions of hooks at present in use. Thirdly, Mr. Green says a "fly-hook does not need a beard, and no fly-fisherman should ever use one. Keep a steady strain on the fish, and the rod will not let him get slack enough to unhook himself."

This mode—a plausible one for the beardless hook—would do very well, I suppose, on small trout; but as they are not in my line, I will pass to a larger run, in order to see how it would work with them. I regret to differ again with Mr. Green. He cannot keep the distance or position of the fish wherein a steady strain can be held on him during his capture, if the fish is of any size; much less could he do so with a salmon or grilse. The idea of landing them after Mr. Green's idea is too ridiculous for comment. But suppose Mr. Green to have hooked a trout with his veritable needle point fly-hook, say from two pounds to four pounds, in a stream wherein he is obliged to wade or use a boat, and the trout, an uncultivated one, should take it into his unruly head to make a direct run for the person of Mr. Green; or for the purpose, perhaps, of making an unpleasant acquaintance with the anchor rope, how is Mr. Green going to prevent it and keep a steady strain on the fish? Or how would a steady strain work in case the fish jumps two or three consecutive times out of the water? These little feats occur very often, and I simply put them before the readers of FOREST AND STREAM to show Mr. Green's head is not 'level" on the 'angle.' He could not keep up a steady strain on the fish when the fish heads for him or the host, no matter how expert he is with his rod, or in his movements. The trout is equally so, and before a sufficiency of slack line could be recovered, the brute would nvail himself of it and the needle point hook to a certainty, and go on his way rejoicing. The barb, the only thing to rely on to keep the hook anchored in the fish's mouth, was a-missing, and so was the trout.

Fourthly, Mr. Green says a "fly-hook for a salmon or trout should have o needle point, and they can't be made if there is a beard on the hook." On the same assumption it might in like manner be said of the needle, 'that, in consequence of the eye, there can go no point on the needle.' But there do, nevertheless, go a variety of points in them without any serious interception that I know of from the eye. The same, too, can be said of fish hooks. The cutting of the beard has nothing whatever to do with the point, either in a long or short taper; and to infer, as Mr. Green does, that the beard or barb is an impediment to the point, will only admit of one solution, and that is, that Mr. Green, instead of giving us an advanced idea of fish hooks, takes us back to our juvenile days, when "we two has paidit i' the born," and drew our supplies in that line from our grandmother's pin-cushion."

SMELTS.

READING, Penn., March 7th, 1876.

EDITOR FOREST AND STREAM:—

You take great interest in smelts. The best of these delicious fishes, and I have eaten them from the extreme east to Jersey, were on the south side of Long Island, and from the Passaic River. These were always small, with the tenderest bones, having the most perfect cucumber flavor. In the creeks of Long Island, they are found in perfect condition from February 20th to March 20th. In the Jersey river, for a long period in the early spring and fall, they are not taken with the hook, I believe, but up in quite large quantities by those who know their value. I remember once buying in Jersey nearly one half bushel for seventy-five cents, which was more than the boys asked for them, fresh, not an hour from the water. These fishes might be cultivated wherever they can reach the salt water. It is supposed that they love to keep near the shores on sandy bottoms. I have seen them at least twelve inches long, playing in the bays of New England and in the harbor of New York, about Communipaw. When large they are tough, swift fish, and only fit to boil in a coarse cloth and eaten with drawn butter. Alderney butter is best if you have it, it will answer if you use olive oil pure.

As these little dainties are cultivated, they will do one good summer and winter, for they will be with you always. The best of them are the young yearlings who seek their spawning places for the first time. Around Boston the fishermen have great sport in catching these silver beauties, and the knowing ones give away all indicating two year olds alive. Why cannot these fishes be made more common? If we could have them in plentiful supply, at cheaper rates, every lover of fish-flesh would thank the FOREST AND STREAM. There is no other fish that would give the same untiring luxury as young smelts.

JOHN A. THOMAS.

National Pastimes.

—The Amateur National Association was held in Philadelphia March 8th, and the proceedings were harmonious and the legislation such as was well calculated to promote the interests of legitimate amateur clubs. The following officers were elected for the ensuing year: President, J. G. H. Meyers, of the Flyaway of New York; Vice President, H. H. Diddlebock, of the American of Philadelphia; Treasurer, M. J. Dillon, of the Confidence of New Rochelle, N. Y.; Secretary, James Pursell, Jr., of the Arlington of New York, and Judge Advocate, A. C. Crawford, of Princeton College. The convention adjourned to meet in New York City, in 1877.

The association will issue their new code of rules the latter part of March. The playing rules will not differ materially from those of the professionals. Mr. Chadwick was appointed Chairman of the Committee of Rules of the Association, a position he has not occupied since he resigned from the old National Association in 1870, before the professional and amateur associations were organized.

—On March 7th the Young America Cricket Club, of Germantown, held their twenty-first annual meeting. The following officers were elected to serve for the ensuing season: E. M. Davis, Jr., President; T. P. C. Stokes, Vice President; J. Wain Vaux, Secretary; J. L. Wright, Treasurer; Ground Committee, G. M. Newhall, J. L. Wright and S. Potter, J. Wain Vaux, was also elected to act as an *ex officio* member of the committee. The secretary's report stated that the total runs made during the past season was 2,167. The average of each player is as follows: R. L. Baird, 43; R. S. Newhall, 46; E. N. Wright, 38; John Large, 31; D. S. Newhall, 25; A. R. Bussler, 22; G. M. Newhall, 21; H. Newhall, 16; C. Baird, 13; Chas. Newhall, 11. The largest score was made by R. S. Newhall, 103; the second was by Loper Baird, 83 runs, and 73 runs not out.

—The Germantown Base Ball Club held their annual meeting on March 6th, when the following officers were elected: President, A. J. D. Dixon; Vice President, R. S. Newhall; Treasurer, James Fowler; Directors, Messrs. Dixon, Van Rensselaer, Sharp, and Whitby. The opening game will probably be played at Riverton, N. J., with the Riverton, as soon as the weather permits. The nine will be an exceedingly strong one, selected from the following well known amateurs: Van Rensselaer, Sharp, Dixon, R. S. Newhall, D. S. Newhall, Van Deventer, Whitby, C. Tiers, J. Tiers, Gowen, Fowler, C. Platt, and W. Platt. The office of secretary was not filled at the annual meeting, and all communications for the present should be addressed to A. J. D. Dixon, No. 416 Walnut street, who is now prepared to arrange matches.

PRINCETON NOTES.

PRINCETON, N. J., March 3d, 1876.

EDITOR FOREST AND STREAM:—

Sporting matters down here are pretty dull, but "coming events cast their shadows before," and some life is looming up in the future. The crews will take to the water as soon as it is let into our raging canal, provided the weather is reasonable. The University ball nine will take the field as soon as the frost gets out of the ground. About rifle shooting, I have only this to say: There are two or three crack shots in college, and some five or six ordinary ones. Whether a team could be gotten up is a settled question. Whether it *will* be, is a different matter. Our Faculty, as the Nassau Lit. of last month remarked, is bitterly opposed to anything having a trigger and a mainspring; and their consent is necessary to the successful formation of a rifle club. It may be of some interest to your readers to know that we have some good pigeon shots in college, and that they are considering the advisability of applying to the Faculty for permission to form a club. Mr. Pappin, of the Scientific School, holds the college championship at present, having won it well by killing nine out of ten strong birds on a windy day. He has received one or two challenges, but will, in all probability, keep his distinction. By-the-way, I see that a correspondent of your's in yesterday's issue asks if shot concentrators can be used to advantage in a muzzle-loader. I have a heavy No. 11 gun which I use for pigeons, and I have found an ordinary Eley shot concentrator to make great improvement, both in penetration and number of shot. In a 12-inch circle at 30 yards with loose shot, I put 110 No. 8 shot; with the concentrator, I put in 152. I would advise the gentleman to experiment with the concentrators at 30 yards. Just before New Year's I put 8 shot completely through a large chocolate pigeon, at about 27 yards from me. In a breech-loader they work like a charm. I have never tried the Kay concentrator, and am unable to state whether it works any better.

Mr. W. Scott, curator of our museum, a fine taxidermist and a good shot, accompanied by Charlie Hobbard, colored sportsman of remarkable powers, is making the feathers fly in Florida. They are securing "specimens" for the museum. There will probably be some good pigeon matches here during the spring, and you shall hear of them all.

LOUNGER.

Will our correspondent tell us how he gets his Eleys concentrators into his muzzle loader?

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

A. T. W., Brooklyn.—Will you please inform me of the law regarding English snipe, through your valuable paper? Ans. No law regarding snipe.

HUDSON, West Troy.—Please give me the address of the owner of a well-bred mastiff dog? Ans. Address Henry Gardiner, No. 111 South 5th Av., N. Y.

YORICK, Rochester.—We will speak to Mr. Raymond, or would suggest to you to write to him direct. His address is Chas. H. Raymond, Fox Farm, Morris Plains, New Jersey.

J. W. F., Leesburgh, Va.—What is the address of J. Glahn, whose name appears in the wood-cuts of dogs in your paper and elsewhere? Ans. Jacob Glahn, West Meriden, Conn.

G. F., Troy, N. Y.,—Can You inform me where I can purchase a fine blooded Scotch Terrier to weigh about 7 pounds, not over 9 Bitch preferred? Ans. Address Henry Gardiner, No. 111 South-5th Av., N. Y.

F. L. M., Phila.—We have no knowledge of the hook indicated in your favor. Inquire of our Southern agent, Col. J. B. Oliver, Agriculturist Office, Jacksonville, Fla., to whom we have forwarded your letter.

L. B., Yarmouth, N. S.—Please send me a number of FOREST AND STREAM containing tent pattern or instructions for making canvas tents, or any article or communication respecting them. Ans. Have sent circular.

SUBSCRIBER, Providence, R. I.—I wish to obtain one or two male wild turkeys for breeding purposes. Can you give me any information as to where they can be got? Ans. Our efforts at procuring wild turkeys alive have not, as yet, been successful.

W. N. S., Phila.—1. Can you tell me if I can buy a barrel for a Colt's Navy revolver, anywhere in Philadelphia, and if so, where and at what price? 2 How old should a setter be before you commence to train him? Ans. 1. Inquire of some of your gun dealers. 2. Six months.

C. L. I., Phila.—Can you inform me whether there ever was a pistol made by the Winchester Arms Co., on the principle of the "Winchester model 73" rifle, and if so, is it manufactured yet, and does it take a central-fire cartridge, also, what is the calibre, price, &c? Ans. Such a pistol was made but is no longer in the market.

H. P. W., Rupert.—Will you send me the address of one or more reliable firms who deal in frogs in New York. I am a small boy but I am going to have the FOREST AND STREAM to myself as soon as I can earn money to pay for it? Ans. Write to Eugene G. Blackford or Messrs. Middleton, Carman, & Co., of Fulton Market, this city.

A. H., New York.—In continuation of our reply to your query of last week as to the proprietor of the Sportsman's House at Burleigh, Ontario, Canada, we are pleased to inform you that his name is John Holmes. A correspondent who had prompted our memory, corroborates our experience that there are few better places for black bass in Canada.

S., Staunton, Pa.—1. Do you know English gunmakers, Tipping & Lawden, and are their guns considered A 1? 2. Where can pigeons be furnished for matches, and what will be the cost of same? Ans. 1. Yes. 2. We know of no one in your vicinity having pigeons. To send from here would not only be very expensive but the birds might be worthless.

J. C., Ronsea Point.—What is the price of the Orange No. 4, and No. 3 Ducking Powder, and also of the Dupont's No. 3, in 6½ pound kegs, and what number is the best for general use? Ans. Ladin & Rand's Orange powder and Dupont's sell for $1 per pound in canisters. The latter at $3.35 per 6½ pound kegs. We use No. 4 Orange and No. 2 Dupont.

G. H. F., Irvington, N. Y.—1. Do you like a pin-fire breech-loader better than central-fire? 2. Is Wm. Moore a London gunmaker, and what is his reputation? 3. Can I have my gun altered from pin to central-fire? Ans. 1. We much prefer central-fire. 2. Wm. Moore is dead. He made excellent guns. 3. We can have your gun altered from pin to central-fire.

D. F. Z.—1. Which would you think best for strict accuracy, a muzzle or breech-loading rifle, for target use? 2 What size bore is best for longest range? 3. How many pounds did the trigger of the American team pull off at, in their matches at Wimbledon? Ans. 1. Breech-loaders have entirely superseded muzzle-loaders for target practice in this country. 2. 44 calibre. 3. 3 pounds.

B., Littleton, N. C.—1. Will you inform me of a house that will buy singing birds, just grown? 2. What is the bait to catch "white chub." We have them in our mill ponds that weigh from one to eleven pounds, but hard to make bite? Ans. 1. C. Zaller, No. 3 Sixth-William street, this city, buys young mocking birds? 2. Worms or grasshoppers; sometimes chub will take the fly. In England they are taken in this way.

SAWDUST.—Can you inform me if there is any school in this State where riders and acrobats are trained for the circus? Ans. Yes; Eaton Stone has a handsome private Hippodrome near Franklin Station, on the line of the Erie Railroad. There is another training school kept by Barney Carroll, at West Farms, and one at Newton, Long Island, kept by J. Crooke. For a very interesting article on the modern circus, see the *Sun* of 12th instant.

T. F., New York.—1. What will make green dye to color linen lines green, and how made, and if injurious to the line? 2. What month, April or May, do spring bass make their run in the Hudson? Ans. 1. Green for will dye your line without injuring it. 2. In April the striped bass return from fresh water to the sea, and we have heard of fine sport being had in the vicinity of Newburg. We shall refer to this matter again in an early issue, and give the baits used, etc.

O. F., Anersm, N. Y.—Please inform me how a "game constable" should qualify? Ans. After being appointed in the regular way by the Board of Supervisors of his county, to serve for one year, he takes the oath of office in the same manner, and is invested with some powers in serving process under the act (game laws) that town constables have in serving civil process. It is his duty to prosecute all violators of the game laws, and his neglect or refusal to so prosecute renders him liable to a penalty of $25.

W. Y. S., Covington, Ky.—1. How are the Wimbledon targets made; have you a diagram, and is there any firm that make them for sale, and what would be the cost if one? 2. A rifle bullet (long bullet) fired at an angle of 45° elevation on a plane, strikes the ground, say for instance, at 1,000 yards, which end strikes the ground first, the point or base? Ans. 1. You do not say size of targets you want. The wood or paper can be had here, or made by yourself equally as well. 2. Theoretically it would strike point first.

L. H. J., Quincy, Ill.—I want to purchase some good hounds (a pair) suitable for trailing and treeing coons, opossums, foxes, wolves, &c., and warranted not to run rabbits of a night. Where can I get them, and what would be the cost delivered in Quincy? I have a good trailing hound bot when he trees, he leaves it, (the tree). How can I make him stay at the tree? Ans. Address Capt. A. C. Evans, Independence Hill, Prince Wm. Co., Va. We doubt if your dog can be broken of the habit of leaving the tree.

J. B., Easthampton.—1. Can good duckshooting and fishing be had during the month of March at Lake Bomoseen, near Rutland, Vt.? 2. In what month do gray squirrels breed? 3. What is Peck & Snyder's address? 4. When is the next Smithsonian report issued? 5. What is the address of Messrs. Conroy, Bissett, & Malison, the fishing tackle dealers? Ans. 1. No; too early. 2. Usually in February or March; but they often raise two litters a year. 3. No. 126 Nassau street. 4. About May. 5. No. 65 Fulton street.

G. O. G., Danville, Canada.—Will you please inform me in your next issue in "Answers to Correspondents," the address of the company who own the Long Point shooting grounds for duck, &c., on Lake Erie; also the address of the company who own the shooting grounds on St. Clair Flats back of Sarnia, Ontario? Ans. Address John J. McKenzie, Secretary Long Point Company, Hamilton, Ontario, and John Maughan, Secretary, St. Clair Flats Shooting Company, and manager of Isolated Fire & Risk Ins. Co., Toronto, Canada.

J. W., Charlotte, Mich.—1. I have a setter pup six months old, his mouth is completely filled with warts, some of them are of a blueish color. Please inform me what to do for him? 2. Do you know anything of Wyman as a gunmaker? What is his reputation? Ans. 1.-The trouble with your dog is a new thing to us, and we know not what to do for him. Perhaps some of our readers can suggest a remedy. 2. There is no gunmaker by that name. Guns are frequently marked with the name of hardware merchants dealing in guns.

G. B. W., Troy.—1. Please inform me if there is, or was, a gunmaker in London by the name of L. Richardson, and what is his reputation as a gunmaker? A very handsome finished gun (used but little) has been offered me, and I am thinking of purchasing it. It is a breech-loader, 12-gauge. 2. What is the cost of binding your volumes in a plain manner? 1. We do not find his name on the list of London gunmakers, yet it does not follow that the gun is not a good one. "A *rose* by any other name would smell as sweet," you know. 2. $1.50.

C. A., New York.—Will you please give me the address of two or three English gentlemen to whom I can write concerning the purchase and importation of a brace of fine bred English or Irish setter dogs? Will you also inform me about what it would cost to import them—not their cost, but the freight? Ans. Address R. Ll. P. Llewellyn, Ashby de la Zouch, England; Edward Laverack, 'Broughall Cottage White Chorch, Shropshire, England; Thos. Statter, Esq., Manchester, England, or R. Garth, Esq., Wimbledon, Surrey, England. The cost of transportation is about £6.

D. L. D., St. Louis, Mo.—A friend writes me from Victoria, Kansas, asking where he can obtain large greyhounds. As he wishes to use them for hunting antelope, none but those of large size and build would be of any service. Can you inform me where such dogs are to be had, and the probable price? Ans. The best greyhounds in this country are those owned by the coursing clubs of California. We have not the names of the officers of the San Francisco Club, but Mr. P. Hanlon, Secretary of the Sacramento Coursing Club, could give your friend the names of breeders in that State.

W. L. B., Packersville, Conn.—1. How would it affect the shooting of a rifle chambered for 70 gr. shells to use 60 gr. shells? 2. Does Mr. Frank Lord use a revolver or single barrel pistol (what maker) in target shooting? 3. Do you consider the following score good, made by me with Frank Wesson's 18 inch target pistol .32, at 100 yards: 5 4 5 5 4 5 5 4 5 5—70 out of a possible 75? Ans. 1. It would make poor shooting, but the difficulty could be obviated by filling the shell after loading 60 grs. and a wad with sawdust, placing the bullet on top of the latter. This fits the chamber and prevents the ball from expanding too soon. 2. He uses a Wesson's or Steven's pocket rifle without rest. 3. Excellent if make without artificial rest.

M. H., Minneapolis.—In Vol. 5, No. 23 of your journal, you answer W. B. W., "Choke-boring consists in enlarging the bore a few inches from below the muzzle." Many sportsmen have been disappointed with attempted choking of their guns, and your directions are not explicit enough to warrant experiment with a good piece. Please specify. Is your direction to be understood "enlarging the bore a few inches below the muzzle," as *including* the muzzle, or enlarging *only* the first few inches of the bore below the muzzle, not including the muzzle, or enlarging the *entire bore*, to within, *and excepting* a few inches of the muzzle? and how many? Ans. Choke-boring is done by enlarging the barrel for about three inches; six inches below the muzzle leaving it the original size above and below the enlarged part. But each of the English makers who manufacture choke-bore barrels claim a mode or process of their own.

L. B. D., La.—1. Can I have a fine 12-gauge breech loader choke-bored and made to do good work as one originally made so? What is about the cost, and where can I have it done. The gun weighs 8¼ pounds, the barrels are 36 inches? 2. Can I have them cut off to 32-inches without injuring the gun if I do not have it choked? 3. I want a heavy gun for ducking on lakes and bays, where the birds are wild. Which would be the best for my purpose, a choke-bore 10 gauge gun, 11 pounds, or one of the same size plain bored? 4. Will such a gun be heavy enough to shoot about 6 drs. powder and 2 oz. shot? Ans. 1. For $5 we can have your gun properly choke-bored. 2. It would not injure the gun by taking off four inches. 3. A choke-bored gun for duck shooting is decidedly the best. 4. With a 10-gauge 11 pound gun you could use 6 drs. of powder and 2 oz. shot, without very much recoil, yet we think 1¼ oz. shot would be as effective, and give less recoil.

—"How much for that broad-faced chicken on the fence?" inquired an Irishman of a farmer on Staten Island the other day. "That's not a chicken; its an owl," replied the farmer. "I don't care how ould he is, I would like to buy him," says the Irishman.

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
128 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, MARCH 16, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible

CHARLES HALLOCK, Editor

WILLIAM C. HARRIS, Business Manager

—The Blooming Grove Park Association held its annual dinner at the Hoffman House on Tuesday evening of last week. The affair was most enjoyable. Seventy ladies and gentlemen sat down to discuss a *menu* which Mr. C. H. Read, the caterer, had determined should be a *chef d'œuvre*. There was a succession of the choicest viands known to the French *cuisine*, and wines of the rarest vintages, served in a style simply perfect, by a corps of perfectly trained waiters. At the the conclusion of the banquet speeches were made by D. G. Croly, Judge Brady, Wm. C. Barrett, Genio C. Scott, and Col. S. D. Bruce. A letter from Fayette S. Giles was read by John Avery, President of the Association. Dr. Geo. H. Glenney acted as master of ceremonies, under whose skillful management the German and other dances concluded an evening replete with enjoyment.

Preparations for the coming season at the park are being made which will make it unrivalled as a resort for sportsmen and their families, and there is excellent promise of a full house throughout the season.

A SHOWER OF FLESH.—The inhabitants of Bath County, Kentucky, were astonished last week by a shower of flesh which fell in one of the townships, the meat-like substance, and which was said to resemble mutton or venison, covering a space of an acre or more in extent. A scientific examination shows the substance to have been the dried spawn of some batrachian reptile, probably that of the frog, transported by a current of wind from some swampy place to the spot where they were deposited. Such showers have occurred before, and the sudden appearance of immense quantities of young toads, or frogs, is probably to be accounted for in the same way.

—We have received from Mr. L. C. Earle the artist, of Chicago, photographs of his two fine paintings, the one representing a pair of mallards, male and female, just taking flight, the other a mallard flushed by a spaniel. In the latter picture the attitude of the dog is remarkably good. Although his back is towards the observer the position of the head is so excellent that one can imagine the eager, expectant eye. Of course we cannot judge of the coloring, but the drawing of both ducks and dog is excellent. As but one person can possess the originals we would suggest to Mr. Earle that chromos of his pictures would find much favor among sportsmen.

—Editorial Notes of Southern Travel are unavoidably deferred.

COURSING.

IT is a little remarkable that one of the oldest of English pastimes should have obtained its first foothold on this continent on the other side of the Rocky Mountains. We allude to the sport of coursing with greyhounds, which has become firmly established as one of the "institutions" of the Pacific Slope. The cosmopolitan character of the population of California is in a measure one of the agents in bringing it about, but the principle cause is found in the fact that the almost treeless plains of the last named State, and the sage brush deserts of Nevada are the homes of myriads of the Jack rabbit or "great American hare," the nearest approach to the hare of England to be found in our country. In point of size and fleetness they are quite the equals of their European prototype; for the purposes of the table they are vastly inferior. In fact, they are not to be mentioned with another member of the *lepus* family, the little "cotton tail," erroneously called a rabbit. It may not be known to all of our readers that the true rabbit, or coney, an animal living in large congregations in warrens, and so common in Europe, is unknown in this country, and that we have no rabbits. The cause of this inferiority of the flesh of the larger hare is due partly to the coarseness of the flesh itself, and also to the fact that in many portions of their *habitat* they are found among the low-growing, scrubby prickly pears, or *tunas*, the thorns of which penetrate their skins; and it is not uncommon upon skinning them to find numerous sores resembling carbuncles.

The London *Field* thinks that the time is near at hand when coursing will be the most generally followed pastime of Anglo Saxons in every quarter of the globe. At the Cape of Good Hope it has taken firm hold, and in Australia it has become one of the most popular sports. The English hares introduced into the latter country have thriven remarkably, and breed with such fecundity, and attain such proportions, weighing often as high as ten or twelve pounds, that they frequently cause the dogs to lie down. In Australia, however, they have another animal, indigenous to the country, to course, and one that must afford splendid sport; we allude to the kangaroo. The kangaroo, however, is a very different animal to tackle from the timid hare, its sharp claws making short work of an ordinary dog. The dogs used are a cross between the greyhound and the staghound, possessing almost the fleetness of the one with the courage and tenacity of the other.

Coursing in California is splendid sport; the abundance of hares, the wide expanses of country as level as the downs of England and without fences, the fleet little mustangs upon which to follow the chase, and the *soupçon* of danger from one's horse stumbling in a squirrel hole, or burrow, all combine to make a most exciting sport. There is no reason why coursing should not be successfully followed in our own vicinity. The primary step necessary would be that contained in the injunction of Mrs. Glass' celebrated recipe, "first catch your hare." Having caught them, or rather imported them, turn them out on the Hempstead plains on Long Island, protecting them carefully until such time as they had increased and multiplied. As a pastime nothing would be more popular, and one can be as happy in the possession of a finely bred greyhound as in a setter, or a pointer, and more so, perhaps, than in a horse. The article in the London *Field*, to which we have before alluded, says:—

"Coursing has the advantage over horse racing, that human agency has less to do with the exhibition of a dog's than of a horse's speed; and whereas it is possible for a corrupt jockey to pull an equine favorite, the greyhound, when once loosed from the slips, is totally beyond the control of his master or trainer. 'A dinner, but more especially tea and toddie,' says the late Mr. H. H. Dixon—latter known as "The Druid"—'have an additional zest when you have a Waterloo Cup winner stretched on the hearth rug, dreaming of Will Warner and the hares.' As 'The Druid' wrote these words he was paying a visit to a most successful Scotch courser at Dalgig, and Canaradzo, who had carried away the great prize at Altcar in 1861, was lying in front of the fire. It was one of the sayings of Mr. Campbell, the owner of Canaradzo and Scotland Yet, that coursing had more charms for him than horse racing, because he could bring his dogs with him into the house and live with them as companions, whereas the turfite could not see his horses without visiting them in the stable."

The rules governing coursing, particularly those referring to the slipper and judge are very strict, and collusion is almost impossible. And here we might say that the custom of having a paid judge for the decision of almost every kind of contest, is one that might be adopted with advantage in this country. Whether in racing, trotting, or coursing, a professional judge is bound from experience gained by practice alone, to have a knowledge of his business, and having not only reputation, but his means of livelihood at stake, his decisions are more apt to be honestly given.

A correspondent has written to us within a few days past to know where he can obtain greyhounds of a large size, to be used in coursing antelopes in Nebraska. We have referred him to the coursing clubs of California, as we know that the dogs used by them would be admirably adapted for the purpose. However it may be with them when first imported, there is no lack of courage in those bred in the country. There are some greyhounds owned near San Diego that have killed as many as half a dozen wild cats in a season, and they have been known to fearlessly attack and kill a California lion. As coursing involves riding, although not necessarily, and is an invigorating, healthful outdoor sport, we would gladly welcome its introduction among us as a valuable addition to our list of pastimes.

METAPHYSICS OF FLY FISHING.

PART FIRST.

VERY frequently our correspondents ask for published instruction in fly-fishing. While there is no manual that is adapted to the practice of the art in America, much information has been printed at odd times in books and letters which, if culled and collated, would constitute just such a handbook as is wanted. One reason why such a work has not been attempted is, that instruction in this art cannot be fully imparted. Only general principles can be given, the rest must be acquired by analytical study and investigation, by repeated and varied experiments, and by assiduous practice. Natural history, meteorology, mechanical forces, must all be studied and applied to the practice of the art. The curriculum, or course of study, must of necessity extend over a very considerable period of time, in order that the physical features of different waters and streams can be thoroughly learned. One cannot "cram," as students do for examination, and by incessant and intense application learn in one day or season what most men spend a lifetime in acquiring. The entomology of fishes—the creatures that live in the water, under the water, and over the water, and whose habits in great part govern or control the movements of the fish; this must be made familiar. We are to know that certain flies deposit their eggs on the leaves of the plants that overhang the streams; that such and such ephemeræ launch their floating boats of eggs upon the water itself; that certain larvæ are to be found among the weeds at the bottom. We are to know just at what locality upon the stream these are to be found, and at what month of the year they will develop into active life, because where the food is there the fish do congregate. This knowledge is important, for it enables the angler to select the choice places for his casts, and prevents waste of time in testing spots where success is improbable. Into this study of entomology also enters all the minutiæ of patterns for artificial flies, and the selection of such specimens for casts as will correspond in a great degree with the seasons when the natural insect is abroad. The mere mechanical art of fly dressing can be so intelligibly imparted that it may be acquired in a day or two. So can the tying of loops and knots, and the making and tinting of casting lines. With a complete tackle of rod, reel, line, casting line, and flies, and the knowledge of *where* to fish, we have next to learn *when* to fish, and *how* to fish. If we can discern the face of the sky and abide by the conditions of the weather—the temperature of the air and water, the direction of the wind and clouds, the character of the streams, etc., we can reasonably determine where to fish.

Observation has taught us that warm, sluggish and turbid water is not the home of the salmonidæ. We know that they are less liable to be found in a limestone country than amid a granite formation. We find that fish don't bite after a thunderstorm, or after a flood; that after a heavy rain which washes unlimited food into the stream, trout become surfeited and indifferent to the angler's lures; that the fish are sluggish on cold, raw and blustery days, which are usually accompanied by northerly and easterly winds; that it is no time to fish when the streams are filled with snow water; that trout are most wary when the sky is cloudless; that windy weather is unfavorable for casting; that the fish dwell chiefly in those parts of the stream where the natural current carries the surface food; that the biggest fish select and occupy the best places. We know, moreover, that the conditions which apply to streams do not apply to lakes and ponds, and that the rules that govern the fishing for speckled trout do not apply to salmon and other varieties of the salmo family. In ponds we must fish where we find the coldest water supplied by bottom springs; in the deep channels, which are frequently indicated by the growing lily pads; and where cold brooks chance to empty themselves into the main body. We do not fish where there are deposits of mud. The presence of aquatic plants indicates mud, but if there be a space of clear water it indicates gravel bottom caused by the flow of a current which has deposited the silt and vegetable matter on either hand, just as bottom lands on large rivers are formed. Sometimes, too, we find patches of a succulent vegetable growth on the bottom swarming with larvæ. If we pull up a handfull we find it alive with the food that will attract the fish to the spot which the experienced angler will instinctively resort to. Neither do the same conditions apply alike to all ponds and streams; for which reason experience can only be gained by fishing over a great number of localities in as many different sections of country. This lesson of entomology is imparted in a very lucid and delightful way by Miss Sara J. McBride, of Mumford, N. Y., in the following passages. It is the foundation of all knowledge that pertains to fly-fishing, and no one can become a scientific angler who builds on any other:—

"There is a large order of insects that live the first stages of life in water, where for weeks, months, in some instances years, they hide under stones; carve an abiding place in submerged driftwood; feed on decaying vegetation in lazy inert masses; burrow in the earth beneath the current; weave together bits of wood, gravel, stones, and floating debris, forming retreats that surround them as they swim or daintily walk; spin of silken thread individual domiciles that they guard from intruders with the valor of soldiers, or boldly and singly dash out in the current swimming with agile rapidity. These are all fish food. But it is only when they assume the perfect form, when they cast aside their aquatic nature, and with gossamer

wings float in the air, that they are of interest to the fly-fisher—as he seeks to deceive the finny tribe with their imitations, made of feathers, tinsel, and mohair. Insects are enfeebled at all changes in their life, and at each successive moult when the pupa case is broken, too weak to keep guard, they flutter and rest on the water an instant before flitting away. At this instant many are seized by the wary fish. Insects leave the water mornings and evenings, particularly the latter, rarely at midday, never during rain storms or heavy winds. It is at these times, when they are leaving the water, their imitations are used to most advantage. It is that insect floating off into a new element that the fish are watching and waiting to feed on. At other times you may cast with success your favorite 'brown hackle' with its golden ribs and steel backbone—the bland professor—the modest queen of the water, or the grizzly king with his gray locks and flaming sword. Things which resemble nothing in the heavens above, the earth beneath, or the waters under the earth; why fish take these, whether from curiosity, or by way of dessert, no one perhaps will ever know, not fully understanding the nature of the fish. But there is one thing we do know, that when the countless myriads of these tiny creatures are entering a new life in untried regions, the favorite flies will be thrown in vain. The fish will regard with contemplative indifference every other lure but a close imitation of that particular insect.

One evening we sat on the bank of a creek, bug net in hand, watching the trout and the birds of the air feeding on a neuropterous insect that is constantly repeating the eyele of its life,

'As yet unknown to fame,
And guiltless of a Latin name.'

The stream was in eddying whirls of ripples from the constant 'leaping' of the trout. Now and then one bolder than the rest would dash out of the water its full length to seize its departing prey, which sometimes escaped to become a precious morsel in the mandibles of a watching bird. Many of these insects would float on with the current, never able to untold their soft creamy wings, and become easy victims. On the opposite bank was an angler. For an hour in patience he whipped the stream, now up, now down, with 'red hackles,' 'white hackles,' 'black hackles;' he changed fly after fly in vain. At length he folded his rod and passed away among the shadows of the night, without so much as a bite, without so much as a chance to tell of the big fish 'hooked' but lost.

There are many aquatic insects double hrooded, or under favorable circumstances, of a succession of broods. Imitations of such can be used throughout the summer months. There are many insects that do not breed in water, yet are successful baits. As a rule, insects that appear in large numbers, whether they belong to land or water, are the proper ones for imitation. Solitary specimens, although dear to the heart of an entomologist, are eyed by the fish with haughty indifference. Water is a great attraction for all insect tribes. The banks of streams constitute the favorite hunting ground for insect collectors where they compete with the fish, those practical entomologists, in collecting. Some insects come to drink, others in search of prey, for insects are cannibals, while very many are the sport of the winds. It is probably the bright sheen of the water that draws the fluttering moths into its depths. All nocturnal insects have a strange infatuation for glistening light. What the attraction is for some is beyond the ken of mortals. A *Tipitidæ bibri maræi*, or in piscatorial language, the hawthorne fly, an insect whose life is beneath the surface of the earth eleven months of every year, comes crawling, creeping out of the ground on warm June mornings apparelled in new livery. After resting a while on low herbage, all, as if guided by one impulse, fly to the nearest stream. We have kept these insects for weeks in confinement, and they would neither eat nor drink. But every morning for hours they congregate over streams; keeping time with the ripple of the water, they hold a May dance; darting hither and thither, occasionally touching the water to go down with the current, or else down the throat of a fish. When these bright creatures are holding high carnival above, the trout positively refuse other enticement. The larvæ of moths is a favorite fish food, and consequently successful bait. Hibernating larvæ are drawn from their retreats in warm spring days, and continue the pilgrimage they commenced the previous fall. In their wild journeyings on and on before spinning the pupa shroud, they fall victims in attempting to cross streams. Hairy caterpillars feeding on the trees are blown off by the winds, or their silken thread is broken, as they hang under the leaves in shelter from the rain. Imitations of these known to the American by the familiar term of hackles, and to the accurate inhabitant of the British Isles by the correct name of palmers, are to be used after winds or during rain storms; also that compromise between larvæ and imagine known as the hackle fly. Bristling with feet its entire length, and graced with a pair of wings, it offers a double attraction to the fish. There has no bait ever been used that has given the general satisfaction of this anomaly. To look at it with the eye of a naturalist one doubts the wit or wisdom of the fish that takes it, and concludes there are comparative degrees of sanesness beneath the ripple of the wave. It is a common remark that fish will not 'bite' before rain. Some have accounted for it by bringing forward that common scapegoat for all unexplainable phenomena, electricity. I can't understand why fish should dread a sprinkling of rain drops. The reason probably is, that their food is never offered at such times. The natural instinct of the insect forbids their leaving the water or flying abroad if rain is threatening. The spiracles or breathing pores are situated on the outside of the body near the insertion of the wings. They are soon clogged and closed up by the water, and the down washed from their bodies; their wings draggle and become powerless, and they suffocate flying in mid air. This is the reason winged insects on touching water drown so easily. Insects do not invariably appear at the same times. A cold spring will retard their development for months, while an unusually warm spring or summer will hasten their appearance. Insects in the water are the most afflicted by changes of temperature. Any guide for a fly-fisher would be almost useless unless this important point is remembered. English works can never become positive authorities for our climate. Insects which appear there in vast quantities are rare here, and *vice versa*. Some that are single-brooded there are double brooded here. Some that appear there in one month visit us at another, while we have many alluring baits here that the classic waters of the British Isles would regard with bewildering amazement."

This subject we shall continue in a series of articles to follow.

GAME PROTECTION.

Game Protection in Canada.

Great dissatisfaction having existed among the settlers of the back townships of Peterborough County on account of the game laws being enforced, a committee of the Peterborough Fish and Game Society visited the village of Apsley on the 17th inst., and at a meeting held in the Town Hall, the chair being occupied by Mr. Golborne, Reeve of the Municipality, J. Ludgate, President of the Society, and Major Boulton, first Vice President; Wm. Eastland, second Vice President; E. H. D. Hall, Solicitor; and R. Walton, member of central committee, addressed the meeting, explaining the object of the society, and fully satisfied those present that it was to their interest to co-operate with the members of the society, and endeavor to put a stop to the slaughter of game out of season. We have a very interesting letter from Mr. Eastland describing his trip, which will appear in our next issue. On the 25th another meeting was held in the Town Hall, and an association to be known as the Apsley Fish and Game Protective Society was formed. James Golborne, Esq., was elected President; Dr. W. S. Clegg, Vice President; and J. D. McIlmoyl, Secretary and Treasurer. The following gentlemen were elected as a Committee: Messrs. A. Brown, C. Regan, W. Hales, F. Middleton, Geo. Kempt. "The annual meeting of the County of Peterborough Fish and Game Protective Association was held on Wednesday evening March 1st. The Secretary's report showed that

"Not only has the society done a good work in our own county by preventing much illegal hunting and fishing, but by improving every opportunity of making known our movements, and urging through the Press the necessity of having similar associations in every county in the Dominion. The consequence has been the formation of the following societies in this Province: The "Guelph Fish Protective Association," the united counties of Prescott and Russell Fish and Game Protective Society, the "Ontario Fish and Game Protective Association," the London District Fish and Game and Insectivorous Birds Protective Society.

"The formation of these associations it is hoped, is but the nucleus of a net-work of similar societies through the whole country, from which Provincial Game Protective Associations will no doubt be formed, and being represented by practical sportsmen and fish culturists from all parts of the Provinces, they would prove the true medium through which we might approach Parliament in urging any alterations or changes in the fish and game laws of the country."

Mr. Ludgate was re-elected President, and Major Boulton and Mr. Eastland, Vice Presidents. Mr. Post having stated that he found the duties of Secretary-Treasurer too onerous, was appointed Corresponding Secretary with Mr. J. E. Hammond as Recording Secretary, and the Rev. V. Clementi as Treasurer. Messrs. E. J. Toker, R. Walton, G. Edmison, H. T. Strickland, and G. M. Roger were elected for the Central Committee, and several names were added to the existing General Committee.

—A bill has been introduced into the Assembly of Fredericton, N. B., to prevent the killing of moose, caribou, and deer in the province for three years.

Game Laws of Pennsylvania.

The following is an abstract of the bill amending the game laws of the State of Pennsylvania, as passed by the Legislature on the 8th inst. It will be found to contain a number of changes from that in force up to this date.

SECTION 1. Provides that no person shall kill or pursue in any part of the State, any elk or wild deer, save only from the 1st day of Oct. in any year, to the 1st day of Jan. next following; no person shall have in his or her possession, or offer for sale or transport, any elk, or wild deer, or fresh venison, save only from the 1st day of Oct. in any year, to the 1st day of January next following; no person shall at any time kill any fawn, when in its spotted coat, or have the fresh skin of any such fawn in his or her possession; no person shall pursue any elk or wild deer with dogs in any part of this State, or shall kill in the water any elk, or wild deer, or fawn, which has been driven thereto by dogs. Any person offending against any of the provisions of this section shall be deemed guilty of a misdemeanor, and shall be liable to a penalty of fifty dollars for each elk, wild deer, or fawn so killed, pursued, or trapped, or fresh elk, wild deer, or fawn skin had in his or her possession, and may be proceeded against in any county of the State wherein he may be arrested having the same in his or her possession; provided, however, that any person may sell or have in his or her possession the elk or wild deer aforesaid between the 1st day of January in any year, and the 1st day of February next following, without liability to the penalty herein imposed —provided he shall prove that such game, if killed in this State, was killed within the time allowed by this act, or was killed outside the limits of this State, and at same place where the law did not prohibit such killing; does pursuing elk, or wild deer, or fawns, may be killed by any person, and any constable, or other law officer in any State and dog that habitually pursues elk, wild deer, or fawns, and other owner of such dog shall be liable to a penalty of ten dollars for each elk, wild deer, or fawn killed by such dog.

SEC. 2. No person shall kill or expose to sale, or have unlawfully in his or her possession, after the same has been killed, any gray, black, or fox squirrel between the 1st day of Jan. and the 1st day of July in each year, under a penalty of five dollars for each and every squirrel so killed or had in possession.

SEC. 3 No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any hare, commonly called rabbit, between the 1st day of Jan. and the 1st day of Oct. in any year, under a penalty of five dollars for each and every hare or rabbit so killed or had in his possession; no person shall hunt, or cause, or permit the hunting of hares or rabbits with a ferret, or ferrets, under a penalty of ten dollars for each and every hare or rabbit caught or killed by means of a ferret or ferrets.

Section 4 prohibits the use of swivel or punt guns.

SEC. 5. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any wild turkey, or any wood or summer duck between the 1st day of Jan. and the 1st day of Oct. in any year, under a penalty of ten dollars for each bird so killed or had in possession.

SEC. 6. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any upland or grass plover, between the 1st day of Jan. and the 15th day of August in any year, under a penalty of ten dollars for each bird so killed or had in possession.

SEC. 7. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any woodcock, between the 1st day of Jan. and the 1st day of August in any year, under a penalty of ten dollars for each bird so killed or had in possession.

SEC. 8. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any quail or Virginia partridge, between the 1st day of Jan. and the 1st day of Nov. in any year, under a penalty of ten dollars for each bird so killed or had in possession.

SEC. 9. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any ruffed grouse, commonly called pheasant, or pinnated grouse, commonly called prairie chicken, between the 1st day of Jan. and the 1st day of Oct. in any year, under a penalty of ten dollars for each bird so killed or had in possession.

SEC. 10. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any rail bird or reed bird, except in the months of Sept., Oct., and Nov., under a penalty of five dollars for each and every rail and reed bird so killed or had in possession.

Sections 11, 12, and 13 refer to the capture of insectivorous birds, taking eggs, etc.

SEC. 14. No person shall kill, catch, or discharge any firearms at any wild pigeon while on its nesting ground, or break up, or in any manner disturb such nesting ground or the birds therein, or discharge any firearms within one-fourth of a mile of such nesting place of any wild pigeon or pigeons; or shoot at, maim, or kill any wild pigeon or pigeons within their roostings, under a penalty of twenty dollars.

Section 15 prohibits the trapping or nesting of grouse, quail, woodcock, rail, or rabbits, except quail for propagation, and then only with the written consent of the owner of the land, and only between December 20th and February 1st. Section 16 prohibits Sunday shooting, the penalty being $25. Section 17 prohibits the taking of trout save with hook and line.

SEC. 18. No person shall kill or expose to sale, or have unlawfully in his or her possession after the same has been killed, any salmon or speckled trout, save only during the months of April, May, June, and July, and the first fifteen days of August, under a penalty of ten dollars for each salmon or trout so killed, or had in possession; but this section shall not prevent any person from catching trout with nets in waters owned by himself to stock other waters.

SEC. 19. No person shall kill or expose for sale, or have unlawfully in his or her possession after the same has been killed, any lake trout in the months of Dec., Jan., and Feb., under a penalty of ten dollars for each fish.

Sections 20 and 21 refer to trespassing and using nets, weirs, etc.

SEC. 22. No person shall at any time catch or kill in any of the waters of this State, save only with a rod, hook, and line or scroll; and no person shall catch or expose for sale, or have in his or her possession after the same has been killed, any black bass, pike, or pickerel *Lucio Percedæ*, commonly known as Susquehanna salmon, between the 1st day of March and the 1st day of July, except alive for stocking other waters, under a penalty of ten dollars for each offence; provided, this section shall not apply to the waters of Lake Erie, except in the ponds on the island or peninsula forming the north and east shores of the harbor of Erie.

Sections 23 and 24 refer to netting trout, black bass, etc.

SEC. 25. Any person may sell or have in his or her possession, any pinnated grouse, commonly called prairie chicken, ruffed grouse, commonly called pheasant, and quail, or Virginia partridge, for a period of fifteen days (15) after the time limited for killing the same has expired, and shall not be liable to any penalty under this act; provided, he or she shall prove that such birds were killed within the period allowed by this act, or were killed outside of the limits of this State at some place where the law did not forbid the killing of the same.

The remaining sections of the law refer to penalties, etc.

SEC. 30. All acts or parts of acts which are inconsistent with this act are hereby repealed.

—We have received a copy of the Constitution and By-laws of the FOREST AND STREAM Sportsmens Club, of Scranton, Penn., of which Mr. J. E. Shepard is President; Cornelius Smith, first Vice, and Dr. C. H. Fisher, second Vice President; D. B. Brainard, Treasurer; and C. R. Smith, Secretary. The club has been in operation nearly a year; has nearly one hundred members, comprising many leading citizens; has leased several small lakes or ponds, and are stocking them with bass, and has accomplished much in preventing violations of the game laws.

—The Legislature of Maryland has passed a law which prohibits the killing of deer in Garrett County save in the month of October, for five years.

—The New York Association for the Protection of Game held its monthly meeting last evening at the Hotel Brunswick. The following resolution, proposed by Mr. Roosevelt, was unanimously adopted:—

Resolved, That in the opinion of the New York Association for the Protection of Game the law in relation to the capture of trout permits them to be taken out on the 15th of March, and that no prosecution will be brought by this association for any trout taken or offered for sale on that day.

Mr. Luddington rendered his report regarding the progress at Albany of the association's Game bill, and said that it would probably be passed without difficulty, as the opposition of Mr. Prince and other Senators was withdrawn. A number of cases of violations of the laws will be brought to trial on the first Monday in April.—*Herald*.

THE KENNEL REGISTER.

RECOGNIZING the want of such a book we some time since started a Kennel Register, which has received the cordial support and endorsement of owners of fine dogs. One of our contemporaries has seen fit to imitate us and start another, which, while it may be the "sincerest form of flattery," is likely to lead to confusion. There can be but one Kennel Register, and we leave it to the sportsmen of the country to designate which that shall be. We have no doubt as to their verdict, and we expect to continue the Register as long as a copy of FOREST AND STREAM is issued.

Our contemporary also offers to register dogs *free*. We confess that we cannot afford to do so, particularly as the dollar paid us is credited to the owner of the dog registered on account of the cost of a copy or copies of the Register when published in book form, the total cost of which we estimate will be two dollars. As Mr. Burges' very excellent book into which our contemporaries' pedigrees are to be incorporated costs four dollars, we consider the advantage, pecuniarily, to be decidedly in favor of our own.

—The managing editor of this journal takes pleasure in acknowledging the courtesies extended to him by E. H. Jackson, of the Charleston Hotel; W. W. Palmer, of the Magnolia, St. Augustine, and George McGinley, of the Grand National, Jacksonville, Fla., while on his recent visit to the South.

—Dog and gun licenses must form a very important item in the British budget. In 1875 licenses were taken out for 1, 352,068 dogs; being an increase of 75,806 from the previous year. The revenue received from this source amounted to £313,017, the tax being five shillings sterling for each dog. Large as are these figures, there are probably thousands of dogs upon whom no license fee is collected. The tax on guns produced £73,139, and for game licenses £190,505.

—We desire to call the attention of our readers to the unusual number of excellent articles in our present issue. Prof. Brown Goode's paper on "Bermuda and its Fish Market," "Metaphysics of Fly-Fishing," "How Split Bamboo Rods are Made," and Dr. W. S. Webb's letter on "Pneumonia, or Distemper in Dogs," are all worthy of especial attention.

The Rifle.

THE INTERNATIONAL MATCH.

THE Executive Committee of the National Rifle Association has forwarded to Sir Henry Halford the following letter, which fully defines their position on the question of the International Match. They take the broad ground that the "invitation," having been extended to all nations, it would be impossible to exclude Ireland and Scotland, should they desire to compete through separate teams. A strong point is made in the fact that the Irish, through being the holders of the Elcho Shield, are practically the champions of Great Britain, and their exclusion from our contest would not settle the question of the world's championship:—

NEW YORK, March 13th, 1876.

SIR HENRY HALFORD, *Member of Council National Rifle Association, and Captain of the British Team:*—

DEAR SIR—Your letter of February 14th came duly to hand. I delayed answering in order to bring it before our Board of Directors, at their regular meeting of the present month, and write under their instructions, which I now have the honor to do.

Your association will better comprehend the position of our Board and the reasons why we cannot properly adopt your suggestion as to the course we should take in reference to teams from the British Isles, outside of England, when I state the origin of the proposed International match, and briefly call your attention to the action taken by our Board in furtherance thereof up to the present time. It was the desire of the United States Centennial Commission to make a rifle tournament one of the features of the Exhibition, and our associat on was requested to undertake its management. Accordingly, at a regular meeting of our Board, the following resolutions were adopted:—

Resolved, That in furtherance of the steps already taken for a grand International competition on the occasion of the Centennial anniversary of American Independence, and for a proper observance of such anniversary on the part of this association, a series of rifle matches be inaugurated, to take place during the summer or autumn of 1876, and a general invitation be and hereby is extended to riflemen of all countries to participate.

Resolved, That the President and Secretary be authorized and requested to notify, in the name of this association, riflemen of England, Ireland, Scotland, France, Germany, Austria, the Dominion of Canada, the South American States, and all countries having rifle associations or clubs, of the opportunity presented to them to participate in the competitions instituted.

Our President and Secretary complied with the request contained in the foregoing resolution by sending a copy of the same to every rifle association and rifle club whose address could be obtained, throughout the world, regardless of nationality or territorial location. These resolutions were accompanied by an official letter, signed by our President and Secretary, cordially transmitting the same, and stating, in substance, that while there would be matches at short distances for military and other arms, the principal match "would be for the championship of the world, at long range, open to teams of eight from each country." We must, therefore, assume that the official communication described above is now in the possession of every known rifle association or club. A strictly technical construction of the foregoing conditions—viz: "Open to teams of eight from each country"—would undoubtedly require Great Britain and Ireland and the British Provinces to be represented in the match in question by one team only. This was not our intention. We intended the match to be free to all; in the broadest sense. We mentioned particularly England, Ireland, Scotland, and the Dominion of Canada, that each might have an opportunity to send a team. In disputing this course we had Ireland especially in mind. Remembering our contests with her in 1874 and 1875, and the pleasant intercourse they afforded; and being also aware of the fact that Ireland, in holding the Elcho shield, stands forth at present as champion of the British Isles, we did not think we could with propriety—and we know we could not in justice to our own feelings—fix such conditions as would necessarily exclude her from representation.

Our telegram to you of January 18th—"Any team you organize will be accepted—English, Irish, Scotch, or mixed"—was not intended to give you the option of sending either one or three teams from England, Ireland, and Scotland, but was intended to give you, as the deputed representative of the National Rifle Association, the privilege of bringing over a team of any character you choose to organize, leaving Scotland and Ireland to accept or decline our invitation as they might elect. No further or other action in the premises than as above appears has been taken by our association. If Scotland and Ireland, or either of them, are not disposed to accede to the propositions of your National Rifle Association, we do not see what action we could properly take that would force their compliance. It is obvious that at this late day we cannot recall our invitations, nor can we change the conditions of the match. Scotland and the Dominion of Canada have accepted and we shall deeply regret if England does not accept on her own behalf, and afford us the pleasure of meeting upon our grounds a purely English team. Our invitation was not designed to bear in any aspect the appearance of a challenge. We organize a match, provide a suitable trophy, invite all to come and compete, and propose to call the winning team champions of the world. It is our judgment that a single team from England, Scotland, and Ireland, combined, would increase the chances for American success, simply because there would be two less teams in the field. Our desire, however, to see a large number of competitors exceeded our desire to win. Nevertheless, if England, Scotland, and Ireland, should agree together to send over an Imperial team, we shall cordially welcome them to the match.

Please pardon the length of my communication, and be assured of my high esteem and regard. Yours, very truly,

GEORGE S. SCHEMERHORN, Jr.
Secretary National Rifle Association.

AFFILIATION.—The following Rifle Clubs have already affiliated with the National Rifle Association under the terms of a resolution passed February 1st, and which has been already published. Copies of the circular containing the resolution can be had by addressing G. S. Schemerhorn, Jr., Secretary N. R. A., No. 93 Nassau street, this city:—

California Rifle Association, San Francisco, Cal.—David Wilder, Secretary, 28 Merchants Exchange.

Norwich Rifle Club, Norwich, Conn.—R. N. Parish, Secretary, 49 Water street.

Seventh Regiment Rifle Club—H. H. Marcy, Secretary, New York City.

Massachusetts Rifle Association—C. A. Sawyer, Secretary, Boston, Mass.

Fulton Rifle Association — O. D. Fowler, Secretary, Stockton, Luzerne County, Pa.

Middletown, Connecticut, Rifle Association—F. C. Smith, Secretary, Middletown, Conn.

Sportsman's Club of Taunton—Henry P. Copeland, Secretary, Taunton, Mass.

In addition to the above, the Amateur Rifle Club, the Yonkers Rifle Club, and a number of other prominent Clubs have announced their intention of affiliating, so as to be represented by delegates in the May Convention.

NATIONAL RIFLE ASSOCIATION.—A meeting of Board of Directors of the National Association was held on Tuesday last. Col. Wingate, on behalf of the Range Committee, reported that measures were being taken for the erection of a barrier 200 yards to the rear of the targets at the Creedmoor range, and that other improvements were being made for the coming season.

The following amendments to the regulations were adopted: No stirrup constructed of metal or other substance, connected to the rifle by straps of any kind, for the purpose of taking up or lessening the recoil of the rifle, will be allowed in any matches of this association. In all matches breech loading rifles must be loaded at the breech only. In all military matches each team will be limited to an average of one minute and a half per shot, for each squad, to complete its score. In all cases the gun shall be held clear of the ground. The meeting then adjourned.

CONLIN'S SHOOTING GALLERY—930 Broadway.—The twelfth competition for the FOREST AND STREAM badges was shot March 9th, 1876. The first badge has been shot for by some of the best shots in the city, and Mr. Chas. A. Cheever won it for the third time, after a very close contest with W. B. Farwell, L. C. Bruce, C. E. Blydenburgh, Thos. Lloyd, D. L. Beckwith, T. C. Noone, and many other "crack" shots. It is a splendid victory for Mr. Cheever, and we take much pleasure in congratulating him upon his skill with the rifle, which is deserving of the badge. Mr. L. V. Sone won the second badge for the last time after shooting off the tie with Mr. C. G. Peters. Mr. J. G. Wright won the third badge finally. The following is a summary of the contests for the badges, commencing Oct. 14th, 1875, and ending March 9th, 1876:—

3d badge, "liners."	2d badge, "centres,"	1st badge winners.
3 winners.	winners.	winners.
Wm. Keein.....42.	G. W. Hamilton.....42.	E. Whitley.
Chas. A. Cheever...41.	Robert Miley.....41.	G. W. Smith.
W. B. Farwell.....35.	L. C. Bruce.....41.	J. Waydell.
Thomas Lloyd.....41.	A. Marsh.....40.	C. Blackie.
D. L. Beckwith...44.	L. V. Sone.....41.	A. B. Abeel.
L. C. Bruce.....44.	L. V. Sone.....41.	J. O. Wright.
T. C. Noone.....42.	A. G. Hollwig.....41.	F. N. DeWitt.
C. E. Beydenburgh.43.	G. W. Yale.....41.	J. Woodward.
Chas. A. Cheever..42.	J. B. Blydenburgh...41.	H. B. Blydenburgh.
W. B. Farwell.....38.	T. C. Banks.....41.	A. Forrester.
J. Woodward.....36.	C. G. Peters.....41.	J. O. Wright.
Chas. A. Cheever..44.	C. G. Peters.....41.	J. O. Wright.

Sone and Peters shot off tie for second badge, Sone winning.

MILEY'S GALLERY—No. 26 Court street, Brooklyn.—The following are the best scores made to date in the tournament for the Brooklyn Championship at the above gallery, ten shots, off-hand:—

Name.	Total.	Name.	Total.
J. B. Blydenburg	47	Joseph Levy	45
J. F. Burns	46	W. H. Beebe	43
J. W. Wallis	46	H. Fisher	43
F. H. Holton	46	F. P. Pike	42
J. V. Senlley	45		

There is also a match progressing, which is shot in lying down position, but as each of the contestants whose scores have been sent us have made the full limit of 50 points each, it promises to be rather difficult of decision.

SYRACUSE.—The Sixth Division Rifle Association, whose headquarters are at Syracuse, was formed late last season, and immediately leased ground sufficient to build a 1,000-yard range, and since that time has built an embankment 250 feet long by thirty high. Everything will be in readiness for business in the early spring, and they anticipate developing a number of first class shots the coming season. The Nevada Badge will be contested for on this range, if any company challenges the present holder, *viz*: A Company, Forty-eighth Regiment. The officers of the association are as follows: President, Maj. Gen. Daniel Wood; 1st Vice President, Lt. Col. James Manning; 2d Vice President, Col. J. Dean Hawley; Treasurer, Lt. Col. George N. Crouse; Secretary Quartermaster, G. W. Edwards.

SOME FINE SHOOTING IN INDIA.—The *Sporting Gazette* has the following:—

"A letter has been received by the Secretary of the National Rifle Association of Scotland from Capt. Horatio Ross, the late Captain of the Scotch Eight, stating that his son, Mr. Hercules Ross, the champion rifle shot in India, was to be home this year on leave, and that he intended to compete for a place among the Scotch Eight for the Elcho Shield match. Mr. Ross has just been successful in carrying off the handsome Cup offered by the Viceroy of India, with a total score of 141. The conditions were ten shots at each of the 800, 900, and 1,000 yards ranges, with two sighting shots at each; and the following was the score he made, it being understood that the two first are sighting shots, and do not count in making up the aggregate:—

800 yards	5	5	5	4	5	5	5	4	5	5—48
900 yards	5	5	5	5	5	5	5	5	5	5—50
1,000 yards	5	4	5	2	5	3	5	5	3	3—43—141

The same journal comments on the proposed International Match as follows:—

"The Council of the Scottish National Rifle Club, declining to listen to the advice of Sir Henry Halford and the National Rifle Association, have resolved to send a separate team to engage in the International shooting contest to be held at Philadelphia in connection with the Centennial rejoicings. Sir Henry thinks the surest way to secure victory is to select one team from among the English, Scotch, and Irish rifle shots; while the Scottish Council are of opinion that the British Empire ought to be represented by three separate teams, and that if it send three separate eights it will have a better chance of securing the international trophy than if it send one united eight. Mr. J. H. A. Macdonald, of the Queen's Rifles, Edinburg, and Capt. of the Scottish Twenty, has been chosen Capt. of the Scottish-American team."

—Creedmoor was formally opened yesterday the 15th inst.

MILWAUKEE, March 7th, 1876.

EDITOR FOREST AND STREAM:—

On Friday last the 3rd inst., the Milwaukee Rifle Club made the following scores at the 500 yard range:—

Name.	Score.										Total.
Bangs	5	5	5	5	5	5	5	5	5	5	50
Fielding	5	4	5	5	5	5	5	5	5	5	49
Meanier	3	4	5	5	5	5	5	5	5	5	45
Turner	5	3	2	1	4	5	4	5	4	5	41

The competition for the Brodhead prizes commences on the first of April. The prizes are two field glasses, one to be shot for at 200 yards, two sighting and ten scoring shots. The other at 500 yards, two sighting and fifteen scoring shots, each to be won three times. E. Remington & Son's has presented to the club one of their new model navy revolvers handsomely finished and mounted. This prize will be shot for at 1,000 yards, competition to commence in June. WAC.

RIFLE CHAMPIONSHIP OF THE WORLD.

MILWAUKEE, March 5th, 1876.

EDITOR FOREST AND STREAM:—

I have read with much interest the conditions on which the Centennial matches are to be conducted, as published in your paper of 2nd inst. The conditions of the International Team Match suggest to my mind a few pertinent enquiries. The conditions say it shall be open to riflemen of all countries. This raises the question what is a country? Are England, Scotland, and Ireland, all ruled by one Queen and one Legislature, separate countries? Is Canada also to be regarded so? If this is answered in the affirmative, then I would ask why may not Pensylvania, Ohio, and Illinois be regarded as separate commonwealths. They have separate Legislatures, and separate Governors. If England, Scotland, Ireland, and Canada be each allowed a separate team, and the United States only one team, does not that work to the disadvantage of the Americans by pinching four teams against their one.

I see a Northwestern Rifle Association is to be organized in Chicago March 29th. Would it not be as appropriate to have a team representing the Northwest as one representing Canada? Again, an Englishman, Scotsman, or Irishman, who has emigrated to Canada can shoot in the International Team match, but if he has been unfortunate enough to emigrate to New York or Chicago, and become an American citizen he is ruled out. What would be the objection to allow the foreign-born citizens of the United States to organize and shoot a team. It may be that the old countrymen who have been transplanted to America can beat, both the native born Americans, and also those "Britishers" who never left the confines of their own little island.

I have no doubt the committee did the best they could, but I cannot see how the contest can be for the championship of the world, when the millions of foreigners in the United States can have no chance to try for it. WISCONSIN.

[We commend the above to the officers of the National Rifle Association.—ED.]

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks, and Wild Fowl.

GAME IN MARKET.—Ducks are being received quite freely from the Great South Bay, in the vicinity of Babylon, L. I., and prices are rather lower. Canvas backs average about $3 per pair; red-heads, $1a$1.50; mallards, 75c.; broad bills, 50c.; black ducks and widgeons, 75c.; brant, $1.25a$1.50; geese, $1a$1.25 each.

—Advices from Florida state that the wild fowl have gone to more northerly latitudes.

—A correspondent writing March 9th from Peotone, Ill., says that geese and ducks are now quite plenty in that section.

—The ice has commenced to break up in the "duck regions" of Central New York, though but few ducks have been seen as yet.

—A Toledo (Ohio) letter of the 6th instant says that the lakes and rivers are quite free of ice, pigeons are beginning to fly, and flocks of geese are occasionally seen.

—The following officers were elected at the annual meeting of the Worcester (Mass.) Sportsmen's Club, held last week:—President, L. G. White; Vice Presidents, Jerome Marble and Geo. B. Buckingham; Secretary, Stedman Clark; Treasurer, Alba Houghton; Executive Committee—Isaac Fiske, J. M. Drennan, A. G. Mann, and S. Foreland.

TESTING CARTRIDGES.—Our correspondent "Brandon," of Bald Mountain, N. J., has been making some experiments with rim fire cartridges, using 300 of different manufacturers in a Smith and Wesson revolver. The result for penetration he gives as follows:—

"U. S. C. Co.'s 2.35; Winchester, 2 20; U. M. C. Co., 1.55. After the first fifty shots were fired with the Winchester the arm was cleaned. Then firing fifty of the U. S. Co.'s make, it was again cleaned. After firing fifty of the U. M. Co.'s, I continued firing 150 shots, making the last 200 rounds without cleaning."

He remarks that hitherto he has found the Union Metalic Co.'s rather superior to the others. As regards fouling, there was little difference between the Union Metalic Co. and the United States Co., the Winchester fouling the most. At the conclusion of the 200 rounds, without cleaning, the easy working of the cylinder was not much affected.

"Out of the 300 cartridges fired, eleven failed among the Winchester's, one each of the other kinds. These all exploded upon the second trial without shifting them in the chamber. As to accuracy, I had no way of judging it, as I had not a proper rest. A bullet from each make would occasionally turn sideways after penetrating the first board. Range 10 yards; cartridges, .22 calibre. Will not some of your readers give us their experience with these, or other make, of a larger size, say rifle sizes from .32 to .46."

An experiment of this kind, however, made with but 100 cartridges of each make should by no means be taken as a test of quality. If tried again with a similar number of each the conditions might be exactly reversed. The small sizes of rim-fire cartridges are much more liable to deteriorate and become damaged than the larger ones, particularly when they have been kept in a place where the lubricant melts and works its way into the shell. We know this to be a fact from experience at Conlin's gallery, where there are probably more .22 cartridges used than any other place in the country. Here the experts who shoot constantly will often notice that a box of cartridges will run poor throughout, (as to the shooting), and it will generally be found to be the last box of a lot. Most of the .22 cartridges are now used and manufactured for gallery rifle practice, and it has been shown that when a very strong powder is used the shooting is not so accurate.

HARD SHOT VS. SOFT.—Our readers will remember that a short time since we published the result of some experiments with hard and soft shot. A correspondent now sends us from Richmond, Va., a communication, for which we regret we have not space, showing that in the trial, or rather in the tabulated results, the proper allowance was not made for the difference in the number of pellets between a charge of hard shot and a similar one of soft, which would increase the pattern made by the soft shot very materially. As regards penetration, by carrying out the same rule of proportion, he finds that "the whole difference in 37 shots for penetration is but 4 59-270 sheets better for hard than soft shot, and thinks that if this rule is applied in all trials where one shot is larger than the other, the results will show that it is not the shot which causes the variation, if there be any.

PIGEON MATCHES.

ERIE, PA.—Two matches were shot at this place a few days since, both at 21 yards rise, 80 boundary. The first was between sides, and resulted as follows:—

THOMPSON'S SIDE.

Name.	Total.	Name.	Total.
J. R. Thompson	11	Carey	5
H. C. Lyach	9	J. Metcaf	7
W. W. Durhy	6	—	—
Total			33

RIDDLE'S SIDE.

Name.	Total.	Name.	Total.
J. Riddle	8	J. Graham	10
J Justis	6	C. Olds	6
G. Davis	8	—	—
Total			48

The other resulted in a tie, and there being no more birds on the ground, it was not shot off. Below is the score:—

Name.	Total.	Name.	Total.
W. W. Durhy	6	Jack Riddle	6
H. Carey	3	Jake Graham	3

—A match was shot on the grounds of the Long Island Club on Thursday, which created some interest, from the rather peculiar conditions attached to it. Mr. Henry Brooks, of New York, talked business to the extent of $250, to kill 13 out of 25 of any birds that could be trapped for him. The gentleman backing the birds procured some remarkably fast pigeons, that so bothered Mr. Brooks that he retired, after killing 5 out of 19. Mr. Parks was referee.

THE DITTMAR POWDER.—Mr. Carl Dittmar writes us, apropos of the manufacture of his powder, that his patent covers two distinct kinds of powder, one for blasting, and one for sporting. He says, in referring to a letter from Mr. Burges, which we published:—

NEPONSET, Mass., Feb. 4th, 1876.

EDITOR FOREST AND STREAM:—

I never have used, and never shall use for my sporting powder such dangerous materials as nitro-glycerine, chlorate of potash, picric acid, etc. If my powder is put on an anvil and struck with a hammer it does not explode, which shows that it cannot contain nitro-glycerine or chlorate of potash. I am sorry that Mr. Burges has been so lucky in the use of my powder, but this was last spring when my powder was soft and could be squeezed together too easily in a small space. Since first of September, last year, I make an entirely different powder, much harder grain, not so compressible as the first. But even with the softest kind, I made in the first time, I have not been able to injure my guns. I can use it in the strongest as well as in the weakest. I have exchanged lots of it for the new kind and have tried what I got back, over and over again without bad results, so I think that the fault can only have been in loading too hard. All the new kind is put up in canisters like black powder, and as I put my own signature on every can, none is genuine without that. I warrant for every can with my signature on it. I hope that those gentlemen who expressed themselves favorable to my powder in your last issue will continue to use it after this explanation. I can make it always uniform, and shall not make any change in those brands which have the approval of the public. I shall change the finer grades of rifle powder, which have been pronounced too quick for breech-loaders. I can give any desired strength, quickness or slowness. At the present I am experimenting to give the powder a water-proof coating, so as to make it absolutely indifferent against dampness. If I change the powder it shall only be for improvement. I am in hopes to convince, by and by, even the strongest adversaries to my powder, that it performs all what I claim. Cheapness will follow with the increased demand.

CARL DITTMAR.

A WORD FOR THE KAY CONCENTRATOR.

NEWARK, N. J., March, 4th, 1876.

EDITOR FOREST AND STREAM:—

The close season is almost over, and the voice of the snipe—"scaup! scaup! scaup!"—shall be heard in the land, and that right soon we hope, so as to gratify the lovers of dog and gun, with an opportunity to draw on their water-proof boots, and try the low lands in this vicinity, for their favorite bird—and be more successful than were many sportsmen the last season.

In truth, we have passed through a very dull winter, dull in business as well as dull in field sports, as the shooting season just past will abundantly verify. Quail and fall woodcock, anything but plenty, and the experience of our shooting friends accords directly with our own; birds scarce, wild, and very hard to get. It may not be out of place for me to say to our shooting friends, right here, that we have an invention, got up in this city, that should commend itself to the friends of the shot gun, particularly when birds are wild and shy, that may help them to fill their game bags, when ordinary methods would not prevail. This invention is known as the "Kay cartridge concentrator," and according to our own limited experience, it fills the wants of the gunner very much better than anything of the kind it has been our pleasure to see. They are marvelously exact in distribution, penetration, and distance. In addition, they are economical and more convenient to load, carry, and handle, than loose shot, besides this, they equalize the shooting of a gun to a degree that would be more than surprising to one who had not used them. Having mentioned a few of the good results from the "Kay concentrator" to your sporting readers, we trust that some of them will try the concentrator, each for himself, to his own satisfaction, and give us an opportunity, through your valuable columns, to judge of his success or otherwise, with them. Feathered, or in fact, any kind of game is very scarce, and hard to get through this thickly populated section, and there must be something more than loose shot used to reach the birds, and should this "Kay concentrator" touch the desired point so much the better for us who are partial to field sports. RIP-RAP.

WILD PIGEONS IN PENNSYLVANIA.

ALTOONA, Pa., March 10th, 1876.

EDITOR FOREST AND STREAM:—

Having returned from a wild pigeon hunt, I thought it would be of interest to let your readers know something of it. Pigeons are around here by the millions. On Tuesday, March 7th, they flew over our city in a constant steady stream, for over an hour, and in a line a mile or more in width. I do not stretch the truth, and this is but a small portion of them already here, being a fresh arrival. If any of you or your friends, want fun, tell them to come on—indications are that they will remain. Would be willing to answer any questions in regard to them. Just to think of it, place yourself behind a stump, by gun, shells, and ammunition on the ground, and reload gun and shells at intervals, and shoot constantly for four or five hours straight ahead, until you have your fill. I shot 150, when I had to stop for want of ammunition. J. W. F.

CHOKE-BORES.

SIR—Having purchased one of Graener's No. 12 choke-bores this season, I beg to give you the following as my experience of it. I consider it kills on an average at least twenty yards further than a non-choke-bore, and, if large shot is used, will kill at extraordinary distances. I myself killed a heron sitting at more than a hundred yards, and, on skinning the bird, found he was hit in five places. I have also tried it on wild fowl with good success at distances at which an ordinary gun would not have been of any service. I have made good bags on snipe and other game during the last month without smashing the birds.

Leamington, Jan. 10th. B. S.

SIR—I often read inquiries in your columns about choke-bored guns. I purchased a 12-bore last September direct from Greener, and must say that I have killed a few most extraordinary shots, viz: a wood-pigeon (single bird) at least one hundred yards distant; several partridges at or over eighty yards; one rabbit running broadside on, distance measured eighty-one yards. I put five No. 6 shot into her, two of them passing clear through. Another most extraordinary shot: I fired at a mallard rising from the Thames, wounded the bird sufficiently for my companion to walk up to and kill it afterwards. The distance was judged by three friends with me to be at least 150 yards, No. 4 shot used. I am prepared to prove all these statements, if required, by independent witnesses. I have since purchased a second gun for a friend, and that turns out equally good. WILLIAM BOX.

Uffington, Farringdon, Berks, Jan. 10th.

SIR—Reading so much on the merits and demerits of choke-bores, I should like to give my experience. Last spring Mr. Greener converted my favorite muzzle-loader—a 12 bore, weighing over 8 pounds, made by his father—into a modified choke 10-bore, breech-loader, lever action. The gun was finished in June, and on trial at the target for pattern I was perfectly satisfied that it would be of good service again. In the first week of August I used the gun on ducks with a charge of good 3¼ drachms powder, (No. 4 Curtis & Harvey's), 1¼ oz. No. 6 chilled shot, turned over with a thin stiff cardboard wad. I fired twelve shots, brought to bag eleven ducks. Only one gave me any trouble to recover (the second bird of a double shot), which must have been at least eighty yards from me when struck; being on the banks of a large pool in advance of a boat. I paced the distance. Ducks were killed dead from forty-five to seventy-five yards. The gun has been used all the season on partridges, pheasants, rabbits, woodcock, snipe, shoots better than when a muzzle-loader, and is in every respect superior to any of my other guns on the old system. A second gun I ordered from Mr. Greener—a 12 bore—it shoots first-rate, the game is not all smashed at short distances, but killed clean, and in my opinion "choke-boring" is a great improvement in guns. J. S. PHILLIPS.

THE BOAT FOR FLORIDA.

AN interesting chapter is contained in "Camp Life in Florida" regarding an outfit for Florida; but practical experience, as well as the results of observation, induce me to offer a few criticisms, as well as suggestions, regarding the boat for Florida. Thousands of sportsmen visit this State annually, and among them are scores, if not hundreds, who would enjoy a boat cruise, if they could obtain a craft adapted to Florida rivers and lakes.

A want is expressed through the columns of the FOREST AND STREAM for an improved rod and reel, or other sporting appliance, and the needed article is produced. Such being the case, I shall offer a few suggestions to boat builders, regarding a boat adapted to the requirements of Southern waters and sports, and trust that action will be taken and the want supplied. I have carefully examined a number of boats built by the most celebrated builders of the North, and humbly express it as my opinion that they are not adapted to Florida waters. These boats unquestionably meet all the requirements of northern rivers and lakes, where lightness and portability are desiderata; but these very conditions unfit them for Florida. Some of our rivers are several miles in width, and many of our lakes are extensive, and upon both rough water is frequently experienced, requiring for their navigation a sea-worthy boat. For use on the southwest coast they must be able, for at certain points the sportsman must adopt a route outside of reefs, keys, and main land. Then again, some of our bays are twenty miles wide, and a light breeze kicks up an uncomfortable sea, in which a canoe or light shallow boat containing the necessary amount of sporting traps would be found uncomfortable, if not actually dangerous.

In many portions of the State where game exists in the greatest quantity, it is impossible to replenish the locker, and it is absolutely necessary to transport enough "belly timber" for a two or three weeks' cruise. Hence a boat adapted to the wants and requirements of a Florida trip must possess stowage and carrying capacity under deck, so that the necessaries of life and sporting impedimenta can be protected from rain, as well as water. In addition, she must be sea-worthy, so that the sportsman can safely navigate our rivers, lakes, and coast lines. A light, frail boat built of paper, bass wood, or white cedar, will not answer on the southwest coast; for in this section extensive coon oyster bars, and limestone reefs exist everywhere. Coon oysters are small, and form extensive beds, the edges of the shells as sharp as knives pointing heavenward, creating sad havoc with the bottom of a boat. The horizontal limestone reefs have been extensively disintegrated, and present innumerable sharp points, each one capable of perforating the bottom of a light frail boat.

A boat for Florida should be supplied at a cheap rate, so that it may be used for a season and abandoned or sold at a discount. Sandpapering, oiling, varnishing, and fancy fixings should give place to utility, adaptability, strength, and common paints. Such a boat should be supplied with a sail of sufficient size to propel her; and she should be adapted to rowing when an ash oar breeze can be used to advantage, as during a calm, or in ascending or descending rivers.

Great lightness is not so much to be desired as carrying capacity and sea-worthiness; for we have an ample supply of railroads, steamboats, and bullock drays to transport boats from point to point, and in the case of the two former, measurement and not weight determines the freight charges. In a recent issue of the FOREST AND STREAM I noticed that Mr. Bishop's head is level, for in his last trip he abandoned the paper canoe for a "Barnegat sneak-box," as a means of conveyance. Having used these boats at Barnegat, I can fully appreciate the wisdom of Mr. B.'s selection. But for the use of sportsman in Florida waters, there is wanted a modification of the "sneak-box" as follows: Length, 14 feet; beam, 4 feet 4 inches; width of stern, 3 feet 6 inches, space between deck and ceiling, 20 inches; floor midships, nearly flat; wall sides midships; deck, bottom, and sides, white cedar, ⅝ inches thick; timbers, natural curve, sawn from white cedar; model same as Barnegat sneak box from midships aft; forward of this point like Whitehall boat, without any deck shear. Deck fillings, same as in sneak box; stool rack (or moveable combing), abaft cock-pit, useful to carry hatch, water keg, anchor, and other plunder on deck; small, but tight-fitting batch in after deck, to enable sportsmen to stow and reach stores; moveable hatch, as in sneak box, so that owner can convert his boat into a Saratoga trunk, and lock up his plunder when he is disposed to leave same; mast, sprit, and oars of a suitable length to stow under deck. The objection to the sneak box is the want of storage capacity forward, and the thumping and pounding of the waves when working to windward.

Such a boat as imperfectly described would be found sea-worthy with a large freight, and would carry two persons with two or three weeks' provender. Such a boat would not be ornamental, but would prove useful to the sportsman and adventurous tourist, and we trust that some enterprising boat-builder will construct such a craft; for we believe it would supply a want. Such a boat, and only such, is adapted to the wants of Florida sportsmen, and we feel assured that the builder would find a market, if the boats were placed in the hands of a proper agent in Jacksonville; cost of transportation to Jacksonville by sailing vessel from New York would be less than $5.

We again repeat that fancy work, brass mountings, fancy woods, sandpapering, and varnishing will not meet the requirements of the State; but cheapness, strength, sea-worthiness, carrying capacity, stowage room, protection of plunder from rain and water, and adaptability to lake, river, and coast line navigation are the requirements to be met. Who will construct a boat adapted to the wants of Florida sportsmen? AL FRESCO.

Jacksonville, March 1st, 1876.

—Yachting was inaugurated in this country in 1844 by the creation of the New York Yacht Club. Now there are about fifty yacht clubs, owning eight hundred yachts or more. The New York Club alone has eighty sailing and steam vessels.

BROOKLYN YACHT CLUB.—This club held its regular monthly meeting on Wednesday evening, the President, Mr. P. W. Ostrander, in the chair. The Treasurer, Mr. Chancey M. Felt, reported that the balance on hand from the last report was $314 91; receipts since, $657, making a total of $971.91. Payments since last report, $354.70, leaving a balance on hand of $617.61. A form of certificate of measurement was reported by the Regatta Committee, and Capt. Hall moved that the owner or owners of each yacht enrolled in the Brooklyn Yacht Club and flying its signal, be required to take a certificate of measurement, properly filled out by the measurer, according to the form just adopted.

The by laws were so amended as to read that when a yacht owned by several parties was enrolled in the register of the club, the party so enrolling her should be held responsible for compliance in the sailing of said yacht with the rules of the club.

On motion of Capt. Huntley it was voted that the minutes of the club of Nov. 10th, 1875, be so couched as to show that the Regatta Committee reported that the Schemer was the winner in the race held at Greenpoint last summer, in the contest between second-class yachts.

Letters of resignation were read from Messrs. Ontwater, Stratton, Livingston, W. C. Fowler, Hubbard, Fields, Franklin, James Gordon Bennett, and Alfred D. Snow. The resignations were accepted.

ST. AUGUSTINE YACHT CLUB.—On the 2d inst. the vessels of the St. Augustine Yacht Club left the city on the annual cruise to Matanzas. Seven vessels in all followed the Commodore's signal from the Saucy Kate, and with single-reefed mainsails bowled out of the harbor before a strong northwest breeze. Matanzas, eighteen miles distant, was reached about one P. M., and at five the members of the club reported for dinner, which had been announced and provided by Mr. S. G. Whitney, of the Lunch Basket. At ten o'clock on the following morning the fleet started again for St. Augustine in a handicap race, the wind blowing almost a gale from the northeast. The official time of the arrival of the fleet abreast the Government schooner, anchored off the wharf, is as follows: America, 1:15:40 P. M.; Belle, 1:46; Fleetwing, 1:55; Saucy Kate, 2:07. The Henrietta, Seminole, and Neva did not sail over the entire course, consequently no time taken.

THE INTERNATIONAL REGATTA.—Commodore Ferguson, of the Schuylkill Navy, has received communications from the Cambridge University Boat Club and the Dublin University Rowing Club, in response to the invitation of the navy to participate in the international regatta this summer. President Close, of the Cambridge University Club, says he has no doubt that one crew from Cambridge will accept, even though the University Boat Club itself does not. He will bring the matter forward at the next general meeting of this club, but hardly thinks any definite answer can be made until the race with Oxford is over. President Bush, of the Dublin University Club, states that Mr. Labat will row under the name and color of the club in the single scull race. He adds that he has no doubt that the club will be represented by a four-oared crew at the regatta. It is considered probable that Oxford has also concluded to accept.

CENTENNIAL REGATTA FUND.

PHILADELPHIA, Pa., March 7th, 1876.

EDITOR FOREST AND STREAM:—

Permit me to acknowledge through your columns a subscription of $56 00 from the Chicago Scullers for the prize fund of the Centennial Regatta, also the sum of $100.00 from the Bachelor's Barge Club of Philadelphia, for the same fund. On behalf of the committee I would thank these clubs for their generous subscriptions JAS. M. FERGUSON, Commodore S. N.

AN IMPORTANT

BOOK ON DOGS!

THE AMERICAN KENNEL AND SPORTING FIELD.

By ARNOLD BURGES,

LATE EDITOR "AMERICAN SPORTSMAN."

A History of the Origin of Dogs, especially of the Sporting Varieties. Also full practical instructions on Breeding, Breaking, and Kennel management; with a Stud List of nearly 300 imported and native Dogs in the United States, giving correct pedigrees, after the manner of the English and American Turf Calendars.

1 vol., square 8vo. Illustrated. $4.

Half Calf, uncut edges, gilt top, furnished to order, $7.50.

NEW SHOOTING BOOKS.

FIELD, COVER, AND TRAP SHOOTING. By CAPT. A. H. BOGARDUS, "Champion Wing Shot" of America. Edited by Chas. J. Foster. With Steel Portrait of Author, and engraving of the "Champion Medal." 1 vol. 12 mo. Price $2.

"No sportsman can peruse this book without profit and instruction; while to the young beginner with the gun it is invaluable."—*Wilkes' Spirit.*

AMERICAN WILD-FOWL SHOOTING. By JOSEPH W. LONG. Illustrated with models and plans for Boats, Decoys, Blinds, Camping, Utensils, etc., and a number of spirited Sporting Scenes. 1 vol., 12mo. Price $2.

"No book of its kind, so full in detail so accurate in information, has ever appeared."—*Chicago Inter-Ocean.*

***To be had through any Bookseller, or will be mailed, post-paid, on receipt of price, by J. B. FORD & Co., N. Y. 1t

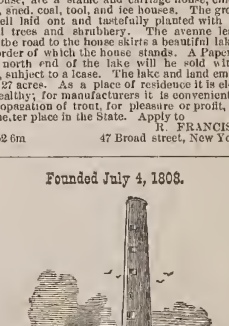
FOR SALE, OR TO LET.

The elegant country residence, WILLOW LAKE, at Locust Valley, near Glen Cove, Long Island.

Suitable for Summer Boarding-House.



The house is 2½ stories, frame, 40 feet front and 32 feet deep, with wide piazza front, rear, and on south end. On first floor are parlors, sitting-room, and dining-room; wide hall through the centre. Up stairs are 9 bed-rooms, all large and airy; kitchen well-arranged and convenient; cellar large and dry.

On the premises, and at a convenient distance from the house, are a stable and carriage house, chicken-house, shed, coal, tool, and ice houses. The grounds are well laid out and tastefully planted with ornamental trees and shrubbery. The avenue leading from the road to the house skirts a beautiful lake, on the border of which the house stands. A Paper Mill at the north end of the lake will be sold with the above, subject to a lease. The lake and land embrace about 27 acres. As a place of residence it is elegant and healthy; for manufacturers it is convenient; for the propagation of trout, for pleasure or profit, there is no better place in the State. Apply to

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,

PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid response in work and rough weather, is a sweet pipe with Vanity Frir. Best dealers have it.

From A. B. Lumberton, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

THE

PAPER STEM PIPE.

Just the Thing for Home and Camp Use.

Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.
THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.
These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fast like moveable anvil made of steel. The nickle cone also prevents misfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2½ to 3½ inches.
Shells and Loaders, and description Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.
From Captain Bogardus, Champion Wing Shot of America.
MESSRS. GEORGE E. HART & CO.,
Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,
A. H. BOGARDUS.

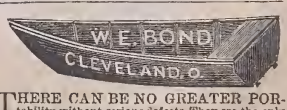
H. L. DUNCKLEE'S
PATENT
CAMPING and MINING

STOVE.
PATENTED JUNE 22, 1875.
Outside dimensions, packed, 12x12x20 inches.
Weighing only 25 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 2 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, gridiron, tent collar, 8 ft. funnel, and an oven that will roast 15 pounds beef.



The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen mates, knives, forks, spoons, and drinking cups. Price, complete, $15.

Orange Sporting Powder.
ORANGE LIGHTNING POWDER,
The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.
ORANGE DUCKING POWDER,
For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.
ORANGE RIFLE POWDER,
The best for rifles and for all ordinary purposes. Sizes F.g., FF.g., FFF.g., the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ½ lb.
All of the above give high velocities and less resinum than any other brands made.
BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.
SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.
LAFLIN & RAND POWDER Co.,
21 Park Row, N. Y.
Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder.
Hazard's "Electric" Powder.
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.
Hazard's "American Sporting."
Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.
Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration*. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.
Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.
SUPERIOR MINING AND BLASTING POWDER.

CHAMPION GUNS OF ENGLAND
PAPE'S
Unrivalled Sporting Guns.
Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.
1875. 12-Gauge, Choke Boring.

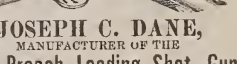
Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.
1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape	Davidson



60 yards, Long Range, Sporting Boring.

1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.
1875. The Sportsman's Snb. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address
NORTH OF ENGLAND GUN WORKS,
Newcastle on Tyne, England
dec2 tf NO AGENTS.

H. C. Squires, No. 1, Courtlandt st. New York.
THE GREAT
London Gun Trial,
1875.

W. W. GREENER'S
Far-Killing Prize Guns.
Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.
W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.
I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of those celebrated guns at a popular price, viz: $75, gold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.
Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.
Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,
Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.
The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold gripe now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BOLT is left in its ENTIRE STRENGTH.
Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.
Guns guaranteed to make patterns of from 160 to 200 with No. 6 SHOT AT 40 YARDS, as desired.

Third Edition.

Camp Life in Florida.

By CHARLES HALLOCK,

AUTHOR OF THE FISHING TOURIST.

This is a most seasonable book for Sportsmen, Tourists, Invalids, and Settlers, and has been long needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

348 pp., 12mo. Price, $1 50.

CONTENTS:

Introductory Chapter.
Birds-eye Glance at Florida.
Outfit for Sportsmen.
Hints for Southern Hunting.
Coastwise Routes of Travel.
Game Animals and Birds of Florida.
Game Fish of Florida.
Three Months in Florida for One Hundred Dollars.
Supplementary Hints for Cheap Recreation.
Up the St. John River.
Indian River.
Florida as a Promised Land.
Fort Capron.
Fishing at St. Augustine.
Black Bass Fishing on Spruce Creek.
Hunting the Panther.
The Environs of Tallahassee.
Private Dougherty and the Bass.
Pet Birds of St. Augustine.
Steam Yachting on the St. John.
Among the Seminoles.
In the Cypress Swamps.
Cruising Along Shore.
Shooting at Salt Lake.
The Okeechobee Expedition.

SOUTHWEST FLORIDA.

No. 1—Fernandina to Cedar Keys.
No. 2—Manatee Sarrazota and Gasparilla.
No. 3—Among the Keys.
No. 4—Meteorology.
No. 5—Punta Rassa and Caloosahatchie.
No. 6—Up the Caloosahatchie River.
No. 7—Visit to Okeechobee.
No. 8—Indian Mounds and Canals.
No. 9—Tampa.
No. 10—Subtropicaean Streams.
No. 11—A Sportsman's Paradise.
No. 12—Suggestions to Tourists.

THE AMERICAN NEWS COMPANY, AGENTS.

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 23, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. *The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character.* She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families *en route* for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 116 South Delaware avenue, Philadelphia.

A SPECIALTY.

AGENTS:

for the following celebrated makers:

W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); J. P. CLABROUGH & BRO.; P. WEBLEY & SONS, and WESTLEY RICHARDS.

HOLABIRD'S Shooting SUITS,

DIXON & HAWKSLEY'S SHOOTING TACKLE

STURTEVANT BRASS SHOT SHELLS,

BUSSEY'S PATENT GYRO PIGEON AND TRAP WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the *heads down* in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when shooting is the result. In ordering send measurement around the chest.

PRICE $7.50.

AGENTS FOR THE

Union Metallic Cartridge Company's Ammunition,

WARRANTED THE BEST IN THE MARKET.

SEND FOR CIRCULAR.

POPE'S
Rifle Air Pistol,

FOR TARGET PRACTICE.

Just the thing for sportsmen and military men. Shoots darts or slugs a distance of 50 feet. Perfectly accurate. By practicing with it one may become a dead shot. Each pistol is put up in a neat box, with 6 darts, 6 targets, 100 slugs, ramrod, claw wrench, and skeleton gun stock. Price, $5; nickel plated, $6. Sent by mail on receipt of price and 35 cents postage.

One of the many testimonials from the Commander-in-Chief of the U. S. Army:—

"It is surely ingenious in mechanism; quite accurate in aim, and useful in preparing one for the more serious handling of the ordinary rifle.

W. T. SHERMAN, General."

HUNTING THE AFRICAN LION IN ALGERIA.

BY ISAAC MCLELLAN.

n the Mahona Mountain, in the Havacta glen
he summons of the Shiek is out—come forth ye hearded men.
a dangerous defiles, in jungle, in ravine,
hadow'd by cork-tree forests, and by the olives green.
he torrent-brook of Onled is hare with torrid heat,
s gravelly bed is trampled by the lion's mighty feet.

ome forth, then, Arab tribesmen, come hunter and come scout,
or signal fires are blazing o'er all the cliffs about;
nt sandal from the feet, cast harnous from the limb,
or silent must your ambush be, in dell and desert grim.
tand firm together side by side with ready gun and lance,
he monster lurks in densest shade where never sunbeams glance.

his slope upon the mountain side runs precipitously down
nd leads to where the brook pours out its waves of turbid brown;
s the lion's pathway, and here he comes to drink,
With bristling mane, with tawny hide, fast by the plashy brink,
ee! all around the trees are torn, and seam'd and scarr'd the bark,
'is here his crooked iron claws leave their terrific mark.
ere in the yellow sand he wallow'd in the heat,
ud here among the pebbles the impress of his feet!
Then let the bravest and the best" in compact order stand;
he weak and timid may lie hid where sheltering groves expand.

ere in these desert places no other life may be,
he wild-boar, the jackal, turn from the haunt and flee,
he sneaking panther of the wood feeds but on sheep and hare,
his desert is the lion's realm, the monarch's royal lair;
rom hence, when stars are out, he gallops to the plain,
eneath the herdsman's very beard the cattle-fold to gain.

and fast! 'tis hour of midnight, all earth is hid in gloom,
o howls of wolf, no low of ox, across the silence boom,
o flash of watch fires, and no light from shepherd's sleeping tent
o scare the prowling monster, in warning gleams are sent.
and fast! there comes a sound! Is it the rising breeze
hat murmurs complainingly far thro' the sombre trees?
o; 'tis the lion's trample, and lo! in single file
he tawny beasts! and as they march they lash their flanks the while;
heir luminous fierce eyes gleam with a lurid red,
ney snuff the tainted breeze, they stride with crushing tread.

ow true and fatal be your aim, for life is on the cast,
reak not your ranks in flight, that moment were your last:
ull on the shaggy head discharge the murderous leaden hail!
ss, it glances harmless, as from a coat of mail;
he roar, one savage roar, as from a thunderous sky!
he raging beast is on them now—they tremble, and they fly;
e snaps the bone, he tears the flesh, and many a victim dies,
e pierc'd with ball upon the earth the bleeding monarch lies.

For Forest and Stream.

Overland Notes.

NUMBER THREE.

N a valley between two of the rock-ribbed buttresses of Pike's Peak, nestles Manitou, and in the recesses of the eeting hills the healing springs bubble up, sparkling like ampagne with beads of gas, and flow over encrusted cks to the Fountain River, a bustling, busy mountain eam that, clear and cold from perpetual snow, passes ong the narrow vale, and with its moisture irrigates a ade of willows, quaking asp, and cottonwood. The ho- s are just by the margin of this stream, and the walks ont them follow its windings, and cross and recross it th picturesque rustic bridges. Cool and fresh sounds rustling song, all through the night it pleasantly re- ves the dead silcuce of the mountains, and doubly asant is it in contrast to the dry hillsides that rise on ry hand, scored by the rush of mountain torrents that r and waste for a brief moment, and then leave their beds and deep channels as safe biding-places for rab- s and coyotes.

Back of the few buildings that, with the road and eam, occupy the full width of the narrow bottom land, foot hills rise abruptly, holding their heads from two five thousand feet above the springs, while far above m, piercing the sunset sky, is the rugged cone of Pike's ak, a mass of beetling rock and snow, towering full eight ousand feet above the plain, and over fourteen above the sea. From the Missouri River the plains, in endless monotony, seemingly level, but actually rising to the west until an altitude of five or six thousand feet is imperceptibly attained, weary the tourist with a perpetual promise of nothing new that deadens expectation; but here, all at once, nature, seemingly disgusted with her dull routine of plain and prairie, brown earth, and muddy, wandering rivers, has set to work with fanciful caprice, and with fantastic art called out all her resources of rock and crag, spring and mountain stream, color and shadow, until surprises without limit delight the eye, and compel imagination to rest until the reality is comprehended. There is probably no point surrounded by such a variety of scenery as is Manitou; and much of the most curious and beautiful is very readily reached—a great many points by fine roads, and nearly all by safe saddle paths, and the air is so stimulating that long and difficult rambles are accomplished with unexpected ease.

The November day of our arrival was warm and balmy, and the last tourist ascent of the Peak was made up and back the short route by daylight, by Sir Charles Hartley, the eminent English engineer. During the following night snow fell, only a little film at Manitou, but deep and heavy on the Peak, where mists and clouds curled and drifted long after the sun was bright in the valleys, where snow goes before his rays like a shadow, leaving the ground dry immediately, and no tinge of moisture in the air. The winter climate here is not unpleasant, and many invalids seek it in preference to warmer and lower resorts, and often give evidence that their choice has been fortunate. The air is wonderfully clear, and the radiation of heat into space is rapid and constant, while sunlight brings an amount of heat that we do not know at the East after midsummer; consequently the nights are cold, bright days warm, and the difference between sunshine and shade very great, and to be carefully avoided by invalids.

At night, in November, the mercury goes to 10° or 15°, sometimes to zero, and ice forms in the running streams; but after sunrise the change is immediate, and after breakfast the most careful invalids are sitting upon the southern piazzas, and parties set off in the saddle and on foot, as in summer, with the mercury at 50° or 60°. The majority of days are brilliantly clear—in November, 1874, 27 days of sunshine. Snow squalls without much wind in the valleys are occasional, and while the snow accumulates in shaded ravines, and on the high points, it is very transient below, and evaporates, leaving no moisture in sunny places to make the soil freeze. Such is the winter at six thousand feet in Colorado, while in April and May even occur the heaviest snow falls, when sometimes forty inches will fall at once to fill the ravines and gulches with torrents as soon as the sun appears. The heaviest fall on Pike's Peak since the Signal Service Station was established, was July 4th, when a thick mantle was added to the perpetual drifts that from year to year defy the sun.

The waters of the springs at Manitou are deemed very valuable, and were resorted to by the Indians with great faith. They are exceedingly pleasant to drink, and agreeable for bathing. One spring is iron, and encrusts with rust the rocks about the well; the others are effervescent and sparkling, with soda and magnesia in large percentage, charged with carbonic acid gas. They have been fully analyzed, and a very guarded and able pamphlet gives their curative properties. Invalids wishing more information of these springs than can be here given, will do well to obtain this pamphlet by Dr. Sully, by sending twenty-five cents to the Manitou House, and submit it to their own physicians. Beyond doubt these waters are among the most agreeable and useful of any, and with such surroundings and incentives to open air life, may give aid in many cases. As your correspondent is not an M. D., nor your paper a medical journal, there is no reason for any extended commentary on Colorado as a resort for invalids; but there are so many here that the influence of this peculiar climate cannot be ignored in writing of it, but difficulties surround the task. An honest drover said to me that no one tells the truth west of Kansas City, and I was not so candid in return as to "allow" that even east of that point a mingling of fancy is at times discovered. But before laying blame too heavily, be it remembered that it is not easy to tell the whole truth out here; almost any statement may be true in a land so full of contrasts and surprises, and conflicting statements be founded on equally conflicting facts. All kinds of climate exist from sun-scorched, wind-swept plains, to sheltered valleys of great richness, and from desert spots one can cast a stone upon verdure. All statements are well taken, *cum grano salis*, and a *little alkali*, and it is not well to go "long" on any specious offering, be they of railway bonds, mining stocks, city lots, or infallible health resorts; and yet valuable investments are daily made, and hundreds of men are living active, busy lives here who were confirmed invalids in their former homes. Asthmatics are wonderfully relieved, and speak most gratefully of Denver, Colorado Springs, and other points of like altitude, and consumptives not too far advanced seem greatly eased and comforted. Heart weakness is dangerously increased in the high air; rheumatism is very frequent from the chill of all winter shade, catarrh is an annoyance to many, and pneumonia often results from the rapid evaporation of perspiration in the dry cool air. Hunters must be very guarded with regard to the latter, and never, when heated by a climb or chase, rest in the cool air, for the moisture of the clothing will be almost instantly absorbed by the air so hungry for humidity, and a dangerous chill will result. The complexion of the young people reared in Colorado is very peculiar, being clear, bright, and rosy from rapid circulation and almost constant sunlight and open air life, and yet hardly conveys the impression of robust health; but the influence of this climate upon the race cannot be yet recognized, as very few *natives* are over ten years old, and all inferences from them are as valueless as the widely published small death rate in these communities of young and adventurous people.

But apart from any health-giving qualities of air, water, and food, which very probably will be found marked and permanent, thousands will beyond doubt find renewed vigor and new life in Colorado, from the facts that here *open air life* which, our summer heat and winter cold do so discourage in the older States, is possible and pleasant a large part of the year, and withall such incentives to roam, ramble, and camp as will win weary men into activity, and lead feeble women to such exertion as will inflate lungs long half-used, and exercise muscles feeble from inactivity. In more or less of open air exercise lies the only hope of any vigorous future generations in an age of furnace and steam heat, double windows, and enervating comforts, and in Colorado is found everything to render safe and pleasant gypsy life and Bohemian habits. From Manitou as a centre are rambles, rides, and climbs of inexhaustible interest, and fit for any footsteps, from an invalids to those of the hardiest mountaineer, while in the parks and camping grounds, on plain, or amid mountains, with game and fish worthy any skill, with the most varied and wonderful scenery on all sides. Rare minerals and hidden treasure are in the gorges and cañons, abundant wild flowers and varied plants are upon the hillsides, in their season; elk, bear, bison, and deer are abundant for him who has nerve and endurance; fine grazing lands await occupation; rocks and peaks of rugged outline and fantastic color have charms for pencil and camera, and interests of every character exist to amuse minds weary of business, and fill with pleasure the hearts of any who really care for the natural attractions of nomadic life.

Three miles from Manitou by the carriage road is the "Garden of the Gods," where, perchance, a race of giant Druids raised their altars. Leaving the stage road, the trail crosses a bridge, and soon winds among rock work of the most fantastic form, columns with round caps, vast stones balanced on a point, huge slabs upheld by pillars as round as if from lathes, and rocks with pictured and variously serried fronts. A mile amid these indescribable surroundings of stones, and we come to the gateway, through which on smooth sod we drive into the main garden. This gate is the grand feature of the scene, and is

certainly very imposing in form, size, and color. From the sod on each side of the roadway, about one hundred feet apart, rise two huge rocks, the one on the left of bright red sandstone, rising sheer above us three huudred and thirty feet; on the right, one of darker rock to nearly the same altitude, standing silent sentinels, while back of them are smaller formations that would be very remarkable were they not overshadowed by the main noble buttresses. So lightly do these tall narrow rocks hold themselves that first views do not convey an idea of their size—twice the height of Niagara—aud only by studying them from various points do they assume their full grandeur in the mind. Turning to the left through them a little way brings us to Glen Eyrie, named after eagle's nests that still occupy the inaccessible rents in the rocks. Here are the private grounds of Gen. Palmer, embracing a sheltered glen with a fine stream of mouutain sprlug water that comes into the low land by a deep and picturesque cañon, the walls of which are of highly colored clay and rock. This was a favorite Indian encampment, and snered it must have been, with its columns and masses of stone that must have deeply influenced even the rude red man's sense of the grand. Here are thin walls of uatural rock, rising hundreds of feet into a ragged sky-line, and pillars of red sandstone one hundred and twenty feet high, not over ten or fifteen feet square at the basc, standing like obelisks of single blocks, so slender that it seemed a risk to pass beneath them. From these valleys a road ascends a plateau, and from there the view is one of remarkable beauty and variety. Just below lies the valley, to the right opens Glen Eyrie and the cañon that enters it. In front are the massive pillars of the great gateway, and through aud beyond are the grotesque rocks of the garden. Rising far above are the mountains; on the left Cheyenne Mouutain, in front over the gate far up in the sky, is Pike's Peak, a fine cone, surrounded by broken and rock-crowned peaks of less ambition. As we saw it a mantle of snow came far down, and snow-clouds wreathed themselves about it as light, mobile, and graceful as a gauze scarf, opening in rifts, and disclosing here a cañon, there a bit of dark forest, and now and then the bold white peak in brilliant sunlight, above the storms that were beating about the lesser cones. All the peculiar features of this scenery are embraced in this view, and their combination renders it a wonderful one, enhanced as it is by the white rocks, the gray and grim cliffs, and the warm red sandstone towers and gateway. Often did we visit this point, ever to find some new charm and, familiar with it, we think the drive from Colorado Springs to Manitou by this road combines more of remarkable beauty than any drive we have yet found.

Not far from the hotels opens Williams' Cañon. Strong wagons can go some distance up it, a saddle path goes still further; but to see it fully, a good scramble is best. It is a deep rift among the foot hills, with sides vertical, aud the narrow sky above, fretted with a wild outline of crags, often rising in arches, with here and there the dark mouths of caverns that are inaccessible and unexplored.

From a hunting tramp we came out upon this chasm, and walked aloug the edge until we reached a round, column-like point that stood boldly out, with only a narrow ridge connecting it with the mountain side. We scrambled over this, clinging to small bushes, and lying flat looked over the edge. The top rather overhung the base, as did the old Table Rock at Niagara, and there was nothing to break the dizzy height. The tall pines below looked small, and from the seconds counted while a stone was falling we estimated the gorge as not less than four hundred feet deep. It curved around an overhanging point, and from it we looked each way into the cañon amid as rugged and romautic scenery as ever laid at our feet. Iu a cliff facing us was a cave opening. It was about two feet wide and three high, the top of it arched as if by rude art. A narrow ledge gave a perilous access to it, and we worked our way to it and looked in, not altogether without the expectation of finding some of the panthers' or wild eats' sign about it, for these animals are and always will be at home where such abundant shelter will be their's. We could look in about twenty feet, and then the opening went down. No response came in reply to stones that went echoing in, and without a rope it was not very prudent to enter. All the character of this cave suggested some former human occupatiou, a fancy not all improbable, as not far from this part of Colorado have been found in similar places the remains of an unknown race, designated as the Cliff Builders.

Many other points of interest offer variety to the tourist. The Cheyenne Canon, at this time full of snow, is said to be very beautiful, and in Mouument Park are many strange caprices in stone. The ascent of the Peak is by two routes—one by the Governmeut trail, twelve miles to the Lake House, where parties remain over night, and go up from there six miles and return the next day. All this is safely done on horseback, and many ladies join the parties. The other route is only fourteen miles, nine on horseback, the remainder on foot, all possible in one day to a strong pedestrian. About the 10th of Novemher one of the Signal Service observers came down, and reported the snow eight feet deep on the peak and four feet at the Lake House. The view is said to be very grand, and one curious effect seen in the afternoon is the shadow of the peak projected for many miles upon the great plain that commences at its hase and goes east with an horizon always lower than the observer's eye.

Some fine game remains about this group of mountains, where, fifteen years ago, every plain swarmed with buffalo and antelope, and the hills abounded in bison, elk, black-tailed deer, and mountain sheep; but many hunters and a general ignorant disregard for breeding seasons is doing a sure work of destruction. Anxious to see something, if possible, of these noble game animals in their own haunts, your correspondent was making inquiries with no great success, when fortune threw in his way Mr. James M. Link, a famous hunter. He came with a load of game that made one's mouth water for a chance. Among it was a superb specimen of mountain sheep—an old patriarch ram with massive and wriukled neck, and horns of many curves, bruised with the marks of many a battle fought for supremacy above the timber line. The horns measured about sixteen inches in circumference at the base, and were very regular and handsome. Arrangements were soon made with Mr. Link for accomodations at his ranche on the Platte River, and full of pleasant expectation, guns were cleaued, shells loaded, and all the details completed for a hunt among the mouutain ranges about South Park, and with commendable forethought it was revolved in our minds over whose hospitable fire should hang the stag's head we would shoot.

L. W. L.

For Forest and Stream.

THE BACK LAKES OF CANADA.

IN fulfillment of my promise to you when in the office of FOREST AND STREAM, New York, I now inclose an account of our winter's trip, taken in accordance with the resolution arrived at, at the last meeting of our Fish and Game Protective Society, Peterborough, to visit the back settlements and hold meetings to enlist the sympathies of the settlers in protecting the fish, game, and fur-bearing animals of our country. A party of four of us started from Peterborough on a clear, cold, frosty morning to visit the village of Apsley. The sleighing was good, so we made nothing of the forty-six miles' drive before us. We passed through the village of Lakefield, which is beautifully situated on the Otonabee River, nine miles from Peterborough, in order to pick up Major Boulton, one of our party. This village is the terminus of the Peterborough branch of the Midland Railway, and any one that was acquainted with it a decade ago would be surprised to see the progress it has made. The steam saw-mill of Strickland & Co., with the fine water privilege that runs the sawmill of Boyd Smith & Co., are the two chief enterprises of this place; and, in addition to quite a number of manufactories established here on a small scale, may he mentioned (in the interests of sportsmen) that canocs are built here which, for finish of workmanship, cheapness, durability, elegance, speed, comfort, and safety, are not surpassed in the world. Lakefield has always been a favorite resort for that fortunate class who possess abundance of this world's goods, and many English families, attracted by the beauty of the sceuery and its many natural local advantages, have built solid, substantial homes for themselves in the immediate neighborhood.

Four miles further up the Otonabee River is "Young's Point," our next stopping place. It is situated at the entrauce to Clear Lake, where the locks are built. We crossed a uew bridge, that was constructed here a year ago to connect the townships of Smith and Douro. We found the water rushing over the dam as if it was the month of May in spring tide. The rickety old saw-mill (which in its day was a great boon to the neighborhood) we found *non est*, it having served as an illumination for a couple of hours on a dark night of last August. Its destruction will resuscitate the bass and maskiuonge fishing, which has been nearly destroyed in the river between this point and Lakefield by the habit of casting all refuse saw-dust and cuttings into the river. There is no better spot for an afternoon's bass fishing than here, and the open water almost invited us to cast in a line. The building of Young's locks, about four years ago, has opened out a stretch of navigation through Clear Lake and Stoney Lake for about twenty miles, and the steamer Chippewa ploughs these waters for the benefit of pleasure-seekers, travel, and excursion parties. We paid a visit to our old friend Jimmy Kearney, who, with many others, used to be seen in the spring of the year with a long pole and a sharp spear, and other contrivances, to destroy fish and fishing, but who now, under the beneficial influence of the "Fish and Game Protective Society," have become model sportsmen.

Having refreshed ourselves after the manner of the country, we started for our next stopping place, the Burleigh Hotel, six miles on. Our road was now literally in the backwoods, and the beauty of the scene surpasses description. Two days before there had fallen a heavy storm of sleet, which made the trees weep and groan under its weight, and the bright sun glistened on the icy boughs like diamonds, which were topped off with the light fleecy snow that had fallen during the night, made it look like a fairy scene. Before reaching Holmes' Burleigh Hotel we had to cross the Burleigh bridge, with the water rushing over the rapids from Lovesick Lake. To the right you see the water empty into Burleigh Bay among islands, and falling over rocks pell mell. The bridge is a wide one, and very substantially built. On the other side is the hotel, which is a new enterprise of last summer's growth. It is built expressly for the accommodation of sportsmen in the summer season; it is a two-story house, about 50x30, with a nice airy dining-room and parlor, and six or eight bedrooms. Adjoining it is the old tavern, which has been transformed into sleeping apartments, to serve in the height of the season, so that the hotel can accommodate about thirty people. It possesses a bright, cheerful hostess, and a good host, and we were heartily welcomed. Dinner was not long in making its appearance. Venison steak, accompanied by mashed potatoes, served on the daintiest table linen, was placed before us—not venison killed out of season, for we are moral men, but venison killed and hung till it just melted in our mouths. At this point is caught some of the finest fresh water salmon (or salmon trout) in Canada. Those fine fish weigh from ten to thirty-five pounds. When opened they are of a dark orange color, and in the month of May they are in prime season. We were loth to leave our comfortable quarters, but as it was three o'clock P. M., and we had twenty miles further to go to Apsley before seven, where we were to hold our meeting, we hitched up and proceeded on our way, accompanied by Mr. Holmes, our host.

About eight miles further on we passed the road which leads to the Mount Julian Hotel, also put up for the accommodation of visitors, and which is also reached by the steamer Chippewa in the summer time. It is situated on the shores of Stoney Lake—a fine, spacious hotel, capable of accommodating about fifty people; it is closed in winter. On our road we passed through large tracts of burnt pine, for fire, that great destroyer of wealth, spares not the forest, but mows down the tall, majestic, valuable pines with such a ruthless hand as to make the axmen mere pigmies alongside of it in its destructive power. There will be weeping some day if measures are not taken to preserve our forests and resuscitate those that are destroyed.

Apsley was reached by half-past six o'clock, when we found a goodly number of the settlers come together to hear what we had to say, some suspecting that we had come to spy out the land and enrich ourselves with fines against the guilty ones.

I cannot give you a description of Apsley, as it was dark; but it is a place about a mile long, situated on Eel's Creek. It contains two taverns, two stores, and six or seven houses. The Crown land agent, who distributes the "free grant lands" to locaters, lives here, and J. Golborne, Esq., the Reeve of the township has a saw and grist mill close by. The Doctor (Dr. Clegg), is not far away, so that though Apsley is not deusely populated it has laid the foundation of future greatness and prosperity. The settlers are a healthy, hardy race, and the population is steadily increasing; one worthy couple could boast of sixteen children, and there is no doubt that when this back country is opened up it will raise one of the hardiest and healthiest populations to he found anywhere. However, we will leave political economy to our politicians. One thing I must observe: we do not move fast in our country. We find thinking the most economical, and we do nothing else but think that we, the Government, or somebody else, will open up the country some day.

After supper we proceeded to the town hall. The Reeve was requested to take the chair, and he called upon us to explain the object of our visit. Had we come to spy out the nakedness of the land, to look out a site for a junior Peterborough; or had we come to victimize some poor fellow who had shot a doe to support his twelve or sixteen children? We explained that having felt for some time past there was a necessity for some organization to enforce the game laws, which were a dead letter, and such an organization had been formed in Peterborough in 1874, under the title of "The County of Peterborough Fish and Game Protective Society," and that its objects were to restock the lakes and streams with fish from the Government pisciculturul establishments, and protect all game and fur-bearing animals in the close seasons—that there were many lakes in their neighborhood that contained no fish, and that we would assist them to stock them—that deer were becoming more and more scarce, and that as an article of food it was essential that they should not be molested in the breeding season—that there were districts in their back country that would never be anything but haunts for the deer, and, if they were only allowed to increase, naturally great benefits would accrue to the settlers; the same with partridge and duck; and that our object in visiting Apsley was to enlist the sympathies of the settlers and to get them to form a branch society, which would exist in their midst, and have a direct moral effect. In the course of the meeting we drew forth local views with regard to the game laws, and to certain alterations that would be beneficial. We had a friendly and pleasant meeting, and laid the foundation of future good for the cause we espoused. A committee was formed to discuss the feasibility of forming a society, to report in a week, and we explained the details of organization. We broke up at half-past nine with a friendly feeling expressed towards us and the work we had in hand. We felt that we had not made our visit in vain

We left for home the next morning, mutually satisfied that a fish and game protective society would soon be in existence in Apsley. One of our party bought a couple of wolf skins. The Reeve told us that he had given more wolf certificates this year than ever before. He accounted for it from the fact that there had been so little snow; the deer could get away from them, consequently the wolves were starving, and came round the settlements for food, where they were either trapped, shot, or poisoned. In ordinary years the wolves chase the deer on the crests of the snow, the deer break through, but the wolves do not, and therefore easily catch their prey; but this year there has hardly been any snow, up to the present time. We returned on our back track, reaching Peterborough at four o'clock P. M., having enjoyed the beauties of nature in mid-winter—a sight never to be forgotten—and a most delightful sleigh ride.

I send you this account of our first trip in hopes it may be the means of acquainting your readers with our back country, and the sport it affords. It is rough, but healthy, and though it may not afford as much sport as some of your well-preserved districts, still the sportsman or disciple of Isaac Walton can get a fortnight's amusement or pure enjoyment in these backwoods about as economically as anywhere else. Another inducement is, our people extend a hearty welcome to all. Excellent guides can be readily obtained, canoes can he had for hire, and all camping equipments can be purchased, or perhaps rented, at reasonable prices by merely applying to the landlord of the house where the sportsman may put up.

Since writing the foregoing we have heard that the Apsley Fish and Game Protective Society has been organized with an efficient staff of officers, and it is now in full operation. The importance of this movement can hardly be estimated, for that immense back country, covered with millions of acres of forest, and dotted with hundreds of small lakes, streams, and ponds, will, if well-preserved, furnish an inexhaustible supply, for all time to come, of fish, game, and fur-bearing animals, besides being a source of food and wealth to the settler, as well as a paradise for the sportsman, the hunter, and trapper.

AN OLD GUIDE GONE.—William Nash, a well known Adriondack guide, died on the 3rd inst. at Bowlands Mills, three miles from Saratoga. The cause of his death was somewhat singular, and is thus related by the *Saratogian*:

About three years ago he met with a painful and complicated physical misfortune, in consequence of which he was not only held back from pursuing his chosen career of trapper and guide, but also afflicted with a great deal of suffering. By an over effort in some of his exploits in the woods or on the lakes he ruptured a blood vessel in his chest. The case was treated by the late Dr. Armsby, of Albany. The breast was cut open in such a manner as to reveal the vital organs at work at their various duties. The artery of the left arm was cut and closed up so that afterward that arm was almost lifeless. He was advised not to be betrayed into any excitement or over exertion on account of the danger of again rupturing blood vessels. He returned in time to the woods, where, the temptation being irresistible, he one day fell to throwing a line for trout and became so excited that, true to the surgeon's fears, the blood vessels of his chest were again ruptured. From this last affliction he suffered a great deal, more than once coming near to death. Once or twice he has been reported as dead, which reports have given occasion for interesting newspaper articles on both his life in the woods, and also on the famous surgical operation that was performed upon him.

FOX CHASE IN PENNSYLVANIA.—The Lancaster (Penn.) *Examiner* of the 7th inst., says: "One of the largest and most interesting fox hunts of the season took place on Saturday. The fox was started at 2 o'clock in the afternoon, and twenty minutes afterwards the hounds, numbering nearly one hundred, were let loose. The start was witnessed by hundreds of spectators from various parts of the State. After a three miles' chase the fox was caught, on the banks of the Conestoga, near the entrance of the Cocalico Creek. It was adjudged that Messrs. Rutter, Carpenter, and Warfel were the best riders, and they were alloted the purse of $30, which had been offered for the first in.

A BLACK DECEPTION.

THE islands of St. Nevis was captured and recolouized by the English shortly before the close of the Elizabethan era (as every body knows), aud preserves to this day, as Ireland does, the continental mode of sounding the vowels in the vernacular, which was the Court fashion of the period (as every body don't know). In other words, St. Nevis men "spake" with what we mistakenly term the "brogue," which was really the pronuneiation of Shakspeare, Johnson, Massinger, as well as that of Raleigh; Dampier, and Drake. However, we are not goiug into the philology of the matter, but merely wish to explaiu what led to Paddy Geohagan's "s]quare" mistake two or three years ago. Had Paddy been aware of the above stated faot, it would have saved him and the wife of his bosom from being frightened into fits; but he was not, and so the catastrophe came. Paddy was comiug over, by winter passage, in a ship which, meeting with disaster, was compelled to bear up aud seek a leeward port for assistauce. Accordingly she made St. Nevis, and put in to repair and refit. Glad of the chance to stretch their legs after the protracted and boisterous voyage—though rather chagrined at the inevitable six weeks or so of detention before them—Pat and Judy gathered themselves up, and went ashore for a stroll in the strange tropical land, whereto the fates had brought them. All eyes and ears, they were passing along George street, when their attention was attracted by the cry of a negro vender of vegetables. Of course the darkeys speak the language of their former proprietors, and this fellow was bawling in a brogue that would have passed muster in the Cove of Cork. "Swate per-r-ratees, swate per-r-ratees!" Pat stopped aghast with astonishment at the familiar accent from such a mouth; besides, coming from the wilds of Connaught, he had never seen a negro before. "Judy, darlint," he said, "bud do yees hare that?" "I do, agrab," she replied, "spake to him in the name av wondbermiut, au' ax where did he larn to spake like uz." Up came the crier. "Av its plazin tu ye," began Paddy, "fwhere did yez eome from, at all, at all?" "Connett," answered the negro, innocently, giving the name of a black village on the opposite side of the island. "Counaught!" echoed Pat, as a horrible suspicion darted across his soul, "an' fwhat, thiu, is yer name?" "Augustin." "O'Gusdon," screamed Judy, "me own maiden name! "Och, the saints betune uz au' harrum; how long bees ye here, thin?" and she clung to Pat for support. "It's won wake yesterday since I kem over," replied the wondering islander. Judy screeched, Paddy roared with despair, and both reeled against the wall, gasping "Ouuly won wake in this baste of a climate, an' black as the devil already!"

NAUTES.

For Forest and Stream.

A HUNTER'S HORSE.

A GOOD, tough, intelligent horse is most essential to the hunter's comfort. Oftentimes he is your only companion, and a "friend in need," and if educated and trained kindly and carefully, he will watch eamp better than a dog, smell or hear auy dangerous visitors, often point out large game by prickiug up his ears and lookiug directly at it; he will pack game when it would be impossible to get other transportation; he will not fail to follow a trail or pick out a good ford, when it is so dark you would be helpless and lost; his instiuct will lead him to find water for you on the plains—in fact a good horse or mule is the "king pin" to a hunter's existence. It is strauge to see the difference in a horse when among others of his kind and people, and when alone with his master in the wilderness for a long period. When in civilization the horse often becomes full of tricks, and is eross and stubborn. Sometimes he will kiek and bite his keeper when in too good condition, and at such times the whip can be used to advantage; but when he gets into the mountains, or on the plains, and sees nothing human but his master and the wild animals which the hunter kills, the horse then becomes a kind and affectionate animal, and if permitted would follow the hunter for weeks like a dog. He is uneasy when his rider is away, and becomes timid and wary. When he observes the hunter returniug to camp on a trail in the forest, or on a roll of the prairie, he greets him with a friendly neigh, and goes the length of his lariat to meet him. When first packing game on a horse never become angry and beat him if he is frighteued and refuses to be loaded. Lead him slowly up to a dead deer, put your hand on his neck, and approach the game; allow him to smell of the carcass, and see that it is harmless, and with a little experience he will pack game to eamp and be as well pleased with his performance as the hunter who shoots it. If a horse becomes nervous when he is being packed with game, it is a good plan to tie your coat or hat over his eyes until the load is lashed firmly. For huuting in the mountains I would recommend a medium-sized, kind, long-legged, quiek-walking mule. There is a great difference in these hybrids. I used one mare mule in the Sierra Madre Mountains that had never seen game until he came into my hands. I packed a warm limsy doe on her that was covered with blood, and she did not even snort at it, but quietly picked her way to camp over fallen timber and rock with her heavy load, using the best of judgment. The remembrance of such a load would cause some mules to buck at times for a whole season. Mules use better judgment than horses when traveling over bad ground; yet they are easily frightened, and will jerk up their picket pins and stampede just as you are about to turn in some night, unless they are hobbled. A mule always looks up to a horse as a superior, and follows him when feeding or ruuuing. Picket two or three of the most reliable horses in a herd, and uuless the feed is poor, the mules will stay with them. There are some mules that will cateh buffalo, but I would prefer a horse for the plains or an open country. The "American" horse fares badly on the plains without his forage; therefore the wiry little Indian ponies will be the best for hunting. They are used to poor feed, are easy animals to ride, and if one gets behind his party a few miles, the distanee is easily made up by a pony, when it would be necessary to work your passage the distanee with your heels if a mule was ridden. The Indian ponies of the plains are poor, unkempt creatures, yet in the summer some of them get plump and sleek. The Crow Indians have some of the best stock I have seen on the plaius, and some of the Dakota Sioux Indians have good-looking ponies; yet nearly all of them show their poor keeping in winter, as the cotton wood bark, which they eat, is not sufficiently nourishing to keep them in good condition. It is amusing to see Indian ponies try to devour oats and shelled corn. They make awkward work of it, and doole badly, and I have seen many that would refuse corn for the dry buffalo grass of the plaius.

MY FEBRUARY FIELD NOTES--BIRDS.

BY C. C. ABBOTT, M. D.

February 1st.—Cloudy; wind east. Saw but one bird, a grass-finch, (*Poiœcetes gramineus*), other than crows and snow-birds. This well-known "sparrow" eomes very near to being a literal resident. I have thought at times that they never passed a week of their lives out of the fields in which they were hatched. But they are wonderfully silent in winter; not chirping often, even when in company.

February 2nd.—Violent northwest wind all day. Crows abundant; no other birds noticed, except one pair of "black-caps" (*Parus atricapillus*), which clambered about the trunks of the pines and locusts, but avoided the wind all they could, I thought.

February 3rd.—Cloudy; cold. A pair of red tailed hawks hovered over the meadows, at a great elevation, for several hours, and screamed incessantly. They have been abundant, off and on, during the winter, but this is the first time I've notieed their call. These two have paired, I suppose. (They often have their nests completed and eggs laid in March). Great abundance of snow-birds. Do they really know when snow is about to fall?

February 4th.—Snowing. No birds noticed, until evening, when a single flock of horned-larks passed overhead. First I have seen since November; but this does not prove they have not been about. In eonversation with a good observer to-day, I learned that on Wednesday, a flock of snow buntings, (*Plectrophanes nivalis*), had been braving the high wind, in one of my fields. Did they too, know of the eoming snow? I have seen none myself since last winter.

February 5th.—Clear; cold; thermometer 4° Fah. at 8 A. M. A large loose flock of red-poll linnets frequented an elm tree, most of the day, twittering incessantly, and appearing to find a good deal to eat, but what, I cannot imagine. It was not the slightly swollen leaf-buds, for the yellow birds (*Chrysomitris*) go over the tree, every year, in the same way, day after day, and there would be no foliage at all, the following summer, if the buds were eaten. These linnets are not common. These are the first I have seen since 1873. The hawks appear to find it too cold to sail over the meadows, and have taken shelter. Saw the skins of a pair of barn-owls (*Strix pratincola*), killed on the meadows a week ago. They were found in a hollow tree, and had probably been there several months.

February 6th.—Dull and rainy. Not a bird of auy kind noted, except the usual evening flight of crows.

February 7th.—Clear; warm. The song-sparrows sang fitfully all day. A downy woodpecker, a brown tree-creeper, (*Certhia familiaris*), and a pair of crested tit-mice, (*Lophophanes bicolor*), were noticed from my study window. The crested tits were quite lively, and sang with as much vim as ever I had heard them in May.

February 8th.—Clear; warm. The cardinal grosbeaks that have long tenanted the blackberry thicket uear the house, came back to-day, or a new pair arrived from somewhere. The male's cheery whistling was kept up until after sunset. These grosbeaks, like the grass-finch, are fixtures, whereso-ever they happen to be hatched, if they are not crowded out by those of an older generation.

February 9th.—Dense fog; rain in evening. The song-sparrows only appeared in the bushes of the hill-side.

February 10th.—Clear; very warm. The birds all back again. The song and chipping sparrows abundant. The black-caps (*Parus atricapillus*) and crested tit-mice, numerous. Saw the first fox-colored sparrows (*Passerella iliaca*) of the season. They were numerous, but not associated in a flock. The sparrow-hawks have probably followed them up, for five were noted, skulking about, and one was seen to capture a "foxie," as it flitted in the long grass. These sparrows are somewhat uncertain in their movements. Notieed a number of meadow larks to-day; but they are here throughout the year, skulking about the fields and sometimes showing themselves, by perching on the stakes of the worm-fences. A few ducks flew overhead, going northeast, but too far off to determine the species.

February 11th.—Cloudy; warm; rain in the evening. The blue-birds began to leave the more sheltered nooks and hill sides, and chip and warble, as in May. They are here all winter, but do not show themselves frequently, for weeks, keeping in retired spots, where something in the way of food is found, and the chilly winds are warded off. Crow black-birds, (*Quiscalus purpureus*), were quite abundant early in the day. The idea, almost universally held, that these birds are migratory, is certainly an excellent example of the imperfect knowledge of our birds had by most people. Even farmers, who are well posted as to crow black-birds from May to November, seem wholly ignorant of the fact that from November to May, they have not entirely quitted us, for more southern regions. A large flock is down on my hooks for Jan. 29th, and to-day, they have been screaming from the tall pine tree tops. I doubt not but that daily now they will be with us, in varying numbers. Cedar-birds, yellow-birds, (*Chrysomitris*), and a cross-bill, (the white-winged) noted.

[To be concluded].

—A great scarcity of birds this winter in comparison with last winter, which was very severe, is remarked by all our correspondents.

BIRDS OF LOWER MICHIGAN.

BY A. B. COVERT, OF ANN ARBOR, MICH.

FAMILY TURDIDÆ.

Turdus migratorius. Robin. Abundant at Ann Arbor, arriving about Mareh 15th, and rearing two broods in the season. The nest is built about May 1st. Departs for the south September 1st.

Turdus mustelinus. Wood thrush. Common; arrives from the 1st to the 10th of May; breeds May 25th; departs about September 15th.

Turdus Pallasi. Hermit thrush. A very rare summer visitor, arriving from the 10th to the 15th of May. Only one instauce (June 1st) of the nest having been found. Common in October during the fall migrations.

Turdus fuscescens. Wilson's thrush. Not common. It arrives from the south about May 1st; breeds about the 1st of June; departs southward by September 10th.

Mimus Carolinensis. Cat-bird. Very common, arriving from the 1st to the 15th of May, and breeding about the 20th. About October 1st this species moves southward.

Harporhynchus rufus. Brown thrush. This well-known bird is a common summer visitor; reaches us from the south between the 15th of April and the 1st of May, and breeds about May 10th. Its beautiful song and beneficial habits have endeared it to the gardener, small fruit-grower, and farmer, who have taken it under their protection; and whoever kills one of these birds is certain to bring down upon him the wrath of the community. By September 15th the brown thrushes have all departed for the south.

FAMILY SAXICOLIDÆ.

Sialia sialis. Eastern blue-bird. Very common, arriving as early as March 15th. It breeds first about May 10th, and rears two broods in the season. By the 1st of September this bird has become rare, and in a few days none are to be seen.

FAMILY SYLVIIDÆ.

Regulus calendula. Ruby-crowned kinglet. A rare spring and autumn migraut, reaching here from April 10th to May 1st, and returniug between September 20th and April 15th.

Regulus satrapa. Golden-crowned kinglet. This also is a very eommon visitor, eoming and going in company with the preeeding. A few remain all winter.

Poliophtla cerulea. Blue-gray gnatcatcher. Very common, arriving about the 1st of May. The eggs are laid from the 1st to the 10th of June, and it departs about the 1st of October.

FAMILY PARIDÆ.

Parus atricapillus. Black-capped chickadee. Common, resident, breeding in the middle of May.

FAMILY SITTIDÆ.

Sitta Carolinensis. White bellied nuthatch. Common, resident, breeding about May 1st.

Sitta Canadensis. Red-bellied nuthatch. Rare, resident, breeding from April 20th to May 1st.

FAMILY CERTHIIDÆ.

Certhia familiaris. Brown creeper. Common spring and autumn migrant, arriving about April 15th. A few remain and breed about the 20th of May. Early in October they all leave.

FAMILY TROGLODYTIDÆ.

Thryothorus Ludovicianus. Carolina wren. This wren is only an accidental visitor from the south. One specimen was taken June 4th, 1873.

Troglodytes ædon. House wren. This bird is very rare around Anu Arbor, although eommon near by, arriving about the 5th of May. It first breeds May 20th, and raises two broods in the season. By September 1st all have gone.

Telmatodytes palustris. Long-billed marsh wren. Common, arriving about the 20th of May, breeding about the 20th of June, and departing for the south about September 1st.

Cistothorus stellaris. Short-billed marsh wren. Not as eommon as the preceding, arriving about the samo time, and breeding about July 1st. I have taken the nest as late as July 20th, departing about the middle of September.

FAMILY ALAUDIDÆ.

Eremophila alpestris. Horned lark or shore lark. A commou resident, breeding about May 1st. I have found the nest of this bird while the snow was yet on the ground. During the hardest portion of winter, this bird moves further southward for a short time.

[To be continued.]

NOTES FROM OUR CORRESPONDENTS.—"Teal" (Salem, Mass.), writes that Salem harbor is open, and whistling ducks and other wild fowl are abundant; shore larks are yet about, and robins, bluebirds and redwinged blackbirds have been seen. A gunner reports having seen a woodcock, but "Teal" doubts it.... W. F. H. Getty sends a list of birds observed to remain at Yonkers, N. Y., throughout the year. It includes the following: Robin, blue-bird, golden-winged and downy woodpeckers, chickadee, purple finch, song sparrow, blue jay, meadow lark, crow, ruffed grouse and quail.... Harry W. Candee (Waterville, N. Y.), mentions the first arrival of robins there on March 10, and a song sparrow and red-winged blackbirds, March 13. On that day a heavy snow storm set in. The pine grosbeaks have been there in plenty all winter.... "Umbellus" (Peotone, Ills.), says the only birds there in winter are snow-birds (*Junco*) and snow-huntings (*Plectrophanes*), none of which have been seen this winter. A record of this season's observations on the nesting of Illinois birds is promised.

—Articles of special value to our readers in the *Popular Science Monthly* for April will be "The Border Territory between the Auimal and Vegetable Kingdom," by Prof. Huxley, an account (illustrated) of the sheathbill of Kerguelen Island (*Chionis minor*) by Dr. Kinder, which is of great interest; "Animal Parasites and Messmates" and "Modern Philosophical Biology." The "Miscellany" also contains interesting matter.

HELPING HANDS.—It is gratifying to find nearly a page of editorial comment in the *Popular Science Monthly* for April, commending the effort of this department "to ascertain the conditions governing the migrations of birds and certain other periodical phenomena." After quoting in full our schedule of suggestions as to the kind of facts to be observed, the Editor of the magazine remarks as follows:

"It is desirable that records of this kind should be kept. As the writer in FOREST AND STREAM observes, it is through such observations as these that the natural history of England has become so well known, and so many persons there have become interested in it. We may add that children might easily be induced to take an interest in this kind of natural history observations, and so by degrees acquire the faculty of accurately noting what is going on around them."

STERNA PORTLANDICA.—Mr. Wm. Brewster has reprinted from the annals of the N. Y. Lyc., N. H., his paper entitled "Some Additional Light on the so-called *Sterna Portlandica*, Ridgw." He does not pretend to wholly remove the obscurity that lingers about this bird, but concludes it to be the Arctic teru (*S. macrowra*) in a transitory but regular stage of plumage representing the completion of its first year. A similar stage of plumage occurs in the growth of the young of the common tern (*S. hirundo*). It is, however, not certain that all the young of either species assume this plumage; or that they do not sometimes breed the first season.

TWO LETTERS FROM NORTHERN VERMONT.

MONTPELIER, VT., March 7th, 1876.

EDITOR FOREST AND STREAM:—

It was with much pleasure that I read your proposition to note the variety of birds resident in different regions, and I enclose the following list of those which remain in the vicinity of Montpelier the entire year, as far as I have observed:

Red-tailed hawk. Common in summer; rare in winter.
Red-shouldered hawk. Common in summer, but rare in winter.
Marsh hawk. Common in mild winters.
Crow. Abundant except during severe winters.
Great horned owl. A few during the entire year.
Long-eared owl. Rare, but neanly to be found.
Downy woodpecker, blue-jay, chickadee, white bellied nuthatch, red bellied nuthatch, and ruffed grouse are common at all times.
Butcher-bird. A few in winter.
Snow-bird. Common in summer; rare in winter.
Ruffed grouse have been unusually plenty this winter, one man near here shooting nearly 300.

Of winter birds I note the following:—
Snow-bunting. Common all winter.
Pine Grosbeak. Common all winter.
Lesser red-poll. Common in the latter part of winter.
Mealy red-poll. Common in the latter part of winter.
Snowy owl. Rare; one has been in this vicinity all winter.

The Summer birds are those said to be found throughout New England.

Last Summer I obtained a fine specimen of the broad-winged buzzard (*Buteo Pennsylvanicus*), the only one I have seen here. Of game birds the ruffed grouse and a few woodcocks are all that we have. A few black ducks and teals occasionally make their appearance. Blue and green herons are common about a few ponds, as also is the loon; and I have seen a few white-headed eagles, but they are rare. The season here is usually later than in the western part of the State, robins and blue-birds not appearing much before April 1st.

I will endeavor to note this spring the time of arrival of some of the above-mentioned species, and inform you.

W. A. BRIGGS.

ADDISON COUNTY, VT., March 5th, 1876.

EDITOR FOREST AND STREAM:—

One of your correspondents says that he was informed that smelts were unknown in Lake Champlain until within a few years. This is certainly a mistake, for Thompson, in his History of Vermont, published in 1842, mentions the smelt as being "sometimes taken in Lake Champlain in very considerable numbers." They are mostly taken through the ice in February and March, but I have seen individuals caught in the seine in May, at the mouth of Lewis Creek. In March, 1869, I saw Canadian fishermen catching them on Shelborne Bay for Burlington market. They had small movable houses, fitted up with stove and banks, with a trap door in the floor covering the fishing hole. These fishermen held the eye of the smelt to be the most alluring bait, and used it in preference to worms. They also caught some perch, and now and then, they told me, that they called "the mother of the eel"—the ling! There is a fish now caught in Lake Champlain, in winter, which was unknown here until within a few years. It is known, locally, as the "blue-fish," "salmon herring," and other names. I have never seen one, but am trying to obtain a specimen, and if I succeed will send you a drawing and description. It is said to be a fine table fish.

Mention is made of the arrival of the blue jay in Pennsylvania. Here he is always with us, and all the year round we hear his various discordant notes in wood and field. He is almost as commonly seen in winter as are the chickadee, the downy woodpecker, and the nuthatch. This winter, so remarkable for its mildness, we have seen very few flocks of the snow buntings, and those few flying over high in the air; none alighting and feeding on the seeds of weeds and grasses as is their wont in ordinary winters. Last winter there were great flocks of pine grosbeaks; we had as many as forty feeding at one time on buckwheat thrown out to them near the house. This winter we have not seen one. Nor of lesser red polls, of which I had a large flock as pensioners all last winter, feeding them on grass seed at an oat barn where I foddered a flock of sheep. A few days ago we saw on some weed stalks near the house, some small birds whose heads and necks were dull yellow, their bodies gray, their wings dark with two bands of white. What were they? Why would quails not thrive here? In old times they were not uncommon in this part of Vermont. What are the probable chances of success in introducing the pinnated grouse into this region? We are thinking strongly of attempting the introduction of both birds. R.

[The little drab-colored birds were goldfinches or thistle yellow-birds (*Chrysomitris tristis*), in their dull winter suit. There seems to be no reason why both the quail and pinnated grouse could not be introduced successfully into Northern Vermont, as even the latter is said to ye linger in retired portions of New England.—EDS.]

Fish Culture.

THE NATURAL AND ECONOMIC HISTORY OF THE SALMONIDÆ—GEOGRAPHICAL DISTRIBUTION AND ARTIFICIAL CULTURE.

NO. FOUR.

BY PHILO ICHTHYOS.

ATLANTIC SALMON—*Salmo salar*. Linnæus.

THIS species is the representative salmon of Europe, the New England coast, the St. Lawrence Basin, and the maritime provinces of the Domiaion. Form oval, moderately elongated, with the head and back nearly on the same line, inclining slightly in the middle third of the body, and the greatest depth a little before the dorsal fin; head small and well proportioned, and equal to one-sixth of length; snout rather sharp; jaws in young fish nearly equal, but in old males the lower one longest and curving upward; a row of sharp teeth along both sides of each jaw, as well as on the palatines, but those on the vomer confined to its anterior extremity, and in some fish obsolete; the eye is moderately large, and is nearly circular, and is contained four times and a half in the length of the side of the head, and once and a half in advance of its anterior rim; the nostrils are moderately large, and situated toward the upper surface of the head, slightly nearer the eye than snout. The opercle is elevated, and narrower above than below. The pre-opercle on its posterior border is nearly vertical; the branchiostegals, or gill rays, usually number twelve, and occasionally fourteen to sixteca; dorsal, eleven; adipose, rayless; the caudal, sixteen on each side; anal, ten; the ventrals teu or eleven, and pectorals ten or eleven.

Ray formula—Br, 12; P, 11; D, 11; 0; V, 10; A, 10; C, 30. The color is slaty blue on the back, darkish on the head, duller and slightly silvery on the sides, aud beneath, pearly silvery white. There are numerous black spots above the lateral line that pass from the upper convexity of the eye to the centre of the caudal fin. The dorsal pectorals are dusky, and the anal white, and the ventrals white externally, and dusky internally. The gill covers are rounded posteriorily, and the tail is nearly square in the adult, but furcated in the young; the scales are regular in shape, delicate, and sunk into the thick and fatty skin—the last feature a wise provision against the abrasion of scales, which usually ends fatally. As viewed upon the market tables the *S. salar* adult size is from two to three feet long, and is the delight of all who have a *penchant* for gastronomic luxuries in the shape of fish. Spawns in November and Deeember.

PACIFIC SALMON—*Salmo quinnat*. Richardson.

The *S. quinnat* of the Pacific Slope is a type of the salmon of that coast, and is possessed of similar anatomical characteristics, differing but slightly in form, color, and markings from the *S. salar* of the Atlantic Slope, and of the tributaries of the Great St. Lawrence Basin. Description by Richardsou, see his "Fauna Boreali Americana."

"General tint of back, bluish-gray, changing after a few hours' removal from the water, to mountain green; sides, ash-gray, with silvery lustre; belly, white; back above lateral line studded with irregular rhomboidal or star-like spots, some of them ocellated, resembling an eye; dorsal fin and gill cover slightly reddish; tips of the anal and pectorals, blackish-gray; the dorsal and caudal thickly studded with round and rhomboidal spots; back of the head sparingly marked with the same; whole body below the lateral line, together with the under fins, destitute of spots."

"*Ray formula:* Br, 20, 20; D, 13; C, 30; A, 16; V, 10; P, 14. S P. C H. Adult—Body fusiform in profile; compressed; head forming a little more than one-fourth of the total length from snout to the end of scales on the caudal. Maxillary bone curved, extending beyond the orbit; anterior margin of the dorsal equi-distant between the extremity of the snout and the insertion of caudal; dorsal region alivaceous, flecked with irregular black spots; dorsal and caudal fins similarly spotted. Region beneath the lateral line unicolor, silvery along the middle of the flanks, and yellowish on the belly; inferior fins unicolor; head above, bluish-gray; sides, bluish-gray."—Girard. See U. S. Fish Commissioner's repoit on Fresh Water Fishes, 1872 and 1873. Page 105 *et seq.*

The scales are of moderate development and conspicuously larger on the area constituting the flanks, and which is traversed by the lateral line. They are sub-ovoid in shape, slightly narrower anteriorily than posteriorily, upon which margin the concentric stria, or channel-like lines are obliterated. Those of the lateral line are more irregular in their outline, and proportionally much larger than those on the abdominal region, where they are slightly larger than on the dorsal region.

This species inhabits the Pacific coast from San Francisco, northward, probably to Bhering Straits, entering the larger rivers of the coast anaually in vast shoals. We are told that in the Sacramento and San Joaquin rivers, they are most abundant, ascending the latter in July and August to spawn, when they travel a hundred and fifty miles through the hottest valley in California to reach their breeding grounds, where the temperature of the air and water reach astonishing figures—where often at noon it is rarely less than 80° Fahrenheit, and where the average temperature of the water at the bottom of the rivers is 79°, and at the surface 80°. These facts we learn from the Report of the California Fish Commissioners, for the years 1874 and 1875. They ayer that those salmon which ascend the San Joaquin, appear to be of the same variety as those of the Sacramento, but average smaller in size. That they ascend this river when the temperature is so high, explodes entirely the theory formed by naturalist's, that salmon can not live below the 43d parallel in the streams of our country. This fact renders it probable, as the California Commissioners affirm, that the Pacific salmon will yet be planted in all the waters of the Southern States that take their rise in the mountainous regions of that portion of the Union. The enterprising and intelligent Commissioners of Fisheries of California, are exploding each year antiquated notions regarding the salmon. If the salmon of the San Joaquin, ascend to the sources of that river to spawn, they go below the 37th parallel, many degees below where naturalist have declared it to be impossible for them to exist.

The *S. quinnat* spawns, according to the observations of Mr. Livingston Stone, Deputy U. S. Commissioner of Fisheries, at the sources of the Sacramento in July; in the Little Sacramento, and McCloud rivers in August; at the mouth of the McCloud in September; and in the smaller tributaries of the main river, at, and below Tehama, in October and November. The flesh of the *S. quinnat*, in its best estate, is juicy, rich, and delicious. The heaviest fish weigh sixty pounds, while the average weight, according to some authorities, is twenty-five pounds. In shape, if we judge from photos, this salmon is more stocky than the Penobscot salmon. At all events it must be a valuable fish, and will eventually people in greater numbers its own native streams, through the agency of artificial culture, and find congenial abiding places in nearly every State of the Union, and in nearly every Province of the Dominion, if not in many streams and waters of the Old World. Much has been said regarding the comparative merits of the *S. salar*, and *S. quinnat*, gastrouomically. Both salmon are full-flavored, and possess every requisite for a high economical value; and the fact of the superiority of one over the other will soon be settled, as they are being cultivated together in both extremes of our country, and their gastronomic qualities will soon be settled by gustatory trials, and judgment rendered accordingly.

To be continued.

For Forest and Stream.

A TRIP TO THE JOHN BROWN TRACT WITH YOUNG SALMON IN MID-WINTER.

I LEFT Rochester with favorable weather for a pleasant journey. Advices from the woods assured me that there was just enough snow to make passable sleighing. The fish arrived at Rochester on Monday evening from the hatching-house at Caledonia, and were inspected by my friend Seth Green, who pronounced them fit for the journey, though quite young. They were placed in charge of the experienced and competent Mr. Marks, who accompanied me to the Fulton lakes. I preceded the fish about twelve hours to Boonville, that I might start at once with them on their arrival. Mr. Green was aware of the difficulties which we had to encounter, as both he and his brother had made similar excursions to these waters. He therefore remarked to Mr. Marks, not realizing the full import of his words, however, "You have undertaken a hard trip, such a one as you have never made."

When I stepped aboard the cars at Utica, it rained hard; the Mohawk was running wild. I thought there would be no sleighing to the lakes. It did not stop raining during that day and night. The next morning the streets of Boonville were covered with ice. The fish arrived on the 10 o'clock train in excellent condition. Mr. Phelps, the well known teamster, of the John Brown Tract, was on hand, the cans were supplied with fresh water from the canal, and the famous guide John Brinkerhoof, the man who accompanied Seth and Monroe Green, on their winter journeys to the lakes, was there taking a look at the fish. All ready, away we went with our babes to the woods. Nothing transpired in the first twelve miles worthy of note. Three hours drive through the falling snow, brought us to the Tannery, Moose River. Here we found a comfortable hotel, the Lawrence House. The landlord, Mr. Lawrence, gave us a hearty welcome. No man in all the woods takes a greater interest in preserving the game than the proprietor of the Moose River House. It is about a year since he caused some cruel fellows to be arrested for killing deer in the deep snows. None but a brave man dare advocate the enforcement of game laws in the wilderness.

The John Brown Tract has, however, many guides and sportsmen who appreciate the necessity of stopping the killing of game out of season.

Our fishes refreshed by a new supply of water, horses fed, and dinner over, we took our departure from town and men, and were swept into the wilderness by a storm. Fourteen miles of unbroken road had to be traveled ere the Old Forge could be reached, and however great the difficulties to be encountered, they must be overcome. The fish must reach the Fulton waters or they perish. The woods were entered with song and story; night overtook us, however, before we reached their heart. As we advanced, the depth of snow increased remarkably fast, and ever and anon the horses plunged into mud and mire—the sink holes of the road—and the sleighs disappeared, where all remained until levers were cut and the whole pried out. Stony Creek was reached, the famous slough pond of the woods. In this the horses were mired, and the sleigh tongue broken. It took but a few minutes, however, to mend the one and extricate the other. The road now led through a swamp where the snow lay three feet deep. The horses now gave unmistakeable signs of fatigue. We concluded to stop at a brook and give them an hour to rest and feed. As John proceeded to light a fire, he expressed his surprise on finding that the bottom had fallen out of the road. Talk about genius, patience, and skill, if I ever saw them centered in one man, it was in him, who had knelt in the snow and essayed to build a fire with everything wet around, and in the midst of a snow storm. He plunged into the snow up to his waist, and with the blade of his axe, swept the covering off a great pine tree. Striking a few vigorous blows, he hewed out by the moonlight, no, by no light, for there was neither moon nor lantern, fuel enough to build a fire. Next he scooped a great fire-place in the snow, with an immense pine tree as a back-log, then a pile of shaving were manufactured, and the process of match-lighting began. Not less than twenty were consumed be-

fore the wood blazed. The fire was kindled, however, and after enjoying it awhile, was left burning. A mile further on the horses failed us altogether. We had not the heart to urge them farther. Whip and word would avail nothing. It was 11 o'clock, and we were still six miles from the Forest House. What was to be done? It was soon decided that two should remain all night with the fishes, and the other two push forward with the horses to the hotel. This being agreed upon, the teamster and the writer took their departure, agreeing to return as soon as possible with a fresh team. I would have willingly have given my place to Mark Twain, that he might have added to his experiences in roughing it. Had he ridden that horse bareback through the banks of snow, he would have had communicated to his sensitive system the pleasures of a skeleton ride, and though the animal stood fifteen hands high, I could shut my eyes and see nothing of the quadruped but his back-bone. That impressed me. Before reaching the Forest House my horse fell several times, throwing me at each plunge into the feathery snow. Mr. Phelps, my companion, varied the journey by walking. When walking he could only advance by aid of the animal's switch. A dog pressed close upon my horse's heels; the snow covering the old fellow, save his nose and a narrow strip of his back. At last we gained the hotel, the horses were stabled and we were seated by a warm fire. The wind screamed around the building like a wild animal let loose from the mountain. The snow beat the window panes, and banked up the doors. The storm might rage were the boys in. The team that we expected to find fresh for our return, had just come in, and was worn and fatigued. It was out of the question, therefore, to go back for the men and fishes that night. With the first light of day the teams started. The snow was still falling. The day had nearly worn away when our companions issued into the clearings, from the woods. Men and horses were literally covered with ice and snow. They advanced toward the hotel after the manner of machines, rather than human beings. Our greatest concern was for the fishes. The cans were examined, and not one of the little "innocents abroad" were dead. There were the little finny fellows full of life, wiggling in the self-made current, delighted with the prospect of being accounted worthy of a home in the Fulton waters. I just began to realize what a perishable commodity tiny fishes are. Before, I had had no conception of the care and attention required in conveying these on their journey. Not an hour had passed since our departure from the hatching house that was not full of labor and anxiety. The water had to be aerated continually. That your readers may form some correct conception of the labor consequent upon the conveying of young fish to the almost inaccessible waters of our State, I need but recite the experiences of a single night. At 8 o'clock on the night previous to the one when the fish were put in the lake, the cans were filled with fresh water, and I took charge of them. They run all right up to 11 o'clock, when I commenced to draw the water, filling the cans with new. I discovered the little fellows wiggling to the surface, a sure sign that they were suffering, and in one can they lay on the bottom, giving but little signs of life. Mr. Marks was aroused, and for three hours, it was one continued effort to resuscitate the young salmon. At last we saw a decided change in their condition for the better, but agreed that the surest plan to preserve their lives was to put them at once into the lake. I aroused a man to aid in cutting a hole in the ice. After much trouble we succeeded in making a cavity large enough for the small salmon to escape through. The balance were taken on a hand sleigh far up the stream and put into the Fulton Chain. It may be well to remind anglers, when seated in their boats amid the green foliage, enjoying the scenery of these lakes, unsurpassed in beauty, trolling or casting the fly, of the winter day when these fishes came to the waters. Also call to memory the days of waves and winds, of wet and cold, when Seth Green and his men gathered spawn on Lake Ontario. The patient study and experimenting of Mr. Green has made our waters as susceptible of production as our acres of land. Mr. Green is already receiving encouraging reports from waters recently stocked with young salmon and other highly esteemed table fishes. The State has just commenced the hatching of brook trout, and now our streams once famous for these fish will contribute again to the table of the mountain farmer, and afford the bare-footed boy with beech rod and twine, rare sport, and the Isaak Walton's of our land may bend their way to streams, where far from care and strife, from smoky town and busy life they may cast the fly o'er the finny race.

This southern gate way to the wilderness (The Fulton Chain) is unsurpassed in fine scenery and excellent sport. The Old Forge House, newly named the Forest House, stands on an elevation commanding a fine view of the picturesque Moose River. The hotel is new and commodious, and will accomodate from seventy-five to one hundred guests. Important improvements are to be made in the house this spring. Those who have visited the Fulton Lakes will be glad to learn that the hotel has been leased for a term of years to Mr. Joel T. Comstock, of Boonville, N. Y., who knows from experience how to keep a first class hotel. Mr. Comstock will furnish sportsmen with camping supplies, tents, cooking utensils, provisions, &c. Those who wish to tarry at a first-class forest house and enjoy the combined beauties of wood, lake, and mountain scenery, can find no more pronounced location and charming spot, than at the Old Forge. As one writer of note has said, in speaking of the hotel and its surroundings, "None will fail to pronounce this location a most appropriate one for a forest inn, ladies will especially note its superior attractions as a summer resort."

There is an effort being made to obtain the non resident tax of the counties within the region, from the State, to expend on the road from Lawrence's Hotel to the Forest House. The waters will be stocked with salmon and brook trout, making the section unusually attractive to anglers.

Many tourists and lovers of this favorite haunt in the the John Brown Tract has described its charms. "A ride through these eight lakes," says one, "is an episode in a man's life he can never forget." "The eight lakes," writes another, "are connected by streams and form a group of surpassing beauty. They vary both in size and shape, each with a different frame work of hills, and the change is ever from beauty to beauty." While another remarks, "the beauty of the waters, their elevation, and the wild scenery which surrounds them, would not fail to attract visitors."

The eight lakes are moreover the point of entrance to the boat route through the heart of the wilderness to Paul Smith's and Martin's. It is twenty-five miles from Boonville by stage to the Forest House (Old Forge). Boonville is about forty miles north of Utica, and is reached by the Black River Railroad.

The guides of the John Brown Tract are a superior class of men, intelligent, competent, and well mannered. Those sportsmen who have ever had the misfortune to be in camp with a lazy, low-bred guide, will hail this announcement with joy in case they wish to visit the region. An ignorant guide, in the sense of the writer, is one who has neither the capacity to find game nor ingenuity to capture it when found. With such a guide a sportsman will be robbed of all pleasure and comfort, and be in danger of starving.

The John Brown guides are "independent" *i. e.*, not hotel guides. The latter are never to be engaged, if the former can be secured. Those intending to visit the Fulton Chain would do well to write to Mr. Joel T. Comstock, Boonville, N. Y., and engage guides. I intend to spend the summer months with my family in a little cottage by the lake adjacent to the hotel. "What," says a friend, "take your wife and children into the wilderness to be devoured by black flies and mosquitos?" Not so. What you call the wilderness is full of life and beauty to me and mine. In the woods the nights abound with silence and repose. How sweet and full their sleep, and the mornings and evenings of the forest are sublime. The morning air comes laden with the aroma of the balsam and odoriferous trees, the sweet fragrances are spread by the breezes from mountain to valley, and the gum trees are there for the healing of consumptives, and my girls will be down by the waters with early song, watching the ripples, and romping the shore with my pointer Ray. After breakfast we shall take a row on the lakes or go to a little pond, a hidden gem that is ever lulled by the sweet toned pines, and angle for trout. There are to us, thousands of new objects and sounds in the woods and by the waters.

The night after depositing the little fish in the lakes, as we smoked our pipes around the fire, some one speaking of the habits of fish, Marks, the "spawn man," related the following as an actual fish story: He said, "Some time last summer, a small dog having fallen into one of the trout ponds at Caledonia, the one containing the oldest fish, he, being near by went to assist the canine out, and was much surprised and amused to observe that on the dog attempting to crawl up, and just as he would lay his paws upon the edge, the trout would dart for him with mouths wide open, and fastening their jaws upon him would pull the animal in again, then dart off, carving about immediately, however, seeming to exult over their victim." The listeners agreed when Marks had finished, that in time he might tell a good fish yarn. The good natured Arnold was not to be outdone. He said "I once saw, when rowing in Fourth Lake, a trout-capture and kill a duck." Marks reiterated that his story was a true one. "So is mine," retorted Arnold, "but it was a young duck that the trout captured." The evening was spent in the recital of amusing stories relating to personal experience in the pursuit of game.

Friday morning we left the Old Forge, with two teams, on our return, and were fourteen hours reaching Lawrence's Hotel, Moose River. From this point we had a pleasant ride to Boonville. The popular hotel of Boonville, is the "Hulbert House." The proprietor, Mr. Geo. A. May, is the most obliging and genial of landlords. It can but continue to be the favorite hotel for sportsmen *en route* to the wilderness so long as it shall remain under his management. Both Mr. Day and Mr. Lawrence contributed toward paying the expenses of transporting the fishes to the lake, and by the important suggestions of Mr. B. P. Graves, the merchant and enthusiastic sportsman of the town, we were enabled to make our trip a successful one. All these gentlemen, besides others, take a lively interest in all that pertains to the John Brown Tract.

I expect to leave here with fifty thousand brook trout for the eight lakes within a few days.

A. B. LAMBERTON.

—The Fishery Commissioners of New York give official notice that the time for receiving orders for all kinds of fish from the Fish Commissioners of the State expired last Monday, the 20th of March.

—We call the attention of our readers who are interested in fish culture, or who would value a country summer residence, to Mr. Dexter's advertisement of Hatching Works for sale.

The Kennel.

THE KENNEL REGISTER.

The following are the names of the dogs entered in the Kennel Register for the week ending March 21st:—

SETTERS.

Mr. Jefferson's Flora.
Mr. Archer's Koenig.
Mr. Drane's Belle Sheppard.
Mr. Bergenthal's Rake and Fanny.
Mr. Dortch's Jane.
Mr. Shapley's Bess and Styx.
Mr. Dingin's Starlight.
Mr. Moses' Buff.

THE SPRINGFIELD BENCH SHOW.—From all we hear we gather that Springfield will run Chicago very closely as regards entries, etc., at the Bench Show of Dogs to be held in the former city under the auspices of the Rod and Gun Club, on the 26th and 27th of next month. The show of last year, although hurriedly gotten up and not widely advertised, was a grand success. We expect that the present one—the gentlemen having it in charge having taken time by the forelock—will equal in quality anything yet held.

A BENCH SHOW IN KENTUCKY.—A Bench Show of Dogs will be held in Lexington, Ky., on May 9th, in connection with the annual meeting of the State Sportsmen's Association.

—Mr. Schuchards black pointer Fan (by his Tom, out of Arnold's Fan) has visited Dr. Strachan's liver pointer Shot.

—We have at this office the certificate of registration of the orange and white setter Sam, owned by Mr. J. J. Snellenburg, of New Brighton. A letter so addressed having failed to reach Mr. Snellenburg, and been returned to us, he will please call at this office and receive his certificate.

—Why the Kentucky Legislature, in passing a bill imposing a tax of $2 on dogs, should have made it to apply only to dogs over three years old we are at a loss to imagine. Is it because dogs in Kentucky are only considered to be of any value after arriving at that healthy age? And how is the dog's age to be determined? We presume the object of a tax on dogs is mainly to keep down the accumulation of worthless, sheep-killing curs, who do so much to bring the whole canine family into disrepute. Why not, then, impose the tax on puppies six weeks old, and thereby discourage the breeding of all but those dogs whose prospective value will cause their owners to at once decide between the cistern and the tax collector?

—"Guyon" sends the following words of wisdom from Corinth, Mississippi:—

"The 'Squire' has the everlasting thanks of Mrs. Guyon on account of an article in the kennel column, in which he stated that dogs should not be allowed to lie on the hearth rug and bake their brains before the fire. She now has the authority from the fountain head to keep them out of our sitting-room. The FOREST AND STREAM says so, and it is so ordered; and so old Nora, who has been engaged for the last eight winters in a truly laudable way in trying to bake her brains, has to give it up, just as they are beginning to get done brown."

DEATH OF "FLY."—Our correspondent "Podgers" writes us from San Francisco under date of March 9th as follows:—

"I am in despair; have just lost my Gordon setter slut 'Fly' that I purchased of our old sportsman friend Horace Smith. Fortunately I raised one litter of pups from her by 'Jeff,' the dog that kept the train waiting, and they are accounted about the best stock in California. 'Jeff' is still on hand, and at this moment lies at my feet, and by the same token is giving my desk a series of vibrations equal to a small earthquake, all in the eager pursuit of the industrious flea, the bane of California dogs' existence, and not only of a dog's, but of a human being's, as all new comers can testify."

ON RETRIEVING.

WESTFIELD, N. B., March, 1878.

EDITOR FOREST AND STREAM:—

Many sportsmen seem to think that it is an advantage to have setters and pointers taught to retrieve. With the exception of men who only keep one dog, it appears to me to be a mistake. It is clear that Lewis thought so (*vide* p. 119, Lewis' "American Sportsman"), but he was probably not then aware of the existence of any reliable breed of bird retrievers, and looked upon retrieving by pointers and setters as a necessary evil. Dogs that are wanted to hunt in first-rate style should not be allowed to retrieve, as the retrieving of wounded game (not dead game) injures them, by causing them to take notice of the foot scent, and consequently teaches them "to potter," and brings their heads too close to the ground. It also makes them unsteady, always wanting to run in as soon as they see game knocked down. I feel sure that most men would shoot with more comfort, and bag more game with a retriever and a brace of setters than with three retrieving setters; besides which it will take less time and trouble breaking these three dogs to do their own particular work, than it will to break one setter to do everything thoroughly well. No one who has seen a first-rate retriever and first-rate setter at work, can have failed to mark the difference in their style—the former keeping his nose close to the ground, while the latter carries his head well up. If a setter has only to learn to range, set, back, and down charge, he can be made thoroughly reliable in a few weeks; but if the additional accomplishment of retrieving is expected of him, it must be a matter of years in making him perfect. How many excellent setters in other respects are hard-mouthed? I think I have more than once seen inquiries made as to how they may be taught to carry properly. A well-bred retriever will always carry alive (unless spoilt by bad management); nor does he require much training, except to be steady to heel, before being taken into the field; he will come to his work very quickly, if he gets plenty of it, and having once learned it, will seldom give his master any further trouble. He can also be used instead of any other dog for cock, snipe, and wild fowl shooting. IBEX.

In the above letter our correspondent urges the propriety of using a dog expressly for retrieving while shooting over setters and pointers, for the reason, as he alleges, that the breaking of the latter to retrieve is a very long and tedious operation, and then, when they are so broken, they will "break shot," and are otherwise difficult to manage. Now, we hope "Ibex" will excuse us when we doubt if he ever shot over a setter or pointer which was *properly* broken to that accomplishment. Notwithstanding our very long and constant practice in the field, and having shot in most of the States, we have never met a single individual who pursued the course recommended by "Ibex," and we would be glad to have an opportunity to convince him that nothing in the way of shooting "traps" could be more useless than having a dog tugging at one's heels for no other purpose than retrieving the game. We have frequently heard sportsmen say they would not allow their setters and pointers retrieve, for the same reasons given by "Ibex," and also alleging that a dog so frequently having birds in his mouth affects his nose. Whenever we have met with persons holding those views we have made it a point to have some shooting with them, if possible, and the result has been that without a single exception they were convinced of their error. Instead of its being a long, tedious operation to teach a dog to retrieve, we can have any setter or pointer of any age broken to retrieve within twenty days from the time he is taken in hand; and then, if a dog is skillfully worked in the field, and made to retrieve properly, he will not "break shot" or be more difficult to manage than one which does not retrieve, and as for its affecting the dog's nose, it is certainly a mistaken notion. Many years ago, when we were living at Trenton, N. J., the late Gardner Hubbard, of Boston, one of the most skillful sportsmen we have ever met, came on to have some shooting with us. He brought with him an extra fine,

well broken pointer, named Tramp, but not broken to retrieve, Mr. H. saying he considered it all wrong to use a setter or pointer for that purpose. We were then shooting over a pointer named "Hart," a first-class retriever, but no better dog otherwise than "Tramp," and after shooting two days on the Bridgeport meadows, in Gloucester county, N. J., where we had excellent shooting, Mr. Hubbard gave us his dog and one hundred dollars for Hart, on account of his retrieving qualifications. "Ibex" suggests that, instead of using three setters or pointers to shoot over, it would be better to use two and a retriever; If any shooter wishes to take three dogs out at the same time to shoot over, we agree with "Ibex" that one of them should be a retriever, or any other kind of dog which would certainly follow at heel. But we cannot believe that any skillful sportsman would undertake to manage three dogs at the same time; for, unless dogs are exceedingly well broken, and are accustomed to work together, even a brace are no better than a single good one. But it matters not how good they may be, one good dog would give more satisfaction in the field than three, even if one was only a retriever and followed at heel.

THE COLOR OF IRISH SETTERS.

March 10th, 1876.

EDITOR FOREST AND STREAM:—

In your issue of the 4th inst., I notice that the valiant "Warwick" has taken up the cudgel to batter to pieces the color of the Irish setter, and replies directly to my letter in your issue of February 24th. Yes, I did say, and now repeat it, that I firmly believe the only color of the genuine Irish dog to be red in its different shades, and with more or less white, and that it is only the red dogs that have made Ireland famous for its setters, and it is only the red dogs which to-day are recognized as the genuine Irish. I mentioned "Stonehenge" and "Idstone," but did not quote very much, as I did not deem it necessary. But since your correspondent has shaken the dust from off the works of his old authorities, pardon me if I now do, what I neglected to, in my last, quote *verbatim et literatim* from mine. I see that "Warwick" has only quoted "Stonehenge" in part, I will do so in full even at the risk of being tedious.

"Stonehenge" says, "The color of the Irish should be a rich blood-red, with muzzle of same shade, sometimes this is actually black, but more often a rich mahogany, the same dark shade running down the back to the stern, which has the short hair as dark as the muzzle, but this deeper stain is objected to by most breeders. Many strains have more or less white about their limbs, but the mouth should always be black, and, unless they are white and red the less white the better." He also says, "When dog shows were first held, the judges made several blunders in the Irish setter prize list. Carlo, the second prize dog at Birmingham, was for a considerable time the type of excellence. Mr. Birtwhistle's Jim, however, (a remarkably clever looking setter), and Mr. Watt's Ranger (a very handsome dog indeed), were the specimens which first upset all their preconceived notions of Irish breeding. Carlo has the wide brow, the "chubby" face, the large languid eye, "black tipped plumage" of the old school." Again, we suggested, when describing the Gordon setter, that the black-tan come from Ireland. That opinion has been corroborated, but the blood-red, or rich chestnut, or mahogany color, the deep rich red—not golden, not fallow, nor yellow, nor fawn, but deep, pure blood red—is the color of an Irish setter of high mark. This color must be unmixed with black, and tested in a strong light, there must not be black shadows, or waves, much less black fringe to the ear, or to the profile of the frame. "There are good Irish setters (notice he says simply good) nearly white, red and white, black-tan, or intimately crossed with black-tan, and in the last case showing the distinctive marks of the cross in the black tipping of the coat, which Irish judges consider a very great fault in color." He mentions the best breeds in Ireland as the La Touche's, the O'Connor's, the late Lord De Freyne's, the late Lord Waterford's, and Capt. Hutchinson's, the latter as good as any known.

Now certainly such a writer as "Stonehenge," whom even "Idstone" acknowledges as the first of authorities, ought to know what he is writing about, and he distinctly and emphatically says that the Irish setter of high mark, is not lemon color, neither is he a dun color, or a black-tan, as "Warwick" quotes from some of his antiquated writers. Your correspondent quotes Thornhill, 1804, as saying that "They are not esteemed unless their color is a deep chestnut, and white or all red." And adds, but he does say that they are not pure if they are other than the above colors. It is well to notice what a writer says, and not what he does *not* say, if one wishes to arrive at the truth.

He quotes another writer as saying that, "They may be lemon color, or red patched with deep chestnut." This latter color would make a funny looking dog indeed. Where would the red color end and the patches of deep chestnut begin?

Now a person can find an authority, or rather a would-be authority for most everything. Why, I can find an author, and a writer of some repute too, (I would say authority for all writers are not authority), who says that the setter is made up from a cross of pointer, fox-bonod and Newfoundland. Now I don't imagine "Warwick" would believe that author, though he did write some time ago, neither will I take much stock in the authors he has quoted as giving the Irish dog of any color. Your correspondent seems to cling rather fondly to earlier writers, perchance he is one of those who believe that everything was better in former times than now—I don't—I believe there has been improvement, as well with the Irish setter as the race horse, and therefore choose the dog and the recognized authorities on the dog of to-day, rather than those in years gone by. It is handed down to us by old writers and old priots that Flyme Childers ran a mile a minute. I don't believe that either, and no one of to-day believes it, if he has read at all our recent works.

No, "Warwick," it is best to put faith in authorities of our own day, those who have looked more thoroughly into the teachings of the past than either you or I have, or can, and who, after careful study, set forth their convictions of the truth. As I mentioned, "Idstone" in my former letter, let us now see what he says:—

"I shall only state facts taken from undoubted authorities. I have been at great pains to find out every thing which can set the matter at rest, and I shall not speculate as to quality or form in what I now set down about the breed." He then goes on to say, "I have said that the Irish setter should be of a pure rich mahogany red, without any black fringe or mixture of another color. He is most handsome without white. But few breeders can afford to destroy a dog of high family simply because he has a white foot, or some little mixture of that color.* * * Having said so much about his color, let me add that some 'correspondents' assert that red and white Irish setters have been, may be, and are to be had pure, and of the highest caste. I do not doubt it."

Now from the foregoing it is plain that "Stonehenge" and "Idstone" agree in regard to color of a pure Irish setter, and Mr. Laverack, who has visited Ireland four times, as he tells us, to investigate in regard to the Irish dog, gives in substance the same opinion. He also mentions as the purest breeds in Ireland, the same that "Stonehenge" gives.

In 1866, that well-known breeder of Irish setters, Capt. Hutchinson, in a letter to the London *Field*, says, "I still affirm that the only true color of the red in the setter in question, should be a very deep, rich, blood red, and free from any mixture of black hair whatever. All those dogs that exhibit the black hair cropping out at the ups and round the edges of the ears, and through the coat and muzzle, are decidedly of an impure strain, being an unmistakable cross with the black dog at some period or other." The same is the opinion of Mr. La Touche, and of Mr. Blake Knox, whose breeds are of the purest known.

That famous writer in the London *Field*, "Sixty One," also says, though the red Irish were not his favorites: "Having known Irish setters for the last fifty years, I can speak to the color of the most esteemed breeds. It was blood red, or blood red and white. The streaky black lines and tips are good for the "Marines," or "the fancy;" that they are proofs of high blood is only imagination."

Notice, "Warwick," that he says "most esteemed breeds," though farther on he mentions black and white, and black, white-and-tan setters as having been bred in Ireland. To my statement, that because they are born in Ireland it does not make them Irish setters, your correspondent adds, "And because they are blood red, or red white, bora in and imported from Ireland, it does not follow that they are the pure article." No, I would not warrant that they are the pure article, unless I knew their lineage. But should a man send me a black, or black and white setter, for a pure specimen of the Irish breed, I would consider myself sold, and the man an imposter." Would "Warwick" buy a black, or black-tan, or lemon and white, or liver-colored setter from any dealer in America, or in fact abroad, and regard the purchase as pure Irish? I am confident he would not.

Now in regard to that particular blood-red setter imported from a kennel in Ireland, into which a black setter from Scotland was introduced. Does "Warwick" know that the red setter he mentioned traces back to the black dog? Can not a man keep Irish setters and yet own a black dog, and even breed the black to some of his red ones, without contaminating his whole stock? But even had the black dog been bred to every red gyn in the kennel, it is not according to my theory at all, friend "Warwick," that the red pups of the litter would be the pure article and the black one's not. Every red dog is not pure Irish any more than is every black and tan a Gordon, or lemon and white a Laverack. I do not say, and have never said, every red dog is a pure Irish setter, but that every genuine Irish setter, and the only dog that is recognized as such by standard authorities, is of the red strain. Now it is just that very idea which your correspondent would attach to me, that has raised the deuce with setter breeding, and which has given the name of Irish setter to many a dog unworthy of it, either in looks, action, or lineage. I am well aware that "Carrie," being half Irish and half Laverack, has been entered and taken prizes in the Irish class. But it was wrong and was written up as such at the time. There was scarcely any need to "mention others," or even the ones named, for it does not take very long, knowing the lineage, to prove that a half bred animal is not a full bred one. However, the mention of "Carrie" was a well timed note, for in last issue of FOREST AND STREAM she is classed as the pure article with "Plunket." While she might as well be called Laverack as Irish, though she is red. And by the way, when our sportsmen see "Plunket" at Springfield, they will find his color not a light red by any means, as is generally believed.

Your correspondent advances the idea that a genuine Irish setter can not be bought, and quotes an Irish gentleman, (for proof I suppose) who states his family have had the pure thing for a hundred years, and never sell one or permits one to go from his kennel. "I can go one better, "for I know of a family said to have possessed the Irish setter for two hundred years, but dogs have gone forth from that kennel and I have some of the stock in mine, only removed two canine generations. The fact is, a dog can be bought of most any man or family at some price, else how is it, we found in the grand old dog "Plunket," the blood of the best Irish strains in Ireland. Oh! no, the time is not yet when one can't buy an Irish setter, and of the best blood too, (though I don't wonder that some think so, judging from certain specimens purchased) but such can not be purchased for a song.

I stated in my former letter that no recognized authority gives the genuine Irish as of any color; and I still adhere to that opinion. What I mean by recognized authorities are those that we of the present time look to for canine information, and if "Stonehenge," "Idstone," and Laverack, are not such, where can we find them? Now this letter is already too long, but a few more words nod I'm done.

There are, as before stated, no doubt, breeds of setters of other colors in Ireland than red, or red and white, but so thoroughly has the red setter become identified with Ireland as the Irish setter, that only such are regarded by the most noted breeders and authorities as the true Irish dog. A dog will not change his nationality just so long as he is bred pure and keeps up the chief characteristics which distinguish him as a particular breed. When will a Chinaman become a thorough American?

Having noticed that some other lover of field sports, in a contemporary of FOREST AND STREAM has taken my name of "Nimrod" to himself, and since "Nimrod" of ancient times was a mighty hunter, which I am not. I renounce the name altogether, and subscribe myself now and henceforth. MONT CLARE.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus.* Grouper, *Epinephelus nigritus,*
Drum (two species.) Family *Sciæ-nidæ.* Trout (black bass,) *Centropristis atrarius.*
Kingfish, *Menticirrus nebulosus.* Striped Bass or Rockfish, *Roccus lineatus.*
Sea Bass, *Scienops ocellatus.* Tailorfish, *Pomatomus saltatrix.*
Sheepshead, *Archosargus probatocephalus.* Black bass, *Micropterus salmoides;* *M. nigricans.*
Snapper, *Lutjanus caxus.*

[*Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.*]

For Forest and Stream.

The timorous south wind blows,
And spring's first buds are swelling;
Once more the honest angler knows
The meadow brooks are welling.
Fleet-footed ripples gleam,
Where tuft grass frets the stream,
Gurgling, gliding,
Shy trout nidiag!
Meet me by the stream. T. W. A.

March 15th, 1875.

Our poet, it is apparent, gathered his sweet inspiration before the cold snap of last week froze up the sources of his supply. Up to the 13th of March all conditions were certainly favorable to a genial opening of the fronting season, which is permitted by law on Long Island on the 15th. Birds twitted; the atmosphere was mild and sunny; the ground almost dry enough for the plough; trout disported in a limpid element clear of ice or snow water; "the south wind blew," and the "buds were swelling." The heart of the angler was glad with anticipation, and crowds of them prepared to visit their favorite resorts. On the 13th, however, the mercury dropped to nineteen degrees, and sealed up the beautiful ponds, and the buds, and the voices of the birds, and the hopes of the fishermen. It has been cold ever since, and bitterly so at times. March is a capricious month at best, and those who would enjoy trout-fishing in its perfection will do well to wait until the days are longer and the sun is stronger.

FISH IN MARKET.—The supply of all kinds of fish continues abundant. Brook trout are coming in in large quantities from all quarters, but are selling at from 25 to 30 per cent. less than last year. We quote: Striped bass from 15 to 20 cents per pound, according to size; smelts, 15 cents; bluefish (frozen) 15 cents; salmon (frozen) 50 cents; mackerel, 25 cents each; North Carolina shad, 65 cents each; white perch, 18 cents per pound; Spanish mackerel, 50 cents; green turtle, 20 cents; terrapin, $12 per 100; frost fish (tom cods), 6 cents per pound; halibut, 18 cents; haddock, 18 cents; kingfish, 20 cents; codfish, 10 cents; blackfish, 15 cents; flounders, 10 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 30 cents; turbot, 25 cents; scollops, $1 per gallon; soft clams, 30 to 60 cents per 100; whitefish, 18 cents; pickerel, 18 cents; sunfish, 10 cents; yellow perch, 10 cents; salmon trout, 18 cents; brook trout, (Canada), 50 cents; Long Island, do., $1; black bass, 18 cents; ciscoes, 10 cents; pompano, $1; hard shell crabs, $4 per 100.

—Anglers will do well to scan this department of our paper thoroughly, for we are imparting information constantly which cannot be found in books. The ignorance that prevails, regarding even the rudiments of fly-fishing, is most surprising, not only among confessed novices, but among those generally regarded as expert anglers. It is a fact that the majority of those who enter the fly-casting contests at our annual State Sportsmen's Conventions cannot even deliver a line properly under circumstances the most advantageous; while the number of *practical* anglers for trout (and especially salmon) can almost be counted upon a man's ten fingers. We appeal to the good judgment of our peers to verify this assertion. As we remarked in our last issue, the entomology of fly fishing should be well understood by every angler; and yet very few, indeed, have any idea of the proper cast of flies to be selected for any given season or condition of weather. We propose, therefore, to give a list of seasonable flies for each month, just as we do of fish in season, with general descriptions of the same, so that every angler can tie his own flies. Here follow ten varieties for April. The nine first are imitations of natural insects; No. 10 is a spring fly. The remaining six are general flies, doing good service throughout the season. We shall hereafter publish something of the natural history of these flies, and their distribution among the different streams.

The numbers specified apply to the Limerick hook—O'Shaunessy. It is important that this be borne in mind, for different manufacturers number their hooks differently; that is, the numbers and sizes do not always correspond. This fact is not generally known.

FLIES FOR APRIL.

BLACK GNAT, OR MIDGE.—No. 13.—Body and feet black, wings subhyaline.

DARK CLARET GNAT.—No. 13.—Body dark claret, feet black, wings subhyaline.

BRIGHT CLARET GNAT.—No. 13.—Body bright claret mixed with red fox face, feet ginger, wings of one sex hyaline, the other ochreous

GRAY GNAT.—No. 13.—Body dark fox mixed with dark claret, feet gray, wings hyaline.

DARK FOX.—Nos. 10 or 11.—Body and feet dark fox mixed with lemon-colored mohair, wings subhyaline, tail three fibres of dark gray hackle.

POOR MAN'S FLY.—Nos. 9 and 10.—Body and feet hare's ear and yellow mixed, wings slightly mottled gray, tail the mottle of the wood duck.

OLIVE GNAT.—No. 13.—Body dark olive mixed with bright claret feet ginger, wings hyaline.

RED FOX.—Nos. 10 and 11.—Body fox cub face mixed with yellow feet red, (chicken red), wings pale gray or subhyaline, tail mottled feather wood duck.

BRIGHT FOX.—Nos. 10 and 11.—Body and feet brightest part of the fox mixed with yellow, wings brightest hyaline, tail pale yellow.

BLACK HACKLED FLY.—Nos. 9 and 8.—Body orange ribbed with gold tinsel, hackle black wings, tail of the American partridge.

GENERAL FLIES.

IBIS.—No. 8.—A hackled fly ribbed with silver tinsel; body hackle, wings and tail scarlet.

PEACOCK PALMER.—No. 8.—Body peacock herls, hackle black and red mixed.

GRAY PALMER.—No. 8.—Body peacock herl, dark gray hackle.

PROFESSOR.—Nos. 8 and 9.—Body bright yellow, feet golden brown, wings wood duck and mallard dyed yellow, mixed, tail scarlet ibis.

QUEEN OF THE WATER.—Nos. 8 and 9.—A hackled fly; body orange ribbed with gold tinsel, hackle chicken red, wings bright mottle of the mallard.

GRIZZLY KING.—Nos. 8 and 9.—A hackled fly; body green, hackle dark gray, tail scarlet ibis, wings mottled feather of the pin-tail.

TROUT.—It is not often that one has the pleasure of breakfasting on trout from half a dozen States at the same meal. Yet such was the felicity we enjoyed a few days since, through the courtesy of Mr. Eugene G. Blackford, of Fulton Market. There were trout raised by Mr. Ira Hoyt, of Halsey Valley, N. Y.; trout from the far-famed ponds of Ira Smith, of Oyster Bay, Long Island; and more from Mr. Levi Hodges, of Farmington, Conn.; trout from far-off Wisconsin, raised by Mr. A. F. Donsman, of North Prairie, and trout from Mr. John Gilchrist, of Montreal, Canada. New Brunswick also furnished a modicum from Messrs. R. & A. Adams, of New Castle, and Pennsylvania was represented by fish from the ponds of Mr. J. Fearon Mann, of Pittsburgh. It would be almost invidious to discriminate as to the quality of the fish, but we must candidly admit that the wild brook trout found most favor. Among other piscicultnrists and shippers of brook trout who are supplying our market, may be mentioned Messrs. W. H. Crowell, of Lndlow, Pa.; W. A. Buchanan, New Haven, Conn., F. H. Holmes, Norway, Me.; Martin Van Buren Nevins, Setauket, L. I., and Robinson & Overhaut Bros., Moscow, Pa.

—In England the salmon lines sold at the tackle shops are much longer than those sold here—often reaching 300 yards. The price is 4d. per yard. Salmon of the largest size, say 50 pounds, will often run off 200 yards at a spurt.

—U. S. Fish Commissioner Mather suggests a Fly Casting Tournament at Philadelphia this summer on the exhibition grounds. The idea is a good one, and we will do what we can to promote it.

—We have received from Chas. F. Orvis, the rod-maker, of Manchester, Vt., some of the hops of the Hop Hornbeam, which grows in great perfection in that State. We cannot say that these hops will make good beer, but the wood of the tree makes fine buts for rods.

—A correspondent refers to the statement printed (copied) in our paper lately to the effect that the Raquette waters were the only part of the Adirondacks yielding pickerel, and asks:—

"Is not this a mistake? As long ago as 1858 or '59 I caught pickerel in Lake Sanford, trolling, and in Rice Lake, and Harris' Lake. I have fished through the ice when it was three feet thick on the latter lake in winter, and remember Isaac Labattis, when a boy, fishing there by me one day, catching one weighing thirteen pounds. I see also that the Preston Ponds are to be stocked and preserved. In 1866 I went there one morning in July with Mr. A. A. Clay and Mitch Labattis. The boat there had been appropriated by a party on a pedestrian tour, but as they were to stay there all that day and night, they let us use the boat from ten A. M. to twelve M.; a hot day and the sun beating down. Mitchell managed the boat, and Mr. C. and I fished with flies, one of us in each end. We caught three dozen trout, weighing together 27 pounds. I have never fished there since." C. C.

—A letter from Alaska to the San Francisco *Chronicle* says:—

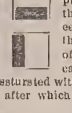
"During the season when the salmon are running, black and grizzly bears haunt the banks of rivers and lakes, where they dig sloping approaches to the water and lie and watch for fish. When they notice a good sized salmon close in shore they slide down with remarkable agility, and with one sweep of their huge paw generally secure their prey. But of course a good many fish escape them, and I have often caught salmon with the marks of these four legged fishermen upon their sides."

SPLIT BAMBOO RODS.

EDITOR FOREST AND STREAM:—

A writer in a recent issue of your paper, after discanting on the excellencies of his split bamboo rod, describes it as having been made in the following manner: "Eight or nine strips of equal size are fitted so as to get the enamel on the inside of each strip, and form a centre. By fitting the strips in this manner the pieces can be well rounded and finished without the least danger of injuring or working off the enamel, as you have the principal part in the centre of the piece."

Will your correspondent permit one, who has perhaps made as many split bamboo rods as any other amateur in the country, (Mr. Hyde excepted), to ask him how this is done? How eight or nine strips can be fitted to form a centre so as to get the enamel—by which I suppose he means the siliclous covering of the bamboo—in the centre? As I figure it, all but an inconsiderable portion of the enamel would have to be cut away in order to get the pieces to centre in the manner he describes. Now no one can find fault with "W. J. P." praising his own rod, which may be a very fine one, but when he describes its construction, and we find it at variance with well-established principles of mechanics, and recommends *ex cathedra*, "as an old angler" this faulty construction for the adoption of others it is time to nip the error in the bud lest the unwary should suffer thereby. Neither is there anything new in this mode of using the splints together; it is old, exploded; rods made in this way were found to be so unreliable, that our best makers now leave the tough close-fibred portion of the wood on the outside of their rods, where nature and science alike tell us that it should be. I feel that I am stating a truism when I say that no fracture of a joint ever commences in the centre of the wood—it is on the outside that first one little tendon breaks and starts out from the rest, then another, and another in quick succession until, if the strain be not eased, the whole piece resolves itself into its constituent atomy, in short, goes to smithereens. What then can be the advantage of massing all the dense fibrous strength of the wood in the centre where no strain ever occurs? Let your correspondent split a piece from a joint of bamboo, and bend it slowly in both hands in either direction almost to the point of breaking. Let him observe as the outside of the wood forms the curve how closely the outer covering of silex protects the fibre, and prevents their losing their hold on each other. Now let him bend it the other way, with the pi by wooded portion out, and he will find that one-half of the strain borne by the outside is sufficient to break the piece in two. This is the reason that Dame Nature, who is generally credited with being tolerably level-headed, in building her bamboos, places the silex and close-fibred portion of the wood on the outside instead of the inside as in the case of your correspondents' rod. Should she ever reverse her process, I fear that after one or two of such storms as she occasionally kicks up in the East Indies there would be very little bamboo left for us to build our rods of, or for any other purpose. No, no! "W. J. P.," the principle which you advocate is a false one—Dame Nature is still safe to follow in this as in other matters. Our mechanics imitate her work in the shape, and even the dimensions of their hollow cast iron columns, and thus obtain the greatest degree of strength with the least expenditure of material, for the old girl, with all her lavish extravagance in some matters, is economical even to stinginess in others.



Now that the open season for trout is about commencing he who is the proud possessor of a good split bamboo fly-rod—not as common a thing as many people suppose—knows in its fullest sense what Keats signified when he wrote of "a joy forever." And what a rod it is! lightness, compactness, strength, durability combined—lithe, pliant, graceful, elastic. Egad! how the delicious adjectives roll off one's tongue. Mr. Editor, I know of such a rod, which responds so accurately to every play of the wrist that the flies appear to follow the eye to the spot indicated without effort on your part, and I should not be surprised if some time during the season—not the early part, the weather is too capricious, but a little later, perhaps, when the apple trees begin to blossom. I should not be surprised, I say, to find that rod on the banks of a stream we know of casting a fly, hooking, playing, and landing the fish all of its own volition! TED GRAYSON.

[Our correspondent is eminently sound in his views. ED.]

PHILADELPHIA, March 13th, 1876.

EDITOR FOREST AND STREAM.—

Backed by at least twenty years' experience in the use of light rods, I venture to differ with your correspondent "H" on the proper way to make split rods. "A chain is no stronger than its weakest link." It follows that the same amount of enamel inside or outside will produce equal strength. I write more directly of tips than butts and second joints. All experience in making rods, whether for personal use, (as in my case), or for sale, know that with the most careful work a rod tip requires to be *toned* down in places to produce a proper and equal flexibility; by "H.s" plan the enamel must be cut away. My plan is thus:—

The shaded sides represent the enamel. If these pieces be pressed together in the position in which they are drawn you will have all the enamel in the centre, and as you work the tip down you cut away the porous part and leave the enamel, and are certain of having the flexibility even whichever way you may cast. As for keeping out the weather, rub down with flannel saturated with shellac and a drop or two of linseed oil, for a hard polish; after which varnish, giving plenty of time for the varnish to harden. J. B. C.

MOVEMENTS OF THE FISHING FLEET.—It has been a tough week for the fishermen, the high winds and rough seas operating unfavorably for a very heavy catch. There have been 21 arrivals—9 from Georges, 4 from the Banks, and 8 with frozen herring. The receipts have been 258,000 pounds of halibut, 225,000 pounds cod-fish, and 2,400 barrels frozen herring. The shore fleet have had but one day's fishing this week, and that was yesterday. Sales of fresh cod-fish and haddock, $2.75 and $3. Halibut have sold for 4¼ and 2¼ cents per pound. Round cod-fish for curing, $1.75 per hundred weight.—*Cape Ann Advertiser, March 17th.*

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. A. K., New York.—Will you be kind enough to inform me whether the (sea) bass come to the surface to breathe, or not? Ans. They do not.

DR. G. G. K. ROXBURY.—For reprint of the very beautiful poem entitled "The Old Canoe," see FOREST AND STREAM, Vol. I, No. 5, page 68.

H. G., New York.—Please inform me what to do with a young dog four weeks old that has water in his legs. Ans. Bathe his legs with spirits of camphor.

W. N., Princeton.—What is A. T. Stewart supposed to be worth? Ans. We don't know, and we imagine Mr. Stewart is the only person who does. Address him.

RABBIT, Boston.—Please give me the name of some one of whom I can buy some wild rabbits? Ans. They cannot be bought in this city; perhaps some of our readers can supply the information.

C. S. R., Jersey City.—What is a proper charge of powder and shot for a No. 10 gun, *i. e.*, for duck shooting? Ans. You don't name the weight; for, say 9 or 10 pound gun, 4 drs. powder, 1¼ to 1¼ oz. shot.

S. N. J., New York.—Will you be kind enough to inform me through your columns where target shooting can be practiced, near the city, without molestation? Ans. Only by joining one of the rifle clubs.

E. J. R., Kalamazoo, Mich.—At what season of the year should wild rice be sown, and in how deep water will it do well in? Ans. Sow in the spring. It will grow in four feet of water after it is started.

J. B. B., Red Bank.—Will you please give me the pedigree of Hamilton Thompson's red dog Duke? Ans. Out of Thompson's Belle, by Bang; he by Paul Meade's Dash, out of Belle; Belle by Robinson's Dash, out of Jane. For more extended pedigree address Mr. Thompson.

W. L. B., Milwaukee.—Will a bullet penetrate a timber 12x12 with less difficulty than two five inch boards nailed one inch apart. Ans. The solid timber would be penetrated more readily than the separated boards.

ELK, Joggins, N. S.—Can you tell me where I can obtain a pair of Scotch stag hounds, and at what price. Will I have to send to Glasgow, Scotland, for them? Ans. We know of none at present. If you advertise for them you could probably get them.

S. G. T., Erie, Pa.—Can you tell me me if a book called "Hawker on Shooting," by Porter, is now in print; if so, where can I obtain it? Ans. Can be procured in England. Mr. Geo. W. Ford care Messrs. Pott, Young & Co., Cooper Union, this city, will import it for you.

A. D. F., Brockford, Ill.—What is the reputation of the Charles Daly guns; how do they compare with Scott, Greener, and Tolly? Where are the Daly works or manufactory? Ans. Excellent. Their works are at Leige, and Messrs. Schoverling & Daly of this city are their agents.

G. H. R., Gainesville, Texas.—Please give me the address of some reliable party in Philadelphia who changes muzzle loading shot guns to breech-loaders, and the probable cost? Ans. John Krider, corner Second and Walnut streets; cost probably not less than $50, but depends upon the quality of the gun. Write to Krider.

J. D. H., Elm Grove, W. Va.—1. What is your opinion of the single breech-loading shot gun manufactured by J. Stevens & Co., Chicopee Falls, Mass. The patent of September 6th, 1864? 2. How should I load for squirrels; average distance, 90 feet? Ans. 1. A fair gun for the price. 2. With the above gun 2½ drs. powder 1 oz. shot, No. 6.

READER, Philadelphia.—Where can I obtain gum pants which will come above the hips suitable for deep wading, and the cost of same; can obtain nothing in Philadelphia that is built higher than hip boots or ordinary wading leggins? Ans. From Goodyear Manufacturing Co., No. 205 Broadway; price, $9 for plain rubber, and $15 for macintosh.

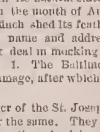
C. D. M., St. Marks.—1. Will you please tell me the address of Bohn, of London, mentioned in the answer of "H. L.," in the issue of March 2d, 1876, of FOREST AND STREAM? 2. What will be the price of the translation of Pliny? Ans. 1. H. G. Bohn, York street, Covent Garden, London. 2. Do not know the English price. Scribner asks $2 per volume.

L., Easton, Md.—Please inform me if you would advise the cross between a setter and pointer, (setter bitch, and pointer dog); also if progeny of the bitch would be injured by the fact that she has had several litters of pups by curs? Ans. By no means breed droppers. Keep the setter and pointer pure. Good dogs may be bred from a bitch having had paps from curs.

A. T. W., Brooklyn.—1. Is there good hunting and fishing near Champlaigne village on the Chazee River? 2. What would be the cost of having one barrel of my gun choke-bored? 3. Are there such gunmakers as E. & G. Hackett, No. 37 Grace-church, London? Ans. Yes, pertinently the latter; both salmon and brook trout being abundant. 2. About $5. 3. Yes.

A. D., Staten Island.—Will you advise me what charge powder and shot I ought to shoot in a 10-bore Parker breech-loader for ducks; is it best with two pink wads over powder, or one thick felt; the gun weighs nine pounds. Ans. Four drs. powder, 1¼ oz. shot. Your gun will probably shoot stronger with two pink wads, although the felt will produce about the same results.

P. G. R., Jr., New York.—Whose powder do you think best for ducking, and who's for quail, woodcock, etc.; and the best size of each? Ans. There is so little difference in the quality of our powder that we can not discriminate. The sizes are, of Hazard's, say No. 5; of Ludlin & Rand's, No. 6; of Duponts, No. 1 or 2. They are the next to the coarsest in grain of sporting powders.



H. B. D., Albany, N. Y.—To Webster's definition of the word quail is added the following note: "In the United States the name is loosely used for *Ortyx virginianus*, or Bob White, and the *Bonasa umbellus*, or ruffed grouse." Please to state in column of answers if you know of any locality where the people call the ruffed grouse a quail? Ans. We know of no place where the grouse is called a quail.

L. N. P., Boston.—I wrote to you some time ago with regard to a brook in which I proposed to cultivate trout, and spoke of it freezing solid, which gave you a wrong idea of the stream. By solid I mean so strongly that the water could not break it up. Ans. The brook would answer capitally for the cultivation of trout. The ice forming as you mention would be no drawback, as the trout would find holes in which to he

F. B. B., New York.—I have a good Parker breech-loader, 12-gauge which makes an excellent pattern and shoots hard; weighs 8¼ pounds; choke bore, I believe. Now, please advise me if the use of the explosive shell or bullet made therefor would be liable to injure its performance as above; and how about buckshot also? Ans. It would, in all probability, injure a choke-bored gun to shoot either bullets or large buckshot.

C., Brattleboro, Vt.—Will you kindly inform me through your columns the time to go to Rangely Lake and Stream (Maine); the route; accommodations? Ans. The best fishing is usually had in the month of September. For route, take Grand Trunk Railroad from Portland, Maine, to Bryant's Pond, thence stage to Andover; three hotels at Andover, and two camps on the lake; or you can find accommodation at the Oquossoc Club House.

C. T., Milwaukee.—Col. Wingate, in his book on the rifle, says that in off-hand shooting it is allowable to rest the elbow against the side, provided the little finger is in front of the trigger guard. We have in our club some members who rest the elbow against their side, and the rifle on the thumb and finger, as shown in the accompanying diagram. Would this position be allowed under the rules of the N. R. A.? Ans. Yes; but we consider in a very awkward position.

TRAMP, New York.—A friend and myself contemplate, next summer, taking a tramp to Delaware Water Gap. Will you inform us the route we will have to take, what is the distance, how many days will be required to make the journey, and what will the expense be a day? Ans. The Water Gap is but ninety-two miles from this city, or four hours by the Delaware, Lackawana & Western Railroad from foot of Barclay street. Several hotels, board from $3 to $4 per day.

B., Buffalo.—1. Will green tea dye silk line without injuring it? I see you advise its use for linen line. 2. Please inform me what proportion of shellac and alcohol to use in making varnish for fish rods of the proper consistency, and how to apply it? Ans. 1. Yes, certainly. 2. Add enough alcohol to "cut" it, then strain through a linen cloth and apply with a brush or wad of flax; spread evenly, dry thoroughly, put on three or four coats, and rub down with rotten stone.

DOG, Waverly Place, N. Y.—I should like to know if it is against the law to train your dog on live quails? 2d. You would greatly oblige me if you could give me the exact proportions of a thoroughbred setter dog. Ans. 1. No. 2. It would require too much space in one column to answer this question. "The Dog," by Stonehenge, "Encyclopedia of Rural Sports," or the "American Kennel and Sporting Field," by Arnold Burgess, will inform you. We can supply you with either.

B. W. S., Moscieud, Pa.—I see Kay's improved shot cartridge, advertised in FOREST AND STREAM, he says "close hard shooting." 1. Are they as good as Ely's wire cartridge for long range? 2. Can they be had filled with one ounce shot; and where can they be got? Please give me the address. Ans. 1. They are considered superior by those who have used them. 2. Yes. They can be had from any of our gunmakers, or from Kay & Co., Newark, N. J. We know nothing regarding the person you mention.

N. C., Jr., Jersey City.—1. Can I have the barrel of a 33-inch .12 bore Webley breech-loader cut down to 28 or 29 inch without affecting the force or closeness of the shooting? 2. Will the Ballard rifle, advertised by Messrs. Read & Sons, Boston, Mass., at $18, shoot at 200 yards as well as a short range Remington rifle, or Sharp's? Ans. 1. Yes, if the gun has not been choke-bored. 2. The Ballard is an excellent rifle at the range you mention, but we do not know how it compares with the others you name.

PEDIGREE, Boston.—1. Can you give the pedigree of Mr. Belmont's dogs? 2. Is it worth while registering the enclosed pedigree without knowing it further? 3. What will be the expense of registering it? Ans. No; but will endeavor to obtain and publish them. 2. Yes, decidedly. The other pedigrees will come to the surface in time; but are you sure of its being authentic even as far as you have given? 3. One dollar, which, however, is placed to your credit as an instalment on the cost of the Kennel Register when published.

G. L. M., Yonkers.—Will teams contesting for the inter-Collegiate Plate be allowed to use a military rifle, (not a special military), but not in use in the State National Guard of the State from which the team comes? To make the case plain, would a team from a college in New York State be allowed to use a military rifle which has been adopted by California, or Massachusetts in arming their National Guard? Ans. Yes; any military rifle will be eligible; but so little interest in the match is shown by the colleges generally that we despair of seeing it brought to an issue.

YOUNG ORNITHOLOGIST, South Adams, Mass.—1. Does the Baltimore oriole shed its feathers in the early spring in its natural state? I have one caught last July that shed its feathers in the month of August, and is now moulting again. 2. Does the goldfinch shed its feathers twice in the same year? 3. Can you give me the name and address of any reliable parties in the Southern States that deal in mocking birds and other Southern species of live birds? Ans. 1. The Baltimore oriole requires three years to attain its full plumage, after which it moults once a year, in early spring. 2. Yes. 3.

W. and H., St. Joseph, Mo.—A is the holder of the St. Joseph Sportsman's Badge. B challenges him to shoot for the same. They shoot and tie, and there are no birds left to shoot off the tie. A claims that according to the rules of this club he is under no obligation to shoot the tie off on any other than the day of the match, as the ties are a part of the match, and it was not for want of time that the match was not determined, but for want of birds, and B's neglect in not having enough birds to finish the match was no excuse, as it is the duty of the challenging party (under our rules) to furnish the birds for the match, and the match can be decided only by one party killing more birds than the other. A being challenged names the date for the match which, of course, includes the ties, and was on the ground to finish the match, and claims he should not be compelled to shoot again under that challenge, *i. e.*, according to our rules. A says B's failing to be on the ground on the day of the match, or not having enough birds for the main match, or forgetting to bring his gun, or any other excuse which might prevent the match being shot on the day set for the same would not compel him (A) to shoot the match on some future day, neither should B's neglect in not furnishing enough birds compel him to shoot again.

We have agreed that you should decide the case, but to be decided according to our rules herewith sent, which make no provision for ties being shot off on any other than the day of the main match, and A claims no other day is contemplated in our rules, as either can compel the other to go to the score not later than 1 o'clock P. M., in order that they may have time to determine the match on that day. Ans. This question should have been decided by the referee on the ground at the time. Our decision is, that A is wrong, and that he was obligated to shoot off the ties on the following day. Although in your rules governing the badge no provision is made for such a contingency, it is an accepted rule, and embodied in the by laws of all, or nearly all sportsman's clubs that, when a match is left unfinished from any cause it shall be shot off the next day, or on such day as the referee may appoint. To show the injustice of declaring a match "off" on account of the neglect or inability of the challenger to provide a sufficiency of birds, we will assume that in shooting off the ties each killed his birds for an indefinite time, until the birds necessarily gave out, would the match in be abandoned on that account?

☞We regret that the demands upon our space compel us to leave out a column or more of answers to correspondents.

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
123 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, MARCH 23, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved taste, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

COACHING.—We are really to have an exhibition of old time coaching in this city once more. Col. DeLancey Kane, who drove a coach out of London last season, and has imported a vehicle of the most improved make, proposes to commence on May 1st, making daily trips to Pelham Bridge, leaving the Hotel Brunswick on Fifth avenue, at eleven o'clock A. M., and the Bridge, on his return, at half-past three P. M. The coach will be "horsed" in the best style, and the whole trip made very exhilirating and enjoyable. Fare $1.50 each way, with 50 cents extra for the box seat.

MR. BISHOP'S CANOE VOYAGE.—In another column will be found the continuation of Mr. N. H. Bishop's interesting narrative descriptive of his voyage from the headwaters of the Ohio River to Cedar Keys, in the Gulf of Mexico, in a duck boat. Mr. Bishop's former voyage, it will be remembered, embraced the Atlantic coast, and was finished at Cedar Keys; with the completion of his present voyage he will have made a complete geographical study of the connecting water courses of the American continent. The results of his observations will be not only interesting, but valuable.

—We are indebted to W. A. Ryan, Esq., of Austin, Texas, for friendly call. Although a stranger to us, it is evident from our conversation with him that he is a skillful, enthusiastic field sportsman, and from him we have gained valuable information respecting the game abounding in that section of the country. Quail, pinnated grouse, and wild fowl are plenty enough to make excellent sport, and we tender to him our thanks for a sportsmanlike invitation to visit him in season and try "conclusions in the field," of which we intend to avail ourselves.

MAJOR LEECH.—A dispatch from the other side indicates that Major Leech will again visit us as captain of an Irish Team. The many friends of Major Leech in this country will be pleased to hear this news, and the gallant Major may be assured of receiving a hearty welcome.

—We shall feel obliged if contributors, when sending us articles containing scientific names or terms, would *print* with pen such words legibly in their manuscript.

—The annual meeting of the New York State Association for the Protection of Fish and Game will be held at Geneseo some time in May

STEEPLE CHASING.

AMONG the many out-door sports which are either being introduced or revived in this country, the steeple chase is one which appears most likely to obtain a permanent foothold and attain important proportions. The experiment made last summer at Newport was not only a very creditable first attempt, but will in all probability be followed up by larger and more important meetings during the coming season. Of course we are speaking of steeple chasing as carried on independently of the principal racing fixtures, where running on the flat is the main object and a jumping race is added merely to give variety to the programme. If steeple chasing was once firmly established, hunting (we use the word in the English sense), and most probably coursing would soon follow. It is a sport in which gentlemen take an active part as riders, and in fact is an outgrowth of fox hunting, originating in matches made between gentlemen to run their horses across country in a certain line, usually indicated by some distant church steeple. To the present day the majority of horses starting in steeple chases in England are ridden by gentlemen, and the leading "cross country" event—the Grand National, at Liverpool—has been repeatedly won by a gentleman rider.

As the principal requirements in a horse for fox hunting are similar to those in steeple chasing, the prosecution of the latter sport has been instrumental in encouraging breeding, and has resulted in the production of the English hunter, a horse that, although he may have the letters h. b. after his name, indicating a cross of cold blood; or, in slang parlance, a "cocktail," or half-breed, is yet unequaled for weight carrying, combined with speed, in the world. For making bold horsemen there is nothing like it, and as we have indicated, race meetings gotten up with steeple chasing as the object, would soon grow in favor, from the fact that gentlemen could actively participate without being jostled by a professional, or sandwiched at a finish between two diminutive sons of Ham.

We would like to suggest, however, that the custom of starting horses in steeple chases with martingales attached to their bridles, which seems to be the custom in this country, be abolished. In taking a jump a horse requires his head to be perfectly free; in landing, the support which would be afforded him by the reins is obviated, and his head brought by means of the leverage of the martingale, between his knees, the consequence of which is a stumble, and perhaps broken necks for himself and rider.

But before reaching the point where we can all own and ride our own horses, there is another branch of sport, a collateral of steeple chasing—a preliminary canter, as it were—which could at once be entered upon without the expensive auxilliaries required for the more pretentious amusement. We allude to paper chasing, or, as it is called at the English schools, hare and hounds. Here men take the place of hares or foxes, as well as hounds, and shanks mares furnish the propelling power. And this reminds us of rather a good joke we noticed in one of the daily papers a few days since. It quoted, as a singular instance of mis-print or slip of the pen, an announcement, which it repeated *verbatim* from an English paper, to the effect that the meet of the London Hare and Hounds for a certain day was postponed on account of the sickness of the wife of one of the hares; the interpretation of which was simply that the wife of one of the gentlemen who proposed to act as hare was unfortunately under the weather.

Paper chasing is most exciting and invigorating sport. Two of the best runners, being started off with twenty minutes' lead, select a line of country and sprinkle the *scent* in the shape of finely cut paper from bags slung across their shoulders. Time up, away goes the pack in chase of them, trailing them by the scent until they are sighted, and, if possible, caught. It seems strange that this sport, so popular in England, should never have found favor in this country. Nothing will so improve the wind, as well as harden the muscles, as an occasional burst across the country. It is the following sports of this kind while lads that gives to Englishmen their stamina, and enables them to take the lead in all out-door sports when men.

GREAT TRAPPING.—Mr. Sewell Newhouse, of the Oneida Community, who is widely known as a manufacturer of traps, gave us a call last week upon his return from the fur region of Virginia, whither he went last fall upon our suggestion. Reports authentic enough of the abundance of beaver in Nottoway, Brunswick, and Dinwiddie counties came to us constantly at that time, with serious complaints from the farmers that their crops were being destroyed by the vermin, which they had no means to exterminate. To verify these statements we visited that section in person, and found evidences enough to convince us of their truth—large patches of standing corn being destroyed at intervals all along the creeks and river bottoms. With the assurances that Mr. Newhouse received, he started last December with two or three barrels of steel traps and the necessary outfit, and was fortunate enough to obtain comfortable headquarters at the centre of his field of operations. Here he lived in primitive style, chiefly on the proceeds of his gun and traps, employing such assistance as he needed in furtherance of his pursuits. The small farmers of that section welcomed him as a new Moses to rid them of the plagues that infested them, and gave him what assistance they could, meanwhile receiving manifold lessons in trapping. At first Mr Newhouse suffered a little from the depredations of vagabond negroes, who stole two of his traps and some trifling articles of apparel, but by judicious diplomacy, threats, and strategy—especially in the display of an enormous iron bear trap with great teeth, that he declared he would set for them—he not only recovered everything lost, excepting one trap, but enjoyed complete immunity from trespass during his entire sojourn—one scared darkey, in one instance, going so far as to ride ten miles at night to return a pair of secreted gloves. The history of his season's operations, however, are contained in the results, namely, a net profit of some $800, including pelts secured and traps sold, to say nothing of prospective sales of traps whenever the impoverished natives can obtain money enough to buy them. His galore includes the furs of beaver, otter, gray fox, mink, and raccoon. Most of the skins are very large and remarkably fine in quality, some of the otters bringing $12 apiece.

There seems to be no end to the fur and wild game of this region. Mr. Newhouse avers that it is worth far more than the land and standing timber. Quail and turkeys are very abundant, and deer almost as tame as cattle. It was a sight to see the rich returns of Mr. N.'s harvest of furs, the old veteran and his pack reminding one of the flush times of the old mountain men, when Kansas was the "far West," and the Black Hills a month's journey from "Missoura;" when, in each spring, they came in with their heavy packs, squandered their proceeds, and then went for more. No doubt Mr. Newhouse's success will attract many sportsmen, as well as trappers, to these prolific hunting grounds next fall.

EDITORIAL NOTES OF SOUTHERN TRAVEL.

THE SEA ISLAND DISTRICT.

TO those not affected by sea sickness, the most agreeable method of reaching Florida is by the coastwise steamers. Very commodious and comfortable vessels they are, where one can pass the sixty or eighty hours of his journey so agreeably as to be scarcely conscious of the lapse of time. Quite imperceptibly he slips from the realm of frost into the milder atmosphere. Before he has left the harbor of New York or Philadelphia behind, the curtain of night drops on the snowy landscape, and the next transition is to green verdure, rose trees, and palmetto fronds. Mallory's line runs to Fernandina direct, stopping only at Port Royal. By Clyde's line the sea voyage is shortened to Charleston, whence steamers run direct to Palatka, on the St. John's River, stopping a few hours at Savannah, Fernandina, and Jacksonville. To those making a flying trip, this route possesses two advantages; only one change of stateroom is made, and an opportunity is given to visit two of the most attractive cities of the Southern seaboard. Again, one can take steamer from New York to Savannah, and there connect with a steamer that runs to Jacksonville by the "inside" route; that is, through and among the sea islands. Where time is of no account, the tourist should select this route, even though it may have its inconveniences, for the object of one traveling should be to see as much as possible. In any case, the expense is thirty per cent. cheaper than by land, meals and staterooms being included in the rates of passage. Besides, one gets fresh air and vigor on the water, while at the end of a land journey he is apt to be enervated or exhausted. Notwithstanding these considerations, the tourist should take the land route, either going or returning, provided he has never visited the South before, for there is much of novelty and interest to be seen, and it is hardly worth while to travel 1,600 miles to Florida without seeing the intermediate country. One must be governed entirely by circumstances as to the route he chooses. Old campaigners who go to Florida each winter, will go direct to Fernandina if they have much freight to carry. If one wishes to spend a season among the sea Islands in the vicinity of Port Royal, this is the route to select, for the steamer will land him right at the shooting ground, together with his boat and decoys and general outfit.

It is a marvel to me that this Sea Island District is not more frequented by sportsmen. In many respects it is far preferable to Florida, besides being nearer. Edible game is quite as abundant here. Deer, turkeys, quail, ducks, and the varieties of beach and shore birds are numerous. As to ducks, the present year is an exception. I found them nowhere. There are comparatively few herons, cranes, water turkeys, limpkins, and the like, which are innumerable in parts of Florida, and which the sportsman values only for their plumage, or as accessories to illustrate semi-tropical life. I am aware that few persons have any idea of the physical character of this district. Let me describe it. All along the coast of South Carolina, Georgia and Florida, is a labyrinth of salt creeks and rivers, which cut up the land into innumerable islands, some of them merely grass hummocks that are covered at high water; others delightfully wooded with oak, cedar, and palmetto, where the old-time planter luxuriated on the profits of the long, silken staple, which sold at fabulous prices. Now the plantations are abandoned, most of them, and countless bevies of quail forage in the old fields. Herds of deer and droves of turkeys and coons come out of the hammocks into the overgrown garden patches to feed on the succulent plants that have come up spontaneously year after year from self-sown seed. Here and there is an old concrete chimney, made of cemented oyster shells, where an overseer's house once stood; or the decaying remnants of some negro quarter hidden in a tangle of orange trees, cat briars, sprawling fig trees, vines, and palmetto scrub. At intervals, on more eligible sites, are groves of sombre live oaks,

whose far-reaching arms are draped with swaying moss, drooping over the waste where a pretentious mansion formerly stood; and one can sometimes trace the outlines of a flower garden by the rose trees, jonquils, and cape jasmines that seem to grow with a strange system of regularity and design. Some few of these favored localities have been reclaimed in part by their former owners, and others are occupied by Northern families who have acquired possession since the war, and are in vain attempting to rehabilitate them, wondering why, in this enervating climate and the present demoralized state of labor, they cannot make the waste places blossom and yield abundantly as of yore. When the tide goes out all the shoaler creeks are emptied, and a vast extent of marsh mud, interspersed with grassy oases, is exposed to view; and all along the edges of these islands is a fringe of "coon oysters," and here and there beds and reefs of these oysters crop out of the mud at random, threatening with their sharp flinty edges serious damage to any craft that runs upon them. One would think there was food here for the million, but it is not so; these bivalves are chiefly shells, and no "coon," however hungry, can consider himself half repaid for what he is able to pick out of them. In some places, however, there are beds of fine edible oysters, which have often afforded a luxurious *entremet* to scanty tables.

These mud flats yield abundant food to all the tribe of web-feet and waders, and when the curlew, the willets, the winter yellow legs, and the snipe, *et id omne genus*, resort to them at low water, the sportsman seizes the auspicious moment at the half-flood and cautiously pushes his boat up and down the intricate channels and speedily secures a load. Of ducks, too, there are usually plenty. Great sport can be had with decoys and blinds. Moreover, through these thoroughfares the hunter finds passage by night or day to places where larger kinds of game abound on the dry islands. Even without a boat most of the islands can be reached at low tide, and throughout this entire labyrinth of peculiar territory, from island to island, and from point to point, cross-cutting and intersecting until the stranger becomes lost in the bewildering maze, run little narrow footpaths where the vagabond negroes shuffle along in their purposeless wanderings, happy in their freedom, and complaining only because the sun does not always shine and the ravens do not bring them bread and meat to eat. Sometimes one musters energy enough into his listless frame to shoulder a gun and hunt for rabbits and squirrels, but it is seldom that either negro or gun is capable of doing much execution among nobler game, so that the experienced sportsman may be said to have the field wholly to himself; and certainly there is none that we wot of that affords better facilities. Of this region the U. S. Commissioner of Agriculture, in his recent report says:—

"A soil of marine formation appears to be necessary for the growth of the stock and fibre of the Sea Island or long-staple cotton, and a sea atmosphere with its warmth and equability. A sandy deposit of marine salt, but little above the sea level, permeable by the moisture beneath, and convenient for the requisite manuring by salt marsh, furnish conditions for the highest production. Edisto Island, south of Charleston, is the most prominent locality for the production of long-staple cotton. Saint Simons, Jekyl, and Skidaway, are also favorably known for products of high quality. The geographical limits and area in which Sea Island cotton matures a perfect growth include the islands of the coast of South Carolina, Georgia and Florida, and the Gulf of Mexico, and a few miles inland from the coast, ten or fifteen, more or less, the line extending farther inland up the river valleys, which have a marine soil and unobstructed sea breeze, and including most of the area of Florida. The area suitable for this culture in Texas is claimed to be quite large, and has of late been extending. The proportion of upland to Sea Island cotton produced is about 200 to 1. Probably not more than 100,000 acres are now devoted to its culture, while that occupied in upland cotton is from 100 to 120 times as much. The area could be increased immensely were the conditions favorable—a sufficient price, more systematic and labor-saving modes of culture and preparation, and more available and efficient labor, the former residents of the coast and islands having gone to the cities or retired to the uplands."

I must run cursorily over this delightful ground. It is not my object to recount personal prowess, so I can afford to be brief. Let me simply state that there is the most comfortable accommodation for the sportsman, either at Port Royal, or Beaufort. These places are four miles apart. Beaufort used to be the Newport of the South, and many traces of its pristine glory remain. If one will only make headquarters at Beaufort, he will find everything at his command that pertains to a watering place, from a billiard table to a fast trotter; there is a boat-house and bathing-house, and an unlimited area of shooting ground in all directions. Port Royal is now an important naval station, and an occasional visit to the fleet at any time will serve to break the monotony that may chance to hang heavily on time. There are two railroad trains a day from Port Royal to Yemassee, whence one may go to Charleston, Savannah, or Augusta, as he may elect.

There is one gentleman—Mr. Chas. G. Kendall, a resident at Palmetto Island, opposite Port Royal, and an occasional contributor to FOREST AND STREAM—who will be glad at all times to receive a visit from gentlemen sportsmen, and to give them any required information. He is a thorough sportsman and a worthy member of the fraternity. HAL.

—The destruction of small birds has been so merciless in the north of Italy and in parts of the Tyrol that their protection has been made the subject of a diplomatic treaty between Austria and Italy. On the destruction of the birds, caterpillars, and other insects, mischievous to agriculture, increased with great rapidity.

GAME PROTECTION.

—It must be borne in mind that the New Jersey game laws forbid the shooting of woodcock out of season, even for stuffing and setting up as specimens. We call attention to this from the fact that within a few days several instances have been brought to our notice wherein parties have been found with woodcock in their possession, and have evaded punishment by claiming that they were intended as specimens. This "specimen" business is being carried too far, and we are glad to see that the Palisade Sportsmen's Club and the Diana Sportsmen's Club, of Hoboken, have issued placards offering rewards for the detection of offenders. We are informed that a very flagrant case occurred at Elizabeth a few days since, where a gentleman met some "shooters"—they cannot be called sportsmen—who displayed *eight woodcock* as the result of their morning's sport. Although well known, they have not been prosecuted.

GREENVILLE SPORTSMEN'S CLUB.—The sportsmen of Greenville, Pa., have organized themselves into a sportsmen's club with the above title, the object being the protection of game. The association will be incorporated, and from the character of the gentlemen who are members, the game laws will undoubtedly be rigidly enforced within the limits of their jurisdiction—at least we hope so. The officers are: President, S. S. Hewitt; Treasurer, C. R. Beatty; Secretary, M. Hargen Brooks.

MINNESOTA.—The Lake Pepin Sportsmen's Club was organized last week by the election of the following officers: President, S. M. Emery; Vice President, S. B. Dilly; Secretary, D. C. Estes; Treasurer, F. Ruckert; Managing Committee, George Lomley, O. Gibbs, Jr., James McCroden, Fred J. Kopplin, Wm. Morris, and W. H. Dilly.

The object of the club is mainly the enforcement of the game laws, the promotion of an interest in the study of natural history, and the collection and preservation of specimens relating thereto. The club will also endeavor to make this neighborhood attractive to naturalists and sportsmen from abroad. The association numbers about fifty wide-awake members on the start, has adopted rules and regulations governing its affairs, and will soon be incorporated in due form.

—W. H. Holabird, Esq., of Valparaiso, Ind., writes regarding the protection of game in that State:—

"I have not known of a single case of violation of the game law, and the reason is, not that the gunners are becoming more law abiding, but we have had no tracking snow. The law for the protection of fish is shamelessly violated all throughout this portion of the State, and nothing save an action of the State in the appointment of Fish Commissioners and State constables can prevent the utter extermination of our black bass and other varieties of edible fish. I have had some correspondence with prominent gentlemen in the central part of the State regarding this much-needed protection and propagation, and the prospect is we will have our hopes realized next year; but its a long time to wait.

Mr. W. H. Vail and I, together with several other gentlemen, propose organizing an association here, and wish you to forward us the rules and regulations governing some of your own organizations of a like character, and furthermore we propose to stop the spearing of fish in our own locality."

—At a meeting held at the Queen's Hotel, Guelph, Canada, last week, and which was largely attended by gentlemen of the town and township, it was resolved to form a society for the protection of fish and game in the county of Wellington. A committee was appointed to draft by-laws, after which the officers would be nominated.

—The Virginia Legislature has declined to legislate upon the petition of citizens of Princess Anne County, relative to the shooting of wild fowl on the Chesapeake.

—Our correspondent "Podgers," whilom of the old Porter's *Spirit of the Times*, sends us the following deplorable account of the wanton disregard of all game laws and close seasons in California. We are glad that a powerful protective game society, with our influential correspondent at its head, has at last been formed in that State. It will have great influence and effect. Podger's statements regarding the abundance of certain kinds of game are almost marvelous:—

SAN FRANCISCO, March 8th, 1876.

EDITOR FOREST AND STREAM:—

It gives me great pleasure to be able to say that at last the true sportsmen of California have waked up to the necessity of some organization for the protection of fish and game in this country. Better late than never, the destruction has been most terrible. An organization known as the for "Sportsmen's Club of California" has its second meeting to-morrow evening. It is composed of some of the best men of the State, and we hope now to have some legislative action on these questions. At present all the previously enacted laws are virtually a dead letter, and in the interior Judges, Justices of the Peace, Sheriffs, and all that class of people of whom you would naturally expect better things, and some respect for the laws, set the example and shoot and fish regardless of time, place, or seasons. What do you think of a country that allows quail to be poisoned by the thousand on the ground that they destroy a few grapes? Game and birds of all kinds are destroyed wantonly by the indiscriminate use of poisoned grain scattered over or about for ground squirrels, which, of course, invites the destruction of every kind of bird. The gentleman granger and farmer must be protected at all hazards, regardless of anything or anybody else. Any one would suppose from the deference shown this most gingerly-handled class that they were gods anointed and favored beyond all other men. It has been impossible heretofore to get any game laws passed that did not except this county and that county, and virtually amount to no protection at all. There is a law against fishing for trout before the first of April, and yet every Sunday during February and March you may see people with rods and baskets bound for the front streams. Trapping, netting, and even giant powder cartridges are common methods, nobody having ever been arrested, much less convicted of any of these abominable and unsportsmanlike practices. In my experience all resistance to game law has come from the so-called farmer. He wants to poison birds because they pick up a few kernels of grain, or eat a few of his grapes. He expects the Lord who made the birds, to bless him with abundant crops, and yet he begrudges them the little they pick up that would probably be wasted anyhow. Does such a man deserve any crop? I am down on them as a class, for I have seen such contemptible meanness and narrow-minded selfishness in them in the course of my efforts heretofore to have proper game laws enacted that I have no patience with them; and when a hoss I goes up from them because it is too dry, or rains too much I say mentally I am glad of it! serves you right! We are going now to see what can be done towards enacting laws that will protect fish and game, and what is equally important, see that they are not a dead letter. The great trouble is to get a conviction in the country towns and villages, where probably every man from the judge down is equally culpable. Your widespread movement in this direction is having its effect, and waking up the whole country to the importance of seriously considering the fish and game question, and creating such organizations as will carry all laws into effect and promote the objects aimed at.

We have a glorious country for game, and, fortunately, it is still abundant, but we must not wait as you have waited, until it has become almost extinct before taking action to restore it. I think I have never had better wildfowl shooting than this season—now at a close. Mallards, teal, spoon-bills, and sprig tails have been plentiful; canvas-backs not so abundant as last season. As for geese we hardly count them game. I have sat in my "blind" and had an almost uninterrupted stream of them passing over my head; in fact, so numerous were they that they spoiled my mallard shooting. We don't waste ammunition on them except now and then a shot into a flock of "old honkers," selecting a couple for young ones. As for the white geese, we value them no more than we do pelicans, not considering them worth carrying home. The last time I was out (in February) I abandoned my old shooting ground on account of the acres of white geese. There were thousands covering the ground as far as the eye could reach, making it look as if there had been a fall of snow.

The inland waters and lagoons, (creeks we call them), leading from our larger bays abound in wildfowl shooting, and with a small yacht and a skipper that knows the navigation you can cruise a hundred miles through the marshes and never anchor twice in the same place. We have floating cabins, (little houses on a scow), that have half a dozen bunks, kitchen, dining-room, and very comfortable affairs they are to pass a few days in.

—Our California correspondent, who seems to have a high appreciation of the usefulness of our journal, writes the following words of encouragement, which deserve our thanks:—

"Your work on Florida having met with such favor should encourage you to continue similar efforts. I am sure the FOREST AND STREAM, in the course of a twelvemonth, contains the material from which an interesting volume can be compiled yearly, that would be extensively read by not only sportsmen, but the general community, and prove profitable as well as popular. If you will say you will do it, every good sportsman will doubtless contribute an article to it of some kind, on the principle that, if he can't sing a song, he can tell a story. The undersigned volunteers for one to give a yarn or two.

PODGERS.

SPRINGFIELD BENCH SHOW.—We have received the premium list and rules of the second annual bench show to be held by the Rod and Gun Club of Springfield, Mass., on April 26th and 27th. The list embraces 52 classes, and a large number of valuable prizes. Our space will not permit us to give details, but intending exhibitors can obtain full information and the premium lists by addressing the secretary of the club, Robt. O. Morris, Esq., Springfield. It is well to note that the American Express Co. and Adams Express Co. will return *free of charge* all dogs who have been sent prepaid over their lines.

TWENTY SECOND REGIMENT, N. G. S. N. Y.—The second Promenade concert by Gilmore's Twenty-second Regiment Band will take place on Saturday evening next, 25th inst., at the armory in Fourteenth street near Sixth avenue. This will be the last concert but one of the season, the concluding one to occur on April 1st, after which the band will visit California. These concerts are a very grateful source of entertainment during the Lenten season, and Conductor Gilmore will receive the gratitude of true lovers of music, as well as those who delight in such social reunions. The last concert, of March 11th, was most enjoyable, and we feel positive that those who attend on Saturday will feel amply rewarded.

—A correspondent wishes to organize a party of four to cross the plains next summer, speed it in the Rocky Mountains, and go south for the winter to New Mexico or California. He says:—

"I have been on the plains several times, crossing in 1874 from Kansas City to Colorado by myself, and am convinced it is the sportsman's trip of the world for health and enjoyment. Expenses will be about $500 apiece for four men to outfit completely, and $40 per month afterwards. But we would of course have the proceeds of the outfit to credit the trip with, and I have generally sold mine nearly about even."

—A correspondent states that a flock of about seventy black ducks have occupied the circular pond in the centre of the city of Providence nearly all winter long; that they have become so tame that they will eat the bread which the people are in the habit of throwing to them.

—The water in the river is still receding, having gone *down upwards* of two feet since yesterday morning.—*Albany Argus*, 11th.

Indeed! We presume the volume of water is absolutely *growing less*. Glad to hear it.

—Mr. Wallace, the taxidermist, at 19 North William street, is stuffing a gigantic ox for the Centennial exhibition, which is so large that he will have to cut an extra space to get him out of the shop.

—The average mid-day temperature at New Smyrna, Fla., during the month of February was 69°; the highest 83°, Feb. 21st, and the lowest 47°. New Smyrna lies in latitude 29°.

—To prevent the handles of tools from splitting, saw off the end square and nail on two round disks of sole leather.

The Rifle.

—The Joint Committee of the N. R. A. and Amateur Rifle Club met on Friday last, and it was decided to prepare a subscription book to be presented to the several railroads and ferries which were immediately and pecuniarily interested in the Centennial matches for their subscriptions, after which subscriptions would be solicited from citizens generally for the conduct of the matches. A protracted discussion ensued as to the advisability of appointing a committee to confer with the managers of the railroad to Creedmoor, with a view to the provision of ample accommodation for the transportation of visitors to the range. Gen. McMahon contended that a committee should be appointed to confer with the managers of the Central Railroad for the purpose of urging upon them the necessity of providing greater facilities for the public. Gen. Shaler and Col. Wingate, however, protested against the movement, as they claimed that the railroad company would provide the necessary accommodations this year.

We think, however, that the matter of transporting the crowds of persons who are expected to visit Creedmoor this summer, should be most fully understood. The committee have assumed a great responsibility in naming Creedmoor as the place for holding the Centennial meeting, and they should see that there is no prospect of a recurrence of the delays and misfortunes attending the last International match shot there.

—The American Off-hand Rifle Club are making arrangements to organize a team for participation in the Centennial short range matches.

THE INTERNATIONAL MATCH.—A dispatch from Dublin says that on the 16th inst. a deputation from the Irish Rifle Association had an interview with Major Leech, late Capt. of the Irish Team, and requested him to organize an Irish team to enter the International match at Philadelphia. Major Leech replied that he would do all in his power. He regretted the National Association had been unable to form a British Team, and presumed each country would now send its own representatives.

The latest dispatches are to the effect that Capt. Mildmay, Secretary of the National Rifle Association, thinks the action of the Irish team (in requesting Major Leech to organize a team) definitely settled in the negative the question of the National Association's representation, though Sir Henry Halford has not yet received a reply from Col. Gildersleeve to his communication asking that no team should be accredited under the auspices of the National Rifle Association.

Capt. MacDonald, of the Scotch rifle team, writes to the *Volunteer Service Gazette* that six members of last year's Scotch Elcho Shield Team—all who are able to go to America to participate in the Centennial matches—intend to shoot for places in this team, and at least nine other first-class shots are ready to compete. No shot, a resident of Scotland, who can go has held back.

CREEDMOOR, JR.—A match was shot on Saturday last between a team composed of students of the sophomore class of Columbia College, and one made up of employees of the Home, Citizen's and Continental insurance companies. The college team was victorious by the following score:—

SOPHOMORE TEAM.

Name.	Score.	Total.
R. W. Kenyon	5 5 5 5 3 4 4 5 5	41
F. A. Dograw	4 4 4 3 3 4 5 4 4	39
J. Fischer	3 4 5 5 5 3 5 4 4	39
J. F. Brush	4 3 2 4 4 2 4 4 4	34

ST. JOHN'S GUILD RIFLE TOURNAMENT.—This competition, which is now in progress at Conlin's Gallery, No. 930 Broadway, promises to be a great success, as there has been a large number of liberal donations in the shape of prizes. At the present time the list includes upwards of seventy-five prizes, besides several more which have been promised, and not as yet received. The full list will be published when completed. The proceeds will be devoted to the St. John's Guild Floating Hospital, and it is expected that the amount realized will be ample to defray the entire expenses of one of the excursions of this most worthy and excellent charity. This match is open to all comers, and will close on April 29th at 11:45 P. M. The following are the rules and regulations governing the tournament:—

RULE I. Conditions—Ten shots; 110 feet, ready measurement target, gallery rifle, .22 calibre, off-hand. Entrance tickets to be limited to 400; no person allowed to win more than one prize. Entrance ticket, $1.

RULE II. Competitors by renewing their entrance fee each time will be allowed to shoot as many targets as they may wish, until the limit has been reached.

RULE III. Before shooting, the target must be numbered, and the name, number, and date entered on the ticket book. When shot the target must be placed in the box; no measuring being allowed.

RULE IV. At the close of the tournament the targets will be measured by competent and disinterested parties selected from the committee. In case of ties, the target with the farthest shot from the centre will be last. In case of dispute, the disputants, the committee, and the judges will each appoint a man to decide the case, their decision being final.

The St. John's Guild Medal will be first prize. The other prizes will be open to choice, the second best shot having first choice of any of the other prizes, etc. Committee—Chas. A. Cheever, L. V. Sone, James S. Conlin.

ROD AND RIFLE ASSOCIATION.—The annual meeting and election of officers of the Jamaica Rod and Rifle Association took place on the evening of the 15th inst., and resulted as follows: President, George H. Creed; Vice President, John Fleming; Secretary, Samuel S. Aymar; Treasurer, George W. Damon; Executive Committee, John H. Sutphin, Theo. Rogers, John M. Crane, James L. Darcy, Wm. S. Cogswell, Wm. S. Elmendort, Albert J. Wilkinson. The association is in a flourishing condition, and its list of members steadily increasing. The subject of a long range is being debated, but the popularity of the 200 yard off-hand shooting is manifestly in the ascendant. The members expect to have a lively time this season, as several prizes will be offered, and many splendid targets will be made. The association feel confident they have some of the best amateur off-hand shots in the country on their roll.

SCHUETZENPARK, UNION HILL.—A practice shooting on ring and bullseye targets took place on March 15th, and was well attended. The following gentlemen took the eight prizes:—

Wm. Klein, New York, 166 rings.
J. Morf, New York, 166 rings.
John Raschen, Hoboken, 161 rings.
R. Faber, New York, 155 rings.
Captain Rasehen, New York, 154 rings.
Philip Klein, New York, 152 rings.
Jac. Aeschlack, Hoboken, 134 rings.
J. D. Bischof, Hoboken, 118 rings.

The most bullseyes (4 inch diameter) were made by Robt. Faber. Distance, 200 yards; off-hand; any rifle.

SYRACUSE.—A club to be known as the Amateur Rifle Club of Syracuse, and not a military organization, has been formed in that city. It comprises but twelve members, and has for its officers Mr. A. C. Chase, President, and Mr. D. H. Bruce Secretary and Treasurer.

—Mr. Stiles J. Stanton is secretary of the Norwich Rifle Club, instead of Mr. R. M. Parish, as published by us in the list of clubs affiliating with the N. R. A.

—Mr. F. J. Rabbeth has again won the championship badge of the Rhode Island Amateur Rifle Club, his score being 118 out of a possible 150 at 200 and 600 yards.

IMPORTANT.—Care should be taken in buying Hunting or Fishing Suits to get a genuine Holabird Suit and not one of the worthless imitations which are being put on the market. The best is the cheapest.—Adv.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Wild duck, geese, brant, &c.

GAME IN MARKET.—Large quantities of wild fowl are being received from the South Side of Long Island. The Great South Bay is sending consignments from all the points between Amityville and Patchogue. The brant are unusually fine and numerous. Prices are as follows: Canvas backs average about $3 per pair; red-heads, $1a$1.50; mallards, 75c.; broad-bills, 50c.; black ducks and widgeons, 75c.; brant, $1.25a$1.50; geese, $1a$1.25 each.

SWAN SHOT.—A beautiful swan, measuring seven and a half feet across the wings, and weighing twenty-two pounds, was shot near Bethlehem, Penn., on Thursday last. It was first seen near Calypso Island, near the Lehigh and Susquehanna railroad bridge.

—A letter from Huntsville, Texas, March 13th, mentions the return of a hunting party with 300 wolf skins. It states that there are a great many Indians out killing buffalo, and also a party of whites on Pease River, who have a boat which they are loading with meat to send below to the settlements.

—A prominent citizen of St. Louis, who is wholly disinterested, writes to us in praise of Holabird's moleskin fustian hunting suits, which he thinks are even preferable to the linen suits of the same maker; and adds the following very pertinent remarks:—

"It may be argued that as good shooting can be done in old cast-off clothes as in Holabird's moleskins; but will any man deny that he feels better the more decent he looks? If or one prefer to go into the field not ashamed to meet a respectable farmer for fear of being mistaken for a tramp or a pot-hunter. Futhermore, a suit built for shooting has many conveniences that other suits do not, and lastly, a man dressed in a proper shooting suit looks like what we all want to be considered—a gentleman sportsman. We talk of our good dogs, and our good guns, and even of good ammunition. Can't we talk of good hunting clothes?"

We decidedly approve of tidiness in a sportsman's dress. A sportsman should always dress so as to be presentable to the company he chances to meet. Yet, inasmuch as we expect the working farmer to plough only in his sorriest clothes, even so there are forest tangles where the hunter meets no one, and where the best clothes would soon be torn to tatters. In such situations we would recommend the oldest worn-out garments. We entertain an obstinate opinion of the "eternal fitness of things."

—Now is the time for ducks.

NEW JERSEY—*Kinsey's Ashley House, Barnegat Inlet, March 14th.*—Yesterday afforded the most exciting day's sport among our gunners that we have had for years. The wind shifted from the east to northwest about eight A. M., and the gunners who were fortuuate enough to get on the points before the gale from the latter quarter had their hands full. Joel Ridgway killed fifty-six brant alone, Sam Perrine six geese, and Sol Soper, John Soper, and Steven Firman thirty-nine brant. Between fifty and sixty were killed on the Clam Island. Judging from the report of guns in the vicinity of the club house, they must have done well. B.

MASSACHUSETTS—*Salem, March 20th.*—Geese were seen flying north over a week ago; they flew irregularly, about twenty-five of them, and were moderately high. This was about the time we had a very open spell of weather, and people thought spring was around, sure. "TEAL."

VIRGINIA—*Blacksburg, March 11th.*—Saw first snipe on the 8th; on the 10th saw four and bagged them all, and on the 11th saw seven and bagged five of them. E.

Norfolk, March 18th.—I have just returned from the "happy hunting grounds" with a bag of 34 ducks and 111 English snipe to two guns, in two days' shooting. "Guy" was my companion. Of course we had fine sport.

"ALFRED."

INDIANA—*Valparaiso, March 16th.*—Our prospects for prairie chicken shooting in '76 are most excellent, as the winter has been remarkably mild. Our duck shooting is now at its height, but owing to muddy roads the marshes cannot be reached. Report says that the flight is very great, largely in excess of that of '74 or '75. Our spring birds are here in considerable variety. Pinnated grouse are pairing off, and the first warm south wind will bring the snipe. Then I shall have my sport. HOLABIRD.

PIGEON MATCHES.

LONG ISLAND SHOOTING CLUB.—The champion cup of this club will be shot for to-morrow on the grounds of the club, Dexter's. The conditions under which it is monthly put up for competition are:—Seven birds each, twenty-five yards rise (with the exception of the last winner, who stands at twenty-seven yards), one and a quarter ounces of shot, H and T traps, and club rules to govern. Mr. Thomas, one of the oldest members in the organization, holds the prize at present.

—The champion medal of the Onondaga County Sportsman's Club was shot for on the 15th inst., Mr. H. Gale being the present holder, and Mr. Thos. Jackson the challenger. The match was shot at snow birds instead of pigeons, at eighteen yards rise. Mr. Gale proved himself the best shot by the following score:—

Name.	Score.	Total.
T. Jackson	1 1 0 0 1 1 1 0 1 0 1 1 0 1	9
H. Gale	1 0 1 1 1 1 1 1 1 1 1 1 1 1	14

A general sweepstakes followed, at pigeons, under the usual conditions, in which seventeen members of the club participated. Mr. J. Bedford was the winner, with a score of nine out of ten birds.

—A match was shot on the 17th inst., on the grounds of W. B. Sheldon, Esq., Penn Yan, N. Y., at ten birds each, State rules, resulting as follows:—

Name.	Score.	Total.
W. B. Sheldon	1 1 1 1 *0 1 1 1 1 1	9
H. O. Pratt	0 0 1 1 1 1 1 1 0 1	7
Geo. Wycoff	0 0 1 1 1 1 0 1 0 0	5

*Dead out of bounds.

OHIO.—The Miami Valley Shooting Club had a match on the 10th instant, under the usual conditions, ten birds each, resulting as follows:—

Name.	Total.	Name.	Total.
M. McNealey	4	J. B. Readman	7
B. F. Readman	7	S. J. Wiley	9
Wm. Kitchen	7	Wm. D. Jordan	7

—A pigeon match took place at New Dorp, Staten Island, on March 15th, and was a well conducted affair. There were twenty entrances at $6.25 each and birds, 21 yards rise, 80 yards boundary, Long Island rules:—

Name.	Total.	Name.	Total.
C. F. Offermann	5	G. Hempstaedt	7
H. Muller	5	Fr. Plunkuchen	3
McCreamelt	8	H. Muller	7
L. Liedermann	7	Hy. Schilling	5
John Moller	3	H. Ficken	6
H. Ficken	8	John Meyer	6
John Muller	7	L. Lane	3
John Behling	6	John Baier	5
G. Baier	7	Albert Lane	4

Messrs. George Baier, McCremelit, and H. Ficken having tied on eight birds, and there not being any more birds left, the above-named gentlemen will shoot off for the first, second, and third prizes at the same place, on the 29th inst. There were five prizes in all, the fourth being won by John Müller, of Brooklyn, and the fifth by Louis Lindemann, of New Dorp; each won a case of stuffed birds. Mr. John F. Rathjen, of Staten Island, acted as referee. Judges—Oscar Hess, of Hudson City; John Schindler, of Brooklyn.

DETROIT, Michigan, March 13th, 1876.

EDITOR FOREST AND STREAM:—

We are all much interested in trap shooting here, and have two clubs for that purpose, both of which offer a medal to be competed for. The Detroit Gun Club is the largest organization, and the State Medal Club the next; the latter had their last shoot at Hamtramck Park on Thursday the 9th. The following are the entries and scores; plunge lines, 15 birds each, 21 yards rise, 80 yards boundary:—

Name.	Total.	Name.	Total.
G. Moran	15	J. E. Long	10
E. H. Gillman	14	J. E. Eldridge	13
L. Dubois	13	J. E. Ford	10
G. Steuben	13	A. Van Dusen	10
H. Hawkins	12	H. Whipple	drawn
C. A. Mack	12	E. S. Barber	10

This gave the State Medal to Mr. G. Moran, of Mt. Clements. After the shoot for the medal a sweepstakes shoot occurred, 10 birds each, same traps, rise, and boundary; $5 entrance; $10 first; $6 second, and $5 third. The following is the score:—

Name.	Total.	Name.	Total.
E. H. Gillman	9	G. Steuben	7
J. E. Long	9	J. E. Eldridge	9
H. Hawkins	8	G. Moran	8
L. Dubois	8		

Gillman, Long, and Eldridge shot off at 26 yards. The following is the score, (3 birds):—

Name.	Score.	Total.	Name.	Score.	Total.
Gillman	1 1 0	2	Eldridge	1 1 1	3
Long	1 1 0	2			

Eldridge gets first money.

The ties on eight then shot off at 26, (3 birds).—

Name.	Score.	Total.	Name.	Score.	Total.
Hawkins	1 1 0	2	Moran	1 1 1	3
Dubois	0 1 0	1			

Moran gets second money.

Steuben gets third money, being the only seven. GREEN.

CONCENTRATORS IN MUZZLE-LOADERS.

PRINCETON, N. J., March 20th, 1876.

EDITOR FOREST AND STREAM:—

I was somewhat surprised at your asking me, in your issue of last week, how I used Ely's concentrators in a muzzle-loader. It is so common among shooters where I live to use them that I imagined every one knew how it was done. The operation, however, is sufficiently simple. It is only necessary to put the concentrator into the muzzle of the gun *after* the shot, and *before* the last wad. Put the wad on top of the concentrator, and push both home at once. You will immediately see what the result will be. The shot, the concentrator, and the wad will assume the same relative positions in the barrel of the gun as they do in a breech-loading shell, and in discharge will act in the same way. To those who have never used the Ely concentrator in a muzzle-loading gun, the experiment is worth a trial. LOUNGER.

CHOKE-BORES.

SIR—Having seen a deal of discussion in *The Field* relative to the penetration and killing powers of guns bored on the new system, I thought it might interest some of its readers to give them my experience in the field against game and wildfowl with a 30-inch gun by Mr. Greener, bored on his new system. I purchased the gun in December, and found

it weighed 10 lbs., with barrels 34 ins. long. This gun appeared heavy at first; but the feeling soon went off, and I found it really very handy, and I have carried and shot with it the whole day, walking sometimes twenty miles. I have never tried its penetration at paper, but at game and wildfowl it is all that could be desired, having killed over twenty hares, some of them as far off as 80 yards, and frequently killed going away at 60 yards. I shot a heron at 72 yards, and a wild duck at 80 yards, besides making long shots at green plover in flocks, having repeatedly killed four or five at from 80 to 100 yards, both when sitting and flying. I have likewise shot rabbits, pheasants, partridges, snipe, jack-snipe, teal, pochards, golden plover, knot, wood-pigeons, water hens and lots of other birds. I have tried it at gulls and crows, and have made some very long shots; but never killed a single bird at 100 yards, although I have killed at that distance when I have sent into a flock. The different kinds of shot make no difference in the shooting, as I have tried it at a 30-in. iron target, and it puts in 250 No. 6 with a charge of 1¼ oz. and 4 drs. No. 6 powder. When I increased the charge of shot to 2 ozs. and 4 drs. of powder the pattern was as high as 360, and when reduced to 1 oz. an average of 209 pellets. For long shots I used 5 drs. No. 6 powder and 1¼ oz. No. 5 shot (sometimes the chilled, and at others the ordinary kind). It shoots equally well with small or large shot, and I have always found the spread of small and large shot to be the same up to 50 yards. At longer distances the large shot has the advantage, as the wind does not act so much upon it. For shooting at 30 yards 1 oz. is quite sufficient; but it requires finer shooting than with an ordinary gun, as the spread is not near so great, and there are no sprinklings of outside pellets, which very often only maim a bird; so that with a gun bored on the new system you either kill or miss, and, with a bad shot, very often the latter. Mr. Greener's gun leads only a little at the muzzle; but it does not interfere with the shooting, as I have fired 100 shots without cleaning. T. METCALFE.

Kingston Villa, New Parks, Scarborough, April 22d.
—From the London Field.

ROUCEVERTE, W. Va., March 11th, 1876.

EDITOR FOREST AND STREAM:—

One of your correspondents asks about a compass set in a gun stock. I have been using for several years a Winchester, model of .56, 29 inch barrel, which has a compass inserted in the stock. The gun was given to me by a friend, Mr. L. J. Peck, of Lockport, N. Y., as a memento of a certain bear hunt we took together, and had been used by him several years with the compass put in for his convenience. He had a Maynard with a compass in its stock, and would, no doubt, tell your correspondent what is necessary to make the needle act properly. The one in my gun acts all right, although I seldom use a compass, while I am a good deal in the woods. A man may get confused by a multiplicity of roads or streets, not knowing which one to take, but he should never be at a loss in the woods. As to the bear hunt I spoke of above, I bet Mr. Sartori, of Philadelphia, unlimited good things that we would kill a bear, agreeing afterwards to do it by 5 o'clock P. M. Mr. Peck supplementing by a bet of "two New York shillings" in my favor. We did not leave camp until 8 A. M., a dreadfully cold morning in mid-November; snow ten inches deep. We struck a fresh track at 3:20 P. M.; killed the bear at 3:40; laid out all night, and came back next day to enjoy venison, the rest of the party having killed two deer while we were gone. C. C.

Yachting and Boating.

MR. BISHOP'S VOYAGE IN A BARNEGAT DUCK BOAT—FLORIDA REACHED IN THE "CENTENNIAL REPUBLIC."

WE give below another letter just received from Mr. N. H. Bishop, describing his adventurous trip along the coast of the Gulf of Mexico. Our last letter, it will be remembered, was written from Biloxi, Miss. Mr. B. has now reached St. Marks, Florida, *en-route* for Cedar Keys, which point he has probably reached ere this. The paper canoe in which Mr. Bishop's first voyage was made, will be exhibited at the Centennial by the Massachusetts Commission, and his present craft which he has christened (and well christened) the Centennial Republic, will be exhibited in the government collection of boats. The Southern Boat Club of New Orleans has presented Mr. Bishop with a flag in commemoration of his visit to that city.

APALACHICOLA, FLA., March 7th, 1876.

EDITOR FOREST AND STREAM:—

I have just emerged from the interior salt-water passages of the coast, by crossing the beach above Cape St. Blas, from St. Joseph's Sound to the waters of the Gulf of Mexico; thence by St. Vincents' Sound to this port. While waiting for the strong easterly winds to subside I will give you a description of the route to be followed by a small boat from New Orleans to Cedar Keys.

From Lake Pontchartrain (where a young friend joined me with his skiff, after my lonely row of two thousand miles down the Ohio and Mississippi rivers, from Pittsburg) the shores were followed to Biloxi, from which watering-place I last addressed you. Leaving Biloxi we rowed easterly, crossing the mouths of bays and bayous, past Pasengoula to the entrance of Mobile Bay, and camped outside of Fort Gaines, until the water became smooth enough to allow us to cross the inlet, three and a half miles to Fort Morgan. The Bon Secour bay was followed inside the beach to its head; and we became landlocked in Oyster Bay, a tributary of the Bon Secour River. Only one man in that part of the pines owned a yoke of oxen; he hauled us seven miles through a level country to Portage Creek, which we descended to the wide Perdido River. The Perdido was followed for a few miles to its last great eastern bend, five or six miles from where it empties its water into the Gulf of Mexico. At this point a strip of low land, only three-fourths of a mile in width, separates the river from Big Lagoon. Here we dragged our boats across into the shallowed lagoon, and rowed through it to the town of Warrington and the Pensacola Navy Yard. It was a long pull across the bay to Santa Rosa Island with a head-wind. The distance between the Fort Picken's end of the island and East Pass inlet at its eastern extremity is about forty-eight miles. All through these regions the cabins of the settlers are few indeed.

In this unsettled region deer, wild-cats and coons are abundant; and heavy pine forests give a dreary aspect to the shores of the sounds.

One family of negroes live upon Santa Rosa Island, and are the only settlers to be found along the sound, excepting the four or five families at the narrows on the main shore of Santa Rosa Bay.

At East Pass, on the eastern side of the inlet, resides Capt. L. Destin, a New London, Conn., fisherman. From East Pass it is about thirty miles easterly to the head of Choctawhatchee Bay; and from that end we had our boats hauled through a wild forest, sixteen miles, to West Bay Creek, a tributary of St. Andrew's Sound. We continued our journey through West Bay, across the mouth of North Bay to St. Andrew's East Bay, the entrance of which we crossed as we rowed down to the sea. At this point was first seen the palmetto or cabbage palm, the feathery tops of which gave a tropical cast to the forests. The waters of the Mexican Gulf were now before us, or rather were seen through the great openings in the beach on our right as we rowed inside the sandy islands, which act as a barrier to keep out the rough waves of the great Southern sea. We camped inside of Crooked Island; and the following day, having rowed as far eastward as the gradually closing interior water-course would allow, we hauled our boats across the beach, and launched out upon the waters of the Gulf. A few miles of hard pulling brought us to St. Joseph's Bay, which we followed to its eastern end where we became land-locked four miles above Cape St. Blas. It was necessary to make another portage of about a quarter of a mile across the beech into the Gulf again. We slept in our boats for two nights awaiting the subsidence of the sea—then launched our little craft once more upon the restless waves. As we pulled up the beach great black-fish came in schools, and dividing into four companies, one on each side, and a party in front and one astern of the boats, in the most dignified manner convoyed us three miles to where we parted company; we to go through the surf to make a landing on the strand; they to follow the bent of their inclinations. These great fellows, weighing from five hundred to one thousand pounds each, seemed loath to leave us, for they swam slowly seaward (s)pouting as they rolled their dark bodies above the waves. The landing was accomplished without slopping much water; and we immediately hauled over the beach three or four hundred feet into the lagoon or western branch of St. Vincent's Sound. Two miles eastward of where we made our landing is Indian Pass, an inlet through which we could have entered the sound, but heavy seas were breaking upon the bar, and any attempt to have entered the inlet at that time would have proved disastrous to us.

Emerging from the lagoon we camped in a palmetto grove, and were detained in that wild retreat for two nights and a day by heavy head-winds. When the gale was over we rowed by moonlight thirteen miles up the sound to the port of Apalachicola, where the kind attentions of Capt. Daniel Fry, U. S. Gov. Inspector of steamboats, and the comforts enjoyed in his "cottage by the sea" made us forget the hardships of our lonely journey along the Gulf coast. In a day or two we expect to continue the journey to Cedar Keys *via* St. Marks. We have only one hundred and sixty five miles to row when our long journey from the head of the Ohio will end. As the colored post master at St. Marks, Fla., *cannot read* he has neglected to forward the letters sent to us, for weeks past, through his office, though he received written orders to do so; consequently we have not heard from the North for eight weeks. The route from Apalachicola to Cedar Keys follows the north shore of St. George's Sound to Crooked River; thence through that river, the Ocklockony Bay and open gulf waters to St. Marks. From St. Mark's the shoal waters of the open gulf, protected by oyster reefs and shoals, may be safely followed as you coast along the great marshes, dotted with little shell-mound hammocks of the cabbage palm. During last April I emerged in my paper canoe from these marshes at the mouth of the wild Suwanee river, and ended a canoe journey of about two thousand five hundred miles, from the Gulf of St. Lawrence. The five thousand miles of rowing through the connecting water courses of the Continent, during two seasons, has impressed me with the great value and wonderful characteristics of the immense rivers, bays, sounds and harbors which are the heritage of the American people. Capital, combined with intelligence, will, sometime in the future, develope these great gifts to great and important uses. I have not had time or space to tell how these waters teem with fish and animal life, and what they contain to feed generations of peoples yet unborn. Camp-life is not conducive to literary effort. There is too much to be studied to leave time for one to impart the harvest to others. Truly yours.

N. H. B.

WIRE ROPE FOR CABLES.—We find in the last issue of the *Aquatic Monthly* a letter from Commodore R. B. Forbes, of the Eastern Yacht Club, on the subject of steel wire rope as a substitute for chain cables. The idea is an excellent one, and we are only surprised that it has not been already adopted. For yachts particularly, a wire cable would be very convenient, as one of sufficient size could be handled and coiled as easily as a rope. Or a drum could be substituted for the old fashioned windlass, and the cable reeled in on that. Mr. Forbes says that those who have merely seen and used common wire rope can have no idea of the pliability of the rope now making at the Charlestown yard out of English steel wire. He describes a cable now in process of manufacture which is four and three-quarter inches, and comprises six strands laid up around a hempen core or heart, each strand also with a similar core, which gives great pliability. One of these strands would make a cable for a schooner of 100 tons. The old hempen cables used before chains became common had many advantages, particularly in the ease with which they were handled; the chief objection to them being their liability to chafe and part when in contact with the bottom. When overlaid with this pliable steel wire this objection would be entirely removed.

ATLANTIC YACHT CLUB.—At the regular annual meeting of this club, held on Saturday last, the following gentlemen were elected as officers for the ensuing year:—Commodore, George A. Thayer, yacht Triton; Vice-Commodore, Latham A. Fish, yacht Agnes; Rear Commodore, William Cooper, yacht Orion; Recording Secretary, John B. Morgan; Treasurer, S. W. Knowles; Measurer, Chris. T. Lippitt. Tuesday, June 6, was fixed as the day for the annual regatta, which was placed under the management of the following committee: Edward Arnold, C. T. Lippitt and W. W. Richards.

—The Beverly Yacht Club held their annual meeting on the 11th inst., and elected the following officers:—Commodore, H. H. Buck, of the Thecla; Vice-Commodore, Arthur Burgess, of the Fanchon; Secretary and Treasurer, W. Lloyd Jeffries, of the Bluebell; Measurer, E. B. Russell. Regatta committee—Walter Burgess, of the Tulip; Parkman Dexter, of the Mariquita; P. Grant, Jr., of the Water Lily; E. B. Russell and W. Lloyd Jeffries.

—A new schooner yacht is being built at Cobourg, Canada, for the purpose of competing in the centennial match for the Queen's Cup. The appearance of a Canadian yacht racing in our waters will be hailed as a welcome, although unusual event.

—Poillon Brothers are building for Mr. Peabody Russell, a large steam yacht, 80 feet long, 18 feet beam and 9 feet hold. She will be fitted with sufficient canvas to reach England under sail, and upon her arrival over there the engines will be put in. She is now in frame and will be completed by May 1.

—The following gentlemen have been elected as officers of the South Boston Yacht Club: Commodore, J. B Moody; Vice Commodore, S. J. Capen; Fleet Captain, John Channock; Recording Secretary, John Morris; Financial Secretary, E. H. Maloney; Treasurer, Thomas Christian; Measurer, John Winniatt; Trustees, J. G. Chambers, F. S. Wright and G. G. Morris. S. J. Capen declined the nomination and the matter was referred to the committee.

—The Rockaway Yacht Club which was organized in 1871, and incorporated in 1875, held its annual meeting on Thursday, March 9th. The following gentlemen were elected officers: Commodore, Daniel Lord, Jr.; President, Nath'l Jarvis, Jr.; Vice-President, A. H. Stevens; Treasurer, Alfred Neilson; Secretary, Henry H. Man; Measurer, N. T. Laurence. Regatta Committe—Daniel Lord, Jr.; Wm. Lummis, Charles A. Cheever. The club-house is situated at Far Rockaway, L. I. This club has some of the fastest open yachts in the country enrolled in its fleet, and expect to be well represented at the coming Centennial regatta.

—At the annual meeting of the Knickerbocker Yacht Club, of this city, the following officers were elected for the ensuing year:—Commodore, Edgar Williams (third term); Vice Commodore, Wm. Ruddiman; Secretary, E. M. Sanson; Measurer, John Potter; Treasurer, C. O. Baker; Board of Directors—John Potter, Wm. Ruddiman, Dr. McElroy, E. M. Sanson, and Geo. A. Henshaw.

THE HARVARD—YALE RACE.—The following is the agreement between the boat clubs of Harvard and Yale Universities with reference to the eight-oared four mile straight-away race, to be rowed at Springfield, Mass., on the 30th June. This agreement is dated March 11, and was completed only very recently.

ARTICLE 1. All members of the University who are candidates for the degree of A. B. or Ph. B., who have been pursuing their studies for nine months previous to the day of the race, or candidates for the degree of LL.B., B. D., M. D., Ph. D., or A. M., who have been pursuing their studies for one term previous to the day of the race, shall be eligible to row on the University crew. Provided, however, that all candidates for the last five degrees above named—to-wit, LL.B., M. D., Ph. D., A. M., or B. D.—shall have previously taken the degree of A. B., B. S., or Ph. B. from the college on whose crew they are to row. No graduate shall be considered a candidate for a degree unless his name is in the catalogue or unless he shall present, if desired, a certificate of membership in one of the departments above named, signed by the secretary of the college or other proper authority.

ART. 2. The race shall be rowed on June 20th, 1876.

ART. 3 The race shall be rowed at Springfield, Mass.

ART. 4. The race shall be rowed on suitable waters as defined by the umpire and in accordance with the laws of Oxford and Cambridge universities now in use.

ART. 5. A gentleman of reputation shall be chosen as umpire. The fact that he is a graduate of either college shall not debar him from serving in that capacity. Each college shall make a nomination for that position, and if the nomination be accepted by the other college, the final choice shall be decided by lot.

The articles of agreement are signed on the part of Harvard by W. J. Weld, Jr., President of the University Boat Club, and by the Yale Committee on the part of Yale. The rules are those governing the Oxford and Cambridge matches.

—The Fisherman's Rowing Association of Halifax, N. S., send word that their crew will go into training about the 1st of April, and that they expect to contest the four-oared, pair-oared and single scull races in the international regattas on the Schuylkill during the Centennial Exhibition. W. H. Daily, champion oarsman of California, is organizing a crew of four, and hopes to have single scull entries also in the international regattas.

—De Witt's Base Ball Guide for 1876, edited by Mr. Chadwick, will be the most complete edition of that standard base ball book yet published. Besides containing complete statistics of the play of the professionals and amateurs during the past season, batting and pitching averages, etc., and special chapters giving instructions in the new points of play, it will be illustrated with cuts showing the legal and illegal attitudes in delivering the ball, and the best style of handling the bat. Also the scores in full of the noted games in Canada, by amateurs as well as professionals; the whole containing over a hundred pages, including the new codes of rules of the professional and amateur clubs.

—Among the League playing rules are to be found the appended amendments, suggested by Mr. Chadwick in his articles on the subject last winter:—

"A player running on a foul taken on the fly is liable to the same penalties as one running on a fair fly. But, on the other hand, a player standing on his base when the ball is caught, or touching his bag after the fly is taken, can run for his bases just as if that foul were a fair fly. Again, if the hit be a foul grounder, the player who has started to run can regain his base without any danger of being put out. No ball shall contain more than one ounce of rubber, but the ball may be all yarn. The effort was made to establish the all-yarn ball as the only ball to be used by the League; but this failed, and the following compromise was come to: The home club should have the option of using either the all-yarn or the rubber-core ball, as they felt inclined, and any change in the ball during the game was to made in accordance with the original ball selected.

—The match at foot-ball between Harvard and McGill (Montreal) Universities will be played at Cambridge, Mass., probably on the 18th of May.

—By next Saturday the probability is that the Brooklyn Club professionals will be in the field playing against picked nines at the Capitoline grounds every fine afternoon.

Camping Tents
AND
Canvas Boats
Water-Proofed & Mildew-Proofed
BY TAPPAN PROCESS.

Warranted superior to anything ever before offered to the public. Flexible at all times. Will not grow stiff, lasting twice as long as any other goods. Orders received and promptly filled by

BRADFORD & ANTHONY, Boston, Mass.
JAMES LYNCH, 124 and 1278 W. Broadway, N. Y.
THOMPSON & SON, 338 Broadway, N. Y.
THOMAS H. REES, 36 S. Fifth street, Phila.

PISCICULTURE.

The West Barnstable (Mass.) Hatching Works are offered for sale. The various ponds and tanks are abundantly fed by springs unvarying in temperature. Six acres of land, dwelling house, a large ice-house, etc., etc., within five minutes' walk of the depot. Three thousand adult trout, and 20,000 fry of this years' hatching. A more complete establishment is not to be found in the country. It received the first prize of $300 from the Massachusetts Agricultural Society in 1873, and a medal from the Societe d' Acclimation, of Paris, in 1878, for "Excellent Fish Farm." Apply to E. DEXTER, No. 46 Chestnut st., Boston.

CHALLENGE.
The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all evidence to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.
The powder is also well adapted for shot guns.
Inquire for the "Dittmar Powder" of your dealer, or address the
DITTMAR POWDER MANF'G CO.,
mch 16 NEPONSET, MASS.

Water-proof and Mildew-proof.
We are prepared to water proof, by an improved process, Canvas for Boat Covers, Tents, Sails, Boat Cushions, Camp Beds, Lounges, Hammocks, Clothes Bags, Fishing Rod Bags, Gun Covers, Correl Netting, Woolen and other material for Clothing, Hats, Haversacks, Awnings, Wagon Tops, Horse Blankets, etc.

The treatment by this patented process of all Textile Fabrics effectually prevents

Dampness, Mildew, Dry Rot, Etc.

It is a water repellant especially valuable to

Sportsmen and Anglers,

Rendering all fabrics prepared with this material not only Water-proof, Mildew-proof, and Moth-proof, but stronger and more durable.

Bradford & Anthony,
mch16 4t 374 Washington street, Boston.

FOR SALE, OR TO LET.
The elegant country residence, WILLOW LAKE, at Locust Valley, near Glen Cove, Long Island.

Suitable for Summer Boarding-House.

The house is 2½ stories, frame, 40 feet front and 32 feet deep, with wide piazza front, rear, and on south end. On first floor are parlors, sitting-room, and dining-room; wide hall through the center. Up stairs are 9 bed-rooms, all large and airy; kitchen well-arranged and convenient; cellar large and dry.

On the premises, and at a convenient distance from the house, are a stable and carriage house, chicken-house, shed, coal, tool, and ice houses. The grounds are well laid out and tastefully planted with ornamental trees and shrubbery. The avenue leading from the road to the house skirts a beautiful lake, on the border of which the house stands. A Paper Mill at the north end of the lake will be sold with the above, subject to a lease. The lake and land embrace about 27 acres. As a place of residence it is elegant and healthy; for manufacturers it is convenient; for the propagation of trout, for pleasure or profit, there is no better place in the State. Apply to

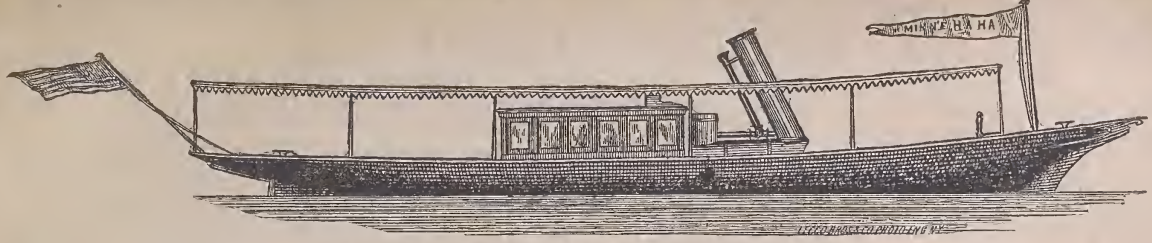
BUY IT Vanity Fair.
It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular.
WM S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.
I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first class.

For Sportsmen.
A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. B. Lamberton, Rochester.
Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.



For Cigarettes.
A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.
We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

THE
PAPER STEM PIPE.
Just the Thing for Home and Camp Use.
Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

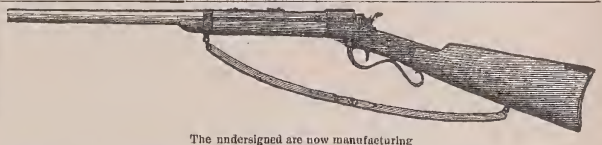
Paper and Metallic Shells
FOR
Breech Loading Shot Guns,
Manufactured by the
UNION METALLIC CARTRIDGE CO.,
BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.
Not sold at retail by the manufacturers. dec23 tf



Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fast like moveable anvil made of steel. The nickle cone also prevents misfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3½ inches.

Shells and Loaders, and description Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.

From Captain Bogardus, Champion Wing Shot of America.

Messrs. GEORGE E. HART & Co.,
Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly.

H. L. DUNCKLEE'S
PATENT
CAMPING and MINING

STOVE.
PATENTED JUNE 23, 1875.

Outside dimensions, packed, 12x12x20 inches.

Weighing only 25 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 3 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, gridiron, teat collar, 8 ft. funnel, and an oven that will roast 15 poonds beef.

The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen plates, knives, forks, spoons, and drinking cups. Price, complete, $15.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ¼ lb.

All of the above give high velocities and less resistance than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration*. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ¼ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER. ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

CHAMPION GUNS OF ENGLAND

PAPE'S

Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12 Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12 Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape	Davidson

60 yards, Long Range, Sporting Boring.

1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1⅛ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¾ oz. shot.

1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In the new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best bousces in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

Camp Life in Florida.

By CHARLES HALLOCK,

AUTHOR OF THE FISHING TOURIST.

This is a most seasonable book for Sportsmen, Tourists, Invalids, and Settlers, and has been long needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of inferior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

318 pp., 12mo. Price, $1 50.

CONTENTS:

Introductory Chapter.
Birds-eye Glance at Florida.
Outfit for Sportsmen.
Hints for Sportsmen Hunting.
Coastwise Route of Travel.
Game Animals and Birds of Florida.
Game Fish of Florida.
Three Months in Florida for One Hundred Dollars.
Supplementary Hints for Cheap Recreation.
Up the St. John River.
Indian River.
Florida the Promised Land.
Fort Capron.

THE AMERICAN NEWS COMPANY, AGENTS.

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 22, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. *The Wyoming does not carry passengers.* The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families *en route* for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

Overland Notes.

NUMBER FOUR.

A FEW days after Mr. Link's load of game aroused our hunting spirit to fever heat we left Manitou in a rong wagon with a constant foreground of ears apperining to two diminutive mules, and started for his ranche the Platte River, distant thirty-four miles. The day as clear and crisp, the warm sun had removed all the aces of a recent snow storm except from shady nooks, d so warm were its rays that our wraps were soon throwu ck. Our route was through the famous Ute Pass, the st of all the entrances to South Park, and an important roughfare for mining, Indian, and Government supply ins. The old time-worn trail has been improved by odern engineering, and a road cut along the rocky sides the chasm for some miles, opening most beautiful nery. For some twenty miles the ascent was almost nstant until at Hayden's Park the road attained an altie of nine thousand feet and over. Pike's Peak was a nstant object of interest on our left, here not a peak but long massive ridge of stone rising in abrupt cliffs. On sky line wreaths of drifting snow showed against the e-like frayed edges. The timber line is very strongly rked, all vegetation ceasing at one line, no margin of shrubs gaining a hold beyond the dark masses of uce and balsam growth. The limit is at about twelve ousand feet, some eight thousand feet higher than on the ite Mountain Range. Ranches are built at nine and ten usand feet, and snow rarely remains long upon the sumof the pass where exposed to the sun. For lunch we ned our baskets by a clear spring, and made a fire for ting our coffee, sitting down on dry ground with no ing of chill, within six feet of a snow bank that reed from a recent storm.

nst as the sun set, and the full moon rose, we comced the descent into the Platte Valley, most enchantviews opening before us of half wooded plains surnded by range upon range of serried mountain line all hing the last rays upon their glittering peaks. Guardeach side of the road are huge masses of rock one upon ther, rising far above the pines, known as the twins, looking between them the view was one suggesting lscape outline, so picturesque were the groups of dark s, and so clear and broad the sweep of natural lawns. road was perfect, dry and smooth as those of Central k, and we spun along, our mules on the gallop, the crisp ing air fresh upon us, until with one lovely view after her the day passed away, and under the full moon y romantic feature of the landscape was entranced in d beauty and unreal character. A few small cottages e scattered on the bottom land, where from open doors windows flashed the warm rich light of burning pitch , reminding us with its ruddy glow and fragrant smell ne evening views in the South.

o impression of recent occupation is received from this liar land. The fields are as fair and free from stump ound as English meadows, the trees stand singly, iag wide and free as trees only grow where there are ivals for their share of sun and air; while all that art d do in obedience to Londou's rules nature has worked in long centuries with no eye to admire the graceful t, unless some Indian felt an appeal to his better nature e widespread wealth of beauty.

on we came upon the Platte River, and were at the of Mr. Link's ranche, where we got slowly unfolded our wraps, and soon were toasting before a huge blaze ne that filled a wide throated chimney.

e next morning, a fair, bright day, Mr. Link and I ed on horseback to hunt for deer. We rode up a wide , and after a few miles came upon steep foot hills, tains in our ideas; and now riding up, now leading horses over stony banks and ledges where it seemed nd the power of a horse to go, we wound our way among scattered pines, carefully scanning the slopes for our game. After a time Mr. Link proclaimed game in sight, and leveled his rifle for me to sight over, but it was sometime before I could see the herd of deer. The air was so clear that the hill-side they were on seemed very near, so near that I looked vainly for large fawns, and only after close examination saw what looked like rabbits among bushes, really large black-tailed deer among pines, when I realized the distance that so deceived me. We urged our horses down the hill and along the valley, smashing through thickets of willow and quaking asp, eager to get the wind in our favor, well aware that these deer are far more dependent upon smell than sight or hearing for warning of danger. When we felt safe with regard to the note-bearing of the light wind, we turned up a spur of the hill where the deer were, and after a steep pull dismounted, lariated the panting horses, and started to stalk the game we had seen. No more beautiful ground can exist for this sport than these mountains, rising into a crisp high air that stimulates every sense, and braces every muscle, where fatigue passes away after a brief rest, and new impulse comes with each hours' effort; where the rocks and scattered trees afford concealment without shutting in the view, and firm rough ground gives firm footing for the scramble, but it is a fair fight with no favor, and he who gets game must work for it. No hounds can here drive the deer to easy shots from some concealed resting place, nor can a "guide" paddle up and hold deer by the tail until, after many misses, a ball terminates their agony of fright. They are free as air, keen and alert, calling for guarded but prompt action, and the hunters most profound strategy.

Mr. Link was most proficient in the ways of all mountain game, uniting with remarkable physical energy and endurance, a great fund of information enabling him to tell with seeming instinct where game would feed, rest, or run, and he was rarely in error. These deer, he said, would work up the mountain, if not around it, before we could reach their pass, then to a second spur. To head them we made our ascent as rapidly as we could, halting at times for air. We were in time, for in the snow that remained in the shade there were no tracks, and sure that they were below us we full cocked our rifles and crept along a commanding ridge, watching eagerly every bush and opening. After a little we found their fresh trail, and followed it as it wound about the mountain, expecting every moment to come upon them, for they were evidently not hurried or alarmed, as at times they wandered slowly around evidently wishing to lie down for their mid-day rest, but we crept after the trail a long time, up dry cliffs, and sliding down snowy banks where no sunlight fell to carry away the snow fall. We were disappointed to find they had crossed an open gulch, and ascended a second mountain. Mr. Link said he would climb it if I would watch a pass, which I did, but the herd evaded me by going just under a ridge out of sight, but yet very near. Rejoined by Mr. Link we slowly dragged our now tired limbs over the rocks of the mountain to points where he had frequently found deer, and at last concluded to separate, he to follow a ravine, I to cross a crest. We had hardly parted when from some low shrubs several deer sprang up, one a large doe, facing me at about one hundred yards. I drew a careful bead, and fired, and seeing her rear and fall over backward, and go sliding down the hill with her heels wildly flourishing in the air, imagined her done for, and sent my second shot hurriedly at long range after a deer that was watching with wondering eyes the strange antics of its companion. This shot went wildly, as did one from Mr. Link's rifle which cut a branch over my head on its way, and the remainder of the herd disappeared with long graceful bounds. Turning to bag the doe, great was my astonishment to find her *non inventus*, with Mr. Link and his dog hastening along her trail, plain enough from showers of blood. She had gone struggling down the hill, gathered her feet under her at the bottom, and with last energy gone flying down the mountain side, going so far that we reluctantly abandoned pursuit, Mr. Link feeling some instinct would guide her to the river where we would find her. Again, on the summit of the mountain we divided to stalk different sides of a long ridge. Mr. Link was hardly out of sight before his rifle rang out once and again. I watched eagerly for flying game, but none came to my side of the range, and I arrived at our rendezvous without incident, where I built a fire, and kept warm as the shadows grew long. After a time Mr. Link came up bearing a fine venison, and said he had hung up another, leaving a mitten with it to frighten away coyotes and wild cats. Tired, we mounted and rode home, enjoying the moonlight on the valley of the Platte.

Our second days' hunting was about the same group of mountains, where we made a long detour among the bushy ravines seeking to find the lairs of some bears that were reported as being in the vicinity. We saw no deer, but came upon elk tracks quite fresh, and after a long rough ride came in bringing the second deer, shot by Mr. Link, and my doe, which we found by the river, just where Mr. Link said she would run. She was shot hard in the head, and it seemed incredible that she should run so far.

A snow storm of some inches prevented any pleasant hunting for a few days, and made the deer move on so that we found very few signs in our tramps. When a fair day came we set out for a range not before hunted, and, separating, hunted each side of several peaks. Leading my old nag "John" around one sunny mountain side I came upon tracks in abundance, and leaving John under a pine I set out guardedly upon the fresh trail, and gradually gained a summit commanding a wide view. No game was in sight, but I heard Mr. Link's rifle speaking loud and fast, and after a little he came up on a return trail, and I found he had seen the herd on a ridge below me, probably alarmed by my coming, and had shot two at some *three hundred yards*, before they could determine the source of danger. We secured these and hung them up, and set out on the trail of two fugitives, a large buck and a doe, whose flying hounds over rock and log, often down many feet upon sharp stones made me wonder at the strength of their slender legs. We followed over a ridge or two, when Mr. Link said "they will probably go up to the next summit and lie down where they can look back upon their trail," and carefully peering across the next ravine we discovered them watching their back track, so we drew back guardedly, left our horses, and made a long detour hoping to surprise them in spite of their cunning precautions. Step by step we stalked their retreat, but the wind played us false, and veered around for a storm, and shots at fleeting forms was all we had at them, but in a moment we saw two other deer bound up an opposite slope, and when far up stop still and look back. They were a long way off, some three hundred and fifty yards, but we drew an aim and fired. They did not move, and I took a second shot, while Mr. Link wrestled manfully with a jammed cartridge, and spoke his mind freely during the contest. I, with but one remaining load, having dropped my coat to get rid of weight, would not risk it again, so Mr. Link, having with his hatchet freed his gun, raised his sight and fired again, a splendid shot, the larger deer falling dead from cliff to cliff. This made him three deer within an hour, all killed at over three hundred yards. Disappointed with my two shots, I tested my rifle, a fine one by W. & C. Scott & Sons, and found that I had done it injustice by distrusting its power at such long range, and over elevated it. Had I fully appreciated its great range and power, I should not have over shot the deer as I did by ten feet.

This hunt terminated our expeditions for deer, and we commenced arrangements for an elk and bison hunt, as I was anxious to see these fine animals, even if unsuccessful in killing them.

I never saw more enjoyable hunting, or found a more interesting country than this. In October, or early November, the sport would be better, and game less wild. The black-tail deer is very large, with sharp branching antlers, quite in form like elk horns, forming a fine trophy.

RECOLLECTIONS OF AN OLD TRAPPER.

A CRANK boat the trapper navigates, you say? Yes, as tottlish a craft as you would want to trust yourself on board of. Flat-bottomed, three clap boards deep, two and a half feet beam, and sharp as a wedge at bow and stern; it will capsize as easily as a bark canoe, but it is a good boat for running over scarcely submerged logs, and creeping among the button bushes and close-set trunks of the water maples, which its owner's business constantly requires, and he will cross the "wide ma'ash" in it when the south wind is blowing great guns, and the swells are running as big as a hogshead. A vastly better craft than the old "dug-outs," which the trappers used in that olden time that we love to talk of, "when we were boys," for it is lighter, and no more crank than they were. You can see the cracked and weather-beaten remains of a "dug out" lying in the driftwood there now. They were the commonest craft on these waters forty years ago, and every trapper and fisherman owned his "cannew." How well I remember seeing the old chaps trolling up and down the creek, "paddling their own canoe," with a short pole under one knee and over the other, a thirty foot line as thick as a pipe-stem, with a big hook at the end baited most temptingly with pork rind and red flannel, or a strip of pickerel's belly. And so they would paddle silently along, just skirting the "ma'ash," and take prodigious fares of slab-sided pickerel. Old Joe White and Uncle Stafford would catch more pickerel in a trip from the falls to the sand bar with these primitive lines than the most skilful hand, wielding the fanciest spoon, can get in all day now.

In these craft the old time hunters went ducking. A greeu hand was likely enough to get more "ducking" than he cared for if he ventured afloat in one of them. Paddling silently around a bend of the channel, they would come upon a great flock of black ducks (dusky ducks) feeding upon wild oats. The paddle was laid carefully in the boat, the ancient Queen's arm, or musket of 1812, as carefully raised, cocked, and sighted for a full half minute, and then, if the clumsy flint lock did not miss fire, off went the venerable piece with a psh, bang! waking all the echoes for three miles around, knocking over a dozen or more ducks, kicking its ramrod half its length out, its bands loose, and shooter and canoe a yard astern. Once or twice a day was as often as any man of ordinary pluck would care to shoot such a gun, and so most likely after such a shot he would pick up his game and paddle home.

Thus it was the woe of Sile Baily to hunt the wild fowl of Little Otter in his "cannew," with his "ole 'fowgee,'" and, according to the tales with which he feasted my boyish ear, terrible was the havoc which followed the discharge of that fateful weapon when he "come ontew a flock of wood ducks a-setting asleep on a log, as demute as could be, I pinted my ole fewgee, and bime-by I onhitched an' gin ten on 'em more'n they could eayry, by gol!"

Old Brian Bowen, who had served under Wellington in the Peninsular War, and whose discharge set forth that "he was an indifferent soldier, but an honest man," used to bait the ducks with oats scattered on a board laid in the marsh, which he could take from an ambush hard by. Nort Lock was a great duck hunter of those days, and John Gage another, and a fox hunter, too.

Under the guidance of Jim Baily, half-brother to Lile, I made some of my earliest attempts at duck shooting. Yonder where that oak overhangs the bank is what used to be known as the "John Clarke place," because J. C. used to fish there, and there we were, then, almost sure to find a flock of wood ducks basking on the fallen trees or paddling lazily about in the narrow channel any day from the middle of August till the middle of October, and could crawl up and get a shot, Jim leading and I close at his heels. I remember one of Jim's notions was, that a paper wad over shot would impede their force. We knew nothing of felt wadding then, and so he always used rags when he could not get tow.

Speaking of canoes reminds me of old Tom Sweet's bear fight. He was fishing in his log canoe out there in the creek one rainy day in haying time, seventy years or more ago, when he saw a bear swimming the channel, so he pulled up stakes and made for her, and belabored her head with his paddle till he killed her. Then, towing her ashore, he made a harness of bark for the old mare which had borne him through the woods from his home among the hills, and so dragged his prize back to it in triumph.

The woods were then as full of game as the waters were with fish. My grandfather used often to see deer feeding with the cattle at the stacks and in the pastures, and one day a noble buck trotted through the frame of a new house he was building. Three moose passed over the ledge near the house, and a lynx was shot still nearer by one of the boys. Such myriads of ducks as these waters teemed with, even when I was young, we shall never see the tenth, no, nor the hundredth part of again. More dusky ducks and wood ducks were reared here then than we see in a whole season now, and in September the hordes began to come down from the northern breeding-grounds, and each day brought reinforcements of them, and immense flocks of blue-winged teal and many other kinds till the marshes were swarming with them; and they tarried here till cold weather caused them to seek more genial cliines. Then the dusky duck and teal fed all day and night in the marshes, only going to the lake for sand, and then returning. Now, for the most part, they remain in the lake all day, come in at night to feed, and are off again to the safer waters of broad Champlain at daylight. A noticeable change in the habits of the wood ducks is, that though it was then by no means uncommon to see them in flocks of fifty and upward, it is now rare to find more than a dozen together, though many times that number may be got up by ones, twos, threes, or half dozens, in boating the length of the river Shang. Then the teal almost invariably used to follow the winding channel in their flight. Now the few that are left have learned to avoid it and the gunners ambushed at its margin, flying high and over the marshes. The railroad has eaten away the woods that clothed these banks twenty years ago, so destroying all the hidden nooks and coigns of vantage so beloved of inland water ducks, and the diabolical yell of the steam whistle continually disturbs them when they chance to have a short respite from the almost incessant persecutions of gunners, old and young.

Alas for those glorious days of well-stocked woods and waters! They are gone past all returning, and we can only try to keep good the numbers of the little game left us by the "march of improvement" and the long years of nonprotection. If we can enforce our game laws we may have fair sport yet in years to come, though never again such sport as used to be, and to this end every sportsman should labor with a will.

But the sun has sunk behind the Adirondacks, and their ancient peaks are "a looming bastion, fringed with fire." The shadows thicken on the quiet waters, unbroken by the wake of even one muskrat. The great horned owl is beginning to sound his solemn notes in Wheeler's woods, so let us shoulder our useless guns and trudge home to supper and fireside. AWANSOOSE.

TWO HOURS' FISHING IN THE GULF OF CALIFORNIA.

ONE day when the United States surveying ship Narragansett anchored off "San Juan Bautista Flats," in the Gulf of California, and about seventy-five miles above the city of Guaymas, a long, lean, lank specimen of Ethiopia stepped up to the officer of the deck and requested "permission to fish, sah." "Why, Lewis," responded the officer, "I don't think that there are any fish hereabout;" and it did not look very inviting. A low, flat country, extending some twenty miles back to the mountains, a sandy beach either way as far as the eyes could reach, did not hold forth much promise of the lively sport that soon followed the permission to fish to the questioner, Jim Lewis. Jim had a peculiar history, and claimed to be a veritable African prince, stolen from his native wilds by a Dutch whaler. He deserted at Honolulu, Sandwich Island, where the Narragansett picked him up. A more grotesque object than Jim Lewis, when he first came aboard the ship, decked out in a plug hat and a long "Dundreary" overcoat, although the thermometer was up among the nineties, reaching near to the ground, and from beneath peeped a pair of No. 20 scows. But we are digressing. Jim obtained his permission, and planted himself on the port cathead in less time than it has taken me to write this he had his line overboard and a fine large fellow of the weak-fish species inboard. "Dar he, me got em," rang out so frequently that it became contagious, and in a short time the whole ship's crew that could muster hook and line were engaged in the pastime, and soon extended to the officers of duty, the men monopolizing the forecastle, cats, channels, and whisker booms, while the officers confined themselves to the bridge amidships. The fish caught were mostly of a species greatly resembling the weak-fish, yet I do not think that they were the weak-fish proper. They were of a beautiful shape, somewhat like the salmon, variegated color and large scale, and averaged from three to five pounds. The meat was rather soft, yet went very well after our long feasting on such luxuries as salt horse and beans. So fast were they caught that it became a nuisance to take them off the hook. One officer, in less than ten minutes' actual fishing, scored 203 pounds of fish, and had only two fish, one weighing 113 pounds and the other ninety pounds. They are not a game fish; even the large ones bite easily, and give up as soon as you get them to the surface, where they are landed without trouble by fastening a "gable hook" in their gills and attaching a "purchase." The deck was covered with fish, and the men began to tire of the monotonous pleasure, when a bright idea seems to have made its way through the thick skull of the darkey. "He had got tired of the small fry; he was going to fish for a whale, that he was." He baited a hook —big enough to catch one, anyway—with a live fish, weighing about five pounds, and took himself to the eat, again to await events. Every once in a while the fish would rebel at the enforced curtailment of its liberty, and wriggle, and Jim, with his usual exclamation, "Dar he, me got em," would haul in, only to find that his bait was alive and kicking. "Me don't get fooled no more by dat squirmer, anyhow," Jim remarked, as he wound the line around his wrist, and was soon in a doze under the influence of the tropical sun. "Lor' mighty! what dat!" exclaimed the excited darkey as he received a yank that nearly pulled his arm out of its socket, and set his teeth a-rattling and eye-balls rolling. "Dar he, me ——," but before he could finish the sentence a black shadow shot through the air, and Prince Jim was floundering in the water. All hands rushed to the ship's side to see the sport. No one had any doubt about the result, or that any harm would come to the darkey. He was warranted not to drown when shipped, and could hang on to the rigging by his toes, so the boatswain said, but I never saw him do it, though. It looked for awhile as if Jim had really caught a whale, and when he came up each time, and the "Dar he, me got em" issued from his expansive jaws with the salt water, it was pretty certain that whatever was at one end of the line Jim Lewis was at the other, and intended to stick there. A light line was thrown to him, which he made fast to the fish line, and a brace of strong sailors on the forecastle played the fish until they tired him out, while Jim swam to the swinging boom and hoisted himself inboard, none the worse off, but a little more awake after the involuntary ducking.

The fish, which proved to be an immense jew fish, was harpooned and soon landed on the deck. It weighed 210 pounds. Prince Jim was the hero of the hour. Elated with his good luck, he became generous, and presented the captured fish to the crew. Good luck does, somehow or other, open the well-spring of generosity, even in the lowliest of us, and when Jim gave the fish to his messmates he reserved only the liver for himself, and as it weighed several pounds it was a princely dinner, even for an African prince. He prepared it himself, with onions and such other vegetables as the limited stock of the ship afforded. When Prince Jim arose from the repast, what was left would not have kept a mouse alive. He betook himself to his hammock for an after dinner nap, and when he awoke his head was swimming around like a top. The surgeon was called, but afforded him but little relief, as he could not tell at the time what the matter was. Prince Jim grew worse, and his head began to swell until, with the ungainly brown blanket that he had wrapped around it, he looked more like a bushel basket full of black rags than a human beiug. His howling in the night was fearful, and nearly drove the mid-watch wild. The doctor did what he could for him to relieve his sufferings, which, on examination, proved to be caused by the liver being poisoned, as frequently happens from something that the fish has eaten. When the prince heard that he was poisoned he laid back in his hammock with a grunt, and told the doctor that he was "a gone darkey this time, sure." But he got better, and the day after he left the "sick bay" he began to peel his hide, which was as black as the ace of spades, came off from the crown of his head to his toe nails, as it taken off with a "spoke shave." Prince Jim was none the less pleased that it left him a score of shades lighter than before.

Fish of all sizes were lying all over the deck; enough had been caught and salted to last the ship's crew of 150 men for three weeks, while the officers regaled themselves daily on the roe, that the Chinese steward, after a fashion known only to himself, managed to preserve fresh for several days. Every one seemed satisfied when the boatswain's shrill whistle was heard, and he piped "All hands knock off fishing," and set the landsmen to washing down the deck. EARL ELTON.

For Forest and Stream.

OUTWITTING A FOX.

UP in the Green Mountains many years ago I boarded in the family of an old time fox hunter, known in the region for short as "Dan." Many a day's sport have I had with Dan, following the hounds and dodging the known beats of the sly red game. On a certain mountain side we frequently started an old female fox, so light colored as to be nearer yellow than red. We always knew her at first sight, and for two years she was too sharp for us, and it would take a column of FOREST AND STREAM to tell of her numerous tricks. I will give one, and one which finally proved fatal to Mrs. Reynard. During these two years we rarely hunted with more than two hounds. Dan's was a slut, and very fast, always leaving other dogs far in the rear, and making it lively for the fox, too lively for this old female fox, who would very early in the chase resort to various foxy stratagems, a favorite one of which was to let the hound get within a few feet of her and then run directly down the mountain side, where low, out-cropping rocks were abundant. When the hound was but two or three jumps behind, the fox would drop over the lower side of one of these rocks and instantly skulk. The hound, coursing at full speed, would go far over the fox and quite a long distance down the steep mountain side before it was possible to stop, even if she chanced to see the fox, which was seldom the case, and it would generally take from five to ten minutes before she could again find the track. The instant the hound had passed over the fox the latter would spring directly back upon the rock, and taking the back track would get a long start of the hound. Sometimes the fox would jump back upon the rock and drop flat, when she would watch the movements of the puzzled dog for several minutes, and at a favorable moment slip away. The second year Dan's slut raised a very fine pup, which we exercised with his mother after rabbits before the fox-hunting season commenced. The pup had also slipped away with its mother on an occasional fox-chase on their own account, and we found that he was so fleet as to keep close to his mother, even on a fresh track. He had also had some fighting experience in company with his master, killing the woodchucks which were abundant in that region. Our first fox-hunt that season was on the mountain side, where the old light-colored fox had bothered us so often, and we chanced to start her early. At the foot of the mountain ran a mountain stream, and upon the opposite side was an open field, through which foxes frequently passed soon after being started upon the said mountain. Upon this occasion the hounds wound around and up the mountain side, keeping among the numerous young spruces. While they were still high up, we (having remained in the open field opposite) spied the old fox coming down the mountain well ahead of the dogs, and directly towards us. We took our stations, and lay in wait with cocked guns. The fox came right on, and disappeared in an intervening thicket not more than three hundred yards away. On came the dogs, but no fox. In a little time it was evident that they were bothered at the stream about two hundred yards below us. We went down and found the old hound jumping from stone to stone in the stream just where the fox had been, of course. The pup, in the meantime, was working the opposite bank quite well, keeping abreast of its mother. After full half an hour they worked the track up the bank, and in the direction where the fox had first started a full hour before, and took near the same round. We returned to the old runway and kept a close lookout, and after awhile we began to catch glimpses of the dogs in the scattering young spruces, and in a moment out sprang the fox, not fifty feet ahead, and ran directly down the open mountain side, towards and in full view of us. "She's going to try that 'squat game,'" said Dan, nervously, and almost in a whisper. On came the fox and the hounds, now running by sight, and making merry music and fast gaining upon the fox. At last, when the old hound seemed scarcely a length behind the fox, the latter dropped over one of those low out cropping rocks and "squatted," while the hound, seeing her and trying to stop, actually went heels over head several feet down the mountain before she could stop. The old fox, as usual, sprang back upon the rock, but just in time to meet the pup, who fastened upon her, and they were having a lively squabble when the old hound appeared upon the scene and made short work and an abrupt termination of the career of that very smart fox. AQUADALE.

For Forest and Stream.

REEL FOOT LAKE.

IN the northwestern corner of Tennessee in Obion county at an average distance of three miles from, and running south from near the Kentucky state line, parallel to the Mississippi River lies Reel Foot Lake, the production as a result of the so-called New Madrid earthquakes in 181 In extent of water surface it may safely be estimated at fifty miles for length, and ten miles for greatest width, contour irregular, having many points of timbered la projecting into it.

Throughout its area of many square miles the sportsm will see and meet innumerable stumps, logs and cypr knees, enough at all events in a day's rowing to fully t his dexterity in managing his boat, and bring out all t attributes of a refined and moral education. Apart fr these drawbacks, the observant sportsman will disco scenic charms of a character entirely peculiar to this lak from the quiet and shallow land-locked cypress borde bays, to vast expanses of water, with isle of the most limited continuity of dead, bleached, branchless cypr trees, mortal eye ever rested upon, that sank with the ea when the bottom was knocked out of this section of

country by the great *quake*. These dead trees are a great natural curiosity, and form one of its prominent features.

In the northeastern arm of the lake, surrounded and shut in by a thick setting of dead trees, there is a beautiful sheet of water about three miles long, from one to two hundred yards wide, said to be of unknown depth, called the blue basin. Some of the other notable localities are Grassy Point, Long Point, Horse, Starved and Choctaw Islands. This lake is supplied with fresh water, nearly every spring, from the Mississippi, through a slough or bayou that branches from the river a little below Hickman, Ky., debouching near Grassy Point. When the river rises very high the lake and surrounding bottom are overflowed; some seasons the water reaching as high as fifteen feet above the level of the lake, as may be verified by the water marks left on the trees; at such times it is restocked with fish, of every variety found in the Mississippi, to an unknown extent, as the supply seems never to diminish. Reel Foot Creek, running from the east, a stream of considerable size, also empties into it. The outlet of the lake is through the Obion River into the Mississippi.

On this curious and weird lake, from October to their return northward in the spring, geese and ducks, of all varieties, abound, then, too, bass fishing is at its best, the water being cold enough then to put all the requisite snap and vim in their movements, to suit the most fastidious Waltonian. PERDRIX.

Natural History.

[This Department is now under the charge of a competent Naturalist, indorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and seasonal observations will receive careful attention.]

SEND IN THE REPORTS.

LETTER FROM PROF. J. A. ALLEN.

CAMBRIDGE, Mass.

EDITOR FOREST AND STREAM:—

I was very glad indeed to see your "Invitation" in a recent number of FOREST AND STREAM, and have been still further delighted to see that it has begun already to meet with responses. The subject of the migration of our birds is not only one of special importance to ornithologists, but one of more or less interest to all who take an intelligent interest in the feathered inhabitants of our woods and fields. While the cause of the seasonal movement of the different species from one portion of the country to another is only imperfectly known, though recognized as evidently connected with the supply of proper food and the constitutional peculiarities of the different species in respect to their susceptibility to changes of temperature and other climatic influences, the real nature of the immediate cause that prompts them to move at particular times, the routes many of the species take, the time occupied in passing given climatic zones, the influence of sudden changes of the weather in hastening or retarding their movements, are comparatively unknown. The special students of this subject have not as yet the data for determining accurately the usual northern or southern winter, or other seasonal ranges of even many of our most common and well-known species. A long time, too, must elapse apparently before such data will have accumulated in an accessible form, unless the collection of such facts shall in some way be systematically undertaken. FOREST AND STREAM, it seems to me, from its reaching so large a number of intelligent observers interested more or less in natural history, and especially in the history of our birds, and consequently capable, and in many cases willing, to contribute such information, affords just the medium through which such information may be gathered and permanently preserved ready to the hand of some specialist, who, sooner or later, will take up the subject and collate and formulate these gathered facts.

Among the observations of "Miscellaneous Phenomena" registered by the United States Signal Service Bureau are often noted the movements of a few of the larger and more prominent species of birds, together with the leafing and flowering of different kinds of trees and shrubs. These confirm already the impression so prevalent among attentive collectors of birds, that there is some relation between these several categories of phenomena, and also show most markedly that the feathered tribes are warned by their delicate senses of approaching changes of temperature or of the approach of storms sufficiently long before, in many cases, to enable them to avoid them by moving away from their path, or to points where these changes will be less severely felt. The subject is one that offers a fruitful and interesting field for investigation, but before it can be studied with profit, thousand of observations on the movements of our migratory species must be recorded, together with similar observations on the vernation, flowering, and fruiting of many species of trees, shrubs, and herbaceous plants, which must be collated with the accompanying meteorological conditions. Data for the latter are fortunately provided by our National Weather Bureau, and all that is required in addition is the accommodation of just such notes as have begun to appear in your admirable paper.

Every attentive observer knows that some of our migratory species are more abundant during some winters than during others—that some winters we have many northern species in abundance; in others fewer, and these more sparsely represented; that some species that winter in the Middle and Southern States extended further north some winters than others, yet the usual northern limits of any species, between the Atlantic seaboard and the Mississippi River, is as yet, to a certain extent, unknown even to the ornithologist. A field is here open in which many workers can profitably labor in contributing to a more exact knowledge of the migratory and seasonal distribution of our birds, and when only the accumulated observations of many localities and for a considerable period, can result in a real advancement of our knowledge of these interesting matters. In this way, too, we may hope to be able to define the limits of the ranges of many species that are non-migratory as well as migratory, and to find out their relative abundance over different parts of their respective habitats.

An accumulation of fifty or a hundred, or more brief reports like that in your issue of March 2d, respecting the resident winter birds of New Haven, for as many localities, would give information of the highest value respecting the winter range of a score or so of species, from which the special student might generalize with great advantage. Add to this as many more such reports as that from Ephrat, Pa., respecting the coming of the birds, and we shall have a vast amount of valuable information respecting the movements of our birds, far more than as yet is anywhere recorded. It is to be hoped that we shall soon have a series of lines of localities stretching from the Atlantic to the Great Plains, and extending from the Canadas to the Gulf of Mexico, from which we shall have such reports. Notes on the arrival of species at any given locality may be sent in at the end of the migrating season, and if taken from old journals and record books will be just as valuable as if made with special reference to the present call. Doubtless many of the readers of this journal have been accustomed to note such facts for a series of years, and now is the time and the opportunity to place them on permanent record, when they will be accessible to the students of this interesting and important department of ornithology. If the observers who send such notes for publication will not allow themselves to be deterred by any feelings of false modesty or other considerations of preference, from adding their names to their communications, they will give to their contributions an authenticity that will add greatly to their value. J. A. ALLEN.

PROF. GOODE'S DIARY AT THE CAPITAL.

February 12th.—Nesting note of the blue-birds first heard; the subsequent cold weather, however, interfered with their domestic arrangements.

February 19th.—Spring-beauty (*Claytonia Virginica*) and chickweed (*Stellaria media*), in flower.

February 20th.—Song-sparrows (*Melospiza melodia*) abundant.

March 4th.—Herring (*Pomolobus pseudoharengus*) abundant in the market. These are the so-called "branch herring," or "March herring," which the fishermen distinguish from the "glut herring," which arrive two or three weeks later. about one hundred shad (*Alosa sapidissima*) from the Potomac were exposed in market this morning; the first time they have been seen in any numbers, though stragglers were caught as early as the first week in February, for the first time in twenty years, the fishermen say. Shad from Savannah, caught in the St. Johns, Altamaha, Ogeeche, and Savannah rivers, were abundant in the market from Christmas week to about the last week in January, and then were replaced by North Carolina fish, which still constitute the largest supply. Yellow-perch (*Perca flavescens*) are, many of them, full of ripe spawn, which flows easily, while the striped bass (*Roccus lineatus*) seems to be well distended with eggs, not yet mature. The horned suckers (*Moxostoma oblongum*) make their first appearance in market. The craw-fish (*Cambarus affinis*) are seen in market, retailing at fifty cents per dozen. These little crustaceans are taken in immense quantities in the shad seines, and are shipped in barrels to New York, where they are known as *écrevisse*, and meet with ready sale. The liver-leaf (*Hepatica triloba*), whitlow-grass (*Draba verna*), Quaker ladies (*Oldenlandia cerulea*), obolaria (*Obiodria Virginica*), and chickweed (*Stellaria media*), are in flower.

March 5th.—Crow-blackbirds (*Quiscalus purpureus*), abundant, in flocks. English sparrows (*Pyrgita domestica*), building their nests. Robins (*Turdus migratorius*), occasional. Honey bees out in large numbers. *Forsythia viridissima* and *Cydonia Japonica*, in flower in the gardens, their second effort, having been frosted in their first flowering in February.

March 7th.—Trailing arbutus (*Epigæa repens*), in flower.

G. BROWN GOODE.

Smithsonian Institution.

MY FEBRUARY FIELD NOTES—BIRDS.

BY O. C. ABBOTT, M. D.

[*Concluded from page 99.*]

February 13th.—Clear and warm. The birds of yesterday, with an accession of sparrows, of three species. Flocks of red-winged blackbirds passed over the meadows.

February 13th.—Clear; rain in the evening. A new cardinal grosbeak appeared on the hill-side to-day, and a pitched battle ensued. The two fought until one was nearly tailless.

February 14th.—Northeast storm. Not a bird noticed, although I was out of doors a great deal, except the invariable crow, and a bedraggled song-sparrow, that seemed nearly dead.

February 15th.—South rain until sunset. The high wind seemed to disgust even the crows, but at sunset, came a few moments of sunshine and they put in an appearance; titmice (*Lophophanes* and *Parus*), also chirped and twittered as night closed in.

February 16th.—Clear; cold; wind northwest. Cardinal sang all day. Abundance of snow birds. (Is it going to snow)? The red-tailed hawks sailed about all day, very high up, and screamed incessantly. The yellow-birds in great numbers settled upon a large elm in my yard, and twittered all day. They appear to be feeding on the leaf-buds, but really do not injure them. Titmice, nuthatches (*Sitta canadensis*), and brown creepers (*Certhia*), tolerably abundant.

February 17th.—Cloudy; cold; windy. But few birds seen; and none not usually met with.

February 18th.—Cloudy; snow-squalls. Snowbirds more abundant than ever. Saw three flocks of horned-larks (*Eremophila cornuta*), and several woodpeckers, but could not determine the species. Besides the red-tailed hawks of every day; noticed black-hawks (*Archibuteo lagopus*), red-shouldered hawks, and one marsh harrier. The hawks this winter have been very scarce, not more than ten or twelve per cent. of the usual number. A few blue-birds again along the worm fences.

February 19th.—Clear; warmer. No birds noticed, beyond those seen every day.

February 20th.—Clear; warm. The several species of birds seen during the past three weeks seem all present. The meadows, hill-side, and up-land fields all have their feathered occupants; but a sharp lookout failed to detect any bird not previously noted.

February 21st.—Clear; warm. A flock of white-winged cross-bills halted a few moments among the pines, and were off again. This one flock has been about the neighborhood during the whole winter, but has been very erratic in their movements. A collector, living near, has shot several specimens. Previous to to-day, I had seen but a single specimen. The red-winged black-birds, which made a flying visit about a week ago, are here to-day, in fewer numbers, but more sociable, frequenting their old haunts and singing cheerily. Like crow-black birds, they come and go as they feel disposed, and are not what is usually called migratory, but more resemble the robin, in this respect; which latter bird, by the way, is conspicuous for its absence, this year. Usually they are very numerous during February.

February 22d.—Clear; cool. The birds of yesterday, with a merry chorus of song-sparrows ringing in the hill-side thicket, from early morning until noon.

February 23rd.—Clear; windy. No note taken of birds seen.

February 24th.—Clear; very cold. Snow-birds abundant.

February 25th.—Clear; not so cold. Snow-birds abundant. A few song-sparrows noticed, and a flock of yellow-birds.

February 26th.—Clear; warmer. A large flock of cedar-birds seen in the forenoon.

February 27th.—Cloudy; northeast wind. A dull cheerless day, and scarcely a bird of any kind seen.

February 28th and 29th.—No entries made. Absent from home.

Prospect Hill, Trenton, New Jersey.

EFFECT OF COLD ON SMALL BIRDS.

THE birds which arive at New Haven, Conn., in the spring, usually make their appearance about the first week in March in the following order: Woodcock, males and females; crow-blackbirds, males alone; red-winged blackbirds, males alone. The blue-birds, robins, and song-sparrows, which remain with us the year round, leave the vicinity of the seashore, where they have spent the winter, at the first appearance of spring, and returning to their favorite haunts in the meadows and gardens, welcome the opening year with joyous notes. They do not seem inclined to return to their winter abodes if we have cold weather and snow afterwards, but many of them, especially song-sparrows, perish from want of food or the severity of the weather. A late snow has the same effect upon the hardy snowbirds as upon the sparrows, which fact seems rather remarkable, as the snowbirds endure our coldest winter weather and deep snows without any signs of distress. But when the fatal late snow has melted away many of both species frequently may be found lying dead in the hedgerows and gardens. A bird overcome by the weather and want of food seems for a short time more active than its companions, running around as if eagerly searching for food, but taking little notice if any one approaches. Should it attempt to fly, it immediately falls on its back, as if shot. The legs and toes are stretched out to their farthest extent, and are quite rigid; the eyes protrude and are insensible to a touch; and the whole body quivers slightly. It remains in this state from one to two minutes, when it recovers suddenly and seems as active as before. If taken in the hand it will immediately go into a convulsion again, even if it has been in a warm room for several hours, and has been supplied plentifully with food. Death usually puts an end to its suffering in a day or two, and I have observed no instance of its recovery after showing the above effects. SPECULATOR.

MIGRATORY QUAIL.—We learn from the Rutland *Herald* that the Hon. M. G. Everts of that place has arranged with the United States Consul at Messina, Sicily, for the importation during the present season of 150 pairs of migratory quail, (*Coturnix communis*). If the climate of Vermont is not too cold for a breeding place for these birds, we see no reason why they should not do well, or at all events, select for themselves during their migrations a habitat the climatic conditions of which would be somewhat similar to those whence they were imported. This bird, which is the common quail of Europe, is found in England only in limited numbers, but in Italy and some of the warmer lands which it traverses during its periodical migrations, it is awaited with the greatest anxiety and snared, netted, and shot by myriads. It flies by night, and it is recorded in Exodus that "at evening the quails came up and covered the camp."

SCARCITY OF WILD FOWL.—A writer in *The Field* states the fact of the present great scarcity of wild fowl in Great Britain, and says: "I do not think the drainage of moors and marsh lands affects the question, because the bulk of wild fowl in these islands are to be found on the coasts, and resort for their food principally to the grass banks, which remain in almost undiminished extent. * * * * It may be that the fowl have taken to a different course in their migration, from some causes which we do not understand. I am inclined to think that when severe weather occurs in these latitudes early in the season—as happened this year in November, and last year also, if I remember rightly—the fowl are driven so far south that they do not return in numbers until their spring migration northward commences."

A similar scarcity in Florida, is accounted for by the dryness of the past season.

—We ask a careful reading of the letter from Prof. Allen, each of whose many essays upon the details of the subject of which he writes has represented an advance in our knowledge of ornithology. One suggestion of his we ourselves were about to make, namely, that our correspondents should allow their real names to be printed with their paragraphs. We should much prefer it.

—Readers of this Department in particular ought not to stop at the end of its columns. Notes of value to the naturalist are every week scattered all through the paper; particularly under the the head of "Game Bag and Gun."

CALENDAR.—Mr. Allen's Ornithological Calendar for Massachusetts, for March 20th to 31st, is as follows:—

Grass finches, mourning doves, pigeons, and fox-colored sparrows arrive; black, wood, and pin-tail ducks, the mergansers, divers and grebes come; the red-headed, canvas-backed, ruddy and surf ducks, the scoters, and other species of ducks and gulls, arrive from the South. Snow buntings, and such rare birds as the pine grosbeak, white-winged crossbills, Arctic three-toed woodpecker, and lesser redpoll depart for the North, as well as many of the buteber-birds. Such early breeding species as some of the hawks, owls, etc., pair during this month. The duck, hawk, and horned-owl, begin to lay and sit.

BIRDS OF SOUTHERN CONNECTICUT.

HIGGANUM, Conn., March 9th, 1876.

EDITOR FOREST AND STREAM:—

This place is situated on the Connecticut River, half-way between Saybrook and Hartford. The following brief diary of ornithological events may be of interest:—

MARCH 6. Large flock of blackbirds made their first appearance to-day; also a number of blue-birds. Weather warm, and snow fast disappearing.

MARCH 7. Another warm day. Blue-birds are singing from almost every tree-top, and I believe the same pair that hatched their two broods last summer in a hole in a post have begun house cleaning, and are getting ready to settle down. A few phœbes (*Sayornis fuscus*) arrived to-day, and are mingling their plaintive notes with the louder cry of the jay, which stay with us all winter.

MARCH 8. A rainy day; wind S. S. E. in the morning, S. W., and W. in the afternoon, and growing colder. No new birds, but those that are here seem very busy. CHARLES O. GLADWIN.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One gray squirrel, three lions, horn in the Garden; one indigo bird, five red-tailed hawks, two red squirrels, one alligator, one red headed duck, one opossum. (Two were born dead, the third was killed by the mother when it was but a few hours old.) HUON.

Fish Culture.

THE NATURAL AND ECONOMIC HISTORY OF THE SALMONIDÆ—GEOGRAPHICAL DISTRIBUTION AND ARTIFICIAL CULTURE.

NO. FIVE,

BY PHILO ICHTHYOS.

THE MACKINAW TROUT—GREAT LAKE TROUT.

SALMO NAMAYCUSH. Pennant.

BESIDES the species of salmon inhabiting the two great slopes of the continent, we have the lacustrine species, of the great chain of lakes of the interior, non-migratory salmon, which we are accustomed to have served almost daily upon our tables. They are excellent fish, as we think; indeed to us they are toothsome and delicious, cut off as we are from obtaining, during the greater part of the year, so many excellent varieties of ocean fish. The *Salmonidæ* and the *Coregoni* of the fisheries of the great interior lakes, must ever be our supply of fresh fish; for they are to be so cheapened by artificial culture, that the masses may soon rejoice in an abundant supply of wholesome food. The lacustrine family of non migratory salmon may be found from Ontario to Lake Superior, and according to Sir John Richardson, in all of the interior lakes northward, from the United States to the Arctic Ocean, which so thickly stud the entire area of British America. In Winter Lake in Lat. 64½ N., the S. namaycush, was taken by Dr. Richardson and Sir John Franklin. Dr. Mitchill says he saw specimens of this salmon caught at Mackinaw, weighing one hundred and twenty pounds, but at the present time they do not exceed seventy pounds, even what fishermen call the largest. In the description of this famous lacustrine salmon, the following salient points may be observed: Body fusiform; dorsal outline moderately arched; lateral line nearly straight; scales small oval adherent; head one-fourth of total length; nostrils double; contiguous muzzle somewhat pointed; mouth large; jaws strong in the male; the upper one longest, the lower having a conical point at top; jaws and tongue, with a single row of teeth on each side; vomer with but a single row. Teeth strong, sharp, and translucent; in the breeding season showing a beautiful amethystine color at bases; dorsal fin nearly in the centre of the fish; its height slightly longer than its base; the adipose is well marked; the caudal is decidedly furcated; the anal is longer on its anterior margin than posteriorily—or at its base; the ventrals at their origin are slightly posterior to the centre of the fish.

Ray formula—Br, 12, 12; D, 12-14; P, 15; V, 9-10; A, 11-13; C, 30. Colors: dark, or dusky brownish-gray above; chin and under parts light, or cream color; Back and sides specked with numerous irregularly shaped spots of lighter gray, brown, or soiled white; lower fins slightly yellowish.

H. A. B.—Lake Huron, Lake Michigan, Lake Superior, and, according to Sir John Richardson, all the great lakes which lie between the United States and the Arctic Ocean, but never found to inhabit tidal waters. The lake trout, or salmon which do not reach tide waters are fish of great economical value, and are wisely being sought by pisciculturist for artificial cultivation. With one or two exceptions those species of the Great Lakes, spawn from October to middle of December.

BROOK TROUT—*Salmo Fontinalis.* Mitchill.

The brook trout are the smallest members of the salmon family. They inhabit rivers and mountain streams from the icy and desolate regions of perpetual snow, of the far north of British America to the interior of the United States, and even south to the 33d parallel. This species differ in color and markings, in different localities, quite as much, if not more, than the salmon of the two coasts of our country. It seems that those species inhabiting the waters of New Mexico, are paler than those of the waters of the extreme north of North America, especially those of the streams of Southern Alaska, where they are nearly black. It is said the trout of California differ in markings and color, in the different waters where they exist, which is owing to some law affecting the *Salmonidæ*. Wherever this favorite of the angler is found, its capture in its proper season, is one of the most keenly relished sports of the devotees of the rod. It has also gained a deserving prominence in connection with artificial culture for stocking fish farms, and fish culturists are reaping golden rewards from its propagation. The following are the characteristics of the trout:

Head sloping nearly symmetrically above and below; body oblong, compressed; back broad and rounded; nostrils double—a characteristic of all the trout families; labials, intermaxillaries and lower maxillaries, armed with minute teeth; tongue with two rows of from four to six teeth; vomer with six or eight teeth in a row.

Ray formulæ Br, 12, 12; D, 12, 0; A, 11; C, 7, 19, 8, 18; V, 8; P, 14. Colors: above with irregular dark markings on a horn-colored ground, which in freshly caught specimens, give blueish and greenish reflections; sides lighter, merging into silvery white on the abdomen, but showing much red in the spawning seasons; upper part of the head dark greenish brown, with quite obscure mottlings; vermilion dots and yellowish spots along the lateral line. The pectorals have the first ray, and the second black, while the remainder are orange; ventrals and anal with first ray white, as on the tips of second and third. Caudal reddish, with obscure parallel dark bands, more distinct towards the lobes. Caudal somewhat emarginate; quite forked in the young, which have also dark transverse bars on the scales. This sprightly agile, and beautiful congener of the salmon, is the popular and favorite fish with every disciple of the rod. The trout spawn in October and November.

THE THYMALLI—*Graylings.*

THYMALLUS TRICOLOR. Cope.

This tribe of fishes bear marked relationship in many respects to the *salmonidæ*. They inhabit the cold streams of many portions of the United States, Canada, Europe, and Asia. It proves to be a game fish of the first quality, and hence, when generally known, will be much in favor with anglers. It takes the fly with avidity, and carries on a brave and spirited contest with its captor. It has a rich and beautiful combination of colors on the body, and a beautifully conspicuous dorsal fin that it shows off to advantage while manifesting displeasure at being in the toils of the angler. Its flesh is white in color, and excellent in flavor. The artificial breeding of the grayling was successfully carried on in Bavaria twenty years ago by Mr. Kauffer Royal, fishcrman in the Garden of the Royal Veterinary School. Fred Mather and Seth Green, our eminent pisciculturests, have both bred the grayling successfully by the artificial process. There are several species, which will be appended to the synopsis of the *salmonidæ* in connection with their geographical distribution. Prof. Cope gives the following characteristics of *T. tricolor*: "Body elongate, sub compressed, highest at anterior portion of dorsal fin. The greatest height of body equal to length of head. The length of the snout is about equal to the inter orbital area. The origin of the dorsal fin is vertical to a point midway between the insertion of the pectorals and the ventrals. The last ray of the anal fin is opposite to the anterior insertion of adipose fin. The greatest height is .21½ of the length of the body without the caudal; the greatest width of the body is .09; the least height of tail is .07½; the length of the caudal peduncle (that space between a vertical line drawn at the posterior edge of adipose fin to the caudal) is .16; the distance from the snout to the dorsal fin is .35½; the length of the base of the dorsal fin is .23; the distance from the snout to the anal fin is .76; the distance from the snout to ventrals is .51; the length of median rays of caudal is .07½; the length of external rays of the same is .20. Head .21½ of the length of the body without caudal; the distance from the snout to the nape is .15½; the width of the head is .44½ of the length of the head; the width of the interorbital area is .24½ of the same; the length of the maxillary is .33⅓; the length of the mandible is .51; the length of the snout is .35; the length of operculum is .25½; the diameter of the orbit is .27½.

Ray formula. Br., 9, 9; D., 24; A., 3-11; C., 8-19-7; P., 16; V., 10. Scales in lateral line, 92; transverse rows above lateral line, 8; below lateral line, 11-4; cæcal appendages, 18. *T. tricolor*, as well as all other known species, spawn in April.

THE COREGONI—*White fish.*

COREGONUS ALBUS. Arted.

This food fish is assuming, under artificial cultivation, an economic and commercial importance equal, if not superior, to any fresh water fish on the continent. Akin to the salmon, its flesh is of great value as an element of food. In the great interior lakes its food is abundant, and the fish is always fat and toothsome in the highest degree. Except, we regret to say, when kept in fish racks too long, it then becomes insipid, as if it had been starved. It is a free feeder, and sooner than other fish loses its flavor by confinement. It is said that the coregoni are addicted to vegetable food more generally than all of the *salmonidæ*, hence rarely take to bait of any kind, although they are occasionally caught on set lines in Seneca Lake, N. Y., by fishermen. As found upon the market tables they have the following characteristics: Body elongated, rather stout and sub-fusiform in profile; peduncle of tail well developed; head rather small, sub-conicle terminated by truncated snout that slightly protrudes beyond the lower jaw; mouth rather small; the maxillar bone proportionally very broad, but so short that its posterior margin scarcely reaches a vertical line drawn in front of the orbit. The origin of dorsal fin is nearer the posterior margin of the base of the adipose fin than the extremity of snout; upper jaw is sub-concave instead of linear. The anterior portion is higher than its base is long. The adiposo fin, (the mark of consanguinity), or blood relationship with the *salmonidæ* is as markedly developed as in any of its congeners, and is situated opposite the anal fin. The latter is anteriorly deeper than long; its initial ray being nearly equidistant between the origin of the ventral fins and the insertion of the caudal. The external margin of the anal fin is sub-concave, also its own base entering eleven times in the length of its body, and twice in the length of the side of the head. The ventrals are inserted opposite the posterior fourth of the base of the dorsal fin; the posterior margin of ventrals is sub-truncated, or rounded off, and when flexed backwards their extremities do not nearly approximate the vent. The caudal is furcated, shorter than the head, since it enters a little more than six times in the total length.

Ray Formulæ.—Br, 9; D, 12; A, 12; V, 12; C, 16 6—28. The scales are large in development, deeper than long; anterior margin undulating, rounded sideways, and posteriorily, slightly diminishing in depth. The four sections of scales are limited by a furrow; the concentric lines are nearly obliterated upon the posterior section; no radiating furrows being observed on any of the sections. Eighteen rows, lengthwise of body, may be counted between the anterior margin of the dorsal and the insertion of the ventrals; nine above the lateral line, and eight below. The lateral line is perfectly straight. *Colors.* The upper region is bluish-gray or lead color; while the sides and lower parts are whitish, with a silvery reflection generally. White-fish spawn in October. See Report of Pacific Railroad Survey, 10th Vol., fishes.

ARTIFICIAL PROPAGATION OF STRIPED BASS—(*Rucous lineatus*).—Several gentlemen of Brooklyn, including Mr. Henry Van Siekien, of Coney-Island, propose to restock Coney Island Creek with striped bass, which formerly abounded with this delicious game fish, affording sport to many anglers. It is now almost depleted, notwithstanding no changes have taken place in the channels or lands adjacent, and natural food is as abundant as ever. These gentlemen have made extensive inquiries of Seth Green, E. Blackford, and others familiar with salt water fish to ascertain the cause of the depletion, and whether the creek could not be re-habilitated by artificial breeding. The correspondence is before us, and we find the unanimous conclusion to be that the scarcity is chiefly due to pound nets set in the streams or in its vicinity. Seth Green says that every family of fish has a regular route that they travel every year, and assumes that these pound nets, have been set across their thoroughfare. He declares that "pound netting should be stopped in all waters in the United States. There is no other kind of net used that does not leave some; the pound takes all." Seth green's letter concludes:—

"Your creek can be stocked again by artificial hatching, and I want to find a place where striped bass can be taken in great numbers while in the act of spawning. If any one that sees this article knows of any such place I hope they will let me know, for I wish to see all of our waters stocked with striped bass again."

We are glad to know that Mr. Green is prepared to undertake this experiment. It is an additional step in the progress of fish culture, and we shall watch it with much interest. Of course it is useless to attempt it if pound nets are to be tolerated, and the first effort therefore should be to abolish these. We trust that our legislature will not decline to act upon the proposed measure now before them.

—An exchange says that six hundred frost-fish, taken from the Raritan River at New Brunswick, were sent to the Commissioners of Fisheries of Maryland last week. They are intended to stock the Elk and Patapsco rivers. These fish are in reality smelts, and not the fish known in this vicinity as frost-fish, or tom-cods. The Raritan smelt is one of the finest fishes in the world; far more delicate than those taken in Maine or Massachusetts waters. Protection in the latter State has made them very abundant. We would suggest to our Fish Commissioners that some attention be paid to their artificial propagation in our own waters.

—The Westport, Connecticut, Trout Association, have lately received from Bucksport, Me., 320,000 eggs of the land-locked salmon. They came in two shipments, 160,000 each time, in cans containing 80,000 eggs each.

FISH AND FISHING IN ILLINOIS.

ROCKFORD, Ill., March, 1876.

EDITOR FOREST AND STREAM:—

Rockford is finely situated for one of the best fishing points in the country. Rock River flows through the city, and is joined by the Kishwaukee a few miles below. Both of these rivers have been greatly depleted by the use of nets, etc., but now, with a stricter observance of the fish laws, and the introduction of new fish, we hope soon to have waters that will delight any angler. Inside of the last two years there have been introduced into these rivers or their tributaries, several thousand shad, salmon, and trout, and the U. S. Fish Commission has just allotted to this portion of Rock River 40,000 Penobscot salmon, 16,000 Schoodic salmon; these two last lots are now ready for shipment. I have learned the first shad that were placed in these waters have done well, and they are now to be seen in the creeks tributary to the river where they were deposited. We still have fit for the rod that game fish, the black bass, though quite scarce; more pike and pickerel are caught, and a few perch. Pickerel commenced running the last of February, and numbers of them are taken every spring in the mouths of the streams where they run. They often bite voraciously at this time, and any boy that can make a raise of a live minnow is almost sure of a pickerel. Pike and black bass are taken later in the season. A day can be spent on the Kishwaukee very pleasantly after black bass, up and down the banks, taking out the beauties from some dark hole, or from underneath a fallen tree trunk, averaging from two to four pounds. A live grasshopper is as tempting a bait as I ever used, a live minnow next.

For a camp in the summer time that is unable to supply their larder with enough of the high-toned bass and pike, all that is necessary is to throw out a night line, baited with fresh meat or a bunch of grasshoppers, and you will get enough catfish to supply a regiment. ROCK FORD.

STOCKING TROUT STREAMS.

BUCKFIELD, Me., March 22d, 1876.

EDITOR FOREST AND STREAM:—
